SGA candidates outline plans

SGA from page 1

as criminals when they violate the code," he said via email. "The Dean of Students' office hands out more sanctions than it does diplomas."

"I am already in the process of working with students and staff to create peer judicial boards," he added. "I hope that these boards will give students more justice – we are the students of UMass and we know what is acceptable behavior here."

Although the UMass system has a president and each campus has a chancellor, in many ways the most powerful body is the Board of Trustees. Each campus is allowed to have a student on the board of trustees.

This student assembly represents each respective campus' voice in UMass decision-making and student trustees are elected by the students of each campus. Next week, UMass will select either Emily Jacobs, Tina Kennedy or Widlynn Louis to represent them on the Board.

Jacobs, a junior studying political science, has not been involved with the SGA, but has political experience.

"I have a lot of experience in state [politics]," said Jacobs, who interned with Congressman John Olver, was the western regional coordinator for Massachusetts Democrats and the president of UMass Democrats.

Jacobs said her state politics background suits the trustee position better than an SGA background.

With state experience in the area, Jacobs plans to work on the budget.

"There is only a finite amount in the budget," said Jacobs.

Jacobs also joked about her unique pairing with her running mate, because Lamb is president of the UMass Republicans and she is president of the UMass Democrats.

However, Jacobs clarified, "The SGA is not about partisan politics, it's about what is best for the students."

Jacobs also said she likes Lamb because he is new and "not so caught up in the SGA bubble."

Jacobs also plans to boost student involvement through mobilizing the SGA and increasing and updating the body's Web presence.

Unlike Jacobs, Trustee candidate Tina Kennedy is currently an active SGA member and holds positions including senator, chair of the finance committee and associate speaker.

Kennedy, 20, said she is ready to be the next student trustee.

"Things need to be changed on a bigger level," said Kennedy, who calls herself "feisty but rational."

She said her associate speaker position has given her experience, but limits what she can achieve. She is now ready to "lobby for students on the Board of Trustees."

Kennedy discussed how she and her running mate, Dave Robertson, are working on a variety of issues, including creating a plan where meal swipes can roll over from one semester to the next, dealing with the $54.5 million budget gap, abolishing a potential flagship fee, getting better advising, continuing work with sustainability-related issues and working with the town of Amherst on lowering alcohol-related fines.

Kennedy also discussed the need for better communication with students.

"No one reads those [Chancellor Robert] Holub emails. They only read ones that say PoliSci 260 canceled," said Kennedy, who said she is willing to do anything to communicate to students from "dorm-storming" to spray-painting snow banks to inform students.

The third candidate is Widlynn Louis.

"I want to fill the void in the representation of students of color," explained Louis. "Students of color need to see a student government that [not only] mirrors them but also accessible to them."

Although lacking SGA experience, Louis has been involved with several political groups on campus, including the Black Student Union, Student Bridges, and the Center for Policy Advocacy.

SGA presidential candidate Nate Lamb and trustee candidate Emily Jacobs plan to aggressively seek out what students need to improve their experience at UMass.

If elected, Louis hopes to improve the SGA's relationship with students, create a safer environment, add more comprehensive sexual assault policies and improve child care services.

"The SGA representatives should actively perform as liaisons to RSOs and reach out to the students they represent," said Louis about communication.

Although admitting her relationship with running mate Yevin Roh has been brief, she said the duo shares "common experience and background" as well as "similar goals and work ethics." Louis remarked that when Roh asked her to run with him, she "could not say no."

"I hope to bring a new voice to the SGA that has been underrepresented," said Louis. "My dedication to the student body will drive me to continue serving them."

Louis has a recent criminal background. According to the Daily Hampshire Gazette's police log for the town of Amherst, Louis was arrested approximately two weeks ago for allegedly assaulting her roommate with a doorknob. The argument was apparently over the replacement of the doorknob, and after police arrived at the residency, Louis was taken into custody on a charge of assault and battery with a dangerous weapon.

The presidential candidates and trustees will debate March 2. The elections will take place online March 8- 10.

Protesters demonstrate near Capitol Hill, demanding the repeal of President William Clinton's Don't Ask, Don't Tell policy banning homosexuals from openly serving in the military.

Repeal not in effect

DON'T ASK from page 1

and lesbians a pressing civil rights issue. President Obama also declared that, as a country, Americans should embrace those troops who volunteer their lives for our country.

"We should be celebrating their willingness to step forward and show such courage ... especially when we are fighting two wars," he said in the same 2009 speech.

On Friday, the Department of Justice (DOJ) filed a brief in accordance with the case against the Log Cabin Republicans. The DOJ stated that, "For the foregoing reasons, the district court's judgment and worldwide permanent injunction should be reversed."

Although the DADT repeal process is in political limbo and taking longer to take effect than expected, the Obama administration is making it clear that it supports gay rights. On Feb. 21, Obama announced his executive administration would not be defending the Defense of Marriage Act anymore.

Similar to the DOJ, Obama has given Congress the responsibility of acting on both of these policies.

Beemyn believes the president has the power to force the repeal into effect, and that he should use what she sees as a mandate in public support to topple barriers to guys serving in the armed forces.

"Obama could stop the discharges now, especially given that public opinion is strongly behind ending the policy," she said. "His decision yesterday not to defend DOMA any longer was a much more politically risky move."

EDITORIAL OPINION

MONDAY, FEBRUARY 28, 2011 "Easy reading is damn hard writing." - Nathaniel Hawthorne EDITORIAL@DAILYCOLLEGIAN.COM

Scalpers lose their glow

Yaroslav Mikhaylov

It's classically American to try and bend rules for the sake of a quick buck. So when people arriving early at the Mullins Center on Feb. 18 to buy tickets for the DAYGLOW paint party found themselves at the head of a line stretching past the practice rink, they were in a unique position to make quite a bit of money from scalping.

Scalping – also known as up-sale or resale – involves buying a large number of tickets to an event in the hopes that it will sell out, thus forcing people who want to attend to buy the tickets at a higher price. This practice is illegal in Massachusetts though not very actively prosecuted.

The argument for allowing scalping makes sense from a free market perspective, as tickets are worth what people will pay to get them. In that sense, the scalpers are merely intermediaries that equate real demand to real supply – intermediaries that stand to make a lot of money off of this 'market self-regulation.'

This was reinforced after the first showing sold out in less than two hours and Craigslist ticket prices slowly settled down at around $100 per ticket. Supply equaled demand and equilibrium was established – Econ 101.

Except there was one problem – neither the supply nor the demand that determined the $100 price tag was representative of the real world. The real supply – how many people can attend the event and therefore how many tickets can be sold – is determined entirely by the capacity of the Mullins Center. No amount of accounting wizardry will allow more people to be crammed inside without violating fire codes. However, as the scalpers held a large amount of tickets in reserve for resale, the perceived supply is much smaller.

If I had to guess, I would say that at least a quarter of the tickets "sold" for the April 2 showing are actually still in the hands of people trying to sell them. Likewise, the scalpers created artificial pressure on the demand end.

The argument for allowing scalping makes sense from a free market perspective.

There were tickets for a lot of people who couldn't buy them – they were just held by scalpers while the black market price went up.

Eventually, this would have resolved itself in a sensible – if unfair – manner for the people trying to go to DAYGLOW. However, something unexpected happened: DAYGLOW added a second show on April 1. This time organizers established a five ticket limit per order. By the time the ticket office opened at 10 a.m., the line didn't even go the entire length of the Mullins Center. Furthermore, because of the lower per-person limit, a smaller percentage of the tickets sold for the April 2 show ended up in the hands of people trying to make money by scalping them.

This brings us to today. Anyone that was willing to buy scalped tickets already bought them for the April 2 show. Almost everyone that wanted to go on April 1 bought their tickets legitimately already. And yet, Craigslist and Facebook are still full of people advertising the fact that they still have "one or two" extra tickets. The result is evident: the scalpers got screwed. The second show has pretty much satisfied the demand and now they are stuck sitting on a lot of tickets that probably won't be used. Already, the prices of scalped tickets are dropping from the original "equilibrium" of $100 to $80, $70 or even as low as $45. And yet, people are not buying. My guess is that on the day of the event, people with scalped tickets will be standing outside the Mullins Center trying to get someone to buy them for $10.

So what is the moral of this story? Scalping is illegal for a reason. And because of the scalpers, the Saturday DAYGLOW show will attract a smaller crowd to an event whose quality is contingent on crowd size. In the end, the scalpers made life worse for themselves, and those hoping to attend the event.

Lots of laws are silly or outdated. This one is neither. Now, if you will excuse me, I have to find a way to paint-proof my cell phone.

Identity theft's no vacation

Kimberly Wilson

It's that time of the year again – time for a nice, stress-free trip away from the cold.

But beware: Whether you're planning a weekend getaway or a weeklong tropical vacation, if you're not careful, travel scams could leave you broke and less than relaxed. Many of these scams are posted in the halls of school buildings, sandwiched in-between legitimate offers and appear oh-so-tempting because of their low prices. But don't be fooled! According to the Better Business Bureau, these bogus offers con vacationers out of an average of $10 billion annually. So, do some research before you fork over your cash.

Parents are always telling us, "If it sounds too good to be true, it probably is." Well, now's the time to heed their advice. Pay attention to how the deal was presented to you; if you get an email offer, a phone offer, or a flyer in the mail, it's probably bogus.

Another type of scam making its way around is the "you have won an all-inclusive vacation" as a result of a sweepstakes you never actually signed up for. Usually, the end result of these scams is that whenever you're ready to take your vacation, the travel company you have booked through has mysteriously disappeared.

These scams sometimes seem like great deals, but they aren't. The Federal Trade Commission (FTC) and the American Society of Travel Agents (ASTA) have a few tips to help you avoid bogus travel packages and find the real deal:

But beware: Whether you're planning a weekend getaway or a weeklong tropical vacation, if you're not careful, travel scams could leave you broke and less than relaxed.

• Check out the operator. Avoid high-pressure sales pitches for school break packages. Ask the operator to send you information about the business and a list of satisfied customers.

• Check with local travel agents to see if the operator is legitimate.

• Read the fine print. Get a copy of the operator/participant contract. This will tell you the conditions under which the operator can change flight schedules (usually charters can be canceled for any reason by the operator up until 10 days before the trip), hotel accommodations (operators may put you up in an alternate hotel listed in the operator contract that is not as nice as the hotel advertised in the package materials), and the rules and penalties for cancellations. Ask about cancellation insurance.

• Rules state that an operator cannot ask for or accept your payment until you have signed and returned the contract.

• Understand your rights. Department of Transportation rules state that you have a right to cancel a charter package without penalty if the operator makes a "major change." These include a change of departure or return date or city, a hotel substitution to a property not named in the charter operator/participant contract, or a package price increase of more than 10 percent.

• Pay by credit card. This gives you more protection than using cash or a check/debit card. If you pay by check/debit card for a charter package, make sure it's payable to an escrow account (as required by federal law for charters) and call the bank handling the account to verify its validity. Be wary of charter operators who are reluctant to provide escrow bank information- they may be selling another firm's space- or who tell you they'll send a courier to pick up your money.

• If you pay for a scam package with a check/debit card, congratulations, chances are you just became another victim of identity theft. Hope you like dealing with your credit card company, bank and federal government. As for cash? Well, you're never seeing it again.

A good resource for checking out a company's credibility is the Better Business Bureau website, www.bbb.org. This website allows visitors to enter the company name and address and read reviews, complaints, contact information and more. The website also offers an easy-to-understand grading system for companies from A to F. Just take a gander before you commit to any companies and keep these tips in mind when you're making your spring break plans.

It would be awful to have an amazing vacation planned, brag about it to your friends, spend a lot of money on it, and have it turn out to be a scam.

Kimberly Wilson is a Collegian columnist. She can be reached at kwilson@student.umass.edu.

More than a name on a door

Jarred Rose

As a Student Government Association Senator from Southwest, there are few administrators I would willingly praise. This may come as a surprise, as some believe that it is actually my responsibility to be permanently mad at every person who works for the school. On top of that job, I am also a Resident Assistant in John Quincy Adams, and I work for the Financial Aid Office. This means I have to listen to complaints – 95 percent of which are justified – about the administration on a daily basis. But there is one administrator in particular who I have never, ever, heard a complaint about from students or other administrators.

For those of you who don't know him, Byron Bullock is the associate vice chancellor for student affairs and the head of the Center for Student Development. Within the next few weeks, the University of Massachusetts will be living with a very sad reality: Mr. Bullock will be leaving the University for a post at the American University of Nigeria. I know most of you are thinking: 'Why should I care, he is just another faceless administrator who comes and goes, right?' Wrong.

This means I have to listen to complaints – 95 percent of which are justified – about the administration on a daily basis.

Byron is one of the greatest allies and mentors a student could possibly ask for. As the founder and director of the CSD for the last five years, he has helped student leadership in ways most people will never know about. Under his leadership, the CSD – with an overworked and underpaid staff – has provided Registered Student Organizations (RSOs) with an unprecedented level of aid and support. The CSD – for those unfamiliar with it – is the administrative body that helps the SGA run the RSOs.

Let me be clear, this doesn't mean that the CSD is flawless. Far from it.

I have been no great fan and have spent a significant amount of time ranting about certain CSD policies. Regardless of policy disagreements, however, Mr. Bullock has fostered a special relationship between the SGA and the CSD that has allowed us to work together, despite differences in perspective and opinion. Last year, and with Byron's help, the SGA was able to implement online elections after years of bickering. Also last year, despite much controversy, he was able to create the new Center for Multicultural Academic Student Success (CMASS) that now serves as the sole advisory center for most multicultural students.

Byron's importance in this matter cannot be overstated. Time and time again he has shown himself to be a friend, advisor and important ally when students needed him the most. He has readily backed students, RSOs and the SGA, even if it means defending them against his own colleagues.

Unlike many administrators at this school who shut themselves up in their offices and are simply nameplates on a door, the majority of people who know Byron know him because they have met him before ever hearing his name. I have never had – nor have I ever heard of anyone – who had a problem meeting with Byron or didn't find him to be the greatest student advocate on campus. He even makes it a habit to eat at Berkshire Dining Commons at least twice a week in order to keep in touch with the student body. He believes strongly in what he is doing, even though it means he must be apart from his wife, who is living in North Carolina.

Mr. Bullock is leaving us for Nigeria, where he will have the amazing opportunity to build a student affairs division from the ground up. I have no doubt in my mind that within the next decade we will be hearing about an amazing student affairs division coming out of Nigeria that puts our own to shame.

The administration has established a committee to find Byron's replacement and their task couldn't be more important. The shoes his successor will have to fill are enormous, and this person should be a real student advocate. Recently, Brandon Tower, the president of the SGA, wrote an op-ed comparing Chancellor Holub to Professor Dumbledore, but in my opinion Mr. Bullock has been the "headmaster" I have always admired.

With his departure, I sincerely hope the CSD and student affairs don't turn into a seventh book- era Hogwarts. I believe I can speak for the entire SGA and, in fact, the whole student body in wishing Mr. Bullock the best of luck in Nigeria. He will be missed.

Jarred Rose is a Collegian contributor. He can be reached at rose@student.umass.edu.

THE MASSACHUSETTS DAILY COLLEGIAN

ARTS LIVING

MONDAY, FEBRUARY 28, 2011 "The moral of the story is listen to your mother." - Tom Hooper ARTS@DAILYCOLLEGIAN.COM

Sandler glows in 'Just Go With It'

By Anthony Santiago
Collegian Correspondent

Adam Sandler continues to reign at the box office as the king of comedy films. "Just Go With It" mixes laughs with drama, as well as touching moments, while still supplying a film that appeals to both men and women. The film is based on the 1969 film "Cactus Flower," which was adapted from an earlier Broadway stage play. This is Sandler's fourth romantic comedy, along with "The Wedding Singer," "Punch-Drunk Love" and "50 First Dates." It is directed by Dennis Dugan, who directed some of Sandler's previous films, and was produced by Sandler himself.

The film also stars the lovely Jennifer Aniston, who has also had her fair share of romantic comedies under her belt, including "Along Came Polly," "The Break-up," "He's Just Not That into You," and "The Switch." The film also supplies an appealing supporting cast that includes Sports Illustrated model Brooklyn Decker, Dave Matthews (the singer), Nick Swardson ("Grandma's Boy"), and Nicole Kidman.

In the film, Sandler plays Danny, a bachelor who pretends to be unhappily married to get sympathy from women. While at a party one night, he meets a woman, Palmer (Decker), who he actually falls for. She ends up finding his fake wedding ring, but Danny cannot explain himself and she wants nothing to do with him. Not wanting to lose his chance with her, Danny has his friend/secretary Katherine (Aniston) pretend to be his wife, who he is divorcing, meet with Palmer. Things get worse when Katherine is talking on the phone to her kids and Palmer thinks Danny has kids and wants to meet them as well. Now Danny must involve Katherine's kids into his lie, which will eventually create an even larger web of lies Danny tries to keep from unraveling.

"Just Go with It" is somewhat better than most romantic comedies because Sandler and Aniston are as appealing as ever with their warmth and sweetness. Aniston even improves Sandler's performance. However, as appealing as the cast may be, this film is nothing special and doesn't try anything too different from previous cliched romantic comedies. The film starts out with laughs, which stay pretty consistent throughout the film, a step up from most comedies. Sandler and Aniston's characters show decent on-screen chemistry and viewers can't help but like them. The supporting cast does not do justice for the film. They are rather irritating and obnoxious, but, on the other hand, that's exactly how their characters are supposed to be.

The characters are anything but boring, and, in their own ridiculous ways, lend the film a faint glow of worth. This occurs especially when Katherine runs into her old competitive sorority sister, Devlin (Kidman), along with her hare-brained husband (Matthews). Kidman's role as a snotty and competitive old friend adds a few laughs, while providing some relief from the other characters. Newcomer Decker delivers an adequate performance in her role, looking bubbly and smoking hot in the process.

The film does get a little ridiculous at it progresses and eventually begins to veer into the usual slapstick humor required of just about all Sandler films, but stays a mark above those. "Just Go with It" isn't the best or the worst romantic comedy from Sandler. While offering enough laughs, it is still a bit of a cookie-cutter film. Though it's filled with problems, it does have its entertaining moments and is worth a shot next time at the box office, if you choose to go with it.

Anthony Santiago can be reached at asantia@student.umass.edu.

Adam Sandler hugs Bailee Madison and Griffin Gluck in his new film, "Just Go With It." Sandler co-stars with Jennifer Aniston in this romantic comedy about a bachelor and his attempts to woo his lady-love.

Animated shorts shine

PASSION PICTURES

"The Lost Thing," winner of the Academy Award for Short Film (Animated), will be shown at the Pleasant Street Theater this week, along with the four other Oscar-nominated films in the category.

By Margaret Clayton
Collegian Staff

This week, Pioneer Valley residents have the opportunity to watch a special showing of this year's Oscar-nominated animated short films. Following the five award nominees, the Pleasant Street Theater will also feature a highly commended film, "URS," that narrowly missed out on a nomination.

Reviewed in order of appearance:

Madagascar, Carnet de Voyage

The first film in the series, "Madagascar, Carnet de Voyage" is an 11-minute piece by French writer/director Bastien Dubois. The film animates a photo album of a man's journey to Madagascar and his interaction with the people there. From a café chat to a local funeral, the music flows through each scene with the cursive script of the photo caption trailing by before the picture comes to life.

"Madagascar, Carnet de Voyage" is unusual in its varied use of animation styles within the film. Dubois depicts the characters as faceless, colored heads when the camera is further away, but their features sharpen when wrinkles, eyes and mouths are drawn in for a conversation across a table.

The film starts and ends with an airplane out of the book, but the story within features a number of scenes that don't have relevance to each other, except that they were all during this trip to Madagascar.

Let's Pollute

Geefwee Boedoe co-wrote, directed, and produced this six-minute American satirical film portraying the benefits of pollution in the style of a 1950s or 60s educational film. This environmentally-aware short is a humorous "how to" guide for creating waste, shared via voice-over with mute father, mother and child characters.

The Lost Thing

"The Lost Thing" is a beautifully told story of how the wonderment, close observation and devotion of younger people disappear over time with the bustle of work.

The main character is a boy whose parents care more about a soiled rug than tending to the "lost thing" – a large, metal mug-shaped creature with tentacles and bells hanging out its hatches.

This 15-minute film urges us to remember our bottle cap collections and beach combing days, and warns against being sucked into the doldrums of a constant struggle between war and taxes.

The Gruffalo

Helena Bonham Carter stars in this 27-minute family-friendly short about a mother squirrel (Carter) telling her children a story about a mouse with an unnaturally long tail.

The mouse's adventure begins when he is unable to scurry up a tree to get an acorn. Throughout the tale, the mouse runs into a series of predators voiced by Tom Wilkinson, John Hurt, Rob Brydon, and Robbie Coltrane. However, the long-tailed mouse is able to outsmart them all by weaving a tale about his friend, a ferocious creature called the Gruffalo.

Day & Night

The final Oscar-nominated film by Disney Pixar is probably the most well-known of the set; at six minutes long, it preceded "Toy Story 3" for viewers who saw it in theaters.

"Day & Night" follows the characters Day and Night as they discover each other's existence, sparking a period of fear and mistrust. As the two come to find they cannot occupy the same space at the same moment, Day and Night work together to allow each other to have a turn at a rooster alarm clock and counting sheep.

Urs

In addition to the five films nominated for the Academy Award, Pleasant Street Theater has included the lauded German film "Urs" as a bonus feature.

The 10-minute film depicts a son who wants a better life for himself and his aging mother. Yet, when the son attempts to leave, his mother stubbornly refuses to leave their home and her wicker chair. Nevertheless, the young Urs straps his mother still sitting in her chair onto his back and begins the dangerous journey of climbing over the mountains.

A poignant story about coping with large changes in life and family, "Urs" tugs at the heartstrings of the audience.

Although the 2011 Academy Awards may be over, these shorts are a must-see for any film fan, and seeing all of them is only as time-consuming as one short-length feature.

Margaret Clayton can be reached at mclayton@student.umass.edu.

Live action films sparkle

By Ian Opolski
Collegian Correspondent

The Short Film (Live Action) category is one of the Academy Awards' most neglected and ignored categories by at-home viewers, the vast majority of whom have never heard of the entries. This matter is particularly sad this year, as the category is full of strong selections without a definitive favorite. Fortunately for the Five College area, Northampton's Pleasant Street Theater is currently showing all five shorts under one ticket. Here's a breakdown of the nominees:

The Confession

"The Confession" follows the story of Sam (Lewis Howlett), a Catholic schoolboy preparing for his first Penance. Concerned he has no sins to confess, Sam and his friend Jacob (Joe Eales) orchestrate a prank to gather material for the confession booth, but the plan goes tragically awry.

Perhaps the strongest film in this category, "The Confession" takes a risk in putting the weight of the film on the shoulders of two child actors, but with the exception of a few lines which seem too adult, the boys pull it off well. Howlett is particularly effective, conveying emotional depth to make more experienced actors envious.

The film is also the most visually interesting of the five nominees, with long shots of the rural English countryside contributing well to the movie's chilly mood. Anyone with a Catholic upbringing will appreciate the treatment of the awkwardness of the film and the sensation of guilt it generates.

Harrowing and horrifying, "The Confession" is an emotional punch to the gut which fares well against any full-length film.

Wish 143

In "Wish 143," David (Sam Holland), a sixteen-year old cancer patient is offered a gift of his choosing by a Make-a-Wish style foundation, but his only request is help in losing his virginity.

The film – Roger Ebert's prediction to win the Oscar – is a refreshing take on an overused scenario. "Wish 143" rarely succumbs to the saccharine tropes of terminal illness films, largely thanks to Holland's performance. He so capably alternates between wry humor and flickering anger that when his emotional mask is finally removed, the effect is devastating.

It is an excellent blend of comedy and tragedy which arrives at transcendent conclusions. "Wish 143" evokes the need for physical human contact which we all share.

Na Wewe

The Belgian "Na Wewe" is this year's only non-English language nominee, depicting ordinary travelers suddenly caught in the genocidal conflict between the ethnic groups the Hutus and the Tutsis in Burundi.

Despite its lack of actual violence, the film creates an impressively tense atmosphere, and its ability to show glimmers of humanity amid horror is at times quite moving.

The biggest problem with "Na Wewe" is that its cast of characters is too large for its running time. The aggressive Hutus sort through a busload of passengers one-by-one, and while the actors' moments of defiance and terror in the situation are compelling, they are too brief to be fully engaging. Further, anyone with even marginal knowledge of the Rwandan genocide might find the film's portrayal rather tame.

"Na Wewe" has moments of greatness, but it falls short of the standard set by the other nominees.

The Crush

Ardal, an Irish schoolboy besotted with his teacher, challenges her boyfriend to a duel for her hand in "The Crush."

Like "The Confession," "The Crush" has a talented youngster at its head, Oran Creagh. Creagh outshines all the adults in the film with a natural gift for comedic delivery. His childish confession of love is utterly convincing, and when the film takes a darker turn, he still manages to be believable in unbelievable circumstances.

The movie somehow packs in multiple twists in less than 20 minutes, which leaves the ending feeling muddled, but on the whole, "The Crush" is an engaging and charming rollercoaster ride.

God of Love

The lone American contender and arguably, the weakest of the nominees is "God of Love," the creation of New York University student Luke Matheny, who wrote, directed, and starred in the film.

Matheny plays Ray, a lounge singer enamored with his band mate, Kelly (Marian Brock). Ray prays for Kelly's affection, and his wish is magically granted in the form of love darts, which create infatuation in their targets.

"The God of Love" stands out as the only completely comedic nominee. Presented last at Pleasant Street, this abrupt change of tone from the first four shorts makes the film seem frivolous instead of humorous. Shot in black and white and weakly incorporating Greek mythology, the film misses the whimsical attitude it appears to aim for, instead coming off as too slick and calculated.

"The God of Love" is the most unique of the five nominees, but it suffers from a self-conscious attempt at being hip and artistic.

The five action shorts will play limited showings at Pleasant Street Theater through March 3.

Ian Opolski can be reached at iopolski@student.umass.edu.

Samuel Holland stars as David, a teenage cancer patient who embarks on a mission to have his one wish granted in the Oscar-nominated live action short film, "Wish 143."

Mooney, Fleming tally goals for Minutemen

M. LAX from page 8

first game, but in the second game out here at Garber, I calmed down a little bit and got to play my game," Mooney said.

Another player who scored twice was sophomore Colin Fleming. With the game in the balance, tied at five apiece midway through the third period, Fleming put in two-straight goals before junior Mike Fetterly added another to give UMass an 8-5 lead heading into the final frame.

The three-goal run swung the momentum in favor of the Minutemen and gave Fleming and his team confidence.

"Especially with that momentum, when you get one goal, [the] next time you get the ball you want to get another one," Fleming said. "When you string two in a row, it's huge momentum for you and for the team as a whole."

Along with Mooney and Fleming, juniors Anthony Biscardi and Art Kell provided two-goal efforts for UMass. The balance on offense was encouraging for Cannella, who doesn't want any one attacker to be relied upon as heavily as the defense was in the victory.

"It doesn't matter who scores. I think if you ask these guys, they'll tell you the same thing," Cannella said. "You hope that can be consistent."

Ohio State came out of the gates strong, posting a 2-0 lead less than six minutes into the contest. UMass, however, fought back, as both teams traded punches before Fleming broke the game open in the third quarter.

Jarred Bowman led the way for the Buckeyes, recording three goals and notching an assist.

Junior goalie Tim McConnack earned his third win of the year in the cage, making six saves.

The Minutemen will look to remain undefeated when they host Brown Saturday at Garber Field in a 1 p.m. start.

Jay Asser can be reached at jasser@student.umass.edu.

MAGGIE CHRONISTER/COLLEGIAN

Senior midfielder Ryan Hantverk makes a cut to the goal against the Buckeyes on Saturday. The Minutemen are undefeated in their first three games and host Brown on Saturday.

Mass. Attack postseaon in doubt after defeats

HOCKEY from page 8

UMass	3
BC	4

place Providence (13) and one point behind seventh-place Vermont (16).

UMass is now winless in its last 10 games (0-6-2), despite playing with a renewed sense of urgency.

"They're a great team and they put a lot of pressure on us at times," UMass coach Don Cahoon said in an interview with UMass Sports radio announcer Brock Hines following Saturday's game. "We stayed pretty composed and played with a lot of energy both nights and gave them, at least, the type of challenge that suggests we're moving in the right direction."

Junior T.J. Syner cut the Eagles' lead to one with 2 minutes, 57 seconds remaining in the second period off of assists from junior Danny Hobbs and redshirt freshman Anthony Raiola.

Syner, the Minutemen's leading scorer (nine goals, 16 assists), extended his point streak to seven games with the goal (two goals, five assists). Raiola's assist was the first of his career.

Barry Almeida scored a goal with 12:25 left in the first period to take a 1-0 BC lead. Pat Mullane's power-play goal with 6:57 left proved to be the game-winner.

After going 1-for-2 with a man advantage in the first frame, the UMass penalty kill tightened up, stopping the next five power plays. Overall, the Eagles went 1-for-7 with an extra man on Saturday and 3-for-13 on the weekend.

"The struggle with our team is the discipline with the stick infractions," Cahoon said. "Too many little slashes and guys getting a little leggy and they don't move their feet and stay with people, then you take a stick foul. That's a real Achilles heel for us. We keep talking it and training it and, hopefully, we [will] outgrow it in a hurry."

UMass	2
BC	1

Two power-play goals led to a 2-0 deficit early in the second period for UMass on Friday night at the Mullins Center. Brian Gibbons scored first with 4:45 left in the first period following an Eric Filiou high-sticking penalty. Then, with 15:54 to go in the second period, freshman Joel Hanley went to the box for tripping and Almeida scored with five seconds left on the power play.

A goal by freshman Conor Allen 23 seconds later trimmed the deficit to 2-1 with 13:36 left in the second frame. BC answered back nearly as quickly with a Jimmy Hayes unassisted goal with 13:10 left.

Hanley scored his third goal of the season with two seconds remaining in the period on the power play. Danny Hobbs scored another man-up goal five minutes, nine seconds into the third period to move UMass within one point of the Eagles. Despite UMass' efforts, BC salted away the Minutemen rally and stymied the home team's chances for a point.

Dainton made 30 saves in Friday night's game to break the all-time save record, previously held by Brian Regan (3,050). He now has 3,097 for his career.

"[Dainton's] a veteran who is under composure and all those minutes and saves and things that he's been able to do over the four years give him the confidence and the experience to be able to come out big in the big moment," Cahoon said.

In addition, Dainton now holds the school-record for minutes played (6,806 minutes) breaking Gabe Winer's record (6,725) on Friday.

UMass will play its final home games this weekend in its regular season-ending series against Maine.

Members of the Minutewomen team shake hands with an opponent earlier this season at the Mullins Center. UMass fell on senior day to the visiting Explorers, 67-63.

Minutewomen drop final game against Explorers on senior day

By Michael Wood
Collegian Staff

The Massachusetts women's basketball team could not overcome a late push by La Salle in the second half Saturday and ultimately fell, 67-63, in a back-and-forth game on senior day at the Mullins Center.

"I thought we played a great game in terms of effort and in terms of defense," UMass head coach Sharon Dawley said in an interview with UMass Media Relations. "We just needed to have more composure down the stretch. We missed some key bunnies and the 3-point shot that [La Salle] made was the shot that broke our back."

UMass	63
La Salle	67

Seniors Cerie Mosgrove, Megan Zullo and Stephanie Lawrence enjoyed a short ceremony before the game, during which the athletic department and the rest of the team recognized their contributions.

"They've had a great year," Dawley said. "All three come into work every day with a great attitude. [Lawrence] has done a great job for us at two different positions. Meg is a leader as well as a phenomenal shooter, [and] she's had a great season for us. Cerie, being a phenomenal shooter for us, really came on as one of the best rebounders we have and really [is] up there nationally with her 3-point shooting. I think she's had a tremendous season."

The Minutewomen came out in the first half and jumped out to an early lead, in large part because of the play of sophomore forward Jasmine Watson, who netted 13 points, grabbed five rebounds and had one blocked shot. However, the Explorers answered each of the Minutewomen's offensive attacks and kept the game close throughout the period. Alexis Scott led the Explorers in points in the first half, tallying 11, while Nadia Duncan and Ebonee Jones each added six.

The tension mounted as time went on and the two squads were never separated by more than seven points at any time in the contest.

After trailing, 34-31, at the break, the Explorers pushed their lead up to six in the second half, but the Maroon and White used a 7-0 run to take back the lead. Shakia Robinson's 3-point play then put the Minutewomen up four with just over 10 minutes remaining in regulation.

The teams traded baskets for the next nine minutes, never pulling apart by more than two points. Watson converted on a free-throw attempt to tie the score at 60 with just over four minutes to play, and for the next three minutes, neither scored a basket.

With 17 seconds on the clock, Michea Bryant took a pass beyond the arc and netted a 3-pointer to give the Explorers the lead and, after a subsequent foul shot, La Salle went up by four and held the ball until time expired.

"Had that shot not gotten off and [had they] not made that [3-pointer], we may have had a different outcome," Dawley said.

The Minutewomen close out the regular season at 7-22 and 3-11 in the Atlantic 10, while the Explorers improve to 10-19 overall and 6-8 in conference play. With a bid in the A-10 tournament, UMass will travel to Lowell on Friday for its next game. Seedings and opponents have not been announced for the tournament as of yet.

Michael Wood can be reached at mcwood@student.umass.edu.

UMass uses comeback mentality in wins over Buckeyes, Hartford

COMEBACK from page 8

Fleming responded with two consecutive goals, rifling a pair of shots past OSU goalkeeper Greg Dutton to help the Minutemen recapture the momentum and the lead, 7-5.

"Once you get one goal…you want to get another one," Fleming said. "When you string two in a row…it's huge momentum for yourself and the team as a whole."

Mike Fetterly and Bobby Tyler added unassisted scores of their own, providing insurance and diminishing the likelihood of a Buckeye comeback.

"Our guys just did a good job of not getting intimidated and…coming back," Tyler said. "I think we [have] a strong group of guys and we all battled back."

A key factor in the Minutemen's surge was the play of faceoff-specialist Greg Rushing. The junior was 12-for-17 on faceoffs, creating extra possessions and limiting the opposition's time of possession and shot attempts.

"That's kind of the way we play," Cannella said. "If we're going to be successful, we have to finish the ball, we have to make saves, but we also have to win faceoffs."

After OSU cut the lead to 9-7, Mooney pushed the margin back to four with his first two goals of the season to put a stamp on the victory.

Stephen Sellner can be reached at ssellner@student.umass.edu.

JEFF BOSSTRICK/COLLEGIAN

Senior Hayley Smith makes a cut around a defender in a victory aginst Vermont earlier this season. The Minutewomen are undefeated for the first time since 1986 after beating Siena, 16-7.

Strong start continues for UM

By Jackson Alexander
Collegian Staff

On Saturday, the Massachusetts women's lacrosse team defeated Siena on the road, 16-7, and improved its record to 4-0, the program's best start since former coach Pam Hixon's squad opened with a 6-0 record in 1986.

UMass	16
Saints	7

The Minutewomen received key scoring contributions from unlikely sources Saturday, as the freshman led the way, accounting for 10 of UMass' 16 goals.

Katie Ferris got her first start of the season and poured in five goals, the most by any Minutewoman in a single game this season. Her five-goal outburst was the final note of an impressive week for the freshman. On Wednesday, Ferris scored her first collegiate goal in her first game with 4.1 seconds remaining to help knock off No. 18 Boston University.

Sam Rush added three goals off the bench, upping her season total to five. Freshmen Courtney McGrath and Kelsey McGovern each chipped in goals as well.

Ali Houlis, Nina Sarcona, Danielle Pelletier, Jesse O'Donnell, Haley Smith and Lauren Terracciano wrapped up the scoring with a goal apiece, while Jackie Lyons played the role of facilitator, dishing out three assists.

Lyons' three assists moved her into fourth all-time at UMass with 58 career assists.

Siena kicked off the scoring just two minutes into the game, taking an early 1-0 lead. From that point on, UMass completely dominated the first half, scoring nine unanswered goals. The Saints added a goal just before the half, making the score 9-2 going into the break.

The Minutewomen started the second half strong, scoring twice and extending their lead to nine goals. Siena didn't back down and made a strong push to get back into the game, scoring five of the next seven goals and cutting the deficit to six. However, the rally was cut short when UMass responded with three insurance goals, two of them coming from Ferris.

Goalkeeper Katie Florence continued her strong start to the season, stopping eight shots. Florence was replaced in goal by Sarcona with three minutes left. Sarcona, who plays attack for the Minutewomen, did not allow any goals or stop any shots during her three minutes in the cage.

The Minutewomen outshot Siena, 53-19. At the half, UMass had already gotten off 32 shots, while the Saints had only managed six.

The shooting onslaught easily surpassed last season's high in shots in a single game, which was 38 against Connecticut. UMass head coach Angela McMahon's former team.

The Minutewomen dominated the game's statistics across the board. They collected 24 groundballs to Siena's 14. The Maroon and White turned the ball over 15 times, but also forced 18 turnovers, and easily won the battle of draw controls, 19-6.

Siena was led by Deidre McQuillan and Katie Maguire, who each had two goals for the winless Saints.

The Minutewomen will conclude their three-game road trip at New Hampshire Wednesday.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

Members of the Minutemen celebrate a goal by junior Anthony Biscardi against the Buckeyes on Saturday at Garber Field. No. 11 UMass is undefeated after an 11-9 victory and host Brown at Garber on Saturday.

UM holds off OSU Saturday

By Jay Asser
Collegian Staff

In its second matchup against a ranked opponent this season, the Massachusetts men's lacrosse team defeated Ohio State, 11-9, Saturday at Garber Field.

Despite suffering an early deficit, No. 11 UMass (3-0) buckled down on defense to limit the attack of the No. 13-ranked Buckeyes (3-1).

UMass	11
OSU	9

"I think both teams were pretty sloppy today, [there were] a lot of turnovers," UMass coach Greg Cannella said after the win. "I know [I saw] way too [many] for my taste on our side."

The Minutemen had 16 turnovers, compared to 18 by Ohio State. In the first quarter, especially, Cannella felt his team was pressing on offense and rushing possessions, which put the team in an early hole. While the attack responded in the second half, the defense was tested heavily.

"I thought today we put a lot of pressure on our defense," Cannella said. "We turned the ball over too many times. We had to rely on our defense to be so solid, and you can't do that to those guys all the time."

Overall, UMass received goals from seven different players, including four who notched multiple scores.

Freshman Connor Mooney scored two goals for the first scores of his collegiate career. Following two goals by the Buckeyes midway through the fourth period, Mooney responded with his two scores in a span of less than a minute to give the Minutemen an 11-7 lead.

"He hadn't been able to do that the previous two games, but he did a nice job inside and, fortunately for us, he finished them off," Cannella said of Mooney's performance.

After playing well in the first two contests of the season, Mooney felt more comfortable in the offense and was able to finally capitalize on his scoring chances.

"[I] definitely had some nerves the

Minutemen show resilience

Come-from-behind victory pays off for Cannella and Co.

By Stephen Seluner
Collegian Staff

After falling behind, 2-0, on Saturday, it appeared the No. 12 Massachusetts men's lacrosse team would have to pull out a come-from-behind victory, much like it did in a 14-10 win over Hartford a week earlier.

Trailing Hartford, 7-5, at halftime, the Minutemen came out in the second frame and dominated en route to a 14-10 victory.

"Right after we went down 2-0, all the guys kept saying, 'We've been here before, we can do it, we can come back,' and we were able to do it," freshman Connor Mooney said.

The No. 12 Minutemen (3-0) were not fazed by No. 15 Ohio State's fast start, stringing together three-consecutive goals of their own to seize momentum, which appeared to be a running theme throughout the game at Garber Field.

"This game is a game of momentum," UMass head coach Greg Cannella said. "It's hard to hold on to it."

The Minutemen got on the board with six minutes, 40 seconds remaining in the first period in what appeared to be the turning point of the game.

In desperate need of a score, sophomore Colin Fleming's errant pass was mishandled by senior Ryan Hantverk, resulting in a mad rush for the ball by both teams at the edge of the Minutemen offensive zone. Fleming scooped up the groundball and found junior Anthony Biscardi behind the collapsed Buckeye defense for the score to help sway the energy in favor of the home team.

"I think that was a real big [swing of] momentum," Fleming said. "Getting the first goal off a scrappy play like that is UMass lacrosse at its best."

The momentum did not end there, as Art Kell netted a pair of consecutive goals to help UMass grab its first lead of the game, erasing OSU's strong start.

UMass was fortunate the deficit was limited to just two, as goalkeeper Tim McCormack denied multiple bids by the Ohio State attack to build on its early lead.

"That's why your goalie's back there," Cannella said about McCormack's clutch performance. "I think he expects [making big saves] more than we expect it."

With the Minutemen holding a 5-3 advantage at the break, the Buckeyes stormed out of the locker room with a vengeance, knotting the score at five apiece after goals by Logan Schuss and Jeff Tundo.

Once again, though, UMass had an answer.

See COMEBACK on page 6

MARIA UMINSKI/COLLEGIAN

Sophomore Colin Fleming celebrates a goal with a teammate in the win against OSU. Fleming had two goals in the victory.

JEFF BORNSTEIN/COLLEGIAN

Senior Anthony Gurley drives to the basket in a victory over Saint Joseph's last week. Against La Salle on Sunday, Gurley was held to a season-low four points in a Minutemen defeat.

Win streak snapped

By Herb Scribner
Collegian Staff

The Massachusetts men's basketball team's climb out of a four-game slump took a serious hit against La Salle yesterday.

On the road against the Explorers (13-16, 5-9 A-10), the Minutemen (15-12, 7-7 A-10) fell, 72-51, in its worst loss in conference play this season. Senior guard Anthony Gurley had his lowest scoring performance of the season, notching just four points.

UMass	51
La Salle	72

"La Salle – from the… second the ball went up, to the last second on the clock – outplayed us," UMass coach Derek Kellogg said.

Sunday's performance saw a complete failure from the Minutemen offense. Gurley – who had started to rise out of his shooting slump in his past two contests – was held to four points against the Explorers.

Similar to how the team had performed during its previous four-game skid, guard Jesse Morgan (eight points) and forward Raphael Putney (nine points, five rebounds) raised their games to lead the team.

Other than Putney and Morgan, little could be said about the UMass offense that went 17-for-57 from the field, including shooting below 26 percent from beyond the arc.

Freddie Riley also made his return to the court, scoring seven points in 16 minutes. Riley couldn't catch fire though to bail out the sputtering offense.

"[La Salle] made us really take bad shots on the offensive end," Kellogg said.

Another ingredient contributing to the loss was turnovers. La Salle scored 19 points off turnovers, compared to the Minutemen's four points.

Defensively, the Minutemen couldn't get things done, as La Salle had four double-digit scorers in Aaric Murray (16 points), Jerrell Williams (14 points), Ruben Guillandeaux (12 points) and Earl Pettis (11 points).

The Explorers also nabbed more rebounds than the Minutemen (57-33), which included La Salle grabbing 24 offensive boards to help them score on second-chance opportunities.

Additionally, UMass couldn't rely on its typical strengths. Throughout the season, the Minutemen and their scorers have found ways to put in points from the paint. Sunday's game saw the opposite, as the Explorers had a 24-14 edge in the paint.

Right after Pettis' 3-pointer and less than a minute into the game, the Minutemen fell victim to La Salle's offensive wrath. By the end of the first half, the Explorers had nearly doubled UMass' point total, leading 48-25 at the break.

Despite their efforts, the Minutemen couldn't find a way to mount a comeback.

"There wasn't one thing that we tried… we never could just get over the hump and make that run," Kellogg said.

The second half was slightly better for the Minutemen, as the Maroon and White outscored the Explorers, 26-24, with 13 points coming from bench players. A deficit which had been at 24 points in the first half was downed to as little as 14 in the second after a 9-0 UMass run which featured a pair 3-pointers from guard Gary Correia and a 3-pointer from Gurley.

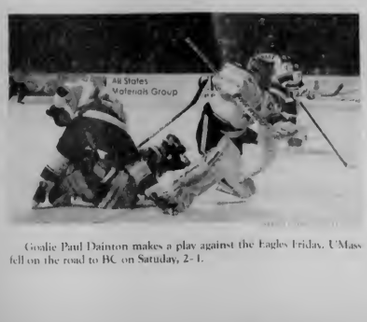
However, the Explorers came right back with a 23-6 run to finish out the game, a run that included an 11-0 push by La Salle.

The loss doesn't paint a pretty picture for UMass, which takes on No. 24 Temple Wednesday.

"We're going to have to regroup and get ready for a tough Temple team on Wednesday and see if we can play a little bit better," Kellogg said.

Whatever the result may be, Wednesday's game is the Minutemen's final home game of the regular season and will also be senior night at the Mullins Center.

Herb Scribner can be reached at hscribne@student.umass.edu.



Goalie Paul Dainton makes a play against the Eagles Friday. UMass fell on the road to BC on Saturday, 2-1.

Cahoon & Co. drop pair on the weekend

Dan Giglotti
Collegian Staff

The final spot in the Hockey East tournament remains uncertain after the Massachusetts hockey team dropped two games this weekend to Boston College.

A Minutemen rally attempt on Friday fell just short in a 4-3 loss to the Eagles (24-7-1, 18-6-1 HEA), in the first game of a home-and-home series at the Mullins Center.

On Saturday, the Minutemen (6-20-5, 5-15-5 HEA) lost 2-1 at the Conte Forum, their fourth consecutive loss by one point.

Despite the two losses, the Minutemen (15 points) remain in eighth place in the conference standings, two points ahead of ninth-

Noisy weekend for the APD

Police arrest numerous students for noise violations, fighting

The Amherst Police Department handed out some $4,800 in fines to local young people last weekend for violations of the town's noise, nuisance and alcohol bylaws, the Daily Hampshire Gazette reported Monday. Police broke up a number of major house parties at residences across the college town, including one party Saturday morning where five 20-year-old female University of Massachusetts students were arrested at 19 Farview Way and another Friday evening at 51 Pine Grove where four young people were issued $300 noise tickets.

Amherst police told the Gazette they broke up the party at 19 Farview around 12:30 a.m. after receiving a second noise complaint in under an hour from a neighbor with two children who were apparently awoken by the noise coming from the house. In addition, the Gazette reported that police said they observed several taxis full of young people arriving at the house. Five female UMass students were arrested and charged with violations of Amherst's noise bylaw. They are Shannon Maura Keaveny (UMass), of Canton, Allyson Marie McGill, of West Falmouth, Kylee D. Reardon, of Norwood, Victoria Holly Rogers, of Medfield and Jaclyn Lee Tenanes, of Westborough.

Another home where police made several visits also resulted in multiple violations.

Twenty-one-year-old UMass student Ted Bates Miller, a Phoenixville, Pa. resident, was arrested just after 10:30 p.m. Friday evening on APD's first visit to the resident at Pine Grove. Police were called back to the home around 2:30 a.m. Saturday morning after further reports of loudness. On their second visit, they issued three summonses to Eastern Hampshire District Court for noise violations.

Several other students were also arrested on noise bylaw violations. Michael Magnell, a 21-year-old from Weymouth, Mass., was arrested for a noise violation just after midnight Saturday on East Pleasant Street. Joshua Monica, a 19-year-old from Milford, Mass., who lists himself on his Facebook page as a student at the University of Maine was arrested at a party at 594 East Pleasant St. on charges of possession of a Class C substance, being a minor in possession of alcohol and resisting arrest. At that party, which Amherst Police claim had over 125 people in attendance, a 21-year-old Dedham, Mass. man was issued a summons to court for a violation of the town's nuisance house bylaw. The names of those issued summonses to court are not released until their appearances.

In addition to the noise and party infractions, police dealt with a spate of fights outside downtown bars late Saturday and into Sunday morning. At 1:19 a.m. Sunday, UMass students Antonio Paul Monteiro, 20, of West Wareham, Mass., Shea William O'Neil, a 23-year-old Westfield native, and Jared Joseph Vasconcelos, 20, of Wareham, were all arrested on charges of disorderly conduct and resisting arrest. Monteiro was also charged with failing to disperse from a riot. Police

The Amherst Police Department may have needed to deploy vehicles like this one after logging a busy weekend, arresting multiple students and ending parties.

Graduate School Preview 2011

GRE to be revised to make format more user-friendly

By Sam Butterfield
Collegian Staff

The Graduate Record Examination (GRE), the standardized test which many graduate programs use in admissions similarly to the way colleges use the SAT in evaluating applicants, is undergoing a series of changes which will go into effect Aug. 1.

According to its site, the exam, administered by the Educational Testing Service (ETS), will be designed in a more user-friendly manner and will provide test-takers a more comfortable, aesthetically-straightforward presentation. The Web-based exam will seek to provide would-be grad students "a friendlier, more flexible test design that gives [students] the freedom to use more of [their] own test-taking style and strategies."

In addition, the revised test will incorporate a variety of new features including an on-screen calculator intended to assist students with the quantitative reasoning section of the exam, preview and review functions in each section of the test meant to allow students to review their responses before they submit, a "mark and review" function allowing exam-takers to tag and come back to questions giving them trouble, the ability to edit answers they've already marked and new sets of questions intended to "better reflect the skills [students will] need for graduate and business school."

The changes will also encompass a newly-designed format for responses, "including tasks such as numeric entry and highlighting a sentence in a passage to answer a question," and a final change intended to force students to rely less on vocabulary on its own, out of context in passages, longer passages intended to provide greater clarity, and the elimination of antonyms and analogies.

Beyond the elimination of vocabulary out of context, the GRE will now feature text completion questions examining students' "ability to interpret, evaluate and reason from what [they]'ve read," new sentence equivalence questions testing students' aptitude at reaching conclusions on "how a sentence should be completed while focusing on the meaning of the whole sentence," and more reading comprehension questions, including new kinds of such questions, "such as selecting multiple correct answer choices instead of just one, or highlighting a sentence within a reading passage to answer the question."

The quantitative reasoning section of the exam will remain largely the same, but will place "increased emphasis on data interpretation and real-life scenarios."

In anticipation of some potential complications stemming from the revision, ETS has launched a new free

Select Board approves relocating Precinct 1

By William Perkins
Collegian Staff

A North Amherst church that had until recently been part of the town's voting process will once again be designated a polling location.

Members of Amherst's Select Board last night unanimously voted to reinstate the North Congregational Church, located at 1199 North Pleasant Street, as the town's first precinct's polling place. Earlier this year, Select Board members voted to move the precinct from the church, which ceased having services late last year, to the Immanuel Luther Church at 867 North Pleasant Street — the same building where precinct three voters go to the polls.

Town Manager John Musante recommended the polling place be reestablished, noting he felt it was bit untimely of the town to have eliminated it in the first place.

"Changing that polling location was premature," said Musante.

Musante added that he feels the church could play a crucial role in the town's ongoing effort to strengthen community building in North Amherst village.

Select Board member Alisa Brewer questioned if keeping the precinct at the Immanuel Lutheran Church would have provided much of a cost savings.

"There would have been a minimal cost savings," said Town Clerk Sandra Burgess, who has oversight over the polling locations. "From my perspective, that wasn't a driving issue."

Member Jim Wald, who resides in North Amherst, said many people had contacted him raising concerns about the precinct moving.

In addition to taking up the polling issue, members also discussed with Burgess the upcoming prospect of redistricting Amherst's precincts, which is required of towns in order to comply with new population data released from the 2010 United States Census.

Burgess said the new data could require a new voting precinct to be added, since each can include just 4,000 residents. She added the town is required to submit a Select Board-certified redistricting review to the Massachusetts

In the Town Room at Town Hall last night, the Amherst Select Board approved reestablishing a precinct, discussed potential redistricting plans and endorsed discussions about the Gateway project.

Decoding the budget

Northampton's NPP promotes transparency

By Thomas Barnes
Collegian Staff

A Northampton-based organization is proving itself instrumental in decoding the federal budget. The National Priorities Project (NPP) "makes complex federal budget information transparent and accessible so people can prioritize and influence how their tax dollars are spent," according to its website.

Jo Comerford, executive director of the NPP since 2008, said the group hopes to "help people feel like the federal budget is their process and responsibility," and to make "often opaque documents more transparent."

The organization utilizes the Web in providing citizens tools to break down the complexities of the FY2011 budget. Despite the disconnect some citizens may feel with the inner-workings of their government, the group believes federal spending affects all Americans. The budget is not meant to be constructed behind closed doors, but well within the public eye, the NPP contends. The NPP hopes that by using its analytic metrics, Americans can become more informed and engaged with federal spending in order to understand it and affect its processes.

The differences between corporate and individual taxes are "not wisely understood," said Comerford.

"Most folks think that government spending is run amok, but it must be looked at from a revenue perspective," she said. "The impact of tax cuts on the wealthy will cost us $42 billion in revenue."

Recent cuts to corporate taxes are the result of policy, Comerford said, with most of the strain of funding the government placed on individuals.

"If we could channel more voices, we could see that the people want a federal government that cares more about its people, and budget proposals that reflect the true meaning of security."

The group has identified what it sees as several other disparities between where some think federal funds go and where taxpayer dollars actually end up.

"People have no real idea about how much the U.S. spends on the military," Comerford stated, adding that the budget is projected to spend 58 percent of its discretionary spending, or $728 billion, on the armed forces.

Instead of being directed towards social services like housing or education, the "extraordinary chunk of money" is funneled into the defense budget, so much that the U.S. accounts for "43 percent of military spending globally," Comerford said.

Comerford said she believes that as governments across the country crunch their reduced budgets, citizens are becoming increasingly aware of how federal funds are spent, citing the Wisconsin protests for and against reductions in pension and benefits for public sector employees, in particular.

"Wisconsin is a conversation about budget priorities, and a powerful implication of a growing awareness of budget decisions having local impact," she said. The NPP "can't keep up with demand, which speaks to a growing awareness of the budget and labor crises."

"The people want voices," Comerford continued.

Some of the tools on the organization's website include illustrative charts and graphs, showing trends in both the present budget and those of years past. One particularly informative page is the "Federal Budget 101" page, which outlines the governmental steps taken to complete the budget as well as outlining basic information on spending.

The NPP figures predict that federal spending in the 2011 fiscal year, beginning Oct. 1, will account for more than 25 percent of the GDP, projected to be around $3.8 trillion. A third of this is to be spent on social programs, another 20 percent to be invested in national defense, and just 3 percent will be devoted to various education programs and funds. During the same time, the government is expected to collect $2.6 trillion in revenues, most of which will stem from individual income taxes and social insurance receipts. Revenues from corporate taxes have declined over the past 50 years from 23 percent to just 7 percent, while individual income taxes have stayed relatively stable, according to the NPP's figures.

GRE revisions aim to boost user-friendliness

GRE from page 1

test-prep program, POWERPREP II, which gives students background on each section of the test, a test preview tool and a practice test. POWERPREP is available at the GRE's website, www.ets.org/gre/revised general.

In terms of the actual structure of the exam, little is changing. The computer-based revised GRE will be comprised of six sections and, according to the ETS, should take about three hours, 45 minutes to complete, not including several brief breaks. The test is composed of one analytical writing section composed of two individually timed writing exercises, two verbal reasoning sections, two quantitative reasoning sections and one un-scored section, which ETS' site says tends to be a verbal reasoning or quantitative reasoning section. The un-scored portion may appear at any time throughout the course of the exam.

Last, some test-takers may receive an "identified research section" which will not be scored. The analytical writing section will always be first, while the remainder of the sections will appear in no particular order, and an "analyze an issue," segment will be shortened to 30 minutes in duration from 45. In addition to the issue-analysis, students will be complete a 30-minute "analyze an argument" task, two 30-minute verbal reasoning sections composed of about 20 questions per section and two quantitative reasoning sections of 20 questions per section, each lasting about half-an-hour. There will be a 10-minute break following the third section and one-minute breaks between the other sections. To be sure the changes are fair for all, the ETS states on its site that, before making changes, the organization sought the "involvement of minority educators and representative committees in every phase of the development and scoring processes," put the test through "multiple fairness evaluations by trained reviewers," and ensured that they provided "rigorous training for all persons involved in the development or scoring of test questions to ensure that all examinees have an equal opportunity to demonstrate their skills and abilities."

To encourage students to take the revised exam quickly, the ETS is offering students who take the new version between Aug. 1 and Sept. 30 savings of 50 percent off the normal cost of the test. For those who need their scores before Nov. 1, the ETS recommends taking the old version. However, for students looking to save $80 off the normal cost of $160 to take the exam, signing up soon may be the best way to save.

Sam Butterfield can be reached at sbutterfield@dailycollegian.com.

Northampton group analyzes the budget

NPP from page 1

Though the income tax is progressive, in that those that make more pay a higher percentage of their income, revenue collected by social security is regressive, allowing the upper income brackets to retain higher percentages of their income than less wealthy individuals.

Jo Comerford is the executive director of the National Priorities Project.

The NPP formed during the Reagan era, when a founder and a member of the University of Massachusetts faculty noted that Massachusetts first congressional district was losing money and approached then Rep. Silvio Conte, who apparently had not thought about the local impact of federal spending. The NPP was founded thereafter to attempt to "decode" the federal budget and help citizens become more informed on the processes of their federal government. To find out more about the National Priorities Project and for opportunities to get involved, the group's website can be accessed at nationalpriorities.org.

Thomas Barnes can be reached at tbarnes@student.umass.edu.

Boards OKs precinct switch, talks Gateway

SELECT BOARD from page 1

secretary of state's office by June 15.

And, since next year is a congressional election year — and a congressional redistricting is slated to occur in the state — Burgess said the state will likely assist in helping the town speed up the process, so it can obtain the town's data as quickly as possible.

"[The state] will be working with us to try to expedite that process," said Burgess.

The town is also slated to develop a redistricting committee that would conduct much of the voting precinct research. It will consist of nine community members who each come from geographically diverse areas of the town. Select Board Chairwoman Stephanie O'Keeffe said the town will notify residents of the new committee, and will select members at a meeting in mid-March.

In other business, members last night also approved a document submitted by O'Keeffe that declares their support of the process occurring in the Gateway development project — a proposal between the town and the University of Massachusetts that would develop portions of the former UMass fraternity row into housing and other potential commercial enterprises. While the document does not issue a consensus in favor or against the development, it gives approval of the talks occurring, noting that much public input is being gathered about the proposal.

While four Select Board members voted to approve the document, member Aaron Hayden who is a member of the Amherst Redevelopment Authority, the committee spearheading most of the discussions — chose to abstain.

William Perkins can be reached at wperkins@student.umass.edu.

APD has loud few days

ARRESTS from page 1

Students Shea O'Neil (top left) and Shannon Keaveny and Allyson McGill (bottom) were arrested for noise violations. Antonio Monteiro was arrested for fighting.

said a crowd gathered downtown, someone threw a bottle into the group, and that police ultimately quieted the scene by using batons on one of the fighters to break up the scrum. One non-UMass student, Jeffrey Adam Dunlop, a 22-year-old from Westfield, was also arrested after the brawl.

Shortly thereafter, police broke up a fight involving two brothers, one an Amherst resident and the other a native of Springfield. At 1:36, brothers Joseph Ramond Lozada, 22 of 246 North Pleasant Street, Unit 3, and 25-year-old Emmanuel Lozada of Springfield were arrested and charged with disorderly conduct and resisting arrest after allegedly attacking an unidentified male who fled the scene and was never apprehended.

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

TUESDAY, MARCH 1, 2011

"If we don't believe in free expression for people we despise, we don't believe in it at all." Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

The problem with arguing ad hominem

Matthew M. Robare

It there's one thing I enjoy more than anything else, after pancakes and improvisational comedy, it's a good, intelligent debate. That's one of the reasons I've risen to be editor of this section. There is nothing wrong with criticism or argument, but two columns I've written this year have led to emails and comments that insult me personally and then treat the insult as an actual argument-winning point.

Debates are not won by insult or obfuscation and name-calling is not an argument. In logic these are known as arguments "ad hominem" or "poisoning the well." Many of you reading this, I'm sure, will recognize what I'm talking about as the Chewbacca Defense.

An ad hominem argument is a fallacy where the debater uses a real or perceived characteristic of their opponent to attack their points. A person is perfectly entitled to believe that Sarah Palin is stupid, but to say that "Sarah Palin is stupid, therefore her position on taxes is wrong" is fallacious because it's a personal attack on her instead of addressing her position.

Debates are not won by insult or obfuscation and name-calling is not an argument.

The poisoning the well is an attack where a debater belittles an opponent in a way that makes the argument unfair, possibly by implying an ulterior motive for their position. I see this a lot among people who don't believe in climate change: they say that the scientists shouldn't be trusted because they get publication, grant money and fame from supporting climate change, therefore they're not actually interested in truth, only the perks – which isn't to say that the perks aren't valid concerns, they just have nothing to do with weather the science is right or wrong.

Economics is positively rife with poisoning the well. Marxists have been known to claim that capitalist economists are in bed with bankers, libertarians distrust economists employed by the government on first principles and Keynesians (or at least Paul Krugman) have ranted about how libertarians can't be trusted because they hold favorable opinions of secession and are therefore neo-Confederates who want to re-enslave black people. [sic]

So I was pretty dismayed by some of the responses I got to a column I wrote at the end of January – "To tase or not to tase."

Steve Tuttle, the Vice President of Communications of the company that makes Tasers (or someone posting as him), wrote "Dear Editor, I must admit I'm stunned how this story made it past [sic] any editing cycle. . . . What I question is how Mr. Robare's story was not fact checked and how his over-the-top statements were approved . . . an editor could have addressed most of this garbage. . . . I truly don't the full day [sic] it would take to provide the litany of data back to contradict Mr. Robare's rubbish. . . . It appears that the editor didn't even do cursory fact checking 101. I have to admit, journalism isn't what it used to be . . . Now, it's more like 'welcome to the land of pump the out [sic] trash and don't let any facts or science get in the way.'"

So Mister Vice President of Communications, Steve Tuttle, you insulted me in a public forum, questioned my integrity – which is the main value a journalist has, insultingly patronized me and outright refused to counter my points with any facts whatsoever. Way to go, sir. Way to go. The one thing you could have done to mitigate what in some European countries could be considered libel, you didn't do. That says to me that you can't refute my points, although I recognize that argumentation does not work that way.

I also got an email from Greg Meyer, a retired Los Angeles Police Department captain. He also refused to try and refute my points, but at least sent an interesting article on the issue of excited delirium, a medical condition frequently listed as the cause of death for people who have been tasered by police. It has happened so often that some civil rights activists wonder if it actually exists or if coroners concocted it to cover up for the police. The article was about the pathology of the condition, and so it only tangentially addressed those concerns.

But that can be seen on any news website. It's more disturbing when those techniques are used on the floor of Congress. There might be relationships between members of Congress and certain big banks, and those congressmen might vote for legislation that somehow favors the banks, but the mere existence of the relationship does not speak to the question of weather or not that legislation is good.

If the definitive philosophy of 20th century America was "Believe in yourself" then we are reaping what our parents sewed all those years ago. Many people have come to believe in only themselves. They have put themselves at the center of the universe and discovered that reality is now infinitely far away. I wouldn't have a problem with that, but my generation's stuck with the check.

Matthew M. Robare is a Collegian columnist. He can be reached at mrobare@student.umass.edu.

Planned Parenthood spreading social illness

Planned Parenthood, one of the largest health care clinics and the largest abortion provider in the United States, may loose its federal funding. It is a business. It is not, however, a charitable organization, as it is portrayed by its many supporters. Their services are not free, although they may be cheaper than regular hospitals.

Yevgenia Lomakina

According to the American Life League, Planned Parenthood performed 289,750 abortions in 2006. The number rose to 324,008 in 2008. However, the organization's website misleads in reporting that abortions constitute only 3 percent of its services. In reality, it performs about 23 percent of all abortions performed each year in the U.S. The organization is also engaged in a number of morally questionable practices, such as opposing parental consent laws. They also support prescribing abortion pills without a doctor's visit as well as the absence of ultrasound before abortion.

The problem, however, does not lie solely with Planned Parenthood or its practices. It lies within the values of contemporary American society where traditional values have widely been replaced with progressive thinking.

The problem, however, does not lie solely with Planned Parenthood or its morally questionable practices.

The notion that sex be regarded only within the institution of marriage has nearly disappeared in modern American culture. It has been replaced by an abundance of sexual activity. This was promoted by feminist movements as "female liberation" – women having the freedom to have sex with anyone, anywhere.

Ignited by the media and supported by many young females willing to become "liberated," the trend took off.

Sex has become a service, like any other, but without fiscal exchange or shame. It is no longer associated with love, marriage or a committed relationship. In too many cases there is no expectation of any sort of emotional attachment. This feat was not accomplished by the pressures of a "male-dominated" society, but rather by the women themselves.

They strive to keep up with being "modern" and "liberated." The contemporary American female is advised to collect five or ten lovers, risk sexually transmitted disease, (some of which cannot be prevented by standard protection, like birth control) or, in the worst scenario, get an abortion. With the easy accessibility of noncommittal sex, men have gained or recaptured the upper hand in relationships. Women, instead of acclaiming "sexual liberation" have received, at the least, a bad reputation.

What is worse is that many women seem proud of their exploits. Sexual columnists such as Natalie Krinsky, who wrote "Chloe does Yale" before contributing a sex column to Yale Daily News, have flaunted into the spotlight. This is not exclusive to college campuses. Jessica Cutler, a staffer on Capitol Hill, posted her sexual adventures online and, after being fired, cashed in by posing for "Playboy."

Today, sex with no strings attached is socially acceptable. If a young woman wears a promiscuous outfit to a party, then proceeds to drink and flirt excessively, she should not blame men for her downfall. She made a decision to dress a certain way, to consume alcohol and should be prepared to deal with the consequences. Far from being a victim of rape, she is a victim of her own choices. This is not to say that rape is inexistent. Sexual crimes should be punished to the fullest extent of the law.

Furthermore, young women are starting to become sexually active earlier, pressured by the media, peers or psychological convictions. Often, they are not ready to face the consequences. If they cannot be responsible, they should not be having intercourse. But this is not the message they're exposed to.

Abortion is also viewed in a different way. For many, it is no longer a last resort for victims of rape or in other emergencies. It is simply regarded as "Plan B." In a Planned Parenthood YouTube advertisement for the "morning after" pill, a woman states the scenarios in which the product may be useful.

"Accidents happen," she starts, and then cites a number of them. These range from carelessness to the grim suggestion that, "maybe you were forced." The ad ends with, "No matter how old you are if you are sexually active, it's always a good idea to have some emergency contraception on hand ahead of time."

However, the ad is misleading. It makes virtually no distinction between forgetfulness and rape. These should not be held to the same standard at all. Furthermore, the ad seems to encourage sexual intercourse at any age; all that is needed is birth control. Throwing condoms at the public, a method often used by Planned Parenthood, is ineffective.

More contraception does not translate to fewer abortions. Parents should stop relying on exterior organizations to provide their children with sex education. Instead, they should look within the family structure. If sex is presented to young people in a proper and moral context, then unplanned pregnancy would be less of a problem.

The diplomacy of economics

Diplomacy and statecraft are some of the most intriguing, if not the most aggravating, aspects of contemporary politics. They afford one the opportunity to step outside of the conventional hothouse of domestic politics, whose excesses overwhelm, at times, even the humble author of this column. Instead, diplomacy affords both the tentative newcomer and the experienced strategist the chance to excel in a test of cunning, intrigue and strategic aptitude on a truly global scale. This is especially important in our age of instant communication.

Dan Stratford

However, diplomacy and the advancement of one's national interest therein, are more than just contentious negotiations between nation-states. Diplomacy often embodies other realms of international affairs, most notably in the case of armed conflict. However, there is another facet of diplomacy that is often overlooked, but has always played a crucial role in how the diplomatic game is played – that of economics.

Carl von Clausewitz, the Prussian officer and great military theorist, once famously asserted that, "War is not merely a political act, but also a political instrument, a continuation of political relations, a carrying out of the same by other means." It is imperative to consider economics in the same vein, both historically and especially in our contemporary world of globalized trade. With the rise of the rapidly developing countries such as Brazil, Russia, India and China, the importance of economics as leverage in diplomacy and world affairs cannot be ignored.

In order to view the diplomatic stage in a truly comprehensive manner, one must appreciate the physical relation of economics with statecraft. The great empires of history, from Rome to Britain, not only emphasized prudent internal economic policies, but also encouraged trade and the opening of markets that would benefit their national interest.

History has proven that no nation can rise to the status of a great power without some degree of central economic guidance and external economic influence over its neighbors and adversaries. The early United States is a particularly prodigious example.

History has proven that no nation can rise to the status of a great power without some degree of central economic guidance and external economic influence over its neighbors and adversaries.

Many schoolchildren are infused with the idea that George Washington and his administration were the epitome of human virtue, devoted solely to the moral and political development of the early United States. In fact, many of Washington's legendary musings, especially from his inaugural address, were inclined to pragmatic foreign policy objectives.

Washington's famous call for American neutrality in the continuing war between Britain and France was not merely to keep the infant United States unvisited by another war, but also to "bait and bleed" the British and French to weaken them both. This would ensure not only that the United States would be able to export to both nations and their allies despite their warlike state, but also that the American economy would be infused with much-needed capital and subject to growth, paving the way for it's rise as a great power.

The Monroe Doctrine possessed philosophical underpinnings that students of economic realpolitik would readily recognize. Most Americans are taught that the doctrine was a noble anti-colonial design of James Monroe's administration. The reality is much different. The author of the doctrine, then-Secretary of State John Quincy Adams, was seeking to ensure that the American economy could have readily available markets in the western hemisphere, fueling the growth of the new Republic.

Fast forward roughly two and a half centuries into the future, then one can see that the maxim of political influence via economic might is still alive and well. Already, we are seeing the rise of a bloc of nations who, through shrewd management of their economies, are rising to preeminence in world affairs.

This bloc is comprised of the aforementioned BRIC nations, whose rising influence in the world is evidence of a multi-polar future. Although abundant evidence exists for each of these nations to vindicate the thesis of this piece, China is of particular interest.

It has asserted its economic might in a method similar to that of our Founding Fathers, realizing that economic concerns were inextricably intertwined with military and diplomatic matters.

Cheap labor, a comparably undervalued currency, strong investments in infrastructure and adroit management of domestic production, are all factors that have contributed to China's rise as an economic powerhouse, and, consequently, as a modern great power. That economic might can be readily translated into political might is made evident by the ability of the Chinese government to influence American domestic politics and ensure its continued export hegemony through the acquisition of vast reserves of American dollars.

The influx of foreign capital into China has contributed to the modernization of the Chinese military, with a new Chinese stealth fighter, the J-20, introduced upon a recent visit by Secretary of Defense, Robert Gates to China.

All of this makes evident the fact that economics is not just a matter of individual rights in an open global market, but a potent agent of foreign policy and an effective vehicle of national interest. The rise of the BRIC nations has made evident the fact that unfettered individualism may sound great on the local talk-radio show, but that such dogmatism will not afford the United States the edge it needs in a quickly-diversifying club of great powers. Rigid individualism or a mental separation of economics from politics did not elevate the BRICs to rising-power status. Neither did it build the United States into the great and prosperous Republic it is today.

Farrelleys' 'Hall Pass' at top of its class

"Hall Pass," the latest film from the Farrelly brothers stars Owen Wilson (pictured, right) and Jenna Fischer in a comedy that is just as much about laughter as it is life lessons.

By Acacia DiCiaccio
Collegian Staff

"Hall Pass" follows the lives of two everyday middle-aged men with beautiful wives who cannot help but gawk at every attractive woman that walks by. After a series of hilarious events that bring the wives to their wits ends, they choose to grant their husbands hall passes - a week off from marriage.

Rick, played by Owen Wilson ("Wedding Crashers") is married to Maggie, (Jenna Fischer, Pam from "The Office") and their children have gotten in the way of their intimacy. Meanwhile, Rick's best friend Fred, played by Jason Sudeikis of "Saturday Night Live," has gotten into the habit of taking care of himself at night in his van while his wife Grace (Christina Applegate from "Married with Children") pretends to be asleep.

Despite the over-the-hill plot of the movie, it is relevant and comedic to anyone who can laugh at a well-crafted sex joke. The film undertakes the fantasy that many people in relationships dream about - the chance to be unfaithful to a partner without any consequences. As can be expected, things quickly become complicated and the movie uncovers many different aspects of marriage and faithfulness.

"Hall Pass" is refreshing in it's notably toned-down humor, which is in no way like the over-the-top slapstick that seems to be the only thing Hollywood cranks out lately to rake in the outrageous ticket prices. Directed by Bobby and Peter Farrelly, "Hall Pass" proves to be a step up from their previous works, such as "Dumb and Dumber" and "Me, Myself & Irene."

Along with falling-out-of-your-seat laughter, this movie also illustrates a few lessons about relationships. Though it may appear that "Hall Pass" is just another "Hangover," this movie exceeds expectations when it has the audience still laughing long after the jokes have ended.

"Hall Pass" is not for the easily offended or the strict feminist, however. Complete with crude humor and plenty of nudity, this would definitely not be a movie see with your parents over spring break. Although you would both enjoy the movie's premise and belly laughs, it would most likely be terribly awkward. This movie points out the typical misunderstandings of marriage, and could be offensive to some women if they can not tolerate stereotypical lymale humor.

The soundtrack to "Hall Pass" deserves some extra credit. Generally in the comedy genre, soundtracks are rather ignored. However, "Hall Pass" chooses some surprising tracks, including songs by indie artists Deer Tick, Pete Yorn and Akron/Family and Empire of the Sun. This added benefit illustrates that the Farrelly brothers did not merely throw a movie brainlessly to make money at the box office. It is also clear that, through the soundtrack, the Farrelly's are attempting to connect with the younger, college-aged crowd as well as the middle-aged adults that can relate to the film's scenario.

"Hall Pass" is a movie worth spending your money on if you are looking to have a good time and induce a lot of laughter. Make sure to sit through the credits, as film''s finale leaves moviegoers with a permanent grin.

Local Gallery impresses

By Amy Larson
Collegian Correspondent

Little Chicopee, Mass. hosted the big sound of indie folk rockers The Gallery Wednesday night at this sports bar/music club Maximum Capacity. The band was promoting their new EP, "Come Alive," which was released Feb. 22. Max Cap was packed with family and friends of the four-member group, as it was somewhat of a hometown show for the Wilbraham, Mass. natives.

Brothers Brendan (lead vocals/guitar) and Ryan Cooney (drums) formed the core of the band when they started jamming together in their teens. Fellow Minnechaug High School friends Shea Brennan (lead guitar) and Dave Mozdzanowski (bass guitar) completed the group, and The Gallery was opened.

It wasn't until 2007, when Brennan and Brendan Cooney graduated high school and moved to West Palm Beach to join the other band members, that the music really started blasting. The band members then got to work and released its first full-length album, "If You Know What I Mean" in 2008.

"If You Know What I Mean" was enough to gain the attention of indie rock band Showbread, who offered The Gallery the opportunity to accompany them on tour. Jumping on this lucky shot, they took to the road for two months in 2009 and played 50 shows.

The four reminisce about all of the diverse places they got the chance to see on their first tour, recalling Colorado as the best place to drive through.

"You can say we're outdoorsy guys," Brennan said as the group expressed their appreciation for Colorado's scenery.

Post-tour, they found permanent residence with their manager in L.A. and got back to writing and recording. On the west coast, the band scored another integral opportunity and returned to the studio with acclaimed producer Warren Huart.

"We liked the raw, natural sounds [Huart] created for The Fray and Augustana and wanted to achieve something similar for the EP," explains Brennan. The results are in , and "Come Alive" is an expressive, organic five-track production that offers everything from catchy blast-the-radio tracks to pensive, slower tunes.

When The Gallery climbed onstage at 10:30 p.m., the audience literally gravitated toward their high-spirited sound. As they opened up with "Catalyst," from the new EP, Cooney's perfectly articulated vocals reminded everyone how well-worth the wait that night was. From the beginning, it was clear that the band takes root in the strength of the younger Cooney brother's singing talents.

But there was far from a shortage of talent amongst the other three band members. Lead guitarist Shea spewed out impressive bridge solos on his semi-hollow bodied guitar. His crisp lines meshed well with The Gallery's energetic drumbeats. The drummer (and elder Cooney) Ryan effortlessly transitioned from rapid-fire cymbal and snare action to slower rhythms throughout the set. Adding the final, smooth touches were the steady bass lines and back up vocals of Mozdzanowsk.

Though each of the four are talented in their own right, which they showcased separately at times, The Gallery's true talent lies in the fusion of these four musical entities. Their sound is hopeful, polished and complete. Though their tunes are catchy, they aren't unoriginal. This band is a force of likeable melodies that stays a cut above the rest. As they performed their carefully constructed songs, the reverberating guitar lines matched the echoed vocals perfectly and funneled through the open space.

An easygoing group, they announced mid-show that they didn't compose a set list for the nights show because it's not the type of people they are. The group visibly enjoyed being with each other on stage, especially brothers Ryan and Brendan, who worked off of one another with ease. Brendan kindly expressed gratitude for the crowd's support after nearly every song.

The crowd loved what they heard. Fans sang along during the popular "Life Is Strange" and enjoyed the spontaneous cover of Tom Petty's "The Waiting." The cover fit well with the set, as Tom Petty and other 80s and 90s bands make up The Gallery's main influences.

Their new track, "Ballroom of Broken Hearts," also resonated deeply through the room with its addicting melody and compelling lyrics. When they closed the night with "The Lonely Disease," it was clear that Brendan was born to sing the ballad. No audience member was unaware of the honesty in his voice, a voice unparalleled in artistry.

But even after The Gallery reluctantly left the stage, fans stuck around because there was something else to talk about, besides the success of the night's performance. The group is currently one of 16 semifinalists in the Rolling Stone Magazine Choose the Cover competition. The guys didn't even know they had been entered until they were informed that they were semifinalists. At stake for the winner of the competition is a recording deal with Atlantic Records, a performance at Bonnaroo Music Festival, and the fame of becoming the first unsigned band on the cover of Rolling Stone.

The Massachusetts rockers have big hopes for this competition, as it can open a lot of doors for the band. In the near future, they hope to advance to the next group of eight semifinalists by gaining fan votes online. Moving ahead will mean networking with music execs and Rolling Stone editors. Beyond that, they'd like to get on a label, record more, tour more and repeat. Not a bad life for a bunch of college aged- kids.

Amy Larson can be reached at alarson@student.umass.edu.

Local band The Gallery, in the running to be the first unsigned band on the cover of Rolling Stone, performed last Tuesday at Chicopee's Maximum Capacity.

ABC, NBC welcome the return of 'Must See' prime time TV

Steve Carell (pictured) stars in NBC's hit comedy, "The Office," prominantly featured on the network's Must See TV Thursday block. The evening also features "30 Rock" and "Outsourced."

By Naychelle Lucas
Collegian Correspondent

How many times have you heard, said or thought, "There's nothing good on TV." Whenever there isn't a new episode of "The Jersey Shore" or "Keeping up with the Kardashians", it seems like there is no reason to turn on your TV during prime time, but Must See TV has returned.

Back when the slogan was introduced by NBC in the 1990s, "Must See TV" dominated the ratings and pop culture. For years, Thursday night prime time was the place to be. Millions of people tuned in and, for the first time, TV stars of scripted sitcoms like "ER," "Will & Grace" and "Friends" were more popular than musicians or movie actors.

Thursday night was not to miss. Everyone remembers anxiously awaiting the end of the week, being glued to their couch and fixated on their TV, watching Ross and Rachel or Will and Grace. Then, with the emergence of new shows like "CSI" and "Survivor," one by one comedy favorites were given the ax and it seemed liked prime time would never be the same again.

But, oh happy day, Must See TV has returned and it's better than ever.

The classic front-runner for scripted comedies, NBC has reclaimed its throne and returned the gift of smart, fun and downright hilarious. In January, the network reintroduced the three-hour comedy block to Thursday nights, six half-hour scripted comedies back to back.

The block is as follows:
8:00 p.m. "Community"
8:30 p.m. "Perfect Couples"
9:00 p.m. "The Office"
9:30 p.m. "Parks and Recreation"
10:00 p.m. "30 Rock"
10:30 p.m. "Outsourced"

In addition to NBC's Thursday night block, ABC has introduced its own comedy block on Wednesday nights. That's right, not one, but two nights of comedy.

The ABC block is:
8:00 p.m. "The Middle"
8:30 p.m. "Better With You"
9:00 p.m. "Modern Family"
9:30 p.m. "Mr. Sunshine"

With these two nights, you now have one more reason to skip doing your homework.

On NBC, "Community," "The Office," "Parks and Recreation" and "30 Rock" continue to be genius. Smart, witty, sharp writing, complex character relationships, and hilarious plots more than justify the countless number of Emmys and other awards they have won. When you watch NBC Thursday nights, you're getting your favorites like Steve Carell, Tina Fey, Aziz Ansari and Amy Poehler at their best. This alone is reason enough to watch.

On ABC, an okay episode of "Modern Family" is better than a great episode of most shows. If you are not already watching, embarking on this series is a great way to fill the black hole in your life. "The Middle" and "Better With You" are also strong shows that have gotten great reviews. "Cougar Town" is on hiatus until April and in its place is a new comedy, "Mr. Sunshine."

Like NBC's newbie's, "Perfect Couples," "Outsourced," and "Mr. Sunshine" arn't in the must watch category just yet.

"Outsourced" a comedy about an American manager for a novelties company who is relocated to India, is not only unfunny, but sometimes downright offensive. Each week you are supposed to believe the Indian employees at this company are so ignorant to American culture that the only person who can teach them is this half-hearted American man. Hopefully this one gets chopped off the block and soon.

When it first premiered, "Perfect Couples" seemed like just another relationship comedy with the typical "men are from Mars women are from Venus" premise. Since the pilot, the show has been redeeming itself little by little, mostly because of actor Kyle Bornheimer, whose comedy is a refreshing and funny relief from the other outrageous and sometimes downright cartoonish couples.

Lastly, ABC's, "Mr. Sunshine" marks the return of prime time alum Matthew Perry. In the workplace comedy, Perry plays Ben, the manager of the San Diego Sunshine Center. The pilot, to put it kindly, was not so good. Ben's personality was as dark as the setting of the center in which he works at. However, one should stick with it. Perry and the writers have listened to audience feedback and improved the show. Last week's episode was actually funny, and it's probably only going to get better from here.

Naychelle Lucas can be reached at nllucas@student.umass.edu.

Cage rage steers 'Drive Angry' to success

Nicholas Cage's latest film comes to viewers in 3D, as the silver screen veteran takes on the role of Milton in "Drive Angry," embracing the action and comedy that ensues.

Christopher Gross
Collegian Correspondent

"Drive Angry 3D" is strictly for those interested in exploitation and Nick Cage rage. Anyone familiar with 2006's "The Wicker Man" should expect a very similar performance from Cage. The best comparison to his angry side might be to that of a five-year-old's temper tantrum.

Cage's character has a know-it-all attitude that is just as awful as it is genuinely hilarious. Right off the bat, distorted guitars wail after every line Cage's Milton delivers, which he does with as little emotion as possible.

As he goes on his romp from the gates of hell all the way to the Deep South to save the world from a devil cult, exploitation is the name of the game.

Misogyny is in full force in the film, and only adds to the hilarity of the film's exploitation. Milton awkwardly grabs a skanky waitress by the neck, brings her to his mouth, and kisses her, which she seems very happy to do.

As if this scene isn't outrageous enough, Cage breaks it up by sipping his coffee mid-kiss, the very coffee she's given to him, and critiquing how it was made. He wanted it black with sugar.

There is a scene where Milton shoots and kills about eight men while smoking a cigar, drinking whiskey and having intercourse with a woman, all in slow motion. The exploitation is crude, hilarious and ultimately one of the most-welcomed aspects of the film.

The movie feels like a strange adaptation of a graphic novel, almost like an angrier, gorier mix between Ghost Rider and the Dukes of Hazard.

As the title suggests, the 3D effects are all over the movie, which is a very good and natural thing, as the film was shot entirely in 3D. Coins get flipped, stakes get thrown, bullets get shot, all coming out at the audience in the most cliché fashion that 3D has ever offered.

Mixed with the gratuitous amount of one-liners and slow motion makes for a film that is constantly offering laughs at its own expense, no matter how much drama or action there is on screen.

Despite Cage's prominence in the film, there are other characters worth noting. Amber Herd plays Piper, the film's Daisy Duke. She doesn't necessarily help the film in any way, but doesn't really hurt it either. She's Milton's straight man, a character who gets to react to all the ridiculous shenanigans going on around her.

More notable is the performance by William Fitcher. He plays the roll of "the Accountant," who's after Milton and has super natural powers. His character is like a take on Christopher Walken's role in Fatboy Slim's video for "Weapon of Choice." His cool demeanor and infallibility might make him the only character that might be able to transcend the shtick. He plays his part very successfully and adds a whole new level of personality to the film.

At the end of the day, this is a film for fans of campy Cage. The only shame with "Drive Angry" is that many might not be familiar or comfortable with Cage's over/under acting and could be really put off that the savvy action movie they were hoping to see isn't what they were expecting. While the movie does deliver in terms of explosions, which happen every five minutes, it also delivers in terms of comedy.

Jeff Bernstein Collegian

After suffering five-straight losses in its West Coast road trip, the Minutewomen will head to Georgia as they look to bounce back against Penn State and UAB in a friday doubleheader.

Plourde, offense not able to spark UMass

UMASS from page 10

Game 1 of Sunday's doubleheader saw the Minutewomen drop their fourth game of the weekend to No. 11 Texas, 3-0.

Longhorn pitcher Blaire Luna tossed a one-hit shutout, striking out 10 batters and walking one in the process.

Magill registered the only hit for UMass, a hard single through the right side of the infield in the third inning, but the squad was unable to generate anything from it.

Plourde threw seven complete innings and allowed five hits, two earned runs, walked six and struck out seven Longhorns.

In its last game on the west coast, UMass brought the tying run to the plate in the seventh inning before falling to Fresno State, 7-5.

Tiffany Meeks led the Minutewomen on offense, going 3-for-3 with a solo home run in the sixth inning and two runs batted in. Magill also homered on the day.

After leading UMass, 2-1, Caitlin Stiglich hit a grand slam to left-center field in the sixth inning, which gave the Bulldogs a 6-1 lead and put the game out of reach.

Plourde started the game but was replaced by Webster in the fourth inning, then re-entered the game in the fifth and pitched the final two-and-one-third innings. Plourde finished the game with 11 strikeouts and gave up six earned runs on four hits and two walks.

The Minutewomen dropped to 2-8 on the season and will travel to Georgia for the Buzz Classic next weekend where the team will look to get back on track.

Michael Wood can be reached at mswood@student.umass.edu

Competitors record high marks

NEC from page 10

The 4x400 relay team comprised of Aaron Araujo, Michael McDonough, Nick Otis and Paul Grafov finished ninth with a time of 3:20.76.

Grafov also took 10th place in the 500-meter dash with a time of 1:05.41.

O'Brien said that the sixth-place finish was about what he had anticipated for his team.

On the women's side, two athletes had second-place finishes. Perno tied the second-best all-time mark for UMass in the 1,000-meter race with a time of 2:51.47. Aguguo had a triple jump of 39-05.00; 10.25 inches shy of her best mark, which already stands as second-best all-time in school history.

The Minutewomen also received strong contributions from Michelle Jenssen and Deanna Julian, who with their performances in the 500-meter dash, both now hold two of the top five times in school history. Jenssen took fifth place with a time of 1:15.65 and Julian took sixth in 1:15.70.

"Friday was a rough day for all of this," Julian said. "The next day, great competition and we just really performed."

Another top performance for the Minutewomen was Karen Roa's third-place finish in the 3,000- meter run. The junior finished in 9:49.38, good enough for fourth-best all-time in UMass history.

Perno said that the last couple of weeks have a taken a substantial physical toll on the athletes and the team will be "easing it up" in preparation for the Eastern College Athletic Conference (ECAC) meet, which will be held next week in Roxbury, Mass.

Last week's "[Atlantic 10's] was definitely the roughest meet of the year," Perno said.

The men will also travel to Roxbury for the IC4A meet. Each team will send the athletes who have previously qualified for competition.

Eric Mansfield can be reached at eamansfi@student.umass.edu.

Courtesy Mass Media Collective

The Massachusetts men's and women's track and field teams will head seperate ways after competing in the NEC. The Minutemen will travel for the IC4A meet, while the Minutewomen compete in the ECAC meet.

UMass tops QU in Amherst

MINUTEWOMEN from page 10

of Yuliana Motyl and Chantal Swiszcz defeated the Bobcat's Rachel Cantor and Adrienne Markison, 8-4.

Dixon described her decision to remove sophomore standout talent Julia Comas from the No. 1 pair as, "an uneasy feeling, but necessary for various reasons."

"I thought that putting Chantal with Yuliana at the top could give us a different look. Julia's a great player and has been there for us to lean on all through the fall and this spring when we've been making some changes and she's been great for this team."

As a freshman, Swiszcz missed all of the spring season, but has come onto the scene this year to give an already deep UMass squad another weapon in the lineup.

"Chantal is a really gifted player and having another player out on the court that can play at any doubles pairing and in the bottom-half of our singles lineup is just really huge to have."

Senior Candynce Boney continued her rise through the ranks of the UMass program greats, winning both her singles and doubles matches Saturday. Before defeating Quinnipiac's Sarah Viebrock, 6-0, 6-0 in straight sets, she teamed up with new duo partner Tanisha Hodgson to claim victory in doubles, 8-4.

The Boney/Hodgson pairing was another change that Dixon made before the QU match, saying that, "Hodgson has really worked hard these last few weeks and I wanted to give her a shot to show me that she can be utilized in a different way with a different partner and she really came through for us."

Comas teamed up with freshman Jessica Podlofsky to claim victory against the Bobcats' Morgan Crystal and Bethany Huard in No. 3 pairing, 8-2. Podlofsky, who also won her singles match against Lisanne Steinert, 6-0, 6-0 in straight sets, has provided a lift for UMass this spring.

"Jessica comes to practice every day, ready to compete and play hard," Dixon said. "She's a real shot in the arm for us and I'm very happy to see that her competitive drive has pushed others on the team in practice. In order to get better, you need to work hard in practice every day, not just some days, but you need a player to exemplify that and Jess does it for us at such a young age."

The biggest progression from fall performance to now has been the game of highly-touted freshman Motyl.

The freshman came into the fall season battling illness and fatigue, desperately trying to not only find her collegiate game, but just her way onto the court. After a disastrous fall season, Dixon describes Motyl's development in her game as, "a complete 180-degree turn for the better."

"The fall was tough for her with adjusting, as well as battling sickness," Dixon said. "It all kind of caught her at the same time of coming into the program. It's hard to absorb so much of that as a young player coming into collegiate sports. But I knew how good she was and how even better she could be, so we were all patient with the process. Now, she's finally putting it all together like we knew she could and it's given everyone on the team a huge lift to see her at work."

Motyl's win against Quinnipiac's Cantor, 6-3, 6-4 in straight sets was her second singles win in her last three matches, as she continues to find her stride.

With things starting to click on all cylinders for UMass, Dixon believes that the best is yet to come.

"Now that we are starting to find our groove as a whole, things are really shaping up for us to have an interesting finish to our season," Dixon said. "I firmly believed that, with our talent, we were in contention to be a force for the A-10 title before the loss to Yale. I believe it even more now."

Scott Cournoyer can be reached at scournoy@student.umass.edu.

Sophomore Julia Comas serves in a match earlier this season. Comas and Jessica Podlofsky won in No. 3 doubles match, 8-2.

JED BURNSTEIN/COLLEGIAN

Pitcher Sara Plourde suffered a loss in the first game of the West Coast road trip to California. The junior went six innings, allowing five hits, four runs, two walks, while striking out 10 batters.

Minutewomen off to worst start since '08

UM finishes road trip with five-straight L's

By Michael Wood
Collegian Staff

The Massachusetts softball team closed out play in the Cathedral City Classic on Sunday and finished its west coast road trip with five consecutive losses.

The Minutewomen, who never lost more than three-straight games over the last two seasons, are off to their worst start since 2008, when they began the year with a 2-6 record.

In the first game of the road trip, the Maroon and White took on No. 14 California in a day-night doubleheader and fell, 4-0. The Golden Bears scored two unearned runs in the first inning and two more in the second were just enough to get past UMass and starting pitcher Sara Plourde.

Jolene Henderson shut out UMass and held the Minutewomen to only two hits at the plate. She allowed only back-to-back singles in the third inning and one walk while striking out 10.

Plourde went six innings, struck out 10 batters and walked two for the Minutewomen.

In the nightcap, UMass faced even stiffer competition in No. 7 Washington. The Huskies knocked the Minutewomen out of the NCAA tournament two years ago en route to a Women's College World Series title.

Plourde received the night off after pitching in Game 1 of the doubleheader and was replaced by freshman Lindsey Webster.

After leading the Huskies, 2-1, going into the third inning, UMass allowed eight runs, including two home runs to give Washington a 9-2 lead, which it would never give up.

Freshman Kaitlin Ingelsby pitched four no-hit innings to get the victory after entering the game with one runner on base and nobody out in the fourth inning.

Webster struck out 10 batters in six innings and allowed five earned runs on nine hits. She was replaced in the seventh inning by freshman Paige Hansen, who gave up a single and three consecutive walks. The Minutewomen quickly put Webster back on the mound and she closed out the game with back-to-back strikeouts.

A day later, the Minutewomen were again unable to find a groove on offense, dropping their third game to No. 19 Oklahoma State, 5-0.

The Cowgirls scored three unearned runs on just one hit in the first inning and followed up with one run in the fifth and another in the sixth.

Kat Espinosa went all seven innings for OSU, striking out four batters while scattering five hits and one walk.

Kyllie Magill led UMass on offense, going 2-for-3 at the plate. Plourde pitched seven innings, striking out eight and allowing two earned runs.

Dixon mixes lineups

By Scott Cournoyer
Collegian Staff

Six contests in a span of nine days can either spell a successful season or a recipe for a collapse for a team with not only high self-ambition to win, but high expectations and projections from the surrounding athletic communities.

Now that the ultimate grind of a trip, which saw the Massachusetts tennis team compete against four top-60 ranked programs in seven schools concluded over the weekend, the team remains very much in the hunt for an Atlantic 10 title. The squad was successful Saturday when it defeated Quinnipiac, 6-1 at home, notching four wins in its last five contests.

UMass	6
QU	1

"After our loss at Yale, I told the girls that this stretch coming up was our most critical point of the season," UMass coach Judy Dixon said. "This is where we either separate ourselves or collapse and as I thought all year long what we were capable of doing in times of crisis, we stood tall through adversity."

Doubles play has been a concern for the team all season, with Dixon mixing and matching countless combinations all through the fall, desperately trying to find the right duo of players that, in crunch time, would find a way to lean on each other.

As expected, according to Dixon before winter break, set-in-stone pairs were still going to be up in the air come the start of the spring season earlier this month. However, the coach has found a potential solution to maximize her teams' talent and bring out everyone's strengths at the same time.

On Saturday, all three doubles pairs for UMass won with ease, proving that the coach's careful calculations are now starting to pay off. The No. 1 pair

ALEX MOCHER/COLLEGIAN

Doubles team of seniors Candyvce Boney and Tanisha Hodgson paired up to defeat Quinnipiac, 8-4, on Saturday.

UMass teams capture fifth, sixth places at NEC in Boston

By Eric Mansfield
Collegian Staff

The Massachusetts men's and women's track and field teams came away with sixth and fifth-place finishes, respectively, this past weekend at the New England Championships in Boston, Mass.

Both teams recieved strong performances in the two-day meet, highlighted by senior Tyler Cotto in the 60-meter hurdles, junior Zachary Koncki in the long jump and Gina Perno and Stephanie Aguguo in the 1,000-meters and triple jump.

Cotto came into the meet having already been crowned the New England Championship champion in the same event last year. Cotto recorded a season-best time of 7.87 seconds, which depending upon other performances around the country, may be good enough to qualify him for the NCAA Indoor Championships.

"[Cotto] just blew the race open," UMass men's coach Ken O'Brien said. "He just ran a great race."

O'Brien went on to say that Cotto went into the race as the second-seeded runner and was going up against a few athletes he had been competing against all year. The runners had taken turns beating each other throughout the season, with Cotto coming out on top in the final heat on Saturday. Just behind Cotto was Sacred Heart's Bertony Jean-Louis, finishing with a time of 7.89.

O'Brien said that in the last two championship meets, the long jump, one of the earlier events in the program, has consisted of a solid one-two punch in junior Daniel Wu and Zachary Koncki. This year, Wu finished fourth in the event.

"When you get a start like that it really takes the pressure off the rest of the team," O'Brien said. "It sets the rest of the team at ease."

In the 4x800 relay, the Minutemen got significant performances out of three seniors, as Scott VanderMolen, Joseph Doyle and Sean Duncan finished second behind only Central Connecticut State.

Another member who had a strong outing was freshman Tom Mullen, who O'Brien said needed to have a superior performance. Mullen came through in the clutch, finishing with the second-fastest split of the afternoon at one minute, 54 seconds.

"It's not that you don't know what to expect, you know, you've got three veterans and a rookie, but you just hope all four come through," O'Brien said.

Hofstra beats Princeton with senior attack

By Matt Strong
Collegian Staff

In an early season conference matchup of highly-ranked Hofstra and Princeton, two senior attackers bombarded the net to give the Pride a convincing 11-9 victory. The senior attack of No. 7 Hofstra led to seven combined goals, four by Jamie Lincoln and three by Stephen Bentz.

Lincoln and Bentz each netted three first half goals with Lincoln's fourth goal and Hofstra's 11th coming with seven minutes, 16 seconds left in the contest. The Pride also received aggressive face-off play from sophomore midfielder John Antoniades. Antoniades picked up a personal game-high of nine ground balls and gained the advantage on 16-of-22 face-offs.

CAA Men's Lacrosse

Dating back to last season, Hofstra continued its success at James M. Shuart Stadium on Saturday with their ninth-straight victory at their home turf in Hempstead, N.Y. The Pride are off to a hot start at 3-0, downing opponents Colgate and Sacred Heart along the way.

Despite taking the loss, junior Princeton goalkeeper Tyler Fiorito made 15 saves while his counterpart, Andrew Gvozden, recorded six. Underclassmen led the scoring for the Tigers, as freshman Tom Schreiber and sophomore Jeff Froccaro each tallied two goals, while sophomore Forest Sommenfeldt scored three.

The No. 8 Tigers start the season off with a loss following a first round defeat to Notre Dame in the 2010 Men's Lacrosse Championship in Baltimore, Md last year.

They look to rebound against ranked opponent Johns Hopkins in Baltimore on Saturday, while Hofstra will look to continue its home winning-streak when it hosts Harvard at 1 p.m. on Saturday.

Delaware wins in OT

In spite of letting a four-goal lead slip from its grasp, Delaware effectively retaliated in overtime to down Bellarmine, 12-11, at home on Sunday afternoon.

The Knights rallied after a four-goal deficit, scoring four unanswered goals in the last 5:16 of play to force an overtime period. Streaky play by both teams allowed for Bellarmine's fourth-quarter run and an early five-goal stretch by the Blue Hens. The Knights converted on four extra man opportunities throughout the contest.

Delaware's top scorer and junior attackman Eric Smith netted the game-winning goal with just 53 seconds left in the overtime period. Smith recorded five points and has 19 for the season in only five games. Defensemen accounted for two of the Blue Hens' goals, one each from Taylor Burns and Connor Fitzgerald.

The Blue Hens are off to a 4-1 start with their only loss coming at home against No. 9-ranked Johns Hopkins.

Junior Dan Cooney won 15 face-offs for the Blue Hens and netminder Noah Fossner recorded 14 saves. Delaware played through injuries to two of its top midfielders and hopes to have them healthy for game action at Albany on Saturday.

Loyola downs Towson

Loyola is out for vengeance this season after a heart-breaking, three-overtime and first-round exit at the hands of tournament semifinalist Cornell in last year's NCAA tournament. The No. 15-ranked Greyhounds are off to a hot start with their second-straight one-goal victory after a 3-2 win at Towson on Saturday.

The Tigers were offensively challenged throughout the contest, recording only 21 shots, with just eight on net, while Loyola held a 28-21 groundball advantage. In its first two games of the season, Towson has netted eight goals, a relatively low number. In net, goalie Travis Love stopped nine shots while allowing three in the defeat.

Loyola senior goalie Jake Hagelin made a crucial stop in the winning effort, saving a shot from Tigers' senior midfielder Pat Britton with less than two minutes to play off a Greyhounds turnover.

Senior attackman Matt Langan scored twice for Loyola, including the game-winning shot with 3:41 left in the last frame. Langan caught a pass in the feeding area behind Towson's goal, crashed the net as he cradled around the crease and ripped a bounce shot past Love.

John Schiavone won the ensuing face-off and allowed Loyola to run 90 seconds off the clock. Tight defense by the Greyhounds limited last chance opportunities for the Tigers. Loyola's defense shut down the last ditch effort of the Towson offense to move to 2-0 on the season.

Matt Strong can be reached at mstrong@student.umass.edu.

SGA candidates for president and trustee square off in Tues. debate

By Sam Butterfield
Collegian Staff

The three candidates for next year's Student Government Association (SGA) president and the three candidates for next year's student trustee position squared off in a debate moderated by the Daily Collegian last night. The event took place in a packed Student Union Ballroom on the campus of the University of Massachusetts last night, and focused heavily on fee hikes, diversity and inclusiveness in the SGA and funding Registered Student Organizations (RSOs).

One week before students are set to vote in online SGA elections, the three presidential candidates, junior political science major and SGA senator Nathan Lamb, junior SGA cabinet member David Robertson and junior public health major and SGA cabinet member Yevin Roh, traded volleys on their major platforms and qualifications for the student body's highest governmental post.

Despite some initial technical difficulties, the debate began with the three candidates giving two-minute biographical introductions, outlining their experiences at the University and in the SGA and detailing their platforms.

Wearing a blazer and a red tie, Lamb said he feels "the SGA provides a link between students and the administration," but that he believes it is sometimes plagued by a tendency to "work inside of its own bubble."

"The SGA spends most of its time debating its own bylaws, debating its own amendments and debating its own internal drama."

Lamb quickly discussed what he called his top legislative priority: creating a free, student-run, sober driving program, which he plans to call "UMass Free DD."

The program, as he proposed it, would run on weekends between 10 p.m. and 3 a.m. "Last year," Lamb said, "63 UMass students were arrested for DUIs. It really hurts our relations with the town when they see these drunk driving numbers and they can blame it on the students."

Next, Lamb said he would redistribute the budget from the Student Activities Trust Fund (SATF), putting $150,000 more towards Registered Student Organizations (RSOs) and putting RSOs ahead of student agencies, which he claimed presently get $1.5 million of a $2.1 million budget.

After Robertson concluded his opening statements to scattered audience applause, candidate Dave Robertson had his turn, emphasizing his experience in the SGA and his connections and rapport with UM administration.

"Other than being the second tallest thing on campus other than the library," he joked, "I've been involved for three years with the SGA."

Robertson, who has served as Governor of the Central residence area and now acts as secretary of university policy and external affairs, mentioned that he worked on an initiative to replace washers and dryers and dorms without a fee increase for students and that he has attempted to work with town and University leadership to make town bylaws "more fair for students."

Robertson then launched into the central tenets of his candidacy, his experience, his goal to create a rollover program for meal plans and a plan to create a CraigsList-like website for students to exchange and sell textbooks.

"My running mate Tina Kennedy and I are known as the meal plan people," he said. "There's about 15,000 kids, the population of campus, who are mandated to have meal plans, and then the people who live off campus, like me, who can't cook and still have meal plans," he said. "We approached dining services and are working to create a rollover plan."

The economics and political science double-major, who referenced his economics background as a strength in budgeting, then discussed his proposal to hire approximately 50 to 75 students to launch a student-run peer advising service, which he said would give students increased financial aid, help create student jobs and help save money from the school's advising budget. He also said he would like to launch a "textbook swap platform, like a CraigsList, except just for UMass students," and that he would like "to expand on that and actually bring electronic textbooks to campus."

JED BURNSTEIN/COLLEGIAN

The three candidates for next year's SGA president and the three candidates for next year's student trustee position squared off in a debate in front of a relatively packed Student Union Ballroom last night.

After Robertson, who wore a gray-colored blazer and a maroon dress shirt, ceded the floor to a round of applause, Yevin Roh, the only candidate donning a cap and a silver Wu Tang medallion, took over.

The junior public health major said he's "been fighting for students ever since I was a freshman," and that he launched his own plan for an e-textbook campaign his freshman year "but found out that there was a lot of bureaucracy we couldn't wade through in a single year."

Roh focused much of his candidacy on his work on revisions to the Code of Student Conduct (CSD), his work on sexual assault reform with the Everywomen's Center, and his opposition to a proposed flagship fee of $400, on which the UMass system Board of Trustees is expected to vote this

See DEBATE on page 2

UMass student passes away Friday in Hopkinton home

An email from Dean of Students Jo-Anne Vanin Tuesday announced the death of University of Massachusetts psychology student Daniel DeMore Friday.
The cause of death was not disclosed.

Vanin's email describes DeMore as having recently returned to the University after taking some time off, and notes he was a member of Hillel House, a campus organization for Jewish students.

According to an obituary by HCAM, a television station in Hopkinton, Mass., DeMore was on the pre-law and pre-medical track at UMass, and expressed an interest in pyschology.

According to the obituary, "at an early age, he loved to draw and was fascinated by dinosaurs. He saved wounded birds from the street and a baby turtle from a soccer field. He loved spending time at Sebago Lake in Maine, The Cape with friends and the St. Lawrence River in New York with the Sweetapple family."

The Hopkinton, Mass., native and 2007 graduate of Hopkinton High School will have calling hours at St. John's Church in Hopkinton this Friday from 3 to 8 p.m.
His funeral will take place the next day at 10 a.m. at the same location.
The family is requesting donations to an as yet unannounced charity in lieu of flowers.

Calls to UMass Hillel House, the DeMore family's Wood Street home in Hopkinton and several family members listed in a Hopkinton News obituary were unreturned as of 6 p.m. Tuesday. The obituary describes DeMore as having worked at Massachusetts Institute of Technology and an avid drawing enthusiast and a lover of animals, especially dinosaurs.

The Collegian will have more on Dan DeMore in the following week as it hears back from family members and friends.

-Collegian News Staff

U of M students to stand with Wisconsin workers

By Michelle Williams
Collegian Staff

Over the past week, rallies have been held in support of Wisconsin's public workers across the country, from Portland to New York City. Now, the movement has hit the University of Massachusetts campus.

UMass students and members of the surrounding community are rallying on Wed., March 2, to support public workers in Wisconsin, who are at risk of losing their right to collective bargaining if the state's budget passes in its current form.

"If we don't stop this attack on public sector unions and their right to bargain in Wisconsin and Ohio, we will be fighting it here in Massachusetts before too long. Solidarity isn't altruism – it's mutual aid and self defense," said Donna Johnson, President of the University Staff Association.

One student at UMass said this issue is apart of a much larger issue, a lack of public funding.

"Here in Massachusetts, the state keeps cutting support for higher education so college is harder and harder to afford for working and middle class students," said Ben Taylor, a UMass senior who is active with PIRGNOM, the Public Higher Education Network of Massachusetts. "I myself will be graduating with tens of thousands of dollars of debt. This too is an attack on the public sector."

The rally will begin outside of the Student Union at 11:30 a.m. on Wednesday. Speakers during the rally will include local union leaders, student speakers and the President of the Hampshire-Franklin Labor Council. All are expected to discuss various issues affecting the public sector. Following the rally, there will be a discussion in the Cape Cod Lounge.

Michelle Williams can be reached at mnwilli@student.umass.edu.

Marijuana law reform discussed on campus with attorney Evans

By Tim Jones
Collegian Staff

The Cannabis Reform Coalition (CRC) hosted Richard Evans, an attorney from Northampton, on Monday night during their weekly meeting. Evans discussed his proposition for the legalization of marijuana and compared the prohibition of the substance with the history of prohibition of alcohol.

Evans, who recently submitted a proposed bill titled "The Cannabis Regulation and Taxation Act," spoke with the crowd about action that needs to be taken to make progress with the reformation of marijuana laws.

His presentation, titled "The Dry Decade: What cannabis law reformers can learn from alcohol's reformers," looked into the history of prohibition of alcohol and the eventual appeal.

In reference to the 18th Amendment, which prohibited several aspects of alcohol, Evans noted there was one that was missing.

"It says nothing there about possession of alcohol," said Evans, pointing out that this contradiction would affect the results of the eventual repeal of the amendment.

Evans continued through the history of prohibition, discussing the major figures that contributed, as well that the organizations that affected the outcome.

Using the slide show as a foundation, Evans compared reformation of alcohol laws to the possibility of marijuana law reformations and listed objectives that should be completed.

JEFF BURNSTEIN/COLLEGIAN

Richard Evans compared current marijuana laws to the prohibition of alcohol.

Creationism in class

Study finds creationism taught in biology classes

By Nancy Pierce
Collegian Staff

Despite a Supreme Court decision nearly 30 years ago barring creationism from being taught in science classrooms, a recent study has found that over 900 high schools in the United States still teach this theory in schools.

Political Science Professors from Penn State University Michael B. Berkman and Eric Pultzer completed the study "Evolution, Creationism, and the Battle to Control America's Classrooms," that surveyed 926 public high school biology teachers. The study, published in Science Magazine on Jan. 28, found that 13 percent of the high school teachers surveyed advocated for creationism by presenting it in the classroom in a positive light, 28 percent present evolution as the basis of biology and as a theory supported by evidence and 60 percent of teachers surveyed were advocates of neither side.

Creationism is the theory that God created the universe and all living things within it, and is taken from the Bible's Book of Genesis.

Teaching creationism was barred in 1987 through the Edwards v. Aguillard Supreme Court

SGA candidates debate diversity, fee hikes and funding for RSOs

DEBATE from page 1

CHRIS ROH/COLLEGIAN

One week before students are set to vote, the three presidential candidates, SGA senator Nathan Lamb, junior SGA cabinet member David Robertson and SGA cabinet member Yevin Roh traded volleys on their major platforms and qualifications for the student body's highest governmental post.

spring.

Roh said he wants to create a "peer judicial board" for minor disciplinary infractions, eliminating the practice of referring students to the Dean of Students Office.

"Instead of going to the Dean of Students office, you'd be seen by a group of your peers," he explained. "The Dean of Students office hands out more sanctions than it does diplomas, and we are students and not criminals, we should treat students as individuals as opposed to numbers in the system."

After the three candidates made their pitches, Moderator Alyssa Creamer of the Collegian turned to the floor to a panel of three moderators. The first question went to Nathan Lamb first, and pertained to how he could work on problems that "make student life at UMass frustrating and difficult."

Lamb said he believes the SGA should be more accessible and a more visible presence on campus.

"I feel like right now a lot of students don't know how to contact the SGA when they have problems," he said. "I want to surround myself with the best people from the University that know what the issues are; I want a secretary of greek life, a secretary of sustainability that will come from such areas and tell me what I can do to help," he said. "I want to work on revamping the SGA website, which means a small investment to get a better site running. I want to allow it to be a place for RSOs and student groups to network and come together."

Lamb also said he would plan on holding "regularly scheduled town hall meetings" where "anybody can walk into, say, the Cape Cod Lounge and air their concerns."

He concluded by stating that he'd like the SGA to have a greater social media presence.

"We need to refocus our efforts on reaching out to students instead of waiting for them to find the SGA office," he said.

Robertson followed in his response about accessibility and problem solving, initially echoing his running motif of his stature, quipping that, "First off, I'm the best candidate for this because I have the largest stride."

"I've been there as an area governor. I know what it's like to try to reach out to your constituents and hear about their problems and trying to get them solved," he said. "I plan to have two secretaries of outreach," he added, "we need new ideas."

Roh made it clear that he believes the SGA needs to meet students where they are to be more accessible.

"The SGA needs to be relevant to peoples' lives; we can't just have office hours as they currently exist," he said. "We need to work on students' schedules, have tables in the [Campus Center] concourse, at late night [at dining commons], at the Rec Center several times a month."

"Students aren't coming to the office, so we need to go out to the students," he said. "The SGA needs to be relevant in peoples' lives, we need to use the SGA bulletin board not just for SGA matters but to feature RSOs on the SGA bulletin board. I would spend as little time in the office as possible."

The next question was addressed to Robertson and pertained to re-envisioning the SGA's relationship with RSOs.

Robertson said he would drastically reconfigure his cabinet in hopes of putting RSOs first.

"I would expand my cabinet to include three secretaries of diversity, two of outreach and two of RSOs," he said. "Right now, the SGA is nothing but a hurdle to RSOs, the CSD, God love them, is understaffed, so when you expand and train these people solidly, and people come in with a question about a budget, it's solved."

Robertson then proposed creating a second category of funds for RSOs to make money not budgeted at the start of the year available immediately.

He said he would "have a hard and a soft funding initiative." Hard funding, he explained, "continues from year-to-year" where "soft funding is purely for events."

Presently, he said, "there is little flexibility in budgeting, soft funding would allow for more flexibility."

Robertson concluded by proposing a two-dollar increase to the student activities fee, presently at $94, to "support clubs, particularly cultural RSOs."

Roh followed up by emphasizing the need for the SGA to perform outreach for all RSOs.

"There's RSOs that have small constituencies of maybe 10 students and there's RSOs that have huge constituencies; there needs to be outreach regardless of those numbers."

Roh then emphasized the need for the SGA to promote cross-cultural connections, not just "on a racial level," and not "on a political level," but stating that "the SGA needs to lead by example, to reach out to RSOs and, for example, SGA's president and cabinet need to have the knowledge about peoples' cultures and heritages and build those connections."

Lamb then took the floor and quickly got to his take on how the SGA can most effectively assist RSOs.

"The most important thing the SGA can do for RSOs and clubs is to fund them," he said. "We need to increase RSO funding. Another thing we need to work on is auxiliary services. With multicultural RSOs, most of the events they throw are around cultural food, and we need to make it easier for those groups to provide multicultural food. Campus space should also be a top priority for student organizations."

Lamb then took up a point of Robertson's about adding new secretaries while concurrently making smart fiscal moves.

"New cabinet positions come from the student activities fund," he said. "If you add three new positions, you add $7,000-8,000 to the SGA budget, when that money could be spent on RSOs," he finished, drawing enthusiastic applause from the gallery.

The next question pertained to reforming sexual assault policies and was addressed to Roh.

Roh said one major issue is removing legalistic language from the CSC and clarifying language for students.

"We need to not just constrain ourselves with legalistic definitions but have definitions that students can comprehend," he said. "In addition to making this policy more comprehensive, clearly defining consent, we need to increase reporting time from six months to a full 12 months."

"[Sexual assaults] are horrific incidents, and we need to give people time to decompress; people shouldn't have to feel like they are on a timeline."

Roh also called on the campus and the community at large to clearly stand against sexual assault, arguing that the community needs to send a strong message that most people are against sexual assault, not the other way around.

"Making student behavior which is positive the norm [is a goal,]" he said. "We hear so often about statistics about x number of assaults happening on campuses at x times, we need to have other statistics that show what the norm really is, that a majority of students don't support sexual assault," he finished, drawing strong applause from the gallery of students, many of them SGA members.

Lamb agreed that assault is "definitely an issue a lot of schools deal with," adding that he feels revisions to the CSC are the best way to tackle sexual violence issues.

"Working with [the Code of] Student Conduct is definitely the best way to go about that; the work they're doing on CSC is really great, but it's a document that needs to be more clear."

Lamb then called for a streamlining of sanctions for sexual assault.

"I think we need very strict rules about sexual assault, and the CSC meetings are definitely a great way to go about making that change."

Robertson again emphasized his campus connections developed through his time in the SGA in terms of how he would develop anti-sexual assault strategies.

"I walked around with Chief Whitehead [and inspected campus lighting,] and I've made very good connections with Chief Whitehead," he said. "Sexual assault on campus is something that isn't just changed by one policy or one person. The SGA is not big enough of a presence; we need to work with other groups," he said.

"The Panhellenic Council and I have already begun to work," he continued, "if I'm elected, we'll plan an event, either on-campus or on fraternity row, to get the community to stand out there and say, 'Sexual assault and sexual violence is something that we say no to.'…Those individuals, as sick as they may be, they need help too, and they need that outreach before something happens; if we can intervene and help both these people ahead of time, we can fix a lot of problems and make a lot of peoples' time at UMass a lot better."

Next, Lamb was queried as to how he would reconcile spending money on the free designated driver program and adding $150,000 to RSO spending as student fees potentially go up and the SGA's budget is possibly slashed.

"The student activities fund would fund that sober driving program," he said, "and where that $150,000 would come from, that's a fee, $94 per year, meant to help students, it's completely unrelated to other fees which may be going up."

Lamb then reprised his theme of "re-prioritizing" the SGA budget to put more funding into RSOs.

"$1.6 million goes to student organizations, and the RSOs get what's left. I want to re-prioritize that so RSOs get what they need. The sober driving program will cost between $30,000 and 50,000 to start up. We're going to apply with VC [Jean] Kim, I believe she has some money for start-up programs like that and put it to the Student Activities Trust Fund. It's a service that's vitally important to the UMass community," he said.

Robertson then critiqued what he sees as the low level of funding for student activities and called for a slight increase to the student activities fee to help balance the budget.

"UMass Amherst has one of the lowest student activities trust funds [of any major university] at just $94, it's absolutely dismal," he said. "A two-to-three-dollar raise would ensure that we don't need to cut agencies, which is one of the biggest positive images UMass has out there."

Roh then took over, voicing his support for a free designated driver program but offering an alternative structure for how it might work.

"I completely support the free DD program," he said. "If any of you have 21st birthdays coming up, hit me up on People Finder, no kidding," he said, noting that he and friends have designated-driven for other friends over time.

Roh's vision for such a program, however, would be a student-run group outside the oversight of the SGA or campus authorities.

"Something as noble as the free DD program should be student-run," he said. "We don't necessarily need an agency. If there's room in the budget, I absolutely support it, but I'd love to see a group of students outside the SGA come together and say, 'This is what we'd like to do for our classmates.'"

Some of the final questions dealt with the reputation of the SGA, and attempts to make the organization more diverse and representative of the campus' demography.

Robertson said he would bring legitimacy to the job based on his experience in the SGA and reputation with the administration.

"I'm a recognized face in the student body that everyone knows," he said. "I will work to support students; everyone knows I will have the same work ethic as this administration, they know who I am, maybe it's the height, and they know they won't have to recognize a new face."

Roh, echoing a grassroots buzzword popular in the Obama-era, said bolstering the SGA's profile is about "going out and meeting with the folks."

"The SGA is accountable to students, and students are accountable to the SGA," he said. "The SGA needs to go out, attend events, and talk to people on a one-on-one basis. If it was up to me, my cabinet would be responsible for reaching out to RSOs on a very regular basis."

Lamb noted that, as a relative newcomer to the SGA having served just this year, he has never seen what some have described as a faulty relationship between the SGA and UMass administration, citing this as a positive in his relations with campus leadership.

"I think it's definitely impotent to build on the relationships we already have with the administration," he said. "I haven't been around the SGA for when the relationship wasn't so good, the current administration has great relationships with the people in the UMass administration."

Finally, the candidates were asked about how the SGA can work to promote diversity and be more reflective of the campus' population.

Roh began by stating that the SGA should reach out to various demographic groups during election season, encouraging students who may otherwise have been too timid to join to run for office.

"The SGA should reach out to every single community possible during senate season, when we're going out for elections," he said. "We should spread awareness that you can be a part of this; the more outreach the SGA does to increase applications, the more democratic we become. It's not just the SGA that's responsible for mirroring the student body, the SGA is made of students, we are equal to students, in that way, we need to work with students, get them educated about how to run a campaign."

Finally he added that "I think the SGA needs to poster flags from every country represented in the SGA" to show various minorities and other less-represented groups the SGA is inclusive.

Lamb shared many of Roh's ideas.

"The SGA needs to be representative of the student body," he said. "We need a much better effort to get people to run for office. We want as many people as possible to run. An increased outreach is definitely paramount to getting a more similar SGA to how the student body actually looks. I think the secretary of diversity is a very important position for that."

Robertson in many ways echoed both Roh and Lamb's ideas on this subject.

"I want a totally campus-wide opportunity to reflect the student body," he said. "There's 20,000 different stories [on campus] and there's 200 RSOs. What better way to get different people out there. I'm the one candidate out there with a plan to get more secretaries of diversity and RSOs," he concluded.

After a prolonged question-and-answer session where the candidates responded to students' concerns and a short break, the candidates for student trustee climbed up the podium. The Collegian will have a separate story on the Student Trustee debate in tomorrow's issue.

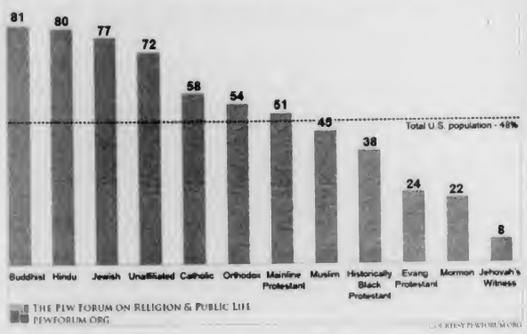
CHRIS ROH/COLLEGIAN

SGA senator Nathan Lamb (left), junior SGA cabinet member David Robertson (center) and SGA cabinet member Yevin Roh (right) are running for president in the SGA's elections next week.

Hey, you know what would be totally super hipster cool?
What?
If you worked for the Daily Collegian.
I MUST go to the basement of the campus center! Collegian, here I come!

Study shows religion in biology classrooms



CHRISTOPHER MAGOON

Creationism is the theory that God created the universe and all living things within it, and is taken from the Bible's Book of Genesis.

CREATIONISM from page 1

He attributed prominent religious beliefs as to why there is a resistance towards evolutionary biology. "There is a very active religious effort to discredit evolution. Teachers in this country are influenced by some of that." Elkinton also said the teachers not advocating evolution are ill-informed since "the evidence in favor of evolution is overwhelming."

Laurie Godfrey, a professor in the anthropology department at UMass, said that she believes misinformation leads to much of the controversy about teaching creationism in high schools.

"It's not good for our kids to be exposed to information that is wrong," said Godfrey. "There is a difference between debate between controversial questions versus distortion of data." Godfrey also said there is plausible evidence for evolution that can't go ignored.

Eric Pultzer, professor of political science and sociology at PSU and co-author of the study, described the motivation for the research as a look inside the friction between public opinion, which he said largely favors teaching creationism in addition to evolution and federal court rulings that teaching creationism in class is unconstitutional.

Pultzer quoted geneticist Theodosius Dobzhansky's 1973 essay when asked if teachers should be teaching evolution of species in the classroom, "Nothing in biology makes sense except in the light of evolution."

He also mentioned the risks he thought were involved in teachers dodging the topic of evolution. "Students are being cheated out of a sound science education. In avoiding the teaching of evolution, teachers adopt a variety of techniques that have the effect of breeding an uncritical distrust of modern science, and deny students the chance to understand the nature of scientific inquiry."

Pultzer said teachers that advocate creationism are not confined to one area, as "teachers of all types can be found in every state, often in the same school."

According to the supplemental document for the article "Defeating Creationism in the Courtroom But Not the Classroom," the criteria for creationism advocates were to report devoting at least an hour to creationism or intelligent design during class time, and to agree to at least one of two questions as follows, "When I do teach about creationism or intelligent design (including answering student questions), I emphasize that this is a valid, scientific alternative to Darwinian explanation for the origin of species." Or "When I do teach creationism or intelligent design (including answering student questions), I emphasize that many reputable scientists view these as valid alternatives to Darwinian theory."

The teachers were categorized as in favor of teaching evolution if they agreed with the following questions: "When I do teach evolution (including answering student questions), I emphasize the broad consensus that evolution is fact even as scientists disagree about the specific mechanisms through which evolution occurred" and "evolution serves as the unifying theme for the content of the course."

The remaining 60 percent of teachers were categorized as advocates of neither side because many left some of the questions blank.

The survey also asked the science teachers to rate themselves based on how knowledgeable they are in the evolutionary theory. Ten percent of creationism advocates rated themselves as exceptional, 26 percent of evolutionary biology advocates, and seven percent of advocates of neither rated themselves as exceptional.

The study focuses on the ambivalent 60 percent of teachers, where Pultzer attributed this uncertainty to a low level of solid understanding of evolution. Pultzer's solution to this lack of understanding is strengthening training for pre-service teachers, more specifically at the college level.

Geoff Daigle, a sophomore computer science major from Hanson, Mass. described his high school Whitman-Hanson Regional High School as presenting evolution with facts and supporting evidence. Daigle gave an example of examining similar bone structures between species as some of the evidence presented in his high school. He also said there was not a single word spoken about creationism. He also described his science teachers as really adept in what they were teaching. Daigle clarified that his science teachers' never pushed the theory of evolution but merely explained it.

Another student, Joshua Hume, a junior English major from Auburn, Mass. attended Monty-Technical High School. Hume said his teachers treated both creationism and evolution as non-proven theories. He elaborated that the concentration was of the ecology and operations of the planet rather than the origin.

Hume praised his high school's representation of both sides as it let the students decide for themselves. Hume noted allowing the students to make intelligent decisions for themselves is important and necessary.

Nancy Pierce can be reached at npierce@student.umass.edu.

Local attorney Evans speaks on future marijuana reform

KYLE MACDONALD/COLLEGIAN

Richard Evans is an attorney in Northampton who recently submitted a proposed bill titled "The Cannabis Regulation and Taxation Act."

MARIJUANA from page 1

The first several points to the audience were directly tried to the people involved.

"The voters, not the politicians, repealed alcohol prohibition," he said. "It wasn't about alcohol, it was about prohibition. Everyone knew how bad was for them, but knew that prohibition was a lot worse."

Evans said marijuana laws only hinder all parties involved and that reformation could be beneficial.

"These laws needlessly blight so many lives, scrub taxpayers and divide us as a people," he said.

He called the attempts at keeping consumption under control futile and said nothing is being accomplished, especially arresting individuals for possession.

"No matter how much money we throw at law enforcement, it's never going to go away," he said.

"The case we need to make is that marijuana prohibition is pernicious to us as a people…[It] forces us to propagandize out children by not allowing us to acknowledge the difference between use and abuse," he added.

Evans reassured that repeal can happened, and said it would happen as long as people supporting the cause followed certain rules, including cultivating resources, being prepared and having a strategic use of rhetoric.

As well as this advice, he said that the supports who smoke aren't enough for the cause, and that they needed to convince those who don't smoke about the benefits of reformation.

In closing, Evans said, "No one can deny the fact that marijuana is part of our culture."

Evans is a former member of the National Organization for the Reform of Marijuana Laws (NORML). In his proposed bill, possession, consumption and the sale of marijuana for people over 21 would be legalized. However, people would be required to possess a series of licenses and pay annual fees. Processing and cultivation fees and licenses would also be established as well as warnings on packaging.

The University of Massachusetts' Cannabis Reform Coalition is a group dedicated to the reformation of marijuana laws. They are currently planning "Extravaganja," an event on the Amherst Common to raise awareness about the legalization of marijuana, which will take place in April.

Tim Jones can be reached at timothy@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

The Cannabis Reform Coalition hosted Richard Evans on Monday night during their weekly meeting. Evans discussed his proposition for the legalization of marijuana.

One summer... a full year of science credits

UVM Summer University offers a variety of science courses in medical, health, biological & physical sciences with credits that can transfer back to your institution. This summer, focus on the requirements that you really need. Post-baccalaureate summer premedical programs available, as well as over 400 general requirement courses.

Registration begins February 15.
Summer classes start May 23.

Catch Up. Get Ahead. On Campus. Online.

Viva la revolucion

The past two months the world has seen revolts against oppressors spread like wildfire throughout Arab and Middle Eastern countries. Millions of people have taken a stand, protesting and taking their efforts to the streets, fighting for their freedom.

Curtis Bloomfield

It all began in December with the revolution in Tunisia, tossing out former President Zine El Abidine Ben Ali, ending his 23 year reign. The Tunisian revolt was sparked by limited freedom of speech, widespread unemployment and political corruption. Following in Tunisia's footsteps were the people of Egypt. On Jan. 25 Egyptian protestors took to the streets of Cairo in an effort to dismantle Hosni Mubarak's regime.

The power of dictatorship-like regimes and that of oppressive governments seem to be on the brink of total annihilation in the midst of the snowballing revolts. The battle to shift control of unalienable human rights from dictators to the people does not come without sacrifices.

After an 18-day protest that tallied at least 365 reported deaths and injuring thousands, the people of Egypt finally managed to run Mubarak out of office, ending his 30-year presidency. These two historic feats created a domino effect in several other nations, sparking revolutions throughout the Middle East. "With [the] Egyptians revolting and getting their freedom it's only going to lead to more movements, it all starts with one person, one movement to the next one," Victor Rodriguez, a University of Massachusetts undergraduate student, said.

Along with those two revolutions, there have also been revolts in Algeria, Yemen, Jordan, Bahrain, Iraq, Mauritania, Pakistan and Libya.

On the home front we have had access to live coverage of these revolts. We have even had students here on campus taking action is support of the Middle East's fight for freedom. On Feb. 5, students and faculty from the Five Colleges came together to march in solidarity and support of the Egyptian protestors.

As revolts such as the one in Libya still rage on, UMass students are expressing their thoughts on what these revolutions mean for the world. UMass undergraduate student Sam Kmail said "It was like 160 or something countries that have achieved democracy so far versus the 8 or 9 that had democracy in the 1920's so I feel like people are actually gaining faith into taking control of their future rather than having dictatorship kind of governments taking over."

As we all know a democracy is a form of government that runs on the consent of the governed.

The people going against these oppressive regimes show the influence democracy is having worldwide. UMass Student Bridges member Shane Coleman said "I think it really means that we are changing who dictates the rights worldwide."

The revolts show an inevitable shift in power, one where if the people are not happy then there will be unrest.

The power of dictatorship-like regimes and that of oppressive governments seem to be on the brink of total annihilation in the midst of the snowballing revolts. The battle to shift control of unalienable human rights from dictators to the people does not come without sacrifices.

The people feel so strongly about obtaining their rights that they risk their lives. Currently in Libya, the death toll in the city of Benghazi has reached 104.

In Bahrain, protestors were attacked during the night by riot police during a sit-in, four people were killed and 231 were injured.

In Yemen, both sides, protestors and anti-protestors, have been reported to have been firing weapons, but there have no deaths reported yet.

It is evident that worldwide, oppressed people are demanding their human rights. Politicians in America have urged the leaders of countries that are rebelling to step down or to change the way they treat the people.

Here in the United States we have our own history of revolting with our historical victory in the American Revolution.

The snowball effect of erupting revolutions has even reached the strict regime of China:

"Authorities detained activists, increased the number of police on the streets and censored online calls to stage protests in Beijing, Shanghai and 11 other major cities. Citizens were urged to shout "'We want food, we want work, we want housing, we want fairness,'" reported the British newspaper The Guardian.

No matter how much show of force oppressive governments may show, it appears today that the will of the people will triumph at all costs. As Abel Ortiz, another UMass undergraduate student said, "Worldwide it really shows people taking power into their own hands; it's been shown before with the American Revolution. All these revolutions show how much power we have as people when we are united."

United we stand means more today than it ever has before, and on a global scale.

Curtis Bloomfield is a Collegian columnist. He can be reached at cbloomfi@student.umass.edu.

Editor's Note:

To the University of Massachusetts community:

The Massachusetts Daily Collegian offers its sincere apologies for yesterday's column by Yevgeniya Lomakina titled "Planned Parenthood spreading social illness" in the Editorial & Opinion section. It is evident that the column is both offensive and inaccurate, and The Collegian is deeply sorry to members of the community who were negatively affected.

The author's suggestion that rape victims should be held accountable for what has occured to them is absolutely reprehensible, and in no way represents the opinions of our staff. The Collegian has terminated its relationship with Ms. Lomakina, and further internal disciplinary actions will be carried out against the editors of the column.

Speak up, don't mumble

The University of Massachusetts boasts that over 90 percent of its faculty holds some of the highest degrees in their field of instruction and that all sounds great when you're reading it off of a computer screen. But in the classroom or lecture hall, things can get muffled.

Amanda Joinson

Although we have some of the most intelligent people here at UMass – people who have been all over the world, and have done it all – it doesn't necessarily mean they can teach. Without at least a minimal grasp of how to structure a class, communication skills and a grip on instructional strategies, passing the class can become a puzzle for students.

The classes that continuously jump around from one topic to another and then return to the previous subject matter are mazes. Everyone gets lost. Some structuring would do the class well by reorganizing the schedule a little so all this isn't so confusing.

But class structure is sometimes the least of your problems.

The classes where the professor is standing in the front of a cavernous lecture hall on a podium accompanied by a poorly executed PowerPoint presentation are perhaps the worst. I swear that ten minutes into the class the audience has been lost, and the professor's voice turns into that "Blah, blah" that echoes in the background of Charlie Brown cartoons.

It is ironic, too, that most professors encourage students to take public speaking classes, not realizing that they should practice what they preach.

These classes often come with the monotone professor who mumbles while looking down at the podium the entire time, while reading from notes that probably have not changed for years. Other times, it is simply a mere lack of enthusiasm. Students pay thousands of dollars a semester to learn the subject matter offered through these classes and the professor cannot adequately communicate the information. It is truly the most frustrating aspect of classes when you actually want to learn and just can't because of an awkward speech disconnect.

It is ironic, too, that most professors encourage students to take public speaking classes, not realizing that they should practice what they preach.

The professors that are not exactly the greatest at communicating don't offer as much advice either. It is like that older man mumbling to himself and occasionally addressing you at the bus stop. You attempt to answer shortly and hope that he doesn't ask you any more questions. Professors who don't speak clearly are less approachable, no matter how smart they are; it is just harder to understand what they are attempting to get across. There is no doubt that they posses a vast amount of knowledge just waiting to be released to their students, if only they knew how to communicate it effectively.

Supplemental instruction by teaching assistants is an available back-up option, and changing the PowerPoint slides every time the professor signals is probably not what they signed up for anyhow. While graduate students are also smart, without good communication skills and a clear, confident voice, nothing changes. At least public speaking should be required and maybe a class on how boring a plain PowerPoint can be for the human brain.

The same applies to textbooks and notes; they should be supplements, not the main lifeblood of a class because students aren't getting the clarification and guidance from the professor.

The bar for requirements to be a professor and teaching assistant needs to be raised. Scraping by with poor people skills and less than acceptable supplemental material is hurting student's grades, not to mention futures. Walking into an internship claiming you took a class and then not knowing the material is bound to cause disappointment and frustration.

Everyone learns differently. PowerPoint's are great, but maybe some hands-on lab time would be beneficial (and maybe some videos), just to mix it up. It couldn't hurt. Anything that doesn't make a student feel like their time would've been better spent at home copying down bullet points.

Ultimately, many students come to college without any idea as to what they want to do and wait for that moment of inspiration in the classroom to judge where they will go.

Just think back to class that you enjoyed so much that you decided there and then to declare your major. The professor most likely was highly organized, and the class was mentally and visually stimulating, rather than a chore to attend.

The Sox have sewn together nicely

While we're freezing our collective butts off in the barren, frozen land that is New England in the winter, the Boston Red Sox are awakening from their hibernation with a sexy new look. In about a month, we'll get our first real view of what this team is capable of, but after a long and agonizing 2010 season in which interest waned, it seems the Sox have taken back their rightful place as New England's team.

Eddie Hand

And thank God for that. I don't want to live in a world where the Tampa Bay Rays consistently win and the Celtics have higher TV ratings. We Sox fans are a spoiled breed. For so long (by which I mean the 1990s), the Sox were the only real team of interest around these parts. Now, the Bruins are competitive, the Patriots have three Super Bowl wins in the last decade and the Celtics are among the most dominating teams in basketball. The Red Sox, for so long the "Bad News Bears" of the American League (because let's face it, no matter how bad things got, the Cubs were always more pathetic) have been in the playoffs five times in the last seven years. Twice, they won the World Series. But that's not enough anymore.

We've gotten used to winning and because of that, it was particularly appalling to watch the Red Sox go down in flames last year after an explosion of seemingly endless injuries. In truth, they won 89 games which really isn't that bad at all. The AL East just happens to be an incredibly tough division.

For better or for worse, Theo Epstein has more money than God and he's not afraid to use it.

Most teams would be happy with this; after all their leadoff man, All-Star first and second basemen and two of their top pitchers missed long stretches of playing time, and they still managed that many wins. Most teams would think "Oh well, we're getting everyone back in full health.

That's like getting a bunch of new free agents anyway." The Boston Red Sox are not most teams, and they can not afford to just sit still after such a critical failure.

For better or for worse, Theo Epstein has more money than God and he's not afraid to use it. Utilizing these nigh bottomless pockets, he's engineered what isn't just the best lineup in baseball, but one that might be one of the best in history. It's that scary but it's also not that different. There are only two major changes to the lineup; the addition of Adrian Gonzalez at first base and Carl Crawford in left field.

Aside from that, the batting order isn't really that different. Heck, they lost Adrian Beltre and Victor Martinez who were total stand-outs last year, keeping the decimated lineup afloat for far longer than was expected.

But that's Boston; a hero one day, gone the next. They're in good company.

We've all heard the things they say about the batting order by now. Jacoby Ellsbury and Crawford are going to steal over 100 bases collectively. Adrian Gonzalez will hit 40 or more home runs and drive in120 runs. Kevin Youkilis will make a seamless transition to third base and put up his regularly outstanding numbers.

This stuff never really works out how it does on paper. Baseball is more predictable than any other sport but its still far from a certainty. Players always get hurt and entire teams never do exactly what they think you will. The Seattle Mariners were a popular pick to win the AL West in 2010, only to lose 100 games.

That's unlikely to happen because the pitching on the Red Sox is a whole lot better. Jon Lester and Clay Buchholtz remain two of the top young pitchers in the game, and Josh Beckett, John Lackey and Daisuke Matsuzaka are way too good to do as poorly as they did a year ago. Even so, there are still questions. Young catcher Jarrod Saltalamacchia is still unproven, and the bullpen was such a disaster last year that Epstein could have used to a time machine to pick up all the elite closers in history in their prime and some people would still be worried.

Even if they don't win 120 games like some people seem to suspect, it doesn't matter. Theo Epstein has already managed to return interest to a team that failed to live up to expectations last year. With the fan base rejuvenated by a revamped lineup, it's going to be a fun season.

Is it spring yet?

DK Returns to his roots on the Wii

By Andrew Sheridan
Collegian Staff

Lately, Nintendo has gone back to its roots. Reaching into the company's deep reservoir of classic franchises, the video game giant has slowly but surely been breathing new life into franchises that in recent years has been featured only in "Smash Bros" and the like. Late in 2010 they unleashed Kirby onto the Wii with "Epic Yarn" and now, 12 years after his release on the N64, Donkey Kong has a new console platformer in "Donkey Kong Country Returns."

Although the titular gorilla used to get his jollies from kidnaping princesses and ruling the sewers, he has long since retired from such seedy enterprises. Nowadays, he spends his time relaxing in his island hut with his special friend Diddy. As the game opens on DK's tropical home, the duo is doing just that. Everything is perfect until the island's volcano erupts, spewing forth a host of evil Tiki creatures – let's call them "bosses" – to ravage the jungle paradise. DK, ever the stoic, can't even be bothered to care until they make one fatal mistake: they mess with his bananas. And no one messes with the Kong's bananas.

With this flimsy premise in place, the King of Swing sets off on another platforming adventure. In standard Nintendo style, the game's many levels are spread out over a series of themed areas, each with its own standard enemies and set pieces. The classic themes are all there: the volcano stage, the jungle stage, the ocean stage and the underground stage, complete with mine-cart levels.

Donkey Kong Country Returns will bring joy to the hearts of old-school gamers, with a return to the stylistic trappings contained in the games released on the Super Nintendo. However, without a doubt it is approachable for new players.

When compared to other Nintendo platformers such as "Kirby's Epic Yarn" or the "Super Mario Galaxy" games, "DK Country Returns" has its difficulty level set quite high. While it starts out simply enough, as you progress through the game the levels become increasingly more complex. Constantly-crumbling platforms and advancing vertical walls of enemies create instant death scenarios that the big ape is often too slow and cumbersome to avoid.

If you find a level that, you simply cannot beat (and odds are that you will), the game will eventually throw you a bone. After dying five times at a single checkpoint, you will be given the option to use the Super Guide, a silverback version of Donkey Kong who will beat the level while you watch. Yes, it feels like giving up and no, you don't get to keep any treasures collected by the Super Guide. But after falling into that same lava pit nine times in a row, you just might not care anymore.

One saving grace is Diddy Kong. The nimble chimp follows alongside the protagonist, and can jump on his partner's back for an assist. While DK does not attack enemies when left on his own, his jetpack-boosted jumps can compensate for DK's unimpressive ups in a tight situation.

Another great feature is co-op mode, where a second player takes control of Diddy and his peanut-gun arsenal. While many games have struggled to implement two-player platforming, in this case it works quite well. Players have separate health bars but share a common stock of lives and taking down Tiki-possessed boss creatures is a lot easier with a friend.

Unoriginality aside, the game's one serious flaw is the control scheme. While the Wii's motion controls can add a fun element of interactivity, here they mostly just lead to frustration. The in-game actions of rolling, ground-pounding and blowing (yes – that's a feature) are all achieved by shaking the remote. Not only is this an imprecise and unwieldy control scheme, but having all three mapped to the same motion can be confusing and lead to unnecessary deaths. This would all be forgivable if the game offered an alternative control setup (for example, with the Gamecube controller), but such is not the case.

Some more redeeming features of DK's latest console romp lie in the art design. While some areas such as the Jungle may seem dime-a-dozen, others will really impress with visual cleverness. In addition, nearly every stage has a hidden "sunset" level, where the characters and scenery are all silhouettes. This is a nice new reward for completing the standard collectible side-quest, and it feels like a cross between "Sin City" and "Planet of the Apes."

All things considered, "Donkey Kong Country Returns" does exactly what it claims. It brings the classic feel of the much-beloved "Donkey Kong Country" games to the newest console generation and keeps it largely intact. Casual platformer fans may be frustrated by DK's poor jumping ability and cheap deaths, but long-time fans of the series know that's the lay of the land.

In the end, a clear lesson is learned: when it comes to Donkey Kong's bananas, don't try any monkey business.

Lake Street Dive into NoHo

By Amy Larson
Collegian Staff

Boston pop-folk group Lake Street Dive will play the Iron Horse in Northampton tomorrow evening at 7 pm. The Americana group Girls Guns and Glory from Scituate, Mass. will also be performing. The two bands share a common drummer, Mike Calabrese and will surely share a laid back and authentic musical experience as well.

Lake Street Dive, a six-year old ensemble, is currently touring the Northeast in promotion of their recent self-titled album. This work was released in November 2010 and features notable tracks like the spunky "Miss Disregard" and the Beatles-referencing "Hello?Goodbye!" Vocalist Rachael Price notes that this album "explored more soulful influences" than the band's past works.

An appreciation for jazz music happens to be what brought these four musicians together in 2005. All graduated from the prestigious New England Conservatory in Boston and discovered a mutual appreciation for avant garde jazz music in one another while still undergrads. Separately gifted, but undeniable as a combo, Lake Street is made up of upright bassist Bridget Kearney, trumpeter/guitarist Mike "McDuck" Olson, vocalist Rachael Price and drummer Mike Calabrese.

Lake St. took their sound in a noticeably different direction in their first couple of years from what it is today. But after becoming comfortable playing together they began to develop the rare blend of jazzy, poppy and folk vibes that now define them. The musicians realized that they wanted to make music that was true to them and the music they enjoyed. The Beatles, Paul Simon and spontaneity make up their primary influences.

Just as the Fab Four possessed strong musical and friendship ties to each other, Lake St. works off of a similar group dynamic. "It sounds cheesy, but we love each other," Price admits.

Price claims that these robust connections propel their live performances. "Onstage we can anticipate what each other are going to do and like to kind of trick each other, in a fun way."

Wednesday evening will be the first time Lake Street Dive has played the Iron Horse, but by no means are they strangers to Mass. While at NEC, they gained experience playing all over the Boston area, primarily in Cambridge. The Lizard Lounge is where the band spent much of their start, playing to its loud bar scene and building a fan base in that manner.

The band has since expanded from the Boston scene and traveled as far as Colorado. In the future, they would like to hit the west coast and also experience the European live music scene.

Girls Guns and Glory (GGG) is another Mass. group and are about the same age as Lake Street Dive. Though they feature the same drummer, GGG sounds much more southern than the Boston band. Made up of vocalist and guitarist Ward Hayden, upright and electric bassist Justin Maxwell, guitarist and banjoist Chris Hersch and drummer Calabrese, these four pull inspiration from greats like Chuck Berry, Hank Williams and Bob Dylan.

GGG has notably shared the stage with well-known acts such as The Bravery and the Stone Temple Pilots. The appeal of their bluesy meets alternative feel is what really snags listeners.

Tickets are $10 in advance, $13 at the door and are available at www.NBOtickets.com.

Amy Larson can be reached at alarson@student.umass.edu.

Lake Street Dive will be playing in Northampton for the first time tomorrow tonight. However, the band is no stranger to New England. In fact, all of the musicians are graduates from the New England Conservatory.

The worst video game cover art of yesteryear

By Christopher Gross
Collegian Correspondent

In the 80's and 90's the video console market was flooded with Japanese-developed games. When these games were released in other regions, budding video game publishers would have the opportunity to market their games with box art of their choosing. Animators would be commissioned to draw realistic, action-packed depictions of the premise of the game. Sometimes, their knowledge of the games was lacking, to say the least. Sometimes they would just take things way too far. Let's go back and look at some of the silliest video game packaging we could dig up.

Megaman
Developed by Capcom
Published by Nintendo for the NES

This packaging is so terrible, in a way it might be one of the most famous examples of video game box artwork ever. For those unfamiliar with the game, Megaman is the story of a robotic kid who blows up an evil scientist's robots for the purpose of saving the world. The robot himself looks like if Astro Boy met the blue Power Ranger. In this picture, however, we have a very serious man with golden armor and legs that twist at seemingly impossible angles standing on what seem to be sharp, golden butts extending out of the water during a sultry Miami night. Also, there are explosions, so whoo. The sequels all had pretty ugly covers, too.

Phalanx
Developed by ZOOM
Published by Nintendo for the SNES

This game is exactly the kind of game you think it is. A side-scrolling spaceship shooter. It says so right there in the print next to the ol' overalls 'n' banjo bro, "THE HYPERSPEED SHOOT-OUT IN SPACE." Maybe the idea was that you pilot the spaceship with that bearded man, and he would play his banjo to keep the engines cool and relax you so you could focus on blowing up the thousands of enemy ships this game throws at you. According to Wikipedia, however, this crumbly old man was put on Phalanx, "in order to attract the customer with something original considering there were many space shooters in the market that looked alike,"...

Abadox: The Deadly Inner War
Developed by Natsume, Milton Bradley for the U.S.
Published by Nintendo for the NES

Abadox. You vs. Them. The princess has been eaten by aliens. The hero, Luitenant Nazal, must use his space suit and save the princess from all the mean, evil alien bad guys. He floats around and uses his laser gun to blow up aliens and creepy space tigers. This box art doesn't veer too far from the premise at all really, except for the whole being able to flinch while still looking forward with enough focus to shoot your rifle with perfect aim. He looks like he's kneeing himself in the chest, poor guy.

Donkey Kong
Developed by Nintendo
Published by CBS Electronics for the Intellivision

Is that Burt Reynolds sporting a mullet and red tights? Whoever he is, he seem to be locked in serious Zeus hammer vs. Keg action with a gorilla that seethes evil from his pupilless, yellow eyes and demonically razor-sharp teeth. Imagine playing Donkey Kong Country with that DK. Yikes. The girl in the cage looks absolutely terrified, probably because there isn't anything to indicate the cage is being supported. The only visible surfaces in this world are rails; everything else looks like it descends into the void. The premise of Donkey Kong - jumping over barrels that a monkey throws at you to save a princess - is reflected here... just with a little term r thrown in to spice things up. Anyone purchasing this game must have been expecting a super intense man vs. gorilla fight for your life.

Chris Gross can be reached at cgross@student.umass.edu.

Minutemen win 5th-straight A-10 title

By Nicholas Belloiatto
Collegian Staff

The Massachusetts men's swimming and diving team captured its fifth-straight Atlantic 10 championship on Saturday.

"It feels good because we set our goals to do this," UMass coach Russ Yarworth said.

In the beginning of the season, UMass' coaches disregarded the notion of preseason rankings and said that the team's high ranking had no bearing on how it would do at the A-10 tournament.

However, after the tournament concluded, the Minutemen took first place, just as the preseason rankings suggested, and the Minutewomen took third, also aligning themselves with their preseason rankings.

Not only is this the fifth-straight championship for the Minutemen, it is also their 13th conference title in the past 16 seasons of conference championship meets. The Minutemen have now won five A-10 championships in a row and have also won 10 out of the last 11 A-10s, with the only miscue in the last 11 years coming during the 2006 season.

Jason Cook, a junior and Amherst native, was named the Diver or the Year for the third-straight season after he captured the gold medal in the three-meter dive for the second year in a row. The men stole the show in this event by taking the top four spots, and placing another diver in seventh.

The women's side had its fair share of top performances as well as sophomore Molly Elkins was named Diver of the Year.

Elkins took home the only gold medal for the Minutewomen in the one-meter dive. The team may not have won the tournament, or many gold medals, but they did set seven new school records and a number of personal bests in the pool.

"Keeping the kids focused and motivated and working hard through the season is a good challenge, they're a good group to work with but when you reach your goal at the end of the year, and get a positive performance from them it feels great," Yarworth said.

Minutewomen coach Bob Newcomb stressed the importance of that as he talked about the perfect meet, in which every swimmer in the lineup would perform at their best of their career.

The players aren't the only ones receiving accolades. UMass coach Russ Yarworth was named the A-10 Coach of the Year and set a conference record for receiving the honor 12 times.

JEFF BERNSTEIN/COLLEGIAN

The men's swimming and diving team won its fifth-straight Atlantic 10 championship on Saturday as the women placed third.

"That award belongs to the swimmers," Yarworth said. "That is not my award, that is the swimmers award, they are the ones that earned it for me."

In his previous 31 years, Yarworth and his UMass athletes have captured 20 titles, which include 12 A-10 championship victories. Under Yarworth, the Minutemen have won 246 dual meets, making up more than half of victories the program has recorded in its history.

Yarworth was not the only UMass coach to be recognized for the accomplishments of this season. The Minutemen and Minutewomen diving coach Mandy Hixon took home both the Men's and Women's Diving Coach of the Year awards for the third year in a row.

"I'm going to tell you that there is not a diving coach that I think is better in the country," Yarworth said. "She motivates, she has a great understanding of diving, and she pushes them. She just has this knack of getting the most out of each kid."

The Minutemen had a very balanced team, not only in what they were able to do in the pool, but also in what they are able to do with recruiting and gaining young talent. This season it was freshman Chris Inglis who took the gold medal in the 1650 freestyle, and set a school record in the process. The Mashpee, Mass. native also finished third place in the 200 fly and in doing so, earned the A-10 men's Rookie of the Year honor.

"Chris is just a hard worker, and he just got in with the distance group and did everything I could have asked of him," Yarworth said.

A full team effort paid off for the Minutemen as they earned seven individual gold medals and three relay gold medals during the A-10 championships.

Already ahead of the competition, the Minutemen opened the final day of competition by winning the first three with the help of Inglis and senior Max Butler. Butler totaled two individual gold medals and relay gold medals, making him a part of four of the 10 gold medals that the Minutemen captured.

"Max has had a good journey here, he struggled at times with his swimming, for me not only with Max, seeing all five of the senior swimmers and the two senior divers have tremendous final career ending meets, shows again their hard work," Yarworth said.

For Yarworth, it isn't about an individual effort as much as it is about individual improvement heading into the NCAA diver qualifiers.

"We create a culture of the goal of the program is beyond the individual, but through individual improvement we are going to continue to try and win the championship."

Nicholas Belloiatto can be reached at nbelloia@student.umass.edu.

Temple owns historic edge over UM in complete series record

JEFF BERNSTEIN/COLLEGIAN

Center Hashim Bailey prepares to block a shot against Saint Joseph's last Wednesday. Although not a traditional starter, Bailey will start this Wednesday as he is celebrated for Senior Night.

M.HOOPS from page 8

the second, until Duke pulled away with just over 17 minutes remaining.

"I think if you play well against a team that that's good, obviously it gives you [confidence] that you can compete with some of the best teams in the country," Kellogg said on Temple.

While the Owls are coming in fresh off a victory against George Washington, the Minutemen suffered a 72-51 loss to La Salle. Senior guard Anthony Gurley was held to four points, his lowest of the season.

"I think we're just putting that behind us and looking forward to Wednesday night's game," Gurley said. "It's going to be a big time game for us."

With the recent loss, Kellogg said his team is ready to rebound against Temple.

"They're on a mission, and I'm thinking we're on a mission in our own right," Kellogg said. "[They are] different missions, but at the same token, the same mission."

Historically, the Minutemen are behind Temple in the series, 41-20, though they have won the last three home games between the two teams. However, the Owls won the last meeting between the two teams, 76-64, in Philadelphia, Pa.

These three-straight home victories add on to a 13-5 advantage that UMass holds over Temple. Not only are the 18 games the most played against any opponent at the Mullins Center, but the 13 home wins are the most against any single Minutemen opponent.

There is more on the line than just the home streak with Temple, however. If the Minutemen are victorious, and both Dayton and St. Bonaventure lose, then UMass would clinch a home game in the first round of the A-10 playoffs.

The final A-10 push will happen on Saturday, when the Minutemen play at Fordham in their last regular season game of the season.

Senior guard Gary Correia said the team has been thinking about how it wants to close out the season, which includes the Minutemen asking, "why not?"

"Why not finish out strong?" Correia said. "Why not finish out the season the way we started it? Why not figure out how we can win these last two and then win four in a row to get a berth into the NCAA tournament? Why not us? I mean, everybody else does it.

"Obviously somebody has to win four games, so why can't it be us?" Correia continued. "So we're just trying to figure out how to do that and see what happens from there."

Herb Scribner can be reached at hscribne@student.umass.edu.

GAME DAY CENTRAL

	UMass	Temple
	Record: 15-12 overall, 7-7 Atlantic 10	Record: 22-6 Overall, 12-2 Atlantic 10
	Last 10 games: 4-6	Last 10 games: 9-1
	At home: 7-6	On the road: 6-4

Mullins Center - Amherst, Massachusetts

Tipoff: 7:00 p.m.
Series: Temple leads 41-20

Probable Starters:	*PPG*	*REB*	*A/B/S*
Gary Correia	4.6	2.0	3.1A

Michael Eric	7.1	0.9	1.4B

JEFF BERNSTEIN/COLLEGIAN

Guard Javorn Farrell handles the ball against Saint Joseph's. Farrell will help lead a UMass side against the nationally-ranked Owls, who are riding into the Mullins Center as the No. 2 team in the Atlantic 10.

UMass undefeated in last 7 Senior Night games at Mullins

SENIORS from page 8

joining the Minutemen.

Bailey originally played at Memphis for former Minutemen coach John Calipari in his freshman and sophomore year. The 6-foot, 10-inch big man saw action in 14 games over that span, before heading to UMass in 2008 and sitting out his initial season due to transfer eligibility rules.

Gurley, meanwhile, elected to play for Wake Forest after his high school career. However, after a promising freshman season in which he averaged 6.4 points, the guard decided to transfer to UMass where he sat out his first year before playing three seasons.

Coming from an elite conference in the Atlantic Coast Conference to the A-10, Gurley had high expectations placed upon him. Now in his senior year, Gurley has taken over the role of leading scorer (team-high 18.3 points per game) and has grown in front of Kellogg's eyes.

"I don't think that comes naturally or easy for him to be that leader and that guy that takes over, but he's matured into that role nicely," Kellogg said.

"I think what he's been able to do especially this year, to help me to get the team and the program where it is at this point, has been huge," Kellogg said. "He's been a rock and a foundation for a UMass program."

Though Gurley is the driving force of the team, Correia is UMass' steady hand at the point guard position. Having played all four years as a Minuteman, Correia has seen many memorable moments in his time – both good and bad.

Still, his first game at the Mullins Center – an exhibition contest against American International – is one that sticks out.

"I remember the first thing, all I wanted to do was hit the rim," Correia said. "I didn't want to [shoot an] air ball [and] I was so nervous. I think it's been a long journey. Obviously, it's had its ups and downs, but I'm happy. It's sad to see it come to an end."

This season, more so than his first three years, has been a challenge for Correia. After losing backup point guard Daryl Traynham mid-season, Kellogg has had to rely on Correia as his only true point guard, playing him for 30-plus minutes at times.

While Correia, Gurley and Bailey will enjoy Wednesday night, they are still focused on reaching the postseason and having a chance for the Minutemen to host the first round game of the A-10 tournament.

Jay Asser can be reached at jasser@student.umass.edu.

MARIA UMINSKI/COLLEGIAN

Guard Anthony Gurley dribbles up the court against Duquesne. Gurley, along with guard Gary Correia and center Hashim Bailey, will be honored on Senior Night tonight.

26th ANNUAL HENRY JACOB MATHEMATICS COMPETITION
2011

MARCH 9, 2010 at 7:00 p.m. in LGRT 101-103

Sponsors: James Francis with Deutsche Bank
Roy Perdue with Solutions by Computer

FIRST PRIZE	= $1600 CASH
SECOND PRIZE	= $1000 CASH
THIRD PRIZE	= $600 CASH
FOURTH PRIZE	= $200 CASH

- Sign-up in room 1623-D LGRT by 3p.m., March 9rd and bring your UMass photo ID to competition.
- Competition is open to all Freshman and Sophomore degree students on the Amherst Campus.
- Continuing Education students and students who are closely related to members of the Math Stat department are not eligible.

Minutemen host No. 24 Temple tonight

Kellogg & Co. prepare for A-10 'benchmark'

By Herb Scribner
Collegian Staff

It will not be an easy road to travel for the Massachusetts men's basketball team heading into the postseason.

The Minutemen (15-12, 7-7 A-10) have two games left in their regular season, with the first being a showdown with No. 24 Temple on Wednesday night. The Owls are UMass' first ranked opponent of the season.

"[The team's] mindset [is] good, they seem to be ready for tomorrow night's game," UMass coach Derek Kellogg said. "I'm interested to see the actual game tomorrow night against what I think is a very, very good team. They'll be a formidable opponent by a long stretch."

The Owls (22-6, 12-2 A-10) enter the Mullins Center in second place in the A-10 table, a hair behind Xavier. Despite being in second place, Kellogg referred to Temple as a "benchmark" for the A-10 conference, as the Owls continue to perform well.

This year's top performance is headed by senior forward Lavoy Allen, who just won A-10 Player of Week and Big 5 Player of the Week honors. Despite these accolades, Allen (11.2 points per game) is bested by two other scorers on the Owls including junior guard Ramone Moore (15 points) and junior forward Scootie Randall (11.6 points).

Kellogg cited Temple's recent 17-point loss to No. 4 Duke Feb. 22 as an example of its athletic ability. The Owls stuck with the Blue Devils for the majority of the first half and the beginning of

Guard Gary Correia handles the ball against Saint Joseph's last Wednesday. Correia is one of three seniors that will be honored this Wednesday when the Minutemen take on No. 24 Temple.

Gurley, Correia, Bailey ready for Senior Night

By Jay Asser
Collegian Staff

When the Massachusetts men's basketball team takes the floor against Temple on Wednesday night, three players will see the Mullins Center parquet for possibly the last time in their collegiate careers.

The contest for UMass (15-12, 7-7 Atlantic 10) against the rivaled Owls (22-6, 12-2 A-10) will mark Senior Night, as the trio of Anthony Gurley, Gary Correia and Hashim Bailey will be honored in a pregame ceremony.

For UMass coach Derek Kellogg, all three players have been with the program since he took over the reins from former coach Travis Ford in 2008. Not only have the seniors helped Kellogg rebuild the program in the present, but they have also set it up for success down the road.

"[They] have done a nice job of being guys that have put the program back on solid footing to where we're starting to get some respect back, not only in the league but [at] a somewhat regional level to eventually a national level," Kellogg said in practice on Tuesday.

Along with being contributors on the court, Kellogg has relied on his three veterans to be leaders in the locker room and help the younger players adjust to the college level.

That leadership has been valuable, especially for a team which is comprised of 10 underclassmen and has five sophomore players as its foundation.

"It was good to have some older guys in the program who have been through some of the battles and the wars," Kellogg said. "That's hard to teach young kids until you've had enough old guys who have been through it."

Both Bailey and Gurley, while being mainstays at UMass, transferred from their previous colleges before

UM continues 3-game road trip against New Hampshire

By Jackson Alexander
Collegian Staff

The No. 18 Massachusetts women's lacrosse team will complete its three-game road trip on Wednesday when it takes on New England rival New Hampshire.

The Minutewomen are coming off a 16-7 win against Siena, a win that improved their record to 4-0.

UMass coach Angela McMahon was humble when discussing her team's emergence onto the national stage.

"If we're still ranked in a few weeks, then for us that will hold some weight, but right now it's a nice thing for to us have, but I don't think it means too much right now," McMahon said.

Instead of celebrating the national recognition, McMahon has her team preparing for the future.

"We're just focused on our defense and our game plan against UNH and what we need to do to be successful against them," McMahon said.

UMass has the advantage over UNH in draw controls as it averages 14.5 draw controls per game, while the Wildcats average four.

However, if the Wildcats control and posses the ball, their slow-paced offense could give the Minutewomen trouble.

McMahon recognized that draw controls could be the key to a victory, but she also pointed out that they would not determine the game.

"It's a very important statistic, but it's not the only defining statistic," McMahon said. "We've have games where we haven't won the draw control battle and still won [the game]."

Senior attacker Jackie Lyons (nine goals, team-high assists) continues to lead the Minutemen this season. However, senior midfielder Haley Smith is helping Lyons with the offense, as she leads the Minutewomen in goals with 10 coming off the bench.

Junior attackers Jesse O'Donnell (six goals, two assists), Danielle Pelletier (seven goals) and freshmen attackers Katie Ferris (six goals) and Sam Rush (five goals), also make significant contributions on offense.

The Maroon and White unloaded 53 shots and connected on 16 of them during UMass' victory over the Saints.

McMahon was glad to see the offense pick up after her team averaged 24 shots in the first three games of the season.

"I wanted us to shoot more, because we had been really capitalizing on our shots and I just wanted us to do it more often and we did that," McMahon said.

She also thought the shooting barrage served as a good lesson for her team.

"I think we learned our lesson in terms of what we need to work on with shooting and just taking our time on our shots," McMahon said.

While the offense has gotten much of the attention this season, junior goalkeeper Katie Florence has quietly put together another solid season in the cage.

"Katie's been our rock on defense," McMahon said. "She's the glue of this team [and] she connects everybody, including the freshman and underclassmen."

Florence has collected all four wins for the Minutewomen in goal and has posted a career-low 9.39 goal against average.

Like the Minutewomen, the Wildcats opened up the season with a win at Holy Cross. Last Saturday, they played Dartmouth on the road and lost, 9-5.

UNH is prepared to build on its 10-7 record in 2010 as it returns four of its top five scorers from last season.

According to McMahon, the recent national attention can only continue if the team maintains its form.

"In order for us to prove that we're one of the best teams in the area, we have to beat the best teams," McMahon said.

Junior Danielle Pelletier defends against Vermont. Pelletier heads back to her home state on Wednesday when the Minutewomen compete against New Hampshire.

By Dan Gigliotti
Collegian Staff

Whether playing in Amherst, N.H., or Amherst, Mass., Danielle Pelletier has played lacrosse at the top of her class.

On Wednesday, she and the No. 19 Massachusetts women's lacrosse team travel to the Granite State to take on the flagship university and see some familiar faces.

One hour and nine minutes from the New Hampshire campus, 51 miles east on Route 101, Pelletier played her high school lacrosse at Souhegan High School.

In 2008, as a senior, Pelletier was named First-Team All-State after scoring 55 goals and 33 assists in her senior season. She helped lead Souhegan to a state title in along with teammate JoJo Curro, a fellow All-State member who now plays with the Wildcats.

The two classmates also played field hockey together, capturing a state championship following an undefeated season.

As a highly touted recruit out of high school, Pelletier had an opportunity to play at Vermont, Boston University, UNH and UMass.

Pelletier eliminated BU from her list because they lacked a nursing program, her intended major. Next to UMass, UVM was a close second because of its location.

UNH, however, was quickly ruled out in the process.

"I didn't really want to go to UNH because that's where my whole high school goes, so I wanted to kind of get away from there," Pelletier said.

Tomorrow will be Pelletier's third meeting against the Wildcats and her good friend Curro. Pelletier said she still gets a kick out of seeing her teammate-turned-opponent.

"It's funny, two years ago when I played her, we were on different teams and I was guarding her and it was really funny," Pelletier said. "We started laughing because we realized that we were marked up on each other. It was just weird."

Pelletier is currently fourth on the Minutewomen roster in point-scoring (14), while Curro has yet to attempt a shot in two games this season. UNH assistant coach and UMass alumni Meg Reddy declined to comment on Curro during a phone interview.

Reddy, a former teammate of Pelletier, is known for being gung ho, constantly displayed in her four years as a letter-winner at UMass from 2006-09. UMass head coach Angela McMahon is certain that she has carried her fiery attitude with her to the Wildcats.

"[Meg] was a playmaker. She was very, very competitive and very feisty, but was always smiling and a really friendly kid," McMahon said. "She wanted to win and do what it took to win, so I'm sure she's bringing that same attitude and focus to UNH."

Reddy was a second team All-Atlantic 10 performer during her senior season, when she scored 46 points to help UMass capture its first A-10 title since 2000.

Reddy and McMahon maintain their coaching bond through regular phone conversations, more recently about the Minutewomen's preparation for their 13-12 win over the Terriers on Jan. 23.

"We talk all the time and see each other at recruiting events," McMahon said. "I actually reached out to her when I was trying to get the team ready for BU because she was on the team the last time we beat BU."

Reddy was a member of the 2007 UMass team that beat the Terriers 13-11 at Nickerson Field.

Although Reddy was hesitant to speak about tomorrow's match-up, the former Minutewomen will still be pleased to see her former teammates tomorrow. That is, as long as it doesn't interfere with her game-planning.

"It's always great to see friends, whether in high school or in college," Reddy said. "I'm still really good friends with Jackie Lyons. But game time is game time, so I kind of walk down that line in game mood."

For Pelletier, tomorrow's audience will include high school friends as well as her brother, making the road setting more welcoming. According to McMahon, each game scheduled against a northeast opponent gives her players a sense of pride and enthusiasm because of their close proximity and the likelihood that there will be common opponents.

Yet, when it comes to preparing her team to play tomorrow, friends become foes, leaving little time for a social call. As far as Reddy having a feel for the way the Minutewomen play, McMahon believes that her former player is far removed from the team's concept.

"I think that we have such a different team than we did in the past; a really young team with a lot of new players who bring a lot of different things," McMahon said.

House of Representatives cuts portion of Pell Grant funding

By Melanie Muller
Collegian Staff

A recent decision by the United States House of Representatives to cut the maximum amount of money awarded to federal Pell Grant recipients has drawn sharp criticism from many in the education community and from local politicians.

On Feb. 22, the House passed H.R.1, the federal budget for the upcoming year, by a vote of 235-189. Among other cuts in the bill the House voted in an amendment to change the maximum award available from the federal Pell Grant Program from $5,500 to $4,705, a decrease of 15.2 percent.

In total, funding for the Department of Education was decreased by $11 billion, or 16 percent. In order to become law, the bill must first go to the Senate; House and Senate bills must be reconciled, and a final version approved by the president.

According to information published by the University of Massachusetts University Relations website, 4,850 UMass students were awarded Pell Grants in the 2009-2010 academic year, a nearly seven percent increase in awards from the previous academic year. In a Chronicle of Higher Education article, the UMass Director of Financial Aid Services Suzanne Peters said, "Last year was probably the biggest increase in appeals that we saw, and I think what we're seeing now is families are still in crisis, they're still unemployed."

President Barack Obama sought to maintain the maximum award for the Pell Grant in the budget originally submitted to congress on Feb.14. This included making cuts to other federal student loan programs and eliminating funding for Pell Grants used to cover summer class expenses. In a statement issued regarding Obama's original proposal, the National Association of Student Financial Aid Administrators commended the decision to maintain Pell Grant levels, but expressed anxiety that the cuts would impact students negatively.

"Eliminating subsidized Stafford loans for graduate students and two Pell Grants in an award year will undeniably have a negative impact on students, but maintaining funding for the Pell program, which could be facing a $20 billion shortfall in FY 2012, is our highest priority," said NASFAA President Justin Draeger at the time.

Lindsay McCluskey, the president of the United States Student Association, released a statement condemning the current cuts to the Department of Education, particularly those which impact the Pell Grant.

"A reduction of this magnitude in the Pell Grant means that the House's continuing resolution will effectively end the college education for many low-income students," McCluskey said. "In all, H.R. 1 shows just how little the 112th House of Representatives prioritizes young people and a college education."

Rep. John Olver of Massachusetts 1st district, which includes Amherst, voted against the amendment to reduce the Pell Grant and against the H.R.1 bill in its entirety.

According to an e-mail from Elizabeth Murphy, Olver's press secretary, Olver said: "Cutting spending should not mean cutting off a young person's opportunity for an education. We cannot afford to cut the maximum Pell Grant by 15 percent. If enacted, 136,517 students in the state of Massachusetts will suffer."

He added, "These cuts unfairly penalize prospective college students in need of financial assistance from pursuing the same education as their wealthier would-be classmates."

In an e-mail from Whitney Smith, Sen. John Kerry's press secretary, Kerry said the Pell Grant is too valuable for students to be cut. "Investments in col-

The House of Representatives recently passed a bill that will cut a portion of Pell Grant funding available to students.

Students pedal to run Eco-Rep show

JESSICA SACCO/COLLEGIAN

The "Bikes to the Beat" concert was powered from machines resembling bicycles, saving the University money and conserving energy.

By Jessica Sacco
Collegian Staff

For the University of Massachusetts Eco-Rep members, powering up a concert may have broke a sweat, but didn't break the electric bill.

In an effort to raise awareness about utilities conservation, primarily concerning wastes of electricity and water, the 37 students in the Eco-Rep Program hosted their second annual "Bike to the Beat" concert in the Cape Cod Lounge Tuesday night.

The Eco-Rep Program, a student-run group that focuses on peer-to-peer education in UMass residence halls about sustainable living, works to foster environmental literacy and practices on campus through classes, field trips and events.

Following the Eco-Rep members' message of conserving energy, the concert featured students stationed adjacent to the stage, pedaling on devices that resembled bikes.

The two seats, fastened with a set of pedals were more complicated than a store-bought bicycle. The contraptions were the source of power for the concert, serving as a generator for the amplifiers. The method reduced the amount of electricity used from the grid, saving the University both energy and money.

The event featured three bands, Doug Ratner & the Watchmen, Arrows Over Athens and Nihility.

SoccerFest set for April

By Steven Levine
Collegian Staff

It's getting to be that time of year again filled with sunshine, warm weather and good times. It's time for Supercuts Soccerfest.

On April 30, the University of Massachusetts will host the ninth annual Supercuts SoccerFest on the field behing McGuirk Alumni Stadium. The non-profit event, organized by the Event Management class in the Mark H. McCormack department of sport management centers around a soccer tournament, which is expected to draw around 720 teams this year.

The event is fully supported by its partners and participant registration fees, and it aims to promote the idea of growth through sport. The event also has its own website, Soccerfest.org, which has taken on a remodeled look this year.

The class' mission statement reads: "This dynamic festival provides a safe atmosphere of fun and fair play. We are an interactive community event using soccer as a uniting thread for athletes, students, and families."

Senior Bryan Archambault, who is in the department of tournament operations, knows the event will be successful.

"If you enjoy soccer and you have a team then you can play some games and really have some fun," Archambault said. "That's really what it's all about – getting people together for some fun [and] some healthy outdoor active living."

Last year, Supercuts SoccerFest attracted around 5,500 people. With new improvements and more to offer, the Event Management class is hoping at least 6,000 turn out this year. Senior Chris Tucci, who is in the marketing department and also runs the website, knows the event can be even better.

"We're trying to upgrade the overall quality of the event," Tucci said. "We're trying to make the experience more enjoyable for everyone involved, including the parents, whether it's the atmo-

Pell Grant cuts frustrate educators

PELL GRANT from page 1

lege opportunity are down payments on our country's economic and competitive future and nowhere is there a better example than right here in Massachusetts," said Kerry said in the statement. "Claiborne Pell believed in his gut that a student's educational future shouldn't depend on their ability to pay tuition."

"I don't want to tell any hard working student that they're going to get priced out of college because our budget priorities were out of whack," he continued. "Let's cut the budget elsewhere and fund the Pell Grants at the maximum amount so we're not cheating kids out of the chance to go to college."

Sen. Scott Brown's office was unable to be reached for comment.

UMass senior Zac Bissonnette, the author of "Debt-Free U: How I Paid for an Outstanding College Education Without Loans, Scholarships, or Mooching off My Parents," said he was not certain that the Pell Grant Program and other government spending on education actually expanded accessibility.

Bissonnette said the answer to the question of whether the Pell Grant expanded accessibility was a "resounding maybe." Bissonnette noted that when the Pell Grant program started, low-income students made up a greater portion of the undergraduate population than they currently represent today.

"The problem is that increases in federal funding for higher education, in many cases, just provide the opportunity for schools to raise their prices to finance things like, hypothetically, a new luxury gymnasium," said Bissonnette

UMass professor of economics emeritus Richard Wolff described the cuts to education as both harmful and unnecessary, saying that they will ultimately harm the economy.

"We are now entering in the fourth year of the great recession," said Wolff. "People are continuing to find it difficult to find work.

He continued, "At a time like this to make it harder for young people to earn credentials is a kind of craziness that makes us look like a hysterical nation to the rest of the world shooting itself in the foot."

Wolff also said these kinds of cuts are unnecessary and that far better ways of reducing the deficit exist.

"Corporations used to contribute 50 percent more than individuals to the total tax revenue. Now they contribute 25 percent as much as individuals. During the 1950s, the wealthiest 10 percent of individuals contributed 70 to 80 percent of their top bracket earnings to the government," he said, noting that the fifties were a time of great economic growth.

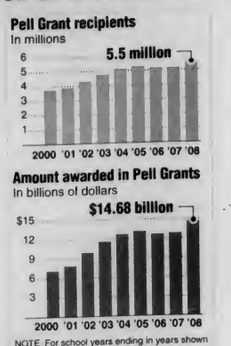
Wolff said the tax burden has been distributed on lower classes, which is making deficit more difficult to overcome for these families.

"The highest income earners now only contribute 35 percent of their top bracket earnings. There has been no comparable reduction in taxes for the middle and lower classes," he said.

While acknowledging that federal educational spending can sometimes be ineffective, Wolff stated that this is not the important issue.

"Rather than quarreling about the effectiveness of a Head Start program, or financial aid programs, and nickel and diming, we need to invest in education. With all the mistakes, spending money on education is a far better and surer investment than spending it on corporations and the wealthy," Wolff said.

Melanie Muller can be reached at mpmuller@student.umass.edu.



Students may face a decrease in their financial aid due to Pell Grant cuts.

Faking happiness may not produce best work output

BY LILY HICKS
COLLEGIAN STAFF

Researchers at Michigan State University are finding despite what employers and moms say, smiling may not always be the best option.

A two-week study of 58 bus drivers in the Pacific Northwest found that smiling alone did not improve drivers' moods – in fact, faking happiness throughout the day correlated positively with daydreaming, thoughts about leaving work and decreased work effort.

The results of the study are potentially problematic for customer service employers, who often encourage workers to appear happy at all costs, as well as employees who are increasingly told that "putting on a happy face" is the ticket to feeling better.

Study authors Brent Scott, an assistant professor of management at MSU, and Christopher Barnes, a former doctoral student at MSU, found that variables like attitude and work ethic depended less on whether or not drivers smiled throughout the day than on why they smiled.

When Scott and Barnes asked drivers to distinguish between "surface acting" – acting happy without feeling happy at all – and "deep acting" – cultivating happiness using, for example, pleasant memories – they found that drivers who engaged in surface acting more often withdrew from work and felt worse than they had at the beginning of the day than their deep-acting coworkers, who felt better at day's end.

Kris Kauffman, a senior at the University of Massachusetts who has been driving UMass Transit buses for three years, said the results of the study made sense to him. While Kauffman said that UMass Transit does not order its drivers to have or exhibit a positive attitude, he added that his previous employer, Kmart – a popular American mass merchandising company – required workers to smile throughout their shifts.

"They really encouraged us to smile all the time, and pretty much everyone who worked there was faking the smiling," said Kauffman. "It was kind of a big joke."

Kauffman said he has never made a concerted effort to engage in "deep acting" when he feels poorly at work, and explained that he is instead "more prone to just not smile at all." He expressed doubt that smiling alone could make him feel better.

"I think the act of smiling in and of itself isn't enough to get me out of my bad mood," said Kauffman.

Journalist Barbara Ehrenreich, author of "Nickel and Dimed" spoke similarly about smiling and positive thinking in a videotaped speech addressed to the Royal Society of the Arts in January 2010, three months after the release of her book, "Bright-Sided: How Positive Thinking is Undermining America." Her speech, titled "Smile or Die," challenged the idea that people need only think positively in order to succeed.

"I began to see a pattern, and find it in more and more aspects of American life: this kind of mandatory optimism and cheerfulness," Ehrenreich said in the speech.

In her talk, Ehrenreich offered realism as a solution to the "delusion" of positive thinking. For employers in the customer service industry, realism may be incompatible with an organization's chief goal: to retain and placate customers. Scott and Barnes, whose study was published in the February edition of the Academy of Management Journal, instead propose a solution to the symptoms of this "delusion," one that includes training in "deep acting" techniques.

The need for training in "deep acting" may be greater for women, as females were more negatively affected by surface acting than men, according to the study. In a phone interview from his MSU office, Scott said that gender socialization is the most compelling explanation for the disparity. "Women are expected to express genuine emotion with more intensity than men," said Scott.

He added, "On days when women are feigning a smile while feeling negative on the inside, that goes against these cultural norms and can be stressful, whereas for men it's a little more acceptable to do so and so it's not as problematic."

Lily Hicks can be reached at lhicks@student.umass.edu.

Concert raises energy, sustainability awareness

ECO-REP from page 1

through the rapid pedaling of volunteers, music filled the room, drawing in crowds from outside the Student Union.

Peddlers switched between songs, and at the end of the night, two participants were rewarded a gift certificate to Bueno Y Sano and Pasta F. Basta for their assistance.

David Marcus, drummer from Arrows Over Athens, felt the performances were a great way to attract people and attention to an educational event. Along with Eco-Reps and attendees of the concert, Marcus said encouraging sustainable habits is important for the campus community.

"The world is using up resources fast," he said. "We need to try and slow down that process until alternatives are brought to use."

Tables lined the corners of the lounge, where various facts about conserving energy, especially in residence halls were displayed. During the concert, Eco-Reps focused on educating attendees about the importance of reducing their utility usage.

"The globe is changing whether we like it or not," said freshman Eco-Rep Liz Foster. "The more energy we can save, the longer we have to prevent our planet from the horrible changes that are coming."

During the night, Eco-Reps also made efforts to educate their peers about water conservation. According to facts the group displayed, 2.5 gallons of water are used for each minute spent in the residence hall showers. In order to effectively illustrate this concept, the group announced that an imaginary shower head was turned on at the beginning of the concert.

Every time 10 gallons were used, a paper cut-out, representative of that amount, was added to a poster situated by the bands. By the end of the night a total of 300 gallons would have been used in a two hour span.

Audrey Sundin, a junior who attended the event believed it to be an interesting and effective concept to draw attention to sustainability.

"A lot of students who come to college haven't lived on their own and it's important to learn eco-friendly practices," she said.

As the night continued, members of the community filtered into the lounge. A dedicated crowd remained throughout the evening, content on listening to the array of music provided and refreshments served.

Eco-Rep Program Manager Julie Kadlik, a sophomore, viewed the night as a success.

"A lot of people were here to support sustainability on campus, which is important because the goal of the Eco-Rep Program is to have students actively involved in sustainable practices," she said.

Jessica Sacco can be reached at jsacco@student.umass.edu

At Wednesday's "Bike for the Beat" concert in the Student Union, UMass Eco-Reps and several local bands combined efforts to raise awareness and educate students about sustainable living.

Soccer tournament will draw in over 100 teams from the state

SOCCER from page 1

sphere, kind of music or games."

He added, "We're also trying to look at the inflatables and see what kind of new things we can bring in and any other kinds of games outside of soccer that we can give people to do."

Players of the New England Revolution, the New England Major League Soccer team, will be involved, along with both the Massachusetts men's and women's soccer teams. Hundreds of volunteers will also lend a hand to ensure that the event runs smoothly.

Despite the name, Supercuts SoccerFest is not all soccer. There are a number of events that draw participation, such as a series of inflatable bounce houses and a dunk tank (where professors get dunked) in the "Fun Zone," or "Fenway Fantasy Park," a miniature Fenway where Wiffle but home run derbies will take place.

Two new features the event planners are excited about are the skills competition and the mascot shootout. The skills competition invites people who are interested to show off their soccer skills in various events. The mascot shootout will feature mascots from all over the community competing against each other, including Subway's mascot and Sam the Minuteman.

On Tuesday night, The Pub hosted Supercuts SoccerFest and raised over $450 that will be allocated to the class budget. The Pub will host a similar night on March 29.

The event officially kicks off on April 30 at 8 a.m. behind McGuirk Alumni Stadium.

EDITORIAL@DAILYCOLLEGIAN.COM

Acceptable piracy

Miss the latest episode of "Glee" or "The Office?" No problem, you can catch those shows on many of the available streaming video websites just hours after they have been aired. Or as has increasingly become the case, you can watch many primetime shows on sites like Hulu or network web-

Seyi Obasa

sites, which offer full free online episodes. With free viewing comes the problem of those pesky ads, kind of like the previews when watching movies in theatres, on DVDs or Blu-rays. What if you could skip those ads or avoid buying individual tracks of entire albums on iTunes or Amazon? This is where the moral dilemma of pirating the goods becomes questionable.

In a study done by the Rockwool Foundation Research Unit, an independent research firm in Denmark, people were questioned on their personal moral and ethical views on laws which they believed were socially acceptable to disobey. Among those that were studied, 70 percent found downloading illicit-pirated material from the Internet for personal use to be acceptable. Fifteen to 20 percent of people in this study found piracy perfectly acceptable. However, the caveat to this study is that three quarters of these people interviewed found it unacceptable to sell pirated material for profit.

Piracy to some individuals can be more convenient as it can allow them to circumvent ads or preserve and backup copies of software they already own...

Before the widespread availability of high-speed Internet access, opinions on piracy were different. When a similar survey was conducted in 1997, 30 percent of people believed it was socially unacceptable to illicit pirate material, which mirrors the numbers of Rockwool Foundation Research Unit's recent survey. Companies have been doing their part which includes suing file sharers from services like BitTorrent and now defunct clients like LimeWire. The spreading of fear by companies and record labels is understandable as they are looking out for their best interest. Also, pirating has seen quite a hit of hacklash from individual artists, such as Metallica's Lars Ulrich and his war on Napster.

This also may further hit home for many when companies with video or music on websites like YouTube remove content from their website at the request of movie and music production companies.

Piracy is also prevalent through the use of torrent and file-sharing clients. These clients cannot only be used to share and distribute copyrighted media, but can also be used to distribute media such as e-books, video games and software.

Piracy to some individuals can be more convenient as it can allow them to circumvent ads or preserve and backup copies of software they already own. The more dubious and questionable uses for piracy are obtaining and potentially hoarding large amounts of audio, video and written intellectual content.

Now, don't get me wrong, I'm not necessarily condemning or condoning such activity in any sense, as there are numerous sound or selfish reasons for people to feel motivated to do it, but it is something that has been at the center of Internet controversy.

What are some incentives that can be provided for people to be less likely to pirate off the Internet? One can be to offer people choices with rentals of shows and movies as is the case with iTunes and Amazon.com. This would also go over well with online e-books for devices like the Kindle, NOOK and iPad. Viewers should also have the option of getting shows earlier and ad-free if they pay a small monthly fee or a lump sum payment each year.

As a fellow poor college student, I am perfectly satisfied with just watching a TV show a day after it airs on the networks website. This allows the network to collect viewership data and ad revenue, which will keep the shows running. This also goes to pay the production staff and people behind the scenes of this show. Another model, which may bode well for fans and companies, is the "Pay What it's Worth Model." Artists like Radiohead and Nine Inch Nails have attempted to replicate this business strategy. I remember hearing of numerous people I know deciding to pay nothing at first, then trying out the album and deciding to pay the full $10 to $15 after fully evaluating the album. An incentive like this needs to be there to avoid pirating.

At the end of the day, access to large amounts of video and media and importantly, books open up the door to people to acquire large amounts of information. Isn't knowledge power? In order to fix the piracy dilemma, there just needs to be incentive for people to affordably and legally obtain this knowledge and media.

In favor of free culture

Traditionally, the Left has stood for the rights of working people over the rights of capitalists, and it has also stood, when not plunged into a Maoist fever dream, for the rights of cultural figures, artists and intellectuals to speak, write and perform as they please. Technological advancement and the democratization of

Eli Gottlieb

culture have been watchwords of leftist activism since there was such a thing. Yet, no major leftist bloc has come out in favor of the free culture movement.

It would appear that the reason has been that the free culture movement looks less like oppressed Third World workers rising up for socialism than First World middle-class teenagers who want a legal right to remix copyrighted music with cartoon clips on YouTube. Why defend such a thing?

I defend it, I justify it and I endorse it because every civilization that has enjoyed the blessings of a domestic golden age enjoyed it due to the widespread dissemination of culture, information, art and communication.

Modern computing technology should represent another great leap forward for culture, communication and simple fun...

The printing press led to the spread of pornographic pamphlets, but it also dawned with the Gutenberg Illuminated Bibles and therefore enabled, on a fundamental historical level, the rise of religious liberalism in Europe and religious literacy everywhere – literally, doing "God's work." Free printing meant the free flow of information and the inability of England to enforce its copyright laws on the United States enabled the printing of Charles Dickens' work in America.

Modern computing technology should represent another great leap forward for culture, communication and simple fun, but overly stringent intellectual property laws have prevented that. Thanks to these laws, developers wishing to create materials for many computing platforms must pay licensing fees for a "devkit" [software development kit], fees so exorbitant that only large corporations can afford them.

Thanks to these laws, the culture which can be produced by common people through "mash-ups" or "remixes" is often criminalized as unlicensed "derived works" and removed from networks. Common people face bankrupting lawsuits for the "crime" of sharing culture for free – the same price at which it can be found on advertising-supported media sources that, unlike commoners, could afford licensing fees.

Free culture has become a necessity. Let's take the following two examples: the "Pokémon" series of video games and the song "Happy Birthday to You." Both remain under copyright, though the original "Pokémon" games came out more than 12 years ago and "Happy Birthday to You" became a common household tune nearly a century ago. More people now know the latter by heart than any other song in the English language, and the former spawned a long series of video games.

Most of us grew up singing "Happy Birthday to You" every single year at our birthdays, and yet, a radio DJ cannot play it without paying a license fee. Its writers have long since died, the copyright has passed through several different purchases and some judges have even recommended examining whether the song still falls under copyright at all. Nevertheless, anyone wishing to publicly perform the song must pay the fees because the ideology of corporate capitalism demands we privatize the cultural sphere for better profits and "job creation." Fair use, once a concept native to copyright law, has died in the pro-corporate courtroom.

The "Pokémon" games provide us with a sample of the blossoming that can come from allowing common creators to work free from the chains of licensing, or even free to pay modest, known licensing fees rather than large, arbitrary ones. A cursory search of a single website indicates that four patches exist to partially improve years-old "Pokémon" games and three that yield entirely new games based on the "Pokémon" game engines.

The common American, while perfectly able to download the software patches, cannot use them. This is because the Digital Millennium Copyright Act of 1998 rendered the copying of any software from its original medium, such as the game cartridge, illegal – even when no actual copyright violation occurs. It has even illegalized the production and sale of devices that perform this function, or that allow hardware owners to run unlicensed but free software on their own property.

These are not the only examples. Basic glances at YouTube or at the disk-jockeying profession will show the cultural productivity that can come from applying a right to create work derived from an original work. If such "mashing up" and "remixing" have already become commonplace for video games, music and short videos, who knows the breadth, scope or scale of the brilliance that could reach the public unchained from the need for million-dollar license financing?

The Left has traditionally liked any story of normal people against multi-millionaire corporations, joining any such fight. It should join this one as well.

NECESSARY WOMEN'S RIGHTS

Dear Editor,

While I will not fault Yevgenia Lomakina on questioning contemporary public morality, I do take offense with many of her other points concerning sex education, Planned Parenthood and her seeming justification of rape when alcohol is involved.

I don't think anyone would disagree with attempting to decrease the abortion rate. Limiting the availability of abortion services is not the way to achieve this goal. Abortions will just go underground, as they were before the Roe vs. Wade ruling. Only by providing women with easy access to contraception and sex education will we lower abortion rates. Its social conservative efforts to limit access to reproductive services and education, not Planned Parenthood, that account for our high teen pregnancy rate, which is the highest in the developed world.

Furthermore, Ms. Lomakina's claim that women are "victim[s] of her own choices" in certain instances of rape is abhorrent. Rape is wrong, no matter what the victim wore, drank, said or did leading up to an assault. The blame rests squarely with the perpetrator and anyone else that failed to intervene. That said, I find it particularly alarming that such an odious claim would be repeated in a liberal college newspaper by a female columnist; it is clear that a lot more needs to be done to change perceptions of rape victims.

Ms. Lomakina later makes the dubious claim that contraception use doesn't reduce abortion. Not only is this an unsighted, doubtful claim, it defies logic. Contraception use reduces unwanted pregnancy, hence fewer abortions. Her claims in regards to leaving sex education to families, is likewise dubious. Abstinence-only education programs in schools essentially did just this and the failures of that program are very well documented.

Planned Parenthood provides badly needed reproductive and women's health services, often to low-income women. Abortion, as Ms. Lomakina mentions, is only three percent of the services it provides. Contraception, education, cancer screening, STD treatment, vasectomies/tubal litigation, among others, are the other vital services it provides. Despite claims to the contrary, it is not a business; it receives most of its funding from private donations and provides, as Ms. Lomakina rightfully claims, subsidized care – not a normal model for a profitable business.

Only by making reproductive health services affordable and accessible will we lower the abortion rate. The stakes are very high. The Republicans are on the cusp of gutting one of the pillars of woman's reproductive rights in this country and they must be defeated.

DRINKING NOT FOR EVERYONE

Dear Editor,

Intrigued by the title and apparent topic, I read carefully Tim Jones' article "No, I do not drink, yes I go to Zoomass", published Feb. 24. I admire his discipline in abstaining from alcohol throughout his undergraduate career, and credit his valiance in writing an article standing up for his practice and perspectives.

However, I think his article – littered with rash generalizations and bold statements – lacks a central argument. While, in the process, he glosses over some substantive issues relevant to this campus, overall, his piece was a self-reflective narrative in which he laid assault on the general population in order to pose himself as a distinct and righteous character.

Although the reputation has faded significantly, the University of Massachusetts remains by and large to be considered a party school, with many students proudly helping to represent it as one. Alcohol has an enormous presence at UMass: This is incontestable. Every week, drinking, often in the form of a binge, induces a myriad of bad decisions, and results in vomit, car accidents and theft.

As a matter of fact, two years ago I wrote an article published as an editorial-opinion piece in the Daily Collegian illustrating the tribulations of living in a party house, particularly the unnecessary amount of stolen and broken items. In other words, I am in agreement with Mr. Jones that many behaviors associated with drinking are deplorable.

However, I emphatically object to his assertions towards and labeling of the typical student who drinks. For example, he expresses his discontent with people assuming he drinks, fearing many would therefore associate him with extremes such as drunk-driving and violence. I know very few, if any, whom upon finding out someone drinks, brings to mind drunk-driving and vandalism. Same goes for stereotyping a white 20 year-old college student with a fraternity and 30-rack of "Natty light," another claim of his that is largely untrue, even if he himself has experienced it.

Amidst all his harsh criticism towards the common student who apparently belongs to the "large part of today's culture [that] consists of people who do not have anything in life going for them besides liver capacity," he neglects to acknowledge, or even postulate as to why so many people choose to drink.

I for one enjoy drinking, whether it be a couple beers at a local pub, or the 30-second-long keg stand I performed at a Smith College party last week. Beer – especially India Pale Ales – and bourbon are delicious. I'm anything but violent, and never consider drinking and driving. But most importantly, I'm not the least bit concerned about people labeling me.

There are plenty of others like me. We drink responsibly and enjoy it; we also respect those who don't drink, that is if they have a more legitimate reason than an irrational fear of being labeled as a fraternity brother who drinks Natural Light – as if those people are worthless in the first place. In the end, Mr. Jones is the one making assumptions about everyone else. Whether he orders a tonic with or without gin, I'm quite certain his peers wouldn't think any differently.

ARTS@DAILYCOLLEGIAN.COM

62 teams to mush Iditarod

By Chris Shores
Collegian Staff

Mushers, start your dog sled teams.

Thousands of miles away in Anchorage, Alaska, mushers and dogs have already begun to gather in preparation for the start of the 39th Annual Iditarod Trail Sled Dog Race this Saturday, March 5. From the ceremonial start in Anchorage and then from the official start 49 miles away in Willow the mushers will travel 1,161 miles over vast and treacherous Alaskan terrain and finish in Nome sometime in the next two weeks.

The 2011 field contains 62 teams, according to Iditarod.com. A majority of the mushers come from Alaska, but other states and countries are represented as well. There are 13 mushers competing in the race for the first time as rookies, including Mike Santos, who was born and raised in Ludlow, Mass.

The Iditarod, and mushing in general, has become a part of culture in both literature and film. The Disney animated film "Balto" told the story of how a sled dog team, under the direction of the lead dog Balto, carried medicine 674 miles to save dying children in Nome. While the Disney film took some liberties in its storytelling, there was in fact a relay of dogsled teams in 1925 to transfer the serum to Nome, with Balto's team traveling the final stretch.

In an average year, about 1,000 dogs compete in the Iditarod. Dogsled teams usually contain 12 to 16 dogs, primarily Siberian Huskies. While animal rights activists have criticized both the sport and the race, the Iditarod contends that it has safety precautions in place. This includes a procedure in which the musher and veterinarian do a brief examination of the dogs at each checkpoint and drop them from the race if necessary, according to Stuart Nelson, Jr., DVM as posted on Iditarod.com. An incidence of dog abuse was reported in 2007 when witnesses observed Ramy "Ray" Brooks kick his dogs and hit them with his ski pole. Brooks was suspended for the rest of the 2007 race and banned from the 2008 and 2009 contests.

The idea for an Iditarod race was formed in the late 1960s and the first official race took place in 1973. Since then, there have been 18 different winners of the race. The closest finish took place in 1978, when Dick Mackey finished one second in front of Rick Swenson. Five mushers – Martin Buser, Susan Butcher, Jeff King, Lance Mackey (son of Dick) and Doug Swingley – have four victories. Swenson, a 60-year-old Minnesota native nicknamed the "King of the Iditarod," has the record with five career victories. Buser, Mackey and Swenson will look to improve their records in the 2011 race.

Mackey is the clear favorite this year, after handily winning the last four Iditarod races, finishing in nine days or less all four years. In 2010, Mackey came within an hour of the fastest time ever, finishing in eight days, 23 hours, 59 minutes and nine seconds. Mackey made history last year by becoming the first musher ever to win four consecutive Iditarods. A fifth straight victory this year would tie him with Swenson for most career wins.

One musher that may be able to dethrone Mackey this year is 24-year-old Dallas Seavey. Son of 2004 Iditarod champion Mitch Seavey, Dallas was the youngest Iditarod competitor ever in 2005 at the age of 18. Seavey finished in sixth place in 2009 and eighth place in 2010. His greatest accomplishment is also his most recent: his victory in the Yukon Quest sled dog race last month. Seavey won the race in his first year competing in the Quest, joining Sonny Lindner and Mackey as the only mushers to accomplish the feat as rookies.

Another musher to keep an eye on is Hans Gatt, an Austrian who has seen mushing success in both the European and American arenas. Gatt has never won the Iditarod, but according to his Iditarod.com profile, he has claimed multiple victories in the Yukon Quest, Wyoming Stage Stop and the European Championship. Gatt finished second last year, entering Nome about an hour after Mackey.

A name often heard during the earlier parts of races is 42-year-old Hugh Neff. After reading about the Iditarod in Illinois, he decided to move to Alaska to chase down a dream, according to his Iditarod.com profile. Neff's performances have strayed a little from his dream. According to the Anchorage Daily News, Neff has been called the nickname "Huge Mess" because of his tendency to start his team off at an extremely fast speed, only to lose steam as the races go on. In the 2009 Yukon Quest, Neff would have won the race but was assessed a two-hour penalty because he decided to take his team off course and mush down a highway as a shortcut. Neff had an eight-hour lead in the most recent Quest last month, but had to scratch after he ran into difficulty on the treacherous Eagle Summit. One of his dogs, Geronimo, died in the Eagle Summit attempt.

Other mushers that have finished high in the standings during recent seasons include Ken Anderson, John Baker, Ramey Smyth and Sebastian Schnuelle.

The race will be televised on Alaskan channels but can also be watched on Iditarod.com with the purchase of an Iditarod Insider package. The website will also provide free news and updated standings at the end of every day.

Chris Shores can be reached at cshores@dailycollegian.com

This 39th annual Alaskan Iditarod will begin this Saturday in Willow, Alaska. The race takes roughly two weeks to complete and will feature 62 different teams. Twelve to 16 dogs make up each team. Several of this year's competitors are descendants of previous winners.

Easy mixers bring spring break home

By Ashley Berger
Collegian Staff

Are you dreaming of the sun, the sand and a drink in your hand but can't quite afford to get away from the bitter cold of Massachusetts? Follow these simple instructions to whip up a few cocktails, which, if you drink enough of them and close your eyes, transport you to a warm beach with a cool breeze.

Blue Hawaiian

Want to escape to that place wear it's always a lazy summer day? Mix one ounce of light rum, two ounces of pineapple juice, one ounce of blue Curacao, and one ounce of crème de coconut to create this fruity concoction that will make you feel like you're laying on a beach watching surfers in Oahu.

Pina Colada

If we could all be Jimmy Buffett, we would all always be on vacation. Since we're not, sipping Piña Coladas will have to do. Especially because the New England weather forecast always predicts the chance that we could "be getting caught in the rain." Grab a blender and blend three ounces of light rum with coconut milk, crushed pineapple, and ice. Garnish with cherries and crank up the Jimmy Buffett to drown away sorrows in rum instead of rain.

Sex on the Beach

Feeling a little risky? Or craving the stereotypical MTV Spring Break? Sex on the Beach is the perfect drink for you and that special or random someone. Mix one and a half ounces of vodka, three quarters of an ounce of peach schnapps, a half ounce of crème de cassis, some orange juice and some cranberry. Serve ice cold with oranges and cherries.

Bay Breeze

Dreaming of lying in the sand with the perfect chill coming off the ocean to cool you down? For the easiest and cheapest recipe in the list, mix one and a half ounces of plain vodka, fill the glass with grapefruit juice, and top with cranberry juice. Serve over ice for the perfect chill.

Hurricane

Not all tropical drinks can have a nice name, and this one comes with the storm warning that too many Hurricanes are sure to make you feel like you got hit by one the next morning. Mix two ounces of white rum and two ounces of dark rum. Combine with passion fruit juice, pineapple juice, orange juice and grenadine.

Lava Flow

Grab the blender again to concoct this drink. Blend one banana with coconut cream and pineapple juice. In the serving glass, mix one ounce of light rum and one ounce of Malibu coconut and strawberries. Pour in the blended mix and watch as the alcohol rises and mixes slowly, like a lava flow.

Bahama Mama #1 and #2

Named after another tropical destination, these two variations with the same name provide for a delicious double-whammy. For the first recipe, mix a quarter of an ounce of coffee liquor, a half ounce of dark rum, a half ounce of coconut liquor, a quarter ounce of 151 proof rum, lemon juice, and pineapple juice. A more watered down version of #1, Bahama Mama #2 requires that you combine one and a half ounces of rum with one ounce of coconut rum with lemon juice, orange juice, pineapple juice and grenadine for a sweeter drink.

Boardwalk Breeze

If you wish you were with the cast of the Jersey Shore this Spring Break, check out this drink. Mix one and a half ounces of Malibu coconut rum and one and a half ounces of amaretto almond liquor. Add orange juice, pineapple juice, and grenadine and proceed to GTL.

Jamaican Sunrise

If you dream about spending long nights on a warm beach, try Jamaican Sunrise. Mix two ounces of vodka, two ounces of peach schnapps and orange juice. Top with cranberry juice to create a drink that looks like a sunrise.

Tijuana Taxi

Closing out the list is another drink named after a notorious Spring Break destination. Mix two ounces of gold tequila, one ounce of Blue Curacao liquor, an ounce of tropical fruit schnapps and finish with Sprite or Fresca. Beware, though, if you drink one too many of these, you might need to take a taxi home.

Ashley Berger can be reached at aberger@student.umass.edu.

LimeRed gives Amherst community that special bubbly feeling

By Mandy Pote
Collegian Correspondent

Stores come and go in Amherst, but some are here to stay due to their uniqueness and quality customer service. Only three weeks into business, the new LimeRed Teahouse may be here to stay. Located a couple doors down from Bueno Y Sano, it has found quite the niche in the Amherst business community. With an eye catching slogan and bright colors, LimeRed attracts enough customers they are lining up outside the door.

LimeRed offers customers a variety of specialty teas including Bubble Tea and Ice Blizzards. Never tried Bubble Tea before? The friendly staff is more than happy to explain what it is and offer up any flavor suggestions. Taro Milk Tea is a favorite for customers new to Bubble Tea because it is smooth and neutral, but has a different taste than what people are used to.

Bubble tea originated in Taiwan about 30 years ago. It is a milk tea base with added flavoring and tapioca pearls, called "boba," which are jellies that fall to the bottom of the glass and add a chewy texture. The tea is shaken until a foamy layer forms at the top of the glass, giving bubble tea its name.

Teahouses are an urban trend in the Taiwan community which has gained popularity in the United States. Amazingly, teahouses are generally unique from one another with different flavor and drink options. Most teahouses in the U.S. are located in big cities such as New York City, which gave young entrepreneur Joe Deng the inspiration to open his own teahouse.

"My friend went to Smith College, and she loved bubble tea but was so disappointed that there was not a teahouse in the area," said Deng. Opening a teahouse has been a dream of Deng's since college, and Deng found Amherst to be the perfect location to pursue his goal. Only two years out of college, Deng pulled together enough funds in three months to start LimeRed. He chose Amherst not only for the opportunity to bring something new to the community, but also, because there is not much for people under 21 to do at night. LimeRed offers a fun and colorful alternative for all ages. Currently open every night until 11:30 p.m., Deng hopes to extend the hours as his customer base grows.

"It's a place for friends to come together," said Deng. True to his word, LimeRed Teahouse is an awesome chill spot. Deng envisions LimeRed as a place for friends to congregate and enjoy a playful, innocent drink.

It's also a fun way to spend an afternoon. The building is newly renovated with clean wood floors, brick interior and bright lighting. They even offer WiFi for those looking for a cool place to study. LimeRed Teahouse continues to grow in popularity, and Deng says he will be staying true to its Taiwanese roots. Priding his business on its uniqueness and authenticity, Deng said, "You won't find cookies and cream on my menu."

Despite that, there are hundreds of options to choose from. There are flavors such as mango, papaya, coconut and so many more. The Ice Blizzards are also highly recommended and have been a big hit. Made with ice cream, these exceptional cold drinks are going to be a fabulous way to cool down as the weather gets warmer. Deng also hopes to expand the teahouse's food menu to include a wider variety of desserts and make LimeRed a "sweet place to eat."

"Our customer base is mostly female right now," said Deng, "but if the girls are here, the guys will come!"

LimeRed Teahouse is open from 11 a.m. to 11:30 p.m. daily. Visit the restaurant's website at limeredteahouse.com to check out its full menu. The teahouse is located downtown at 50 Main StreeA

Mandy Pote can be reached at mpote@student.umass.edu

LimeRed Teahouse opened in downtown Amherst recently, filling the storefront previously occupied by Newbury Comics. It offers various flavors of bubble tea and a unique environment to hang out in.

Track and Field teams rest, prepare for 2 championships

JEFF BERNSTEIN/COLLEGIAN

The Massachusetts men's and women's track and field teams continue its championship schedule this weekend when they travel to Roxbury, Mass. for the IC4As and ECACs.

By Eric Mansfield
Collegian Staff

Heading into the IC4A and ECAC meets this weekend, the men's and women's indoor track and field teams won't have their usual strenuous workouts.

While all physical preparation settles down, the mental preparation may prove to be the most paramount it has been all year.

Senior harrier Sean Duncan will be competing in the mile this weekend, having qualified for the IC4A's a week and a half ago at the Atlantic 10 Championship meet with a time of 4:16.44.

Duncan said that practices leading up to championship races tend to dip in intensity and that they're more about honing in on certain skills the athletes have focused on throughout the season.

However, Duncan also said that mentally preparing for these races is the most stressful part because the competition will be higher than any other meet thus far.

One phrase that keeps getting thrown around by athletes and coaches at these practices is that the "money's in the bank." In other words, the team has done all of the work it could have done and it's time to "withdraw" that money this weekend.

Other members of the team competing in the IC4A's will be fellow senior miler Daniel Barry, Tyler Cotto in the 60-meter hurdles, Zachary Koncki in the 60-meter hurdles and the long jump, Scott VanderMolen in the 1,000 meters, Patrick McGowan in the 3,000 meters and Sean Busch in the pole vault.

Duncan said that he believes the IC4A meet is a time to focus more on the individual events, but still believes that there will be a great team atmosphere.

"I think everyone who qualified is really, really excited," Duncan said.

As far as the competition goes, Duncan, having been there before, said that a meet as big as this one will feature tough competition. The talent pool that had three or four athletes battling to get on the podium at A-10's will increase to around 20 at the IC4A meet.

"[The coaches] know we're ready. We know we're ready," Duncan said.

Duncan said that while he doesn't have a specific goal for the timed mile, it's more about just giving your best effort and if the time ends up meeting the next qualifying mark, so be it.

If Cotto improves on his New England championship time of 7.87 in the 60 meter hurdles, he has a chance to qualify for nationals.

Junior Deanna Julian of the Minutewomen echoed sentiment that this week's practices won't be too difficult in preparation for the ECAC meet.

"It's a down week, not as much lifting, just nice running because we've already put in the work," Julian said.

Coach Julie LaFreniere said that she planned on resting a lot of the athletes this week after what has been a tiring couple of weeks.

"It's tough to have three championships in a row," LaFreniere said. "And they're long, long track days."

Julian also added how much tougher this meet will be than the others.

"Even in prelims you have to fight to get into the next round. It's very heavy competition," Julian said.

Still, Julian said that the entire team remains confident.

Eric Mansfield can be reached at eamansfi@student.umass.edu.

Minutemen nearly buck A-10 trend, end up falling to conference elite for third time

By Jay Asser
Collegian Staff

Despite its loss to No. 24 Temple on Wednesday night at the Mullins Center, the Massachusetts men's basketball team made strides in the right direction. In its second to last game of the regular season, UMass nearly overthrew a top-tier Atlantic 10 team, something which it failed to come close to doing in its two previous chances this year.

On Senior Night, the Minutemen (15-13, 7-8 A-10) battled the Owls (23-6, 13-2 A-10) through regulation and forced overtime before falling, 73-67.

While the game was up for grabs, especially late in the second half, UMass coach Derek Kellogg recognized that Temple is the type of team which will find ways to exploit mistakes and come out with wins.

"They're a borderline top 25 team that's an NCAA tournament-level team, one or two in the conference, very well-schooled, well-coached and very mature, as we saw in overtime when they outplayed us and took advantage of some things," Kellogg said.

Though the loss was heartbreaking, the final result was a far cry from UMass' previous two meetings with conference elite teams Xavier and Richmond, which stand with the Owls as the only programs in the A-10 with double-digit conference wins and 20-plus wins overall coming into Wednesday.

The difference for the Minutemen against Temple was their ability to answer potential runs by the Owls and come up with key defensive stops when needed. UMass held Temple to 36.4 percent shooting from the field, compared to 48.1 percent against No. 23 Xavier and 51.9 percent against Richmond earlier this season.

Even with UMass' strong defensive effort, the Owls still made its shots count down the stretch.

"They're probably the best team that we've played this year that moves without the ball," guard Gary Correia said. "They're always moving, they're very fluid, they're very patient on the offensive end and I thought we defended very well. We just couldn't make plays down the stretch."

"They had a few open looks that came off offensive rebounds. But for the most part, I thought we played a solid defensive game and we were on their 3-point shooters, but they have some good players," Kellogg said.

In only their second contest of the A-10 schedule, the Minutemen were dominated by Xavier (23-6, 14-1 A-10), 79-50, on Jan. 11.

Unlike its performance against Temple, UMass broke down defensively towards the end of the first half, allowing a 21-4 run as the Musketeers took a commanding 35-18 lead into the intermission.

While the offense picked up for the Minutemen in the second half, ball movement was an issue as UMass committed 17 turnovers and dished out only six assists for the game, compared to 16 assists and seven turnovers for Xavier.

In its next opportunity to take down the cream of the A-10 following back-to-back wins, UMass didn't fare much better against Richmond (23-7, 12-3 A-10), losing 84-68 on Jan. 22 at the Mullins Center.

Once again, the Minutemen allowed a strong offensive half as the Spiders converted eight of their first nine shots coming out of halftime to take a 19-point lead.

Despite a 30-point effort from Anthony Gurley, UMass couldn't slow down the Richmond shooting as the Spiders converted 63 percent from the field in the second half.

Going forward, the Minutemen will look to take positives from the loss to Temple and get ready to battle for a potential first-round home game in the A-10 Tournament.

"I know it hurts, I'm dying inside right now, but the season's not over and we still have another one on Saturday that we have to have, especially I think if we win, we come back here Tuesday," Correia said.

Jay Asser can be reached at jasser@student.umass.edu.

Five games await UM in Buzz City Classic

SOFTBALL from page 8

the lone consistent producer at the place through the first 10 games.

Bettencourt will be looking for her first hit since the opening weekend of the season. The 2010 Atlantic 10 Co-Player of the Year went 0-for-13 in five games last weekend, but will likely get back on track against the Nittany Lions, who she dominated with a 2-for-3 performance and the aforementioned grand slam.

Waiting for UMass following its matchup with the Nittany Lions will be Alabama-Birmingham in the second game of the doubleheader on Friday afternoon.

The Blazers (10-6) are led by junior Kayla Orr, who leads the team in batting average (.375), home runs (2), RBIs (12) and total bases (28) through 16 games.

After their meeting with UAB, the Minutewomen will return to the field on Saturday morning to face off with UNC Greensboro.

UMass will likely go up against starting pitcher Cory Mattson, who posts a record of 3-5 and 5.03 ERA in nine starts for the Spartans (7-8). At the plate, the UAB offense relies on shortstop Kaitlin Merkt for the bulk of its production. The redshirt senior boasts a.419 batting average along with two home runs and 12 RBIs in 15 games.

In the second game of the doubleheader on Saturday, the Minutewomen will go up against Kennesaw State.

Sharon Swanson will more than likely carry the load on offense for the Owls. In 15 games thus far, she has produced six home runs, 27 RBIs and a .468 batting average that all the lead the team by a large margin.

UMass will cap the weekend on Sunday afternoon when it will take on Georgia Tech, and of all the teams that the Minutewomen will play this weekend, the Yellow Jackets (8-4) will pose the toughest pitching matchup.

Senior Kristen Adkins (0.94 ERA) and sophomore Hope Rush (1.77 ERA) lead the staff with a combined 7-4 record in 11 starts.

Offensively, junior Kelsi Weseman leads the team in home runs (3), RBIs (10) and 28 total bases with a .361 batting average.

The first pitch of the weekend will take place at 11 a.m. on Friday against PSU at the Twin Creeks Softball Complex.

Stephen Hewitt can be reached at shewitt@student.umass.edu.

UMass falls to No. 24 Temple in overtime

By Herb Scribner
Collegian Staff

When the final whistle blew, the Massachusetts men's basketball team knew it hung with No. 24 Temple for two periods of basketball.

It was in the third period – the overtime period – where the Minutemen (15-13, 7-8 Atlantic 10) couldn't keep up, as they fell, 73-67, on Wednesday night at the Mullins Center in UMass' final home game of the season.

"I guess we came up a little bit short at the end," UMass coach Derek Kellogg said. "We came out and played with some high energy and some high intensity."

Although Kellogg seemed poised and calm during the press conference after the game, senior guard Gary Correia looked sorrowful after losing the Senior Night contest.

UMass	67
Temple	73

"I know it hurts, I'm dyng inside right now, but the season's not over," Correia said.

Guard Anthony Gurley put on one of his best performances to date with 25 points. It may not have been his statistical best, but the energy and tenacity he brought was unparalleled by any other game this season.

"I had a lot of energy," Gurley said.

Gurley's energy reached a high-point as the clock expired in the first half as he sunk a Lebron James-esque 3-pointer to send the Minutemen into halftime with a four-point lead.

Forward Javorn Farrell was second behind Gurley in scoring with 13 points.

Gurley and Farrell were given top opportunities by Correia, who dished out six assists on the night. Although he was held to six points, Correia managed the ball from the top of the court and calmed down an electric Minutemen offense.

Gurley, Farrell and Correia led UMass against the nationally-ranked Owls (23-6, 13-2 A-10) at least for the first two halves. The trio played tight defense to contain Temple for the majority of the game.

When UMass contested inside drives and baskets, the Owls relied on their 3-point shooting to hang with the Minutemen. Temple shot 9-for-22 from beyond the arc, which included guard Juan Fernandez's 4-for-9 shooting from the perimeter.

Fernandez (19 points) led a quartet of double-digit scorers including forward Lavoy Allen (14 points) and guards Aaron Brown (10 points) and Khalif Wyatt (10 points).

"Threes hurt across the board," Correia said. "When a team's hitting 3s on you, especially when you're trying to open it up against a Top 25 team, there's not really too much you can do about it."

Kellogg explained that it was more than successful 3-point shooting from Temple that earned it the victory, emphasizing that the little things in the game proved to be quite substantial.

"I kind of explained to the guys all year that little things in college basketball are big things," Kellogg said.

Some of the "little things" stemmed from the overtime period, when the Minutemen appeared tired and outmatched by the steaming Owls who continued to play composed throughout its first overtime period since Feb. 17, 2008.

"They actually outplayed us and took advantage of some things," Kellogg said.

When it came time to play successfully in overtime, Correia said that the Minutemen contested baskets, but couldn't find their way to the rim.

"I feel like we defended very well, we just couldn't make plays down the stretch," Correia said.

UMass maintained pace with the Owls, including the final two minutes of the second half, which featured some of the most dramatic basketball to date.

At the 1:45 mark, Correia nailed a 3-pointer that gave the Minutemen a short-lived lead, as forward Rahlir Jefferson hit two free throws to put Temple ahead again with 1:26 remaining.

Gurley limped away from the paint during the free throws, appearing injured. When Gurley returned from the bench seconds later, he faced a Minutemen crowd that thunderously chanted his name. Using the crowd as fuel, Gurley stole the ball and tossed it up court. The ball stumbled past Farrell and went out of bounds on a play that could have given UMass a two-possession lead.

With the last possession of the half, Fernandez drove towards the net in hopes of ending the Minutemen's 7-0 streak in Senior Night games. Sophomore Sampson Carter denied him of this with a game-saving block to send the game into overtime.

After putting out a top performance against the always-dangerous Temple team, the Minutemen head to Fordham for their last regular season game.

"[We've got to] take the positives out of the game, take how we played for the first 39 minutes and just try to apply it to our next one," Correia said.

If the Minutemen defeat Fordham on Saturday, then they will return to the Mullins Center for the first round game in the conference tournament next Tuesday.

Herb Scribner can be reached at hscribne@student.umass.edu.

MARIA J. MOSES / COLLEGIAN

Senior center Hashim "Big City" Bailey (35) goes for a layup in a game against Saint Joseph's earlier this season. Bailey contributed six points on 3-of-3 shooting and added two rebounds in UM's loss to Temple.

JEFF BERNSTEIN / COLLEGIAN

Junior attacker Danielle Pelletier (25) plays tight defense against Vermont in a game earlier this season. Pelletier has seven goals in the Minutewomen's first seven games.

Minutewomen win fifth-straight, defeat New Hampshire, 11-4

By Jackson Alexander
Collegian Staff

The Massachusetts women's lacrosse team entered Wednesday's game against New Hampshire looking for its fifth-straight win. The Minutewomen achieved just that thanks to an efficient offensive attack and great goalkeeping.

Katie Ferris led the way offensively with three goals and an assist, while Nina Sarcona and Jackie Lyons each recorded hat tricks for UMass (5-0) en route to an 11-4 victory over the Wildcats (1-2). Junior goalkeeper Katie Florence had her best outing of the season, stopping 15 shots and allowing just four goals.

UMass	11
UNH	4

"She was making some great stops. She was a huge star for us and definitely helped us transition up field to the other end," coach Angela McMahon said. "I think we were able to build off of the key stops she made."

While Florence flourished in the cage, she couldn't have done it without her strong defense.

"We just wanted to try to limit some of their top players' shots and really force them down into low angles," McMahon said. "Everyone just shifted as a unit and backed each other up, and we were able to get some caused turnovers."

The game started off slowly as both teams struggled to find the back of the net. Finally, nearly 12 minutes into the game, UMass went on a three-goal run in a five-minute span. Jackie Lyons got her team on the board, then Nina Sarcona and Ali Houlis fired in the second and third goals of the game to make the score 3-0.

New Hampshire finally got a shot through Florence with nine minutes and 15 seconds left in the half, but Lyons and Ferris responded with goals of their own to make it 5-1. A minute later, UNH's Ilana Cohen scored the team's second goal of the game. With ten seconds left in the half, Sarcona was awarded a free position and she converted it to put UMass up 6-2 at the half.

Both teams again started slowly in the second half, but eventually Ferris added two-straight goals and Lyons added another during a run that left UNH with a seven-goal deficit.

The Wildcats fought back as Ally Stager and Kate Keagins each scored to cut the lead back to five with just under nine minutes left. However, just when it looked like the Wildcats were creeping back into the game, Lyons delivered the dagger with her fourth goal of the game. Sarcona tacked on an insurance goal for the Minutewomen, finalizing the score, 11-4.

McMahon was impressed with her team's balanced effort.

"We definitely had a solid team effort end-to-end, our goalie play was great, our defense made some huge stops, midfield did a great job and we transitioned in our attack all the way to the end," McMahon said. "It was really just a complete team effort."

As expected, UMass won the battle of the draw controls, 13-4, but the Minutewomen did not dominate every category. The Wildcats outshot UMass (21-19), collected more ground balls (15-7), and forced the Minutewomen into 26 turnovers.

The turnovers were a season-high for UMass and one of the only negatives in an otherwise positive game.

"It's definitely going to be a huge focus for us over the next week and a half, because we really made some outstanding plays on defense, [but] to turn it over right away could have given UNH a window to get back into the game," McMahon said.

The Minutewomen will return home after their three-game road stint and host Stony Brook at Garber Field 1 p.m. on Mar. 12.

UM softball travels to Georgia with hopes to end difficult start

By Stephen Hewitt
Collegian Staff

Following a disappointing winless showing at the Cathedral City Classic last weekend in California, the Massachusetts softball team will try and reverse its fortunes this weekend when it travels to Woodstock, Ga. to play a five-game slate at the Buzz City Classic.

At 2-8, the Minutewomen are not only off to their worst start since 2008, when they began 4-6, but are also just a pair of defeats shy of matching last season's loss total.

The underwhelming performance to start the season may be excused by some, due in large part to the fact that the team faced four nationally-ranked opponents last weekend. However, aside from a 9-2 drubbing given by then-No.7 Washington, UMass was well within reach of victory in each of the other games.

To their advantage, the Minutewomen won't see any ranked opponents this weekend, and will also reacquaint themselves against some familiar foes.

UMass will square off with Penn State for the second time this season, and if the previous meeting is a benchmark for the team's potential, then this game may serve as a revival of the Minutewomen offense.

Behind junior Katie Bettencourt's grand slam in the sixth inning, the Minutewomen defeated the Nittany Lions handily on Feb. 18, shutting them out 10-0, and showing just how potent the offense can be.

However, after its meeting with PSU, the UMass offense sputtered, scoring a total of 15 runs in nine games, including being shut-out four times.

In order for the offense to rebound, the Minutewomen will look to junior Kyllie Magill to be a sparkplug. The Pawtucket, R.I. native leads the team in batting average (.323) and total bases (15) to go along with one home run and four RBIs, and has been

Amherst College's 2-time Pulitzer winner Richard Wilbur celebrates 90th birthday

By Michael Roberts
Collegian Correspondent

Poet Richard Wilbur turned 90-years-old on March 1 and the milestone was honored at a tribute and poetry reading on Wednesday at Converse Hall of Amherst College, Wilbur's alma mater.

Fourteen of Wilbur's colleagues and Amherst College students read various poems from his 68-year career to a crowded audience, many of which were forced to stand.

Wilbur's translations were recited nearly as often as original works. Such translations, like Charles Baudelaire's "L'Invitation au Voyage" and "Canto XXV" from "Dante's Inferno," were first read in their original language and then followed by a reading of Wilbur's English translation.

About half-way through the event, president of Amherst College Anthony Marx took the stage to read Wilbur's "Cottage Street."

Marx said, "The idea that I am now reading Wilbur to Wilbur is amongst the most amazing and bizarre moments of my time at Amherst College."

He said the poem has a special place in his heart, as it has helped him through difficult times in his life.

"When moments of suicide have touched my life, this is the poem I go to," he said. Marx later read a rendition of "Happy Birthday to You" during the reception.

Wilbur, seated directly in front of the podium, officially ended the occasion with a poetry reading of his own. Very humble, Wilbur read a humorous poem, set in New England, about a snow shovel propped against the side of a house in July — just in case. His reading ended the event with laughter and smiles, along with a lengthy standing ovation. A reception in the lobby followed.

COURTESY KWLS.ORG

Richard Wilbur, who is a professor at Amherst College, recently attended a birthday ceremony held in honor of the works he wrote over his career.

Amherst College student John Wagner thought Wilbur had a good sense of humor during the event and noted that Wilbur has a good reputation and is well-liked throughout campus.

Wagner said, "I had a class where we went through his poetry ... just figured I had an obligation to come hear him."

Wagner hopes that he'll take a class taught by Wilbur in the future.

Wilbur is esteemed by his colleagues, and during the event there were a few comparisons to another famous poet to teach at Amherst College, Robert Frost. According to professor of Latin American and Latino culture at Amherst College, Ilan Stavans, who was one of the organizers of the event, "He is connected to the region in broader ways ... just as Robert Frost and Emily Dickinson were connected with its natural landscape, its playing field of ideas."

Stavans continued, "He stands next to James Merrill, Robert Lowell and Elizabeth Bishop as a New Englander for whom the poetic tradition is an opportunity to explore time, place and the question of being."

Stavans noted the purpose of the tribute and poetry reading.

"The occasion allows [reflection] on a career devoted to precise words. Remember: Poetry isn't the art of crafting words; it's the art of finding the precise word to say [to build] an image of the world," he said.

In addition to being a poet, Wilbur is also a dedicated translator.

"Wilbur has devoted his life to translation. He's rendered into English poets like [Anna] Akhmatova, [Jorge Luis] Borges, and Dante, as well as Moliere and [Charles] Baudelaire. This commitment to translation is another feature of New England poetry," said Stavans.

Wilbur won his first Pulitzer Prize for Poetry in 1957 with "Things of This World," a collection of poetry. He won a second in 1989 with "New and Collected Poems." In 1987 Wilbur was appointed a U.S. Poet Laureate. His latest poetry collection, called "Anterooms" was published last year. He currently teaches a poetry writing class at Amherst College.

SGA motions impeachment of Senator

By Ashley Berger
Collegian Staff

Tensions flared at the last Student Government Association meeting on Wednesday, with what started as a meeting with the focus on amending by-laws, turned into a debate about the question of impeachment of Senator Bill Cody.

Sponsored by the Committee for Administrative Affairs, the motion to amend parts of Title II of the Constitution brought much questioning, which was mostly done by Speaker of the House Modesto Montero.

A few of the chapters were reworded or reworked in an effort to make them more clear or to further help the student body, explained Nick Barton, chair of the committee who defended and answered most of the questions that were brought up.

One of the sections that was examined by the body was the appropriation of how many constituents each Senate seat shall govern. The by-law was revised in the motion to give each Senate seat a maximum of 500 constituents. Speaker Montero initiated the idea that, while this provision would allot a legitimate maximum amount of constituents, it did not provide a minimum. Modesto argued that this would be a necessary revision to the by-laws as well, because some areas on campus are generally larger than others.

Another key by-law that was included in the motion was to install a 10-minute time limit any given Registered Student Organization (RSO) can talk and petition their case in front of the Senate Chair of the Ways and Means Committee, Josh Davidson. Davidson mentioned that in a hypothetical situation, if all 180 clubs came to petition, the Senate would endure three days in a meeting.

Speaker Montero added, "I think that there should be something within the by-laws that would give the Speaker a greater ability to cut people off if they keep talking."

After the reading and discussion of the proposed amendments, Speaker Montero told Chair Barton that he did a wonderful job on the revisions but had advice to share.

"There are still holes in here that need revision. These directly affect each and every one of you," said Montero. "Each senator should feel strongly about the changes enough to read over them and think more about them." Modesto added, "I will dance. I will give you things. Just please consider tabling the motion."

The motion was tabled because it needed closer examination.

Following Senator Cody's police escort out of last week's meeting, the Chair of the Ways and Means Committee motioned to bring impeachment charges against the acclaimed disruptive senator.

Though the by-laws require a 72-hour waiting period after a review from the Rules and Ethics Committee before the charges are brought to the Senate, at the time of the Senate's meeting; the 72-hour period had not yet passed.

Davidson made the motion because Senator Cody's behavior had disrupted both Senate body and individualized committee meetings, and motioned to overlook the by-laws in order to ensure the safety and comfort in all meetings for all members.

Davidson said, "It is the Senate's responsibility to act on this tonight and not let it go another week. This is not the first time that this has happened, and I am personally tired of this bad behavior." After the motion was read, Senator Cody retorted from the back of the Cape Cod Lounge that the SGA has an "open meeting policy" which would allow Cody to attend any meeting, just not as a Senator.

Lindsay Vitale, who was personally attacked proceeding last week's meeting and who feels generally threatened by his presence asked the Senate to "consider the standard that we hold ourselves to when we come to these meetings and then question it when people come intoxicated."

Davidson was persistent in his attempt to get the motion passed on the Senate floor before Senator Cody angrily yet willingly agreed to not attend any Ways and Means meetings over the course of the next week in order to give the Senators more time to decide on the matter at hand.

Following Cody's statement, Davidson withdrew the motion until next week.

"The severity of the situation outweighs the laws regarding the situation," said Davidson after the meeting. "I hope it gets heard next week. This is one of those instances where you have to make hard decisions regardless of personal feelings. I feel that we must hold ourselves to the highest standards as representatives."

In the spirit of elections, Student Trustee Mike Fox said, "The warlock Charlie Sheen is running for Southwest area governor."

The SGA will hold presidential and trustee elections next week from March 8 – 10. The next SGA meeting will take place on March 9.

Ashley Berger can be reached at aberger@student.umass.edu.

The SGA is currently debating the impeachment of Senator Mike Cody. Cody allegedly attended the last meeting intoxicated disrupted activity.

Lindsay Vitale of the SGA claims she was verbally and personally attacked by Mike Cody, asked the Senate to consider the standards attendents of meetings hold.

The future of energy

Bask in the sunlight of solar power's promise

Matthew M. Robare

Frankly, oil sucks and coal and natural gas aren't much better; all three involving burning hydrocarbons, releasing pollutants into the air and water and, in the case of coal, ripping off the tops of mountains in West Virginia and dumping everything but the coal into rivers. I remember one story from The New York Times about a family in coal country where the water was so full of industrial solvents and other chemicals that they get burned if it touches their skin.

Fossil fuels just aren't the future, especially compared to more viable options. Wind power is popular (and could do really well on this campus during the winter), but it just doesn't generate enough energy to be worthwhile. Wave power is nice if you live on the coast and hydroelectric is nice if you have a river to dam and don't mind wiping out entire towns.

Then there's nuclear. It doesn't produce any climate change emissions, it's not dependent on a capricious planet for input and while uranium is technically a non-renewable resource, there's enough of it that it won't matter for tens of thousands of years.

However, there's just one teensy-weenie problem with nuclear power: The waste it produces stays dangerous for so long that part of the Yucca Mountain project included linguists paid to theorize how human language might change over the next several thousand years in order to making warning signs.

There is a source of energy available to us right now that remains virtually untapped. It's been around for billions of years and will be around for billions more. Yes: the Sun. Right now there are two major problems with solar power: One is that you need a lot of land area and two, even if you have a perfectly cloudless day, you can only collect power for 12 hours and those 12 hours have various peak collection rates because the amount of energy a panel gets is related to its angle with the Sun and the Sun's angle with the Earth.

Thankfully, there's a better way of realizing the Sun's bounty here on Earth. Instead of putting the solar panels on the ground, covering up Arizona, put them in space and beam the power to receivers on the ground.

As some scientists have been known to say, it's an elegant solution. But is it practical? Yes.

Space-based solar power has been researched since the 1950s and all of the technology to do it already exists: microwave lasers, orbital launch vehicles capable of taking satellites to geostationary orbit, solar panels and so on. Research has also been done on the effects of transmitting power from space to the ground and if the laser is wide enough it won't warm the atmosphere anymore than sunlight or fry birds passing through. The receiver on the ground would have to be large, but it could be integrated into the environment instead of covering it.

The satellites would have to be in geostationary orbit – an orbit where the satellite's position relative to a spot on Earth is fixed – and therefore would be able to continuously collect energy and beam it down.

There are no technological challenges here; the big problem is the cost of putting these things in such a high orbit. Today, space launches cost several thousand dollars per kilogram of payload. The reasons are varied, but generally related to maintenance and fuel costs: A four gigawatt system is currently estimated to cost around $11 billion to launch.

But even this apparent setback has hidden benefits: A company putting solar power stations in orbit could start with smaller ones in low Earth orbit to start generating revenue quickly and invest in the research and development of better, cheaper launch systems, like laser propulsion, where radiation pressure (the same thing that makes solar sails work) from a ground-based laser is amplified with mirrors.

The launch company could even have a satellite in orbit dedicated to producing power for the lasers. Science fiction writer Robert A. Heinlein once said that once a spaceship is in orbit "You're halfway to anywhere" because a spacecraft can use as much acceleration getting into orbit as it can going anywhere and that opens up the possibility of all sorts of industry in space.

The main one would probably be asteroid mining. There are plenty pretty close by (in astronomical terms) and one nickel-iron asteroid could bring in billions of dollars worth of valuable metals. It would be like another industrial revolution.

Some entities are already looking to invest in space-based solar power. A company called Solaren has a deal with a California utility to buy 200 megawatts of solar power beginning in 2016, the Japan Aerospace Exploration Agency wants a prototype in orbit by 2030 and Astrium, a subsidiary of the European Aeronautic Defense and Space Company has plans for a prototype.

If Twitter can get billions of dollars in venture capital without any revenue plan at all, then space-based solar power and its derivative benefits – industry potentially worth trillions, being good to the environment, lowering the costs of everything and creating a world where our grandchildren will be under the impression that Al Gore was the leader of some kind of cult – should have investors lining up.

Matthew M. Robare is a Collegian columnist. He can be reached at mrobare@student.umass.edu.

The future of energy

Nuking the problem of our energy needs

Yaroslav Mikhaylov

It is the slowly building horror story of our generation: One day, our fossil fuels are going to run out if we don't manage to turn our planet into a pressure cooker through the global warming that results from burning fossil fuels.

Much debate has been given to what sort of energy-producing system is suitable to replace our dependence on coal and gasoline.

My preference – as anyone who's heard me argue on this subject before knows – is nuclear energy. It is efficient, environmentally friendly, landmark-independent and active around the clock. An alternative that my colleague presents today is solar energy, which is none of those things.

Nuclear power is incredibly efficient.

A small load of fissile matter contains the energy equivalent to tons of coal. Solar power, on the other hand, has a low per-panel output. Putting solar panels on the roof of your house won't produce enough power to keep the lights on all day, much less to satisfy energy-hungry HDTVs and video game systems. The output of a nuclear plant can also be modulated to produce more or less electricity as demanded by the power grid. Meanwhile, solar panels have only two settings: "On" and "Oh my, its dark out!" On the scale of efficiency, nuclear energy clearly has the upper hand, being both more powerful and more flexible.

Nuclear power is also more environmentally friendly. "What?" says an astute reader. "Nuclear waste may be a lot less toxic than waste from burning coal or natural gas, but solar panels produce no emissions at all. They must clearly be the more environmentally sound choice."

That is true when you look at it purely from the point of view of emissions. However, the air is not the only part of our planet worth preserving.

Every year, more and more farmland and forests around the world are being appropriated for housing and industrial development. Land is also a very valuable resource.

In terms of responsible land use, solar power loses badly. To supply the power equivalent to that produced by the nearby Mt. Tom coal-burning power plant, you would need several football fields' worth of solar panels.

On the other hand, a nuclear plant the size of the currently existing power station would produce much more energy. The only alternative then, is placing them somewhere where space is not at a premium; at the risk of a bad pun – space. However, in mentioning that possibility you ignore the costs to actually get the solar panels up there. All of our current ways of getting things into orbit and keeping them there require massive amounts of fossil fuels and also produce a lot of air pollution themselves. This is not even mentioning the possible ways in which one would then retrieve the solar energy produced in orbit. Somehow, I don't think dangling a really long wire from the Lagrange point would work awfully well.

Building on the previous point, nuclear plants, in contrast to solar panels, can be built anywhere. Solar panels require places that are rather sunny at least a significant portion of the year to be feasible. England or the Scandinavian countries would not receive any significant benefits from solar panels for large portions of the year due to the weather. And places that get a lot of sunlight are either prime real estate for farming, resorts and beaches or are deserts which would make any sort of maintenance done on the panels difficult.

Not only are certain places limited in the utility they can derive from solar panels, but the only places where they will function at anywhere near peak efficiency are places we're already using for other important purposes like food and recreation or are so inhospitable as to make construction and maintenance difficult.

Finally, probably the strongest argument against solar power and in favor of nuclear power is that it works around the clock. Solar panels and wind farms rely on factors that are only available for some time during the day.

Solar panels are producing electricity during the daylight hours, when the demand for electricity is actually fairly low. People are at work rather than at home.

While offices do consume a significant amount of energy, the consumer use of electricity is much higher. When was the last time your office had two PS3s running on plasma TVs? If you don't work in an electronics store and your answer is "Tuesday," I want your job.

Solar power is available when there is not much demand, can't scale well with demand, takes up a lot of prime real estate and is, for the lack of a better term, "wimpy." Nuclear energy, on the other hand, is available all day and year round, can be contained in nice and compact power plants, can be adjusted to meet demand and is also a whole lot mightier than solar.

Comparing the two is just as silly as comparing a sunflower to a Four Loko.

Lake St. will be back

MADDIE COHEN/ COLLEGIAN

By Mandy Pote
Collegian Staff

The Iron Horse was buzzing Wednesday evening with all eyes on Lake Street Dive, a jazzy pop group from Boston. Four very talented musicians from all over the country, came together at the New England Conservatory mixing together with incredible balance and flow. Lake Street Dive is an equal-gender band with a fun loving image, a jazzy tone and pop roots.

Girl, Guns, and Glory, an Americana blues group provided the opening support for Lake Street Dive. Ward Hayden on guitar and vocals, Justin Maxwell on bass, Chris Hersch on the electric guitar and Mike Calabrese, drummer of Lake St., are a classy bluesy group that is entertaining to watch. Dressed in old school suits, they performed engaging songs including the ballad "Soft Raccoon" which told a story with an epic drum solo and multiple electric guitar jams. They had a groovy, folksy sound that had the crowd tapping to the beat.

Lake St. opened with strikingly beautiful, happy sound. The band connected with each other easily, as if they had been playing together for a long time and they had love for the same music. A unique array of instruments, including a trumpet and an upright bass, created an interesting atmosphere and drew smiles from the crowd. They played many songs off their most recent album, released in November, self-titled "Lake Street Dive." The show's better tracks included "Miss Disregard," "Henriette," "The Neighbor Song," and "Hello? Goodbye?" which the band played with enthusiasm and grace.

Right away, the crowd was amazing by Rachael Price's incredible voice. It fit so smoothly and with the sound of the band and adding a little funk to their tunes. Bubbling with personality, Price delivered a performance that was so fun to watch, full of exciting body language and connection to the other band members.

Lake St. is a band full of multi-talented musicians working together in a visual chemistry with one another. Full of life and energy, this group of four is meant to make music together.

"None of us are dating," joked Mike Olson to the crowd during the show.

Olson swapped between jamming on the electric guitar to spitting his sound through the trumpet until he was on his tiptoes. His talent on the trumpet was more than memorable and his great skill to play softly and giving a full crescendo until his sound filled the room was truly an audio experience.

Bridget Kearney, composer of many of Lake St.'s songs, tackled an upright bass twice the size of her. In mind blowing solos, she plucked faster than eyes could follow as the crowd went wild for her. Kearney and drummer Calaprese kept an upbeat pace throughout the concert.

Lake St. was rewarded with a standing ovation and a call for an encore, in which they returned with a rendition of Jackson 5's "I Want You Back" and had the entire Iron Horse singing along to the chorus. Their encore finished off a night of sweet, simple rhymes, and pleasant feelings.

Lake Street Dive is an awesome band, full of great people and talented musicians. They've got a good outlook on life and it comes through in the good vibes of their songs. This band is an easy listen and a must see live.

Wednesday was Lake Street Dive's first time to Northampton, but it should not be its last.

They decided at the end of the night, "We will definitely be returning to the Iron Horse."

Mandy Pote can be reached at mpote@student.umass.edu.

Worcester's Dom in town

By Amy Larson
Collegian Staff

Saturday night at 10 p.m., the Iron Horse will host the energetically appetizing acts of Expensive Looks, Bobby and headliners, Dom.

Dom will make the short commute from their shared residence in Hadley for the show that will begin a national six-week tour. The headliners have visited the Iron Horse several times, and express an enthusiasm for Northampton entertainment and dining.

Natives of Worcester, Dom is a dynamic group that is very new to the scene. They started playing and recording under the name Dom for the first time in January 2010. After only four months, the garage-meets-pop band released a seven-track EP titled "Sun Bronzed Greek Gods." The freshman album immediately began to infect countless listeners craving an experimental but accessible sound.

Major record labels wasted no time trying to sign on this very young group. Dom was given countless offers, almost all of which they promptly declined. A collection of creative mavericks, Dom feared the corporate control that would come from signing with a big name label. However, they ended up signing a short contract with EMI/Astralwerks. After the tour, the band will release another EP with the label and return to their preferred status of being "free agents."

But where did this lucky band, who, for personal reasons choose not to have their full names out in public, even come from before rising through the musical ranks so quickly? Namesake and guitarist/keyboardist Dom met drummer Bobby in Worcester in 2009 and the two began laying down electronic music foundations. Together they wrote "Jesus" as their first song and quickly moved forward by introducing bassist Erik and guitarist Cosmo.

Despite the fact that it was 23-year-old Dom's first time being in a "real band," it was and is a wild success. When writing their first EP the group channeled vibes from a wide spectrum of sounds. They like the grungy garage band type feels of inspirations like Kurt Cobain, but across the spectrum, they also like the peppiness of groups like the Carpenters. It's safe to say that their style is quite changeable, and reflects the member's current listening preferences.

Separately though, each Dom musician is very different. But the element of contrast between members is vital to their unified

See DOM on page 7

Prepared to Dom-inate

DOM from page 6

success. Dom says of his band-mates that "we all relate on different levels and interchangeably work together." The original two, Dom and Bobby, can always connect on some level or other. And they're only getting tighter and tighter as a whole.

Over the past year Dom has had many opportunities to showcase their unique creations live. They even took to the road for a month with Ratatat last year. When they're onstage, their goal is to push themselves and put on a really fun show for the crowd. "I try to think of what Kurt Cobain would do when I'm up in front of an audience," Dom said.

Off of the stage, the modern musicians relish in the beauties of living right off of Route 9. "Our life is a sitcom," Dom said while also mentioning the entertainment of being so close to the B43 bus stop.

Enthusiasts of fresh musical experiences and fun times alike, Dom intends to show Northampton a night like it has never seen before.

Tickets are $8 in advance and $10 at the door and are available at www.NBOtickets.com.

Amy Larson can be reached at alarsom@student.umass.edu.

Rapper cashes in at Pearl St.

Supported by UMass' own L.A.N.K., Curren$y brings his talents to Noho

By Stephen Hewitt
Collegian Staff

Meet Shante Franklin.

Better known in the hip-hop community as Curren$y, and referred to by his passionate fan base as "Spitta" or "The Hot Spitta," he is one of rap's fastest rising stars, and he'll be making a pit stop tonight in Northampton to headline at the Pearl Street Ballroom.

With notoriety mostly stemming from his Internet buzz, Curren$y hasn't received much fame commercially, but his discography and career to date seemingly speak for itself.

Curren$y entered the rap game in 2002 as part of the 504 Boyz with Master P. After earning some fame there, he signed with Cash Money Records and Young Money Entertainment with Lil Wayne in 2004.

From there, his career blossomed into what it is today. He released the mixtapes "Welcome Back, Curren$y," "G-Series" and "Life at 30,000 Feet" while under Young Money. But due to a lack of promotion, he left the label. Without a label, Curren$y released a slew of mixtapes, including "Welcome to the Winner's Circle," "Higher Than 30,000 Feet" and "Super Teemo Bowl."

The Hot Spitta finally released his debut album under Amalgam Digital in 2009 entitled "This Ain't No Mixtape," an ode to the countless number of mixtapes that he had released. Soon after, Curren$y teamed up with Wiz Khalifa to put out the much anticipated "How Fly" mixtape. Building off of the momentum of that project, he released his second studio album, "Jet Lifes," also under Amalgam Digital.

Curren$y had arguably his most successful year in 2010, releasing the highly-acclaimed mixtape "Smokee Robinson" as well as two more studio albums, released through Def Jam, "Pilot Talk" and "Pilot Talk II," featuring songs with hip-hop legends Snoop Dogg, Mos Def and Raekwon. Now just one month away from turning 30-years-old, Spitta is reaching the pinnacle of his career, and his fifth studio album, "Muscle Car Chronicles," is due out March 15.

Aside from Curren$y, a few other artists will have the opportunity to grace the stage on Pearl Street tonight.

UMass' own Christian McCracken, also known as L.A.N.K., is a finance-economics major from Princeton, N.J. and is one of several openers for Curren$y. Since starting to rap back in sixth grade, McCracken has slowly improved his craft over the years, rapping over beats produced by his friends to fulfill his creative juices and love for the genre.

Backed by production from Nomad, Soul Controller and DJ Intel, McCracken released his first official mixtape available for free online called "The Roughest Draft" last November that includes all original material except for two remix tracks.

Black Thought from The Roots, Talib Kweli and Jurassic 5 are among the influential artists that inspire McCracken, in addition to mainstream artists such as Eminem, Nas and Jay-Z. Curren$y might not be on the level of those artists just yet, but the opportunity still has McCracken very excited.

"One of the coolest things honestly is just to get on a real stage and use real sound equipment," McCracken said. "It's really cool to have your own beats and things that you've been using for the past year at a real live show like that. And obviously a name like Curren$y is huge, so no matter what, it's gonna be awesome."

Other openers for the show include Corner Boy P and Friend, who have been featured in several Curren$y tracks, C Banga, a rapper who is also a UMass student and Split Second, a hip-hop group consisting of members Xcel, Dougie P and J Jax round out the lineup for the concert.

Doors for the show will open at 9 p.m. at the Pearl Street Ballroom and tickets will be available at the door.

UM searches for 4th–straight win

By Stephen Sellner
Collegian Staff

The No. 9 Massachusetts men's lacrosse team continues its successful start to the season with Brown on Saturday afternoon at Garber Field.

The Minutemen (3-0) don't look to dwell on last Saturday's impressive 11-9 handling of No. 14 Ohio State, as the Bears (1-0) will give them all they can handle.

"They play with a hunger," said UMass coach Greg Cannella. "They're athletic so they … allow their athletes to use their athleticism out there on the field. It's really a great way to play. We try to do the same thing here."

Brown had no problem defeating Quinnipiac in its first game of the 2011 season, cruising to a 14-3 decision. The Bears jumped out to a 6-0 lead and never looked back.

Jeff Bernstein/Collegian

Senior midfielder Ryan Hantverk controls the ball against Ohio State. The Minutemen host Brown on Saturday at Garber Field.

Brown's size, craftiness and athleticism on the offensive end make them a tough unit to contain. Senior Andrew Feinberg and junior Parker Brown are the top two scorers for the Bears, as each netted four goals last Saturday.

Feinberg cashed in on four scores against UMass in last year's matchup, which indicated to Cannella that the senior "can score with anybody in the country."

Brown is coming off his seven-point performance against Quinnipiac, which earned him the Ivy League Player of the Week award.

The Minutemen look for another solid performance from goalkeeper Tim McCormack, along with the defensive unit of Jake Smith, Tom Celentani and company, to contain the aggressive Brown attack.

Last weekend's win over OSU propelled UMass to its highest ranking since its No. 7 ranking last season on April 5. Cannella hopes the Minutemen's recent victory will pay dividends for his team moving forward.

"Anytime you play a top-notch opponent and not only are you able to compete with them but compete at a high level, you gain some confidence," said Cannella.

The turnovers were a concern for Cannella last weekend, as the Maroon and White committed 16 on the afternoon.

"You just [got to] ask your guys to have a greater sense of urgency on each play," said Cannella. "In practice, you can turn the ball over and [there are] no consequences. In a game, [there are] … great consequences and against a team like Brown, they'll put it to us if we turn it over that many times."

The Minutemen attack will be firing on Brown goalkeeper Matt Chriss, who ranked third in the Ivy League last season with 10.30 saves per contest, including a season-high 15 against high-powered No. 19 Duke. The Lutherville, Md. native accumulated 14 saves against QU last Saturday in his first outing of the season.

Chriss has the luxury of being coached by former Virginia goalkeeper, Kip Turner, who has solidified his game and made him a more consistent player.

Anchoring the defensive squad will be Peter Fallon who led the Bears with 36 groundballs a year ago and received second-team All-Ivy League honors.

UMass will try to continue to maintain a balanced attack against Brown, which it showcased against OSU last weekend with Anthony Biscardi, Colin Fleming, Art Kell and Connor Mooney each scoring a pair.

"Hopefully we continue to have that kind of contribution from those guys and even a couple more guys that can help us," said Cannella.

The two teams met last season on March 23, with the Minutemen emerging victorious, 11-10. Kell, Biscardi and then-freshman standout Will Manny each scored a pair of goals for the Maroon and White, while McCormack tallied a career-high 17 saves.

With a slew of quality opponents this early in the season, Cannella has noticed an increased tempo from his team during the week of preparation.

"There's a sense of urgency in practice and a sense that you have to be ready or else you [will] get stomped on," said Cannella.

Saturday will mark the Minutemen's third home game of the season and is set to begin at 1 p.m.

Stephen Sellner can be reached at ssellner@student.umass.edu.

UMass looks for underdog story in playoffs

By Michael Counos
Collegian Staff

The Atlantic 10 conference playoffs get underway this weekend as Massachusetts women's basketball team looks to be a true underdog story in the postseason.

Twelve of the 14 teams in the A-10 conference are awarded playoff berths and UMass earned the No. 12 seed with a 7-22 overall record and 3-11 record in A-10 play.

The Minutewomen face the challenge of No. 5sced Charlotte on Friday afternoon, who posted a mark of 21-8 overall and 9-5 in conference action. The 49ers finished the season in a five-way tie for third place in the A-10 standings and were awarded the fifth seed by virtue of the league's tie-breaking procedure.

The two teams met on Feb. 5, which showed a 27-point loss by UMass, something it will look to avoid this weekend.

The Minutewomen shot 0-for-9 in the opening minutes and never recovered. Charlotte built an early 12-2 lead in the game as Kendra Holmes hit a 3-pointer from the top of the key with just under 14 minutes remaining in the first half. The 49ers extended their lead to 22 at one point in the half, going into the intermission with UMass down by 20 points.

In the second half, the Minutewomen did improve their shooting didn't cut the deficit below 20 points. The 49ers finished the game shooting 56.4 percent from the field and 55.6 percent from the perimeter. UMass shot just under 30 percent from the field and from 3-point range. UMass was outrebounded as well, 37-28, and was manhandled in the paint, getting outscored, 36-18, and 8-0 on fast-break points.

Charlotte guard Shannon McCallum scored a team-high 18 points, while Jennifer Hailey contributed with a double-double of 12 points and 11 boards. Holmes had a double-double as well with 11 points and 10 helpers, while Epiphany Woodson pitched in with 11 points herself.

UMass saw strong performances from senior guard Cerie Mosgrove (18 points), center Jasmine Watson (12 points) and forward Stephanie Lawrence (seven points).

Despite their conference record, the Minutewomen have played decent in A-10 play. Before losing to Charlotte in the regular season, the Minutewomen went into overtime with a talented Duquesne team, but dropped the contest, 84-79.

On Feb. 9, the Minutewomen dropped a close one to Dayton on the road, 66-58, and lost their final regular season game by four points to La Salle. Both the Dukes and the Flyers finished the season tied for third in the A-10 standings, while La Salle finished ninth.

Quality conference wins for the Minutewomen came against Rhode Island and Saint Louis (neither made the playoffs). UMass defeated URI twice this season, first at the Ryan Center, 75-64, and most recently on Feb. 19 at the Mullins Center, 75-71.

Jeff Bernstein/Collegian

Sophomore center Jasmine Watson is defended by Duquesne forward Orsi Szecsi earlier this season. Watson and the rest of face Charlotte in a first round playoff contest.

Regular season statistical leaders for the Minutewomen were Watson, Mosgrove, forward Shakia Robinson and guard Megan Zullo, all whom averaged double-figures in scoring.

Mosgrove's perimeter shooting proved to be a difference-maker, as she finished the season with a team high 77 3-pointers and a .502 3-point shooting percentage.

Action gets underway at 2:30 p.m. in the Tsongas Center in Lowell, Mass. The Minutewomen are 0-2 at neutral sites this season. If UMass advances to the next round, it would play on Sunday, March 6.

Michael Counos can be reached at mcounos@student.umass.edu.

Minutemen finish season at Rams

By Jay Asser
Collegian Staff

As the Massachusetts men's basketball team plays its final game of the regular season, it will be in control of its own postseason fate.

With a win at Fordham on Saturday, the Minutemen (15-13, 7-8 Atlantic 10) can secure a home game at the Mullins Center for the first round of the A-10 tournament.

However, following a heartbreaking loss to Temple on Wednesday, UMass is presented with a potential trap game against a Rams team which is playing on Senior Night.

More so, Fordham (6-21, 0-15 A-10) is looking to salvage a disaster of a season which includes a current 17-game losing streak and zero wins in conference play.

Jeff Bernstein/Collegian

Sophomore forward Sampson Carter tightly defends against Temple on Wednesday. Carter and the rest of the Minutemen head to Fordham this weekend.

"Anytime we're on the road, I think it's going to be a tough game, especially for Senior Night and honestly a team that hasn't won in the conference this year, I'm sure they're going to give it one last swipe to see if they can end the season on a positive note," said U Mass coach Derek Kellogg.

While the embarrassment of affording Fordham its only A-10 win of the season is daunting, the Minutemen are focused on their own problems.

"I think just that we have the fate of our season in our own hands is probably more important than worrying about what Fordham's record is and where they are," said Kellogg. "If we win, I guess we're going to get a home game in the tournament so I think that should be motivation enough."

Though it may seem unlikely for UMass to slip up against the lowly Rams, it's not out of the question. The Minutemen have already dropped games this year to teams in the bottom half of the conference standings.

After claiming back-to-back wins against St. Bonaventure (on the road) and Rhode Island, UMass went on the road for two games which the Minutemen seemed more than capable of winning.

Nevertheless, a difficult offensive night resulted in a 69-53 loss to Saint Louis on Feb. 2 before UMass fell 67-64 to Saint Joseph's three days later. At the time, the Billikens were 7-13 and 3-5 in the A-10, while the Hawks' victory marked their first conference win in nine chances.

While the Minutemen may have taken those opponents for granted, they're not thinking that way against Fordham, especially with the implications of a win.

"I think we're going to come out with a lot of energy, a lot of intensity," said senior guard Anthony Gurley. "We know the magnitude of this game. I think we're going to come out with ultimate focus and be ready to play."

The Rams, despite suffering 17 straight losses, did have some success in their out-of-conference schedule, going 6-5, including a four-game winning streak, before entering A-10 play.

Since then, however, Fordham has been in a tailspin, dropping 12 contests by double figures or more. In the conference, the Rams sit near the bottom in nearly every team statistical category.

UMass will focus its attention on sophomore Chris Gaston, who leads Fordham with 15.8 points per game (good for ninth in the A-10) and a conference-leading 11.2 rebounds per game.

With the Rams out of contention for the A-10 tournament, they'll have nothing to lose on Saturday, something which Gurley recognizes as he'll look for his team to put away Fordham early.

"You let a team like that hang around, get confidence, stick around throughout the game, they're going to make a run, especially on Senior Night and in their own place," said Gurley.

The game will tip-off at 1 p.m. on Saturday at the Rose Hill Gym in Bronx, N.Y.

Jay Asser can be reached at jasser@student.umass.edu.

Playoffs on the line in battle with Maine

By Dan Gigliotti
Collegian Staff

At the end of January, the Massachusetts hockey team played with the chance to move up in the Hockey East standings.

The Minutemen (5-15-5, 6-20-5 HEA) still have that opportunity this weekend with their final two games of the regular season. There's only one difference – their playoff hopes hang in the balance.

"There's no hiding the fact that this weekend, we produce and we get rewarded," said UMass coach Don Cahoon. "Don't produce and God knows anything can happen."

Currently in eighth place in the conference standings, the Minutemen host No. 14 Maine (13-8-4, 16-10-6 HEA) on Friday and Saturday with a bid to the Hockey East Tournament on the line.

UMass (15 points) is two points ahead of ninth-place Providence (13) and one point behind of seventh-place Vermont (16). The Friars take on No. 7 Merrimack in a home-and-home series this weekend, while the Catamounts host UMass-Lowell in two games.

UMass can still take over seventh place in the standings with two wins and a UVM loss or tie in its final two games, but it is much different than the situation the Minutemen were in six weeks ago.

On Jan. 22, UMass recovered from a 2-1 defeat to the Catamounts to beat them, 6-0. In what was their best performance at Gutterson Fieldhouse in school history, the Minutemen took over sole possession of seventh place in Hockey East.

The next weekend, UMass had an opportunity to move up to sixth place with a home-and-home series win over Northeastern. Yet, a 3-0 loss at Matthews Arena on Jan. 28 followed by a 2-2 tie at the Mullins Center on Jan. 29 was the beginning of a 10-game stretch that saw the Minutemen grab just two points.

Since its win over UVM, UMass is winless with seven games decided by one goal or less. After a tie against Providence on Feb. 12, the Minutemen have lost their last four games by one point.

UMass still controls its own postseason destiny, but what was a virtual certainty for the Minutemen a month ago is now very much in question.

"That's our reality," said Cahoon. "No sense in worrying about because that just saps energy. You understand it and then you go forward and plan as you always would to put your best foot forward."

Whether it has been scheduling or just mere coincidence, the Black Bears have historically stood in the way of UMass advancing in postseason contention. Generally, they have been a welcome foe for the Minutemen who have won five of their last six games against Maine and the last seven contests at the Mullins Center.

"It seems to me that, on a very regular basis, we get to March and the Maine series becomes a really pivotal series," said Cahoon. "So here we are again with Maine in two very pivotal games that obviously have us paying attention to detail and trying to get these guys to feel good about the way they're playing and how they're playing."

Last season, UMass won two games in Orono, Me., on March 5 and 6 (5-3, 4-2) to slip into the conference tournament. That is just the most recent of the two teams' pivotal match-ups.

In 2003, the Minutemen beat the Black Bears to advance to the Hockey East Semifinals in two straight games on March 6 and 7 (5-3, 4-2).

Jeff Bernstein/Collegian

The Mass Attack gathers after a goal against Merrimack. The Minutemen return home this weekend with two games against Maine, with postseason implications on the line.

Then, in the Hockey East Championship Game on March 20, 2004, it took three overtimes before Maine won 2-1 in what was the fourth-longest hockey game in NCAA history at 109 minutes, 27 seconds.

Three seasons later, on March 3, 2007, then-No. 16 UMass captured home ice for the first time, following a 5-3 victory over then-No. 9 Black Bears. The win came en route to four straight victories over Maine, including two in the Hockey East Quarterfinals.

The Minutemen eventually made an appearance in the East Regional round of eight of the NCAA tournament, nearly moving on to the Frozen Four.

But in a fateful game on March 24, UMass met the Black Bears once again, with Maine getting the upper hand in a 3-1 win at the Blue Cross Arena in Rochester, N.Y.

Friday's game, beginning at 7 p.m., will mark another installment in this late-season rivalry and another chance for the Minutemen to stave off elimination against Maine.

"It's not lost on me that here we are again," said Cahoon. "I'm sure some of the players understand it more than others. It makes it a unique rivalry, that's for sure."

UM shows support for Wisc. workers

By Alyssa Creamer
Collegian Staff

Galvanized students, faculty and staff rallied in front of the University of Massachusetts Student Union building Wednesday to express solidarity with Wisconsin public sector workers protesting legislation to strip them of their collective bargaining rights.

The rally, called "From Wisconsin to Massachusetts Defending the Public Sector," drew a crowd numbering in the hundreds. Many braved the cold weather in order to sing, speak and protest against Wisconsin Gov. Scott Walker's budget-balancing plan, which would reduce certain pension and insurance benefits for public sector employees.

Rally speakers, including students and community members, contended that actions being taken against public sector workers in Wisconsin would travel to Massachusetts unless members of the public protest.

"It's not just about what is happening in Wisconsin," said rally organizer Ben Taylor, a UMass student who is also a member of Public Higher Education Network of Massachusetts [PHENOM] – a pro-public higher education advocacy group. "This has been going on for the last 30 years. It is not just happening in Indiana. It's happening in Massachusetts."

Taylor expressed excitement over the rally's position as part of a "concentrated fight." Calling out to students to recognize UMass as a "working class college," Taylor said a threat to Wisconsin unions is a threat to all unions. He began his speech at the rally chanting, "When workers rights are under attack, what do we do? Stand up, fight back."

The rally-goers' other chants and pro-labor sing-alongs included a variation of the song "Keep Your Mind Stayed on Jesus" converted to "Stayed on Unions" and "What's disgusting? / Union busting," among others. Meanwhile, many of those in attendance toted large signs with messages such as "Tax the rich" and "Stand up, fight back."

Many of the speakers at the rally emphasized acknowledging a mentality that UMass is a school of working class students and faculty. Several speakers also opined that tax breaks are not going to classes of citizens who most need them.

Kathy Rhines, chapter president of UMass Amherst and Boston's professional staff union, said in an interview with a Massachusetts Daily Collegian reporter before the rally: "It's kind of interesting; Gov. Walker says the closing is about a budget deficit. But it is clear to us that this is not the case. It is clear to us that this is really about collective bargaining rights."

Wisconsin-native Kate Losey, a graduate student and member of UMass' Graduate Employee Organization [GEO], also spoke at the rally.

"I'm here to represent GEO, and I'm also here as a Badger, as a Wisconsonite," she said to the crowd on Wednesday. "I'm very proud of my Badgers right now."

Losey also said at the rally there has been "an important crack in the fight," as Republicans such as Wisconsin GOP Sen. Dale Schultz, who publicly opposed Walker's budget bill, co-sponsored an alternative bill with Sen. Van Wanggaard, also a Republican. Schultz and Wanggaard's alternative bill would allow limited bargaining rights for public employees on wages, pensions and healthcare for the next two years.

HANNAH O'BRIEN/COLLEGIAN

At a rally at the University of Massachusetts Wednesday, citizens voiced their opposition to a bill which would cut public sector employees' benefits in Wisc.

Losey said at the rally that she saw this "wavering" of Republican votes on the bill to be telling, illustrating that the rally's cause is a bi-partisan issue.

"The movement is strong enough to sway not only Democrats, but Republicans as well," she said in a phone interview with the Collegian. "There are tens of thousands of people in the streets protesting. Public service workers, people from small towns have realized [the bill] is attacking [their] living and what [people] need to put food on the table."

Losey said she feels that a majority of people, regardless of partisan political affiliations, feel the abilities to provide for and educate their families are where their priorities as a working class lie.

"Wisconsin was one of the first states to pass collective bargaining rights," said Losey at the rally. "There is a staunch support for unions [there]."

The rally included a 45-minute march around campus. After the march, the rally-goers retreated indoors to the Cape Cod Lounge in the Student Union to continue discussions about workers' rights.

The rally also raised money to send food to protesters occupying the Wisconsin Statehouse.

Organizations sponsoring the event included the University Staff Association, Professional Staff Union, Massachusetts Society for Professors, AFSCME Local 1776, PHENOM, GEO, the International Socialist Organization, Student Labor Action Project, Western Mass. Jobs with Justice and VOX UMass Student Voices for Reproductive Justice.

Poll shows Americans don't agree with bill

By Kara Clifford
Collegian Correspondent

The recent debate in Wisconsin over the proposed legislation that would terminate collective bargaining rights for many state employees has contributed to outcry over bargaining rights across the nation. Last Wednesday, that opposition was voiced at the University of Massachusetts in the form of a rally.

Anger stemming from the situation in Wisconsin among union supporters led unions and advocacy groups to campus The Public Higher Education Network of Massachusetts PHENOM to organize and hold "From Wisconsin to Massachusetts Defending the Public Sector," last week. The rally had a turnout of approximately 300 people.

Sarah Hughes, vice president of the Graduate Employee Organization (GEO) on campus, remarked that she "was really impressed with how the rally went" and that it "became this public union event."

The rally ended with an all-campus meeting where speakers discussed what they perceive to be recent attacks on unions and suggestions on ways to counter the apparent attacks. The speakers also expressed support for "An Act to Invest in Our Communities," a intendedbill proposed by Democratic Massachusetts state Sen. Sonia Chang-Diaz and Democratic state Rep. Jim O'Day intended to combat budget shortfalls by raising taxes on high-income households.

Hughes said she appreciated the expression of support for the bill. She also iterated her belief that "people should have a say in their own workplaces" and that union members are not just fighting for wages and benefits, but for issues such as hours, grievances or the number of students allowed in a classroom.

A recent USA Today/Gallup poll showed that a majority of Americans polled are on the same page as Hughes in supporting union rights The poll found that 61 percent of Americans would oppose a law in their state similar to the one proposed in Wisconsin, while 33 percent would support one.

Fill their states' budget gapsThe same poll found that 71 percent of Americans would oppose increasing sales, income or other taxes to try to close states' budget gaps, while 27 percent would favor such measures. Fifty-three percent of those polled would also oppose reducing pay or benefits for government workers, while 44 percent would be in favor of it. And 48 percent of those polled would oppose reducing or eliminating government programs, while 47 percent would favor such steps.

Michael Hannahan, a visiting scholar in the Department of Political Science, said he recognizes this split in opinion between cutting pay or programs and increasing taxes, but doesn't think removing collective bargaining rights for unions is the right solution.

"I do think that unions may have to become more flexible than they have been," he remarked, but "I don't think they

Yemen: the next front?

Ex-ambassador discusses Yemeni geopolitics

By Max Calloway
Collegian Staff

Popular revolution has consumed the Middle East.

From the Mediterranean to the Persian Gulf, the region is witnessing a new period of unprecedented populist, political turmoil. In most cases, these revolts have been cheered on by spectators and supporters in the West and hailed as the beginning of a new chapter in Middle East history.

But nestled south of Saudi Arabia lies an anomaly: Yemen.

Usually described as the poorest and least developed Gulf country, Yemen's recent outbreak of civil unrest has attracted the attention of U.S. foreign policy experts. The country was also the focus of a lecture held last Thursday by University of Massachusetts alumnus Thomas C. Krajeski, a former U.S. ambassador to the Republic of Yemen, who now serves as the senior vice president of the National Defense University. The lecture, titled "Yemen: The Next War – How Osama Bin Laden's 'Ancestral Homeland' could become America's Next Battlefield," featured Krajeski sharing insight into the geopolitical situation in Yemen and what impact it could have on the U.S.

"I'm not an expert on anything. I'm an FSO [foreign service office] generalist... I'm a practitioner," Krajeski said at the onset of the lecture, in an attempt to seemingly downplay how much expertise he has on Yemen's political and social currents. But Krajeski proved to be adamant in his conviction that "we [the U.S.] want to do everything in our power to avoid a war in Yemen."

Yemen is structured slightly differently than other Middle Eastern nations fighting for social and political reforms, and many fear that if President Ali Abdullah Saleh is deposed, the country could fall into chaos.

Similar to its neighbors, 80 percent of Yemen's revenue comes from oil, but the supply of that oil is vanishing rapidly. As Krajeski described, Yemen's geography doesn't allow for the kinds of massive, unified oil fields found in Saudi Arabia, Oman or the United Arab Emirates.

And it's not just oil that's drying up, the country's water supply is low, too.

Yemen has the "least water per-capita on the earth," explained Krajeski. In fact, some assert that certain regions of the nation may run out of water completely within the next decade. Faced with such an apparent catastrophe, the government has explored two options: spending money and oil the nation doesn't have on desalinizing water from the coast and pumping it up 5,000 feet in elevation, or moving the entire population from the interior foothills and mountains to the coast. As if matters weren't complicated enough, the country's 3.1 percent annual population growth rate could prove problematic for solving the nation's resource issues.

Yemen currently ranks 21 out of 232 in the CIA World Factbook for population growth, with the U.S. ranking 121 with a .95 percent growth rate.

Yemen also has a high illiteracy rate. According

UMass graduate and former Ambassador to Yemen Thomas Krajeski spoke Thursday about Yemeni politics.

Locals key to Amherst Typewriter's survival

By Michelle Altman
Collegian Staff

When walking in downtown Amherst, there are certain features that are just givens: red and brick buildings, University of Massachusetts maroon sweatshirts, the firehouse and Robert Green's display of antique typewriters.

Green has been in business in Amherst for 35 years and until recently not many were aware of the struggles he – and his store – were facing.

Green, 66, said the problem began with the sinking economy drying up his student sales, which he said are crucial to his ability to stay afloat. However, Green regained some business when the economy started to pick back up again, seven months ago.

"Well, when the economy [crashed] part of my market had dried up, as a result of that money and income loss, I got behind on my rent and other bills," Green said. "So, back in the later part of April [2010], my landlord[s] started making demands. They said, 'Pay up or you're gone.'"

"So I signed an agreement because the economy picked back up and I thought I would be able to pay them back by the time they asked on the agreement," Green added.

It was only after Green signed the agreement that his health started to decline at an increasing rate. He said he suffered from stroke symptoms for two weeks and eventually an actual stroke, which resulted in his inability to be able to come to work, or to do his job effectively.

"I've worked seven days a week for 35 years, and never missed a day of work," said Green. "For the first time in 35 years, I missed three days of work." "On top of that, it got to the point where I couldn't perform my job like I was used to, because you have to have good vision and a steady hand to repair typewriters, and my vision was blurry and my balance was off," he added. Green asked the Amherst Knights of Columbus, his landlords, if he could get an extension due to his physical condition. After negotiating with the organization, Green said that the Knights of Columbus agreed to

lower his debt of $6,700 to $6,000, but asked him to pay it to them by Feb. 25, three days ahead of when his rent would normally be due.

At a loss for what to do, Green contacted the Amherst Bulletin to detail his plight.

"After the paper ran, a reporter showed up at the store, and told me about the fund set up to save my store," Green recounted. "I never asked anyone for anything, I just wanted my side of the story told."

That fund was set up by Reynolds Winslow and Michael Burkhart, two local residents, who,

Central Heating Plant gets Energy Star seal

UMass LLC

The Central Heating Plant at UMass recently won an EPA Energy Star award.

By Thomas Barnes
Collegian Staff

The Environmental Protection Agency (EPA) presented the University of Massachusetts with the 2011 Combined Heat and Power Energy Star award for its new Central Heating Plant, in an effort to recognize the reduced emissions and increased efficiency of the plant.

University spokesman Daniel Fitzgibbons said the uUniversity and the maintainers of the plant were "proud to be recognized, and proud to get a symbol of green technology up and running."

Encouraging the use of Combined Heat and Power (CHP), EPA's CHP Partnership is a voluntary program that works on all levels of the energy market, such as state and local governments, energy users and the energy industry itself to promote CHP use as a way to reduce environmental impacts of energy use. According to the EPA's website, "The Energy Star CHP Award recognizes highly efficient CHP systems that reduce emissions and use at least 5 percent less fuel than comparable, state-of-the-art, separate heat and power generation."

Completed in 2009 at a cost of $133 million, the Central Heating Plant is located just beyond the recreational athletic fields. Reducing greenhouse gases, its efficiency also decreased overall energy consumption by 21 percent since 2004, according to University figures. Fitzgibbons stated that the efficiency would save money for UMass, saying "it's a big reason why [UMass] built it,; as technology changed to allow for more efficient and cleaner energy production."

The Central Heating Plant consists of a 10-megawatt solar combustion turbine, a heat recovery steam generator, a four-megawatt steam turbine and three natural gas boilers. The state-of-the-art plant has reduced campus-wide greenhouse gases by approximately 75 percent, according to a UMass press release. With the replacement of its almost 80-year-old coal-fired boilers, the Central Heating Plant is able to supply the uUniversity's demand for heat and electricity. With 200 buildings and 10 million gross square feet of building space to provide with heat and electricity, the University requires vast amounts of energy.

By combining thermal energy and electricity, the plant requires 18 percent less fuel than energy sources that process heat and power separately. In this way, it prevents 26,000 tons of carbon dioxide gas from polluting the atmosphere every year, according to the same release. The emissions equivalent would be to remove 4,600 passenger vehicles from the road.

The Central Heating Plant also includes another concept in reducing environmental impact besides its reduced greenhouse gas emissions. The plant utilizes 160,000 gallons of water in its day-to-day operations, but instead of using drinkable water, the plant was designed to use treated wastewater effluent.

"The idea of using treated wastewater effluent saves water for the town and campus, because instead of drawing drinking water from the town's reservoirs, it uses waste-water from the nearby plant to process water into steam," said Fitzgibbons.

Thus, Amherst's reservoir does not have to put up with the strain of supplying both water for consumption and steam power for the plant. W

The regional administrator of the EPA New England office, Curt Spalding, said in a press release of UMass's achievement: "This combined technology not only conserves energy, but also reduces emissions of greenhouse gases and other air pollutants, helping to protect the health of New England citizens and our environment. EPA is proud to recognize the outstanding pollution reduction and energy efficiency qualities of this project."

Fitzgibbons went on to say that the uUniversity is committed to lessening the campus's environmental impact in the future, apart from the Central Heating Plant.

"There's a campus-wide committee to look at environmental issues," Fitzgibbons said, describing plans for "a reduced reliance on vehicles that use fossil-fuels, and constructing energy efficient buildings" He outlined the 10-year process of utilizing new technologies in lighting and shutting down systems to construct these buildings.

Fitzgibbons also cited other commitments by the campus to further reducing its environmental impact, such as the Franklin pPermaculture gGarden. In addition, he discussed "more environmentally friendly drainage, such as outside the Studio Arts building, in which plants clean the water running off the parking lots nearby."

"It's an ongoing process as we evaluate new technologies," said Fitzgibbons.

should remove collective bargaining rights for unions."

Rather, Hannahan said, "unions in Massachusetts have been reasonably flexible" and that "they've done their bit."

However, he acknowledged that state deficits are so enormous that areas like pensions, healthcare and salaries may have to be partially cut.

"People will have to give things up, but they shouldn't give up collective bargaining," he said.

Hannahan also stated he did not believe that there would be much debate sparked over collective bargaining rights for public employees in Massachusetts.

"It won't be much of one," Hannahan said. "I think there will be a debate over union givebacks, but not about collective bargaining. Unions are very powerful political figures and give a lot of payback to Democrats."

Feldman ponders 'this thing called happiness'

By Brian Canova
Collegian Staff

Presenting his lecture "What is this thing called happiness?" as part of the 2010-2011 Distinguished Faculty Lecture Series, University of Massachusetts philosophy Professor Fred Feldman was awarded the Chancellor's Medal last Tuesday afternoon. The medal is the highest honor bestowed on individuals for exemplary and extraordinary service to the campus.

The lecture, based on Feldman's book of the same name, drew over 200 people to the Massachusetts Room at the Mullins Center, the largest crowd yet attracted by a lecture in the series.

In the lecture, Feldman said "being happy is not the same thing as being satisfied with your standing in life domains." He added that a person who is interested in politics could be happy "not because of things going on in his job, his housing, his marriage, or his leisure time activities," but because, "he's heard what he takes to be good news" about a political candidate. Feldman explained the opposite could also be true with a similar person who was instead unhappy with the news he had heard.

Feldman used these examples to stress that happiness was not to be confused with welfare, but that rather happiness is a function of pleasure.

Drawing on principles of hedonism to support his take on happiness, Feldman centered his approach on sensory and attitudinal pleasures. Feldman said while hedonists are commonly thought to give the greatest value to sensory pleasure, or physical feeling sensed by a part of the body, greater value is actually attached to attitudinal pleasure, or positive attitudes towards something that is happening, has happened or may happen.

Chuck Vermette, a senior philosophy major in attendance who had taken classes with Feldman, clarified the difference, offering the example that he can get sensory pleasure from a massage and attitudinal pleasure from remembering a karate tournament he won when he was six, or from the knowledge that if it's spring, flowers are going to bloom.

Vermette, added that attitudinal pleasures don't need to come from something that has actually happened, or even something that is necessarily going to happen.

Feldman confirmed this, but said that in order to experience attitudinal pleasure in this way, one must really believe that something is going to happen, evoking the implication that humans can create or be convinced of their own happiness.

Feldman added that if people can learn to focus their attention on the good things that are happening, rather than the things that aren't working out, they can achieve the happiness of his theory.

"By engaging in something that you enjoy, bad thoughts will slip away and you will be happier, according to my theory," Feldman said.

During the question-and-answer session following the lecture, a member of the audience asked how the theory of happiness explained why he found himself in a good mood, seemingly without reason, as he arrived to the lecture. Feldman asked the man whether he had recognized his good mood during this time. The man said he had and Feldman explained to him that the reason he was happy was because he knew and sensed that he was in a good mood.

Feldman explained that many surveys taken on happiness focus on how satisfied people are with their standing in a collection of life domains, such as their job or their physical environment. Feldman said that life domain satisfaction tests don't test for happiness, but rather test for welfare. Feldman stressed throughout his lecture that happiness was linked to a psychological state, and not to welfare.

UMass Chancellor Robert Holub, who noted that he has read some philosophical works but none directly focused on happiness, said he tends to be skeptical. Holub said that humans have too many conflicting emotions to accurately report on their own happiness, adding that there are emotions at the subconscious level we aren't able to detect in ourselves.

Holub raised the question of why pleasure needs to necessarily associated with happiness, and whether happiness is the most sought after emotion. Holub asked whether people can be happy and unhappy at the same time, using the example of people in Egypt who were unhappy with former President Hosni Mubarak, but were happy to be protesting against him.

Brian Canova can be reached at bcanova@student.umass.edu.

upon reading Green's story, grew concerned for Green and his business. Donations poured in to the fund called "The Typewrite Man Commission" and Green was able to make his rent in time and keep his store.

"The impossible turned out to be a real possibility. I was out of money, and it came from people who had compassion," Green said. "And I just appreciate that."

"I'm not a perfect person, but you would be surprised at all the letters and cards I've gotten from older generations of students," he added. "People have come in expressing their appreciation for me, some weren't able to give donations because they can't afford it, but they gave moral support. Really, I needed both, and it means so much."

Amherst Typewriter's hallmark display will remain out front of the store, which will remain open after donations.

Permanent sustainability

Ryan Harb (center) spoke to a crowd about the UMass permaculture garden at Franklin Dining Commons Saturday.

Alum talks Yemen in visit to UMass Thurs.

(Mc Tl

A busy street in Sanaa, the capital of Yemen. Former ambassador to Yemen Thomas Krajeski spoke Thursday about politics, resources and the threat of terror from the nation south of Saudi Arabia.

YEMEN from page 1

to the United Nations, 33 percent of males are illiterate, while almost 60 percent of females are. In Krajeski's view, these figures contribute directly to the high population growth rate. In his words, "educating women is a game-changer" and that could lead the population growth rate to drop "precipitously, quick."

It is in the face of these problems that Yemen's unemployed and disenfranchised have taken to the streets to demand Saleh step down. However, Krajeski doesn't see these protests as all too threatening to Saleh's regime.

"Saleh is a deal maker," Krajeski echoed countless times during the lecture. What he seemed to mean by this is that Saleh came to power because of his ability to broker contextually sensitive agreements with the various tribal leaders ruling the outlying rural provinces – provinces that the central government in the capital of Sana'a has very little direct control over.

It's for this reason that Saleh has been quoted as saying that ruling the nation is akin to "dancing in a circle of snakes." The United States sometimes gives attention and support to Yemen when al-Qaeda of the Arabian Peninsula raises its head. So, as Krajeski explained, "when al-Qaeda is strong [Saleh] gets a pass on corruption." As a result, the U.S. helps Yemen with financial and logistical support to combat terrorism at times. But seeing as Krajeski treated Yemen's plethora of mind boggling problems with diplomatic scrutiny, what is to be made of the decision by the Hashed and Baqil tribes – two of the country's largest and most influential tribes – to side with anti-government protesters? As Krajeski explained, the decision is meant to say, "We tribes are going to make a deal, and Saleh might not be part of it." But he cautioned not to "count Saleh out." When all is said and done, Krajeski believes the political future of Yemen won't be decided by the protests, but that in the face of such momentous change in the region, no possibility should be overlooked.

In the face of such a bleak outlook and loaded implications, Krajeski included many slides showcasing the country's abundance of natural and architectural splendor. Standing before a picture of a Dragon's Blood tree – a species of flora endemic to the island of Socotra, which lies off Yemen's southern coast – he marveled at the beauty of the island and remarked that "it's one of the truly magical places left on earth." He even suggested that if Yemen could stabilize itself, its unique architecture, rich history and distinctive ecology could make it a haven for adventuresome tourists.

Krajeski's lecture was the latest in the Civic Initiative Speaker Series and was organized with the help of the Political Science Department and Dr. Michael Hannahan in an effort to inspire students through exposure to politicians and diplomats holding high-level positions.

Max Calloway can be reached at mcallowa@student.umass.edu.

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

MONDAY, MARCH 7, 2011

"If we don't believe in free expression for people we despise, we don't believe in it at all."–Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

Solidarity forever: why we need labor unions

A corporate chief executive officer, a public union worker and a Tea Party member sit around a table. In the center of the table is a plate holding a dozen cookies. The CEO takes 11 cookies and whispers in the Tea Partier's ear, "Look out for that union guy, he wants part of your cookie."

This joke has been making the rounds on the Internet in recent days. It's a brilliant summary of the current state of American politics.

Mike Tudoreanu

We are told we need to endure very deep cuts in wages, health benefits, education, aid to the poor and public services in general. Why? Because the government is "broke," apparently. That's funny. It didn't seem so broke when it came to bailing out the banks as a reward for crashing the economy ($700 billion), or extending the Bush tax cuts for the wealthy (reducing government revenue by $200-500 billion), or throwing away money on wars in Iraq and Afghanistan ($159.3 billion set aside for 2011 alone).

By comparison, the deep spending cuts demanded by the Tea Party wing of the Republicans in the House amount to…$61 billion over the next year (to be achieved by cutting Pell Grants to students and heating aid for the needy, among other things).

And the amount of money that Gov. Scott Walker wants to save in Wisconsin by crushing public sector unions? About $1 billion. That's right, our dear leaders are squeezing every last penny out of the working class while spending lavishly on shiny guns and giveaways to the rich. The idea that the attack on unions is about saving money is a joke. What they are saving is pocket change in the grand scheme of things.

The campaign to destroy public sector unions in Wisconsin, Ohio and Indiana is not about fixing any state or federal budgets. That was made crystal clear when the unions agreed to accept every pay cut demanded by Walker, yet he still refused to let them keep their collective bargaining rights. What this is really about is the privatization of public services. If public schools were replaced by charter schools, for example, and the wages and benefits of teachers were slashed, then the companies running those charter schools could make huge profits. But the unions stand in the way of any such plan, and that is why capitalist politicians are trying to smash them.

This is nothing new. Big businesses and their pawns in government have always been trying to make us work harder for less, and unions have always been the main force standing up to them. Many of the things we take for granted today – such as the eight-hour work day, getting weekends off and the fact that children no longer work in factories – were won through years of hard struggle by unions. Organized labor has a long and proud history of fighting and winning in the face of odds much worse than the ones we're dealing with today. We should remember this history; remember what unions did for us and why we need them.

The campaign to destroy public sector unions in Wisconsin, Ohio and Indiana is not about fixing any state or federal budgets.

The first unions in America were formed in the 19th century, at a time when workers who stood up for their rights faced not only the risk of losing their jobs, but also a good chance of being shot. Picketing and strikes were illegal and judges allowed companies to use private "police" – that is, hired thugs – to beat or even kill workers who dared to strike in defiance of the law. Anyone trying to openly organize a union was liable to be thrown in jail for "conspiracy."

One of the first nationwide unions, the Knights of Labor, had to organize itself as a secret society to avoid prosecution.

Workers were commonly required to work between 10 and 12 hours a day (including children), and the most important demand of the underground union movement was to shorten the working day to eight hours. Some paid for it with their lives.

On May 3, 1886, hundreds of thousands of workers went on strike to demand an eight-hour working day. The police responded by firing live ammunition into the crowds at the McCormick Reaper Works in Chicago. The protests continued. The next day, an unknown person threw a bomb at police in Haymarket Square, killing one and injuring others. Shots were fired and seven officers and an unknown number of protesters were killed, hundreds of labor activists were arrested and some were executed simply for being involved with the movement. Only after several decades of such struggle was the eight-hour workday finally won.

In the end, unions fought and won better working conditions and rights not just for themselves, but for non-unionized workers as well. Free weekends and the eight-hour work day are for everyone. No one lives in fear of private company thugs any more. And whenever union members manage to win higher wages for themselves, this puts pressure even on the employers of non-unionized labor to raise wages somewhat.

After all, they need to keep up or risk losing workers.

We've come a long way since the days of the Haymarket martyrs. But this progress did not come about because robber barons suddenly realized the way they had been treating workers was wrong. It came about because workers – organized in unions – forced their bosses to compromise and dragged them kicking and screaming into a world where strikes are no longer answered with bullets. But many capitalists would love to go back to the way things used to be, if only they could get away with it. Unions are our shield against this threat; they help us keep what our ancestors fought for. And if we had stronger unions, we may even be able to start moving forward again.

Mike Tudoreanu is a Collegian columnist. He can be reached at mtudoreal@econs.umass.edu.

Charlie Sheen isn't new

Charlie Sheen is crazy. He was horribly overpaid for his show, has a history of misogyny, marital problems and a terrible working relationship with his boss.

He continues to provide ample ammunition for critics and pundits looking to shoot down his career. And yet, the one behavior he has exhibited that is being criticized the most is his penchant for wild cocaine-and-porn-star parties. Sure, the man parties like a wild animal, but so does most of my target audience. Few people on this campus party as hard as he does, of course, but there is nothing inherently wrong with throwing an awesome party.

Yaroslav Mikhaylov

Sheen has done plenty of things to be vilified, but his drug and sex life should not be the primary reason to criticize him. Drug use is between a man and his internal organs. Plenty of celebrities have done drugs.

Sure, the man parties like a wild animal, but so does most of my target audience.

In fact, people like Keith Richards, Robert Downey Jr. and members of The Beatles used large amounts of drugs. Robert Downey Jr. successfully turned his life around, stopped using drugs and became a serious actor and was nominated for two Academy Awards. Keith Richards and The Beatles on the other hand, kept on doing drugs throughout their radically successful careers.

The Beatles even managed to keep most of their behavior secret despite multiple arrests where Paul McCartney attempted to smuggle massive amounts of marijuana on tour. And I don't think any of The Rolling Stones ever really stopped doing drugs. Drug use is not the end of a life or a career. It is possible to put it behind you and recover.

It is also possible to use drugs and still maintain a great career and personal life. Sure, Charlie Sheen's habit of "banging seven-gram rocks and finishing them" is not healthy or remotely attractive, but it is probably not much worse than the sort of thing Richards and Jagger were doing at the height of the Stones' popularity. And it was not drugs, but rather Sheen's abrasive personality that finally led to his suspension from "Two and a Half Men." To condemn Sheen's drug use while holding up Richards as a cultural icon is not only incongruous but hypocritical.

The other critique of Sheen is his family living arrangement. He has been married three times, with each marriage ending in a contested divorce. He has reportedly partied with many pornographic actresses, and was – as of the last week – living with an adult film actress and a model who he calls his "goddesses." Happiness in relationships is hard to find, which is as true for college students as it is for rock stars from Mars. Most people on this campus have been in a relationship where they were smitten with their significant other, only to realize later that the relationship wasn't working.

Sheen has made three mistakes like that, and has finally realized that divorce is a lot of paperwork, so he isn't trying again. And why is he so quick to marry them? Because each wedding consists of at least three socially acceptable mega-parties and Sheen sure loves his parties.

Now he is very happy in his polyamorous relationship with two beautiful women half his age, so let him be happy with them. Just because his idea of domestic bliss is not equal to many does not make him a bad person. Likewise, there is nothing wrong for him to have had sex with porn stars at his crazy parties while in the process of getting a divorce.

His relationship with his wife was over at that point and his relationship with his "goddesses" had not yet started. There were no victims of his activity, except for those seven-gram rocks.

So, Charlie Sheen parties like crazy and has sex with adult film stars. Where is the problem here? He is happy with the life he led. He described his drug binges as "epic."

He waxes poetic about his beautiful girlfriends. Sure, there are problems with his party life. He has gone to rehab at the urging of the rock star Slash and is unlikely to have the chance to raise his own children in any sort of fatherly capacity. And it goes without saying that he is currently unemployed.

He is an abrasive and horribly vain person, but that's not what he is being criticized for. We're used to famous actors, like Christian Bale for instance, throwing hissy fits over nothing. We take it for granted that the privileged will yell and scream about how "Lucy in the Sky with Diamonds" will make our children take acid and Dr. Manhattan's blue penis will turn them into sexual predators.

Charlie Sheen is not a good person; he is a terrible role model and may, in fact, be bipolar. But as far as his sex life and his partying go, he's winning: he's winning at both.

Go and vote this week

I am involved in student government and campus activism, and have been for the past three years. Around this time of year – with student government elections coming up – we engage in the time-worn political tradition of the campaign and do everything we can to boost our visibility so our visions for the rest of the campus body can be endorsed and supported in the coming year. The elections – as they do in all democratic societies – bestow on us our legitimacy and serve as worthwhile barometers of how much of the student body feels our impact.

Mike Fox

However, it has become a reoccurring source of frustration that we get around 3,000 voters, or around 12 percent, of our campus of more than 20,000 undergraduate students, each year. This limited dialogue with the rest of the student body – especially in our time of highest visibility – has turned campaigning into a game instead of a full and thorough conversation with the general student body. It has begun to eerily resemble the zero-sum game of national politics.

I, for one, have been guilty of prioritizing this mini form of large scale electioneering over trying to forge real relationships.

Perhaps it's an inevitability of anyone seeking leadership to rely on shorthand in order to prioritize effectiveness.

However, the typical turnout number remains an indicator that, despite efforts being made on campus, there is significant work to be done. It doesn't work to blame apathy on one's own constituents or the people on whose behalf one is fighting. Communication must be increased within passionate groups in order to accomplish more collective goals and greater efforts at creating a welcoming community must be undertaken.

All of this calls for a public sphere on campus where people feel comfortable and valid in expressing their visions for the University of Massachusetts and how it can help them attain their aspirations. Student government provides a good model for this outlet, but the closed-minded nature and quick judgments that reflect larger politics must be avoided.

These flaws aren't inevitable. On a university campus, a place established to promote and advance the greater good, these flaws can be addressed at a level that is comparatively manageable.

Please vote this Tuesday, Wednesday and Thursday. If you don't, I apologize, and I will do all that I can for you to see that a future vote is worthwhile.

Mike Fox is a Collegian columnist. He can be reached at mgfox@student.umass.edu.

Communication must be increased within passionate groups in order to accomplish more collective goals and greater efforts at creating a welcoming community must be undertaken.

But it's worth taking the opportunity of having a smaller and condensed group of people going through similar experiences to figure out how to elevate campaigning to holding honest conversations – not just with potential voters, but also between all of those who aspire to participate in student leadership.

Dissenters will cite low turnout numbers to label what I would like to do as negligible. After all, if it's a relatively small percentage which engages with student government, why shouldn't one be concerned with just pushing the vision one sees as correct?

This view employs the student body's apathy as an excuse to not exercise self-criticism. A more comprehensive and deliberately measured view of student leadership would create a body which all students see as accessible. As more students view a student government as accessible, more viewpoints will be contributed to the student government.

The cycle would continue until the system can be an organization that will best address the concerns of all students and ensure that as one body, we can be organized in shaping the direction of our campus and experiences here.

This isn't to discredit the work student activists and student government members have done. This past year, student government members have made great progress in making our Code of Student Conduct more answerable to students. They have done extensive research and advocacy on behalf of social issues confronting our campus and have established a swap market for textbooks. The government is also in the process of allocating Registered Student Organization funds, among many other efforts.

MASSPIRG, an organization committed to student activism, takes the biennial approval it receives in spring student government elections to heart. While it is connected to a larger external organization as many student groups are, students are essential in shaping the group's direction. Notably, on our campus, this involvement helped shape a coalition with the Student Government Association and the UMass Democrats to register 1500 new voters. They also conducted efforts on a larger scale, winning funds for Pell Grants and helping to achieve credit card reform.These experiences also provide valuable real world lessons.

Fighting and advocating for causes while trying to balance the interests of many different constituencies help develop essential skills in becoming an engaged citizen. Student government and student activism provide an outlet to directly contribute to the society around oneself, considering the relative universality students feel from campus policy change.

Hadley-based band dominates NoHo

By Amy Larson
Collegian Correspondent

Four parts extraordinary musical presence, two parts rampant, long hair and one part electronic addiction completes the recipe for Dom. The Hadley, Mass. band took the stage of the Iron Horse for the third time Saturday night after a suitable opening from two other modern groups, Expensive Looks and Bobby.

Built around powerhouse strumming and an infusion of computerized sounds, Dom executed an unforgettable set in Northampton. The music hall tried to contain the sound, but it was beyond the scope of present time and place.

Dom offered a pop-powered feeling of decades past, but made us of electronic elements that send the music into a futuristic frenzy. Their songs often ended at the climax and thus thoroughly hooked the audience and this brevity made time fly even faster. Dom has mastered the art of gaining listeners' full attention in a way that exudes more experience on stage than Dom actually has.

The band, named after guitarist/vocalist keyboardist Dom, entered the scene in January, 2010. Early formations began in 2009, when the 23-year-old Dom met drummer Bobby in Worcester. The two discovered they had a knack for making electronic music when their first song, "Jesus," gained popularity. Shortly after, Dom found himself in a "real band" for the first time, as bassist Erik and guitarist Cosmo were added to round out the group.

Once a solid foursome, Dom hit the ground running and released a seven track EP titled "Sun Bronzed Greek Gods." The album proved to be irresistible, as it triggered several offers from major record labels. However, like true artists, Dom was disinterested in the "fancy dinners, airplanes, and hotels" the labels had to offer and repelled their bids. They eventually signed a short contract with EMI/Astralwerks, but have retained their integrity as a band.

Dom possesses a rare ability to create music which can please many but is impossible to place in a genre or style. Most of their tunes are rhythm – not lyrically – based. They ingeniously make music that would typically be for hipsters but express it in such a way that anyone can love it. It could easily play in the background of a trendy, West Coast TV show.

Dom is a sonic eruption when performing live. The music is a communal experience requiring both the energy of the band members and the electrified audience. By the time they got to their hit "Living in America" Saturday, the entire crowd was jumping. The audience went even wilder when guitarist Cosmo dove backwards into the crowd and continued to play as they supported his weight.

Bassist Erik got equally excited on stage and nearly whacked several girls dancing in the front row with his bass as he got as close to the edge as possible to jam. Drummer Bobby provided the power supply for all of this action as he smashed out quick beats and made use of a Mac laptop to produce electronic sounds. Singer Dom belted with his high-pitched, unique voice, which was entrancing, though it was not the focus of the music. At times he set his guitar down to focus on just his singing, which was equally forceful. Dom's solidarity gave the group the muscles to play such a fast-paced set.

As they sang about cats and danced fluidly on stage as if they were at their own party, it became clear that Dom was cool because they just did whatever they wanted.

The young band claimed to be inspired by the Carpenters and Nirvana, and even – according to Dom – his cat, as they performed their popular track, "Bochita." Singer Dom went further in his boldness as he donned a pink guitar and metallic nail polish for the show.

These four Massachusetts 20-somethings are the type to have fun anywhere, anytime; the type many young people would hope to receive a party invite from. And on Saturday night, everyone in the crowd actually did get an invite to Dom's "party house" in Hadley.

Transcending the walls of the Iron Horse, Dom left its audience craving more of their fresh music and hoping to be able to have as good of a time as the young band does all the time.

Amy Larson can be reached at alarson@student.umass.edu.

Expensive Looks and Bobby opened for the Hadley-based Dom on Saturday night at the Iron Horse in Northampton. The band, originally from Worcester, stunned the crowd with their energy and creativity.

Damon chases love in 'Bureau'

By Margaret Clayton
Collegian Staff

"The Adjustment Bureau," from writer and director George Nolfi, is an action film anchored in the chase of romance, appealing to an audience varied in gender and age. It is based on the short story "Adjustment Team" (1954) by Philip K. Dick, whose other works have also been turned into films which include "Minority Report," "Total Recall" and "Blade Runner."

The story spans five years following young politician David Norris (Matt Damon) and Elise Sellas (Emily Blunt), a dancer who captures Norris' heart on election night.

In the beginning of the film, Norris is campaigning for senate across the state of New York, making appearances at both his alma mater and on the international level on "The Daily Show with Jon Stewart." His personal history has attained him some public attention, as he is the youngest congressman in history, and he lost his parents and brother at a young age growing up in Brooklyn. This level of exposure also seems to have attracted the attention of a group of men in trench coats and fedoras who are spotted in the crowds at Norris' speeches, in the park on his route to work, and seated elsewhere in the restaurants where he takes his lunch breaks.

When sleeping on the job ends up costing Norris a lot more than a paycheck, it is revealed that this shadowy envoy is the "Adjustment Bureau," a group of case officers for destiny. Their resources are a library of books with constantly changing type and a steadfast belief that any part of their job that is emotionally jarring is for the good of the greater plan.

The Bureau gives the air of an unemotional cult, as the members are referred to by their last names only, with the exception of Harry, who is the first associate shown. They have a power that is crushing if one attempts to stand against them, which Norris learns in an abandoned warehouse that sets up the audience's schema for a torture chamber.

No one succeeds in killing off the main character during the first 20 minutes of the film, and the plot continues to follow Norris and Sellas as their chemistry flares and paranoia seeps in.

John Slattery, better known for his roles in television's "Mad Men" and "Desperate Housewives," is the white-haired Richardson, a Bureau boss who cleans up messes. Terence Stamp, who plays the unforgiving villain Ramsley in "The Haunted Mansion," once again takes on the role of merciless dictator in the fate of his fellow characters.

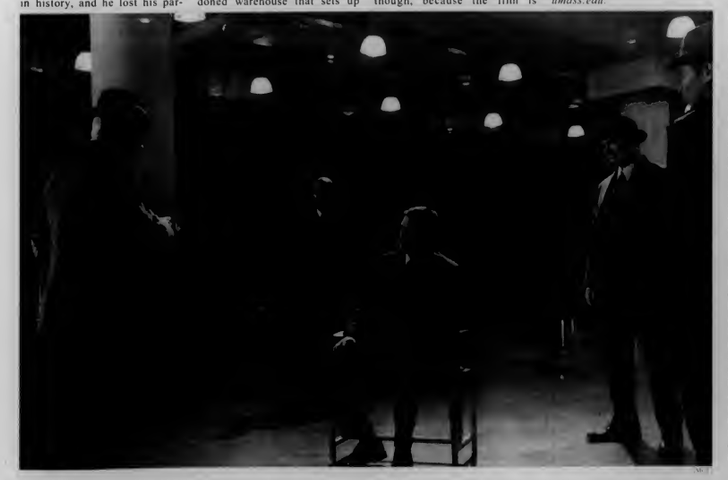
Given its multi-million dollar budget, the film is disappointing in its execution. The editing lacks continuity, as shown by the discrepancy in the types of phones used (Blackberry vs. a generic silver flip-phone) and clothes that were torn off passionately magically reappearing the morning after.

The audience can easily forgive these shortcomings, though, because the film is intelligent, with real characters whose break-ups are based on lost phone numbers and a fear of being hurt again. These qualities bring a degree of realism to the film, allowing the audience to relate to the characters.

"The Adjustment Bureau" picks up on the classic "race against time" theme dominating theaters. The film bears a noticeable resemblance to recent hits "Inception" and "Black Swan," with changing dimensions and an injured dancer. But what separates the film from thrillers of the past year is an accessibility that does not make one's head hurt, even when one fears for the characters' safety.

Damon explores his emotional side running from the underground law and Blunt is as saucy and beautiful as ever, not hiding her charming accent for this American film. The struggle between fate and true love is the tension explored in this Hollywood blockbuster that opens doors to an untold future.

Margaret Clayton can be reached at mclayton@student.umass.edu.



New York politician David Norris (Matt Damon) faces the Adjustment Bureau in director George Nolfi's latest film, "The Adjustment Bureau." Damon co-stars with Emily Blunt in this film adaptation of Philip K. Dick's short story, "Adjustment Team."

'Mother's Son' a dark drama

By Ian Opolski
Collegian Correspondent

It is 1963 and Richie Kvichak is accused of murdering his best friend. As tensions grow and hostility from the community heightens, Richie's parents must decide the best course of action for their family. It is ultimately Masha, Richie's mother, who takes matters into her own hands in order to protect her son and her family from the threats that stand to ruin them forever.

Written and directed by Smith College MFA candidates Darren Harned and Kendra Arimoto, "Some Mother's Son" is a tense and compelling exploration of the horrifying means to which a mother must resort in order to safeguard her child.

"Some Mother's Son" is a low-action domestic drama, so it naturally must rely on character development to maintain interest. Smith's production fares well in this regard. It is fortunate for the performance that the bulk of the action falls on Susanna Apgar, who plays Masha. While the entire cast handles the material capably, it is undoubtedly Apgar who dominates the stage. Even in the rare moments in which attention is drawn away from her character, Apgar often manages to pull the focus back onto herself by way of small, effective movements of her face and body. Constantly cleaning, wiping or wringing her hands, and taking shuddering breaths, she skillfully relates the growing emotional strain of her situation while also gesturing to the character's darker undercurrents.

Alex Techeira, who plays Masha's husband, Carl Kvichak, also performs well, particularly in the second act, in which his character develops more nuance. Likewise, the brief confrontation between Masha and Constance North – the mother of the deceased boy played by Smith undergraduate Emily Brown – is one of the most shocking and shattering moments of the entire piece. As little actually happens in the plot of "Some Mother's Son," its cast should be commended for how engaging and lively this character-driven drama continues to be throughout its duration.

The play, performed at Smith's intimate Hallie Flanagan Studio Theatre, is confined to a single set, the kitchen of the Kvichak's household. The small size of the stage and the theatre itself actually work very well for this production, compounding the sense of domestic isolation and feminine confinement developed by Masha's character. The mundane sounds of a ringing phone, oven timers and a broken garbage disposal serve the greater purpose of signaling Masha's inability to make active change outside her own home. While none of these elements is of any earth-shattering originality, they all buttress Apgar's performance in order to develop the play's increasingly uneasy atmosphere.

While the performances and the setting are compelling enough to maintain audience interest for the majority of the play, the second act of "Some Mother's Son" seems, at times, somewhat extraneous. The mood, characters and themes are established so well in the first act that little of the action in the second half contributes enough to make it seem worthwhile. In addition, implications about the characters' motivations are made in the second act that are left underdeveloped and unresolved. The second half of the play does include several creepily humorous moments, but the number of loose ends it leaves begs the question of whether they merited conclusion at all.

While the play obviously intends for the audience to reflect on the reasons why the characters act as they do, one wonders whether it might have been more effectively rendered as a long single act performance. Still, the dialogue is strong and never betrays its 1960s context. The script does include a few gems, including a clever reference to "Beowulf" which, when considered in light of the entire play, contributes very well to the exploration of the relationship between motherhood and monsterhood.

Despite the overlong and slightly unsatisfying second act, "Some Mother's Son" is ultimately a success. The production's capable performers keep what could easily have been an over-the-top performance grounded and realistic, relating a gloomy and open-ended tale of monsters and maternity.

Ian Opolski can be reached at iopolski@student.umass.edu.

Minutemen get win over Brown Bears, head to Albany Tuesday

M.LAX from page 8

While Rushing, Biscardi and Mooney helped give UMass possession and time on the offensive side of the ball, Cannella wasn't thrilled with how the unit performed in the victory.

"On offense, we were a little bit uncharacteristic, [but] we'll take it," said Cannella. "If you watch me on the sideline, I was pretty aggravated because I thought we could play better, particularly on offense."

Until the third quarter, the Minutemen relied on its defense to stay ahead of a resilient Brown side. This included containing junior Andrew Feinberg, who unloaded four goals on the Brown Bears' first opponent of the season, Quinnipiac, on Feb. 26. Feinberg was held to a goal and an assist on Saturday.

"Feinberg is probably one of the better attackmen we'll face," said Cannella.

With their defense standing tough, the Minutemen opened up a little bit more in the third and allowed its offense to have a crack at the net.

"We settled down, we played less defense and more offense … and had to work for our goals," said Cannella. "Our defense had a chance to settle down and catch their breath."

The opening up of the offense allowed the Minutemen to outscore Brown, 5-2, in the second half, giving the squad all the offense it needed to remain unbeaten.

When UMass travels to face Albany on Tuesday, it won't be facing a nationally-ranked team, as the Minutemen face a Great Danes (1-1) squad picked to finish second in the America East Conference – headed by No. 7 Stony Brook.

In its most recent contest against Delaware, Albany picked up its first win of the season with the help of freshman Miles Thompson, who notched a hat trick.

For Cannella, the difference in rankings doesn't affect the way the team is going to practice and prepare.

"We just talk about our team, our focus [and] our opponents," said Cannella. "Regardless of who you're playing, you have to be ready. If you're not ready to play, somebody's going to beat you."

This will be the beginning of a two-game road trip for the Minutemen, who went 3-4 on the road last season.

"We weren't very good away from home last year either, so we hope we can scratch out a couple this year," said Cannella.

UMass will have three days to prepare for its game Tuesday, a quick turnaround for a team used to playing on a weekly basis.

"It is very different for us in terms of who we've gone week to week [with] here," said Cannella. "We talk to the guys to try and get as much rest as you can, stay off your feet [as] best you can. It is very different, and the energy will probably be very different. Hopefully we can be there physically, but also be there mentally."

Herb Scribner can be reached at hscribne@student.umass.edu.

JAKE HACHEY/COLLEGIAN

Faceoff specialist Greg Rushing prepares for a faceoff against Brown on Saturday. Rushing was 10-of-14 on faceoffs on the day, as the Minutemen cruised to a 9-6 victory.

JEFF BERNSTEIN/COLLEGIAN

Michael Pereira brings the puck down the ice against Maine on Saturday. Pereira had a goal in a 4-3 loss Friday, but the Minutemen tied the Black Bears Saturday to make the Hockey East playoffs.

Mass. Attack to take on Eagles

HOCKEY from page 8

all the time. The only way to stay sane in a foxhole is to talk. If you're in there and you isolate yourself, you're scared out of your wits. You feel alone and overwhelmed. But if you keep talking to each other and keep working together, you can survive the foxhole experience."

The Minutemen stormed back, scoring four consecutive goals. Adam Phillips scored with two minutes and four seconds remaining to give UMass a 4-3 lead. Rocco Carzo and Danny Hobbs teamed to get a cross from the left corner of the rink to the oncoming freshman.

Maine came right back to tie the game just 19 seconds later, and the remainder of the game moved to UMass trying to fend off an onslaught of Black Bear attacks.

Senior captain Paul Dainton made multiple huge saves in the third period, drawing praise from the crowd of 3,376 with each one. He finished the game with 32 saves, 14 coming in the third and overtime combined.

"We had an immense effort from Dainton in critical situations," Cahoon said. "He's the captain and he really is a special kid. I think everybody's starting to realize that. He's got a great future."

Carzo started the rally with his first goal of the season near the end of the second period to cut the score to 3-1.

Hobbs added the second UMass goal five minutes and 44 seconds into the third. The announcer could not finish crediting the goal before Michael Pereira tied the contest at three just 18 seconds later.

Friday's game also featured a big third period push, as the Minutemen nearly erased another three-goal deficit, but eventually fell to the Black Bears, 4-3. Maine held a 1-0 lead after two periods before six total goals were tallied in the third.

The same trio of Phillips, Hobbs and Pereira all scored in the final period, with UMass rallying around a 17-5 shot advantage.

Like Saturday's game, the Black Bears controlled the first two periods, outshooting the Minutemen 35-17.

Facing a 4-1 deficit, UMass scored a couple of "piggyback goals" in the 12th minute of the third, separated by just seven seconds apiece.

With the Maine goalie clearly rattled, the Minutemen took shots as far away as the neutral zone to try to complete the comeback.

UMass will now play Boston College, the No. 1 team in the conference, next weekend.

"We have got our work cut out for us, let us not forget that," Cahoon said.

Pete Vasquez can be reached at pvasquez@student.umass.edu.

Defense pays dividends

By Stephen Sellner
Collegian Staff

Saturday's 9-6 win over Brown showcased the No. 9 Massachusetts men's lacrosse team's reoccurring theme of defensive unity and physicality.

"I think it was a good group effort," said sophomore defenseman Jake Smith. "We made stops when we needed to… [and] overall, we played well as a unit."

Smith and the rest of the defense applied crushing blows to No. 20 Brown's attackmen throughout the game, disrupting the Bears' comfort level and execution on offense.

"We definitely try [to] pride ourselves on…being a physical defense," said Smith. "We [want to] take it to the other team [and] always play hard."

The Minutemen (4-0) defense had their work cut out for them, forced to contain a potent Brown attack featuring elite goal-scorers Parker Brown and Andrew Feinberg. The duo combined for just three scores, as Smith and junior Tom Celentani held the potent Bear attack in check throughout the afternoon.

"If you ask those guys, they'll tell you it was a total team effort on defense and that's how you have to play teams like Brown, and everybody else we play on our schedule…" said UMass coach Greg Cannella.

The Maroon and White have shined on the defensive end all season, containing some of the top attackmen in the country. Army's pair of attackmen, Jeremy Boltus and Garrett Thul, were held in check (two goals and one goal respectively) and the Minutemen limited Ohio State's Logan Schuss and Jeff Tundo to only a pair of goals each.

UMass applied constant ball pressure on Saturday, which helped disrupt the flow of the Bears' offensive sets, leading to 17 forced turnovers. Smith led the Minutemen with a career-high five caused turnovers, while Celentani and Greg Anderson each forced a pair of their own.

Cannella was happy with his defensive midfield's play, particularly senior Stephen Zorkers and sophomore Bobby Tyler and their ability to hinder Brown's execution on the offensive end.

"[Our] short sticks did a good job," said Cannella. "Zorkers did a great job today, [as did] Bobby Tyler [of] turning the ball over [and] knocking some passes down as well."

UMass assistant coach Kevin Burns' game plan allowed the players to feel more comfortable in the defensive zone.

"We were [really] prepared for their offenses, so it helps when you…think you're one step ahead of the other team and…know where to be," said Smith. He went on to add that he believed switching on Brown's picks and communicating with fellow defenders were vital to the defense's strong performance.

Cannella believed his defense's comfort level rubbed off on goalkeeper Tim McCormack, who made some key saves down the stretch (10 total) to preserve the win.

"I think you get to a point where [if] the defense plays more relaxed, the goalie plays more relaxed," said Cannella. "The defense plays more relaxed because the goalie is playing solid. The goalie plays more relaxed because he knows he has people in front of him [who] are [going to] take care of him."

In the second half, the defensive play was crucial in the Minutemen's surge. UMass limited Brown to just 12 shots in the half, including only four in the third quarter, which allowed the home team to finally create separation in the score and hold onto its lead.

UMass has relinquished an average of 7.5 goals per contest, a credit to both McCormack's play in net and the defense's ability to limit scoring opportunities. The Minutemen have held the opposition to merely 25.8 shots per game and have also caused an average of 10 turnovers per contest.

The Minutemen were effective in clearing the ball out of the defensive end, going 18-of-20 on the afternoon, limiting the number of extra possessions for Brown to mount a comeback.

Stephen Sellner can be reached at ssellner@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Goalkeeper Paul Dainton makes a save against the Black Bears this weekend. Dainton was instrumental in UMass earning a playoff bid in a 4-4 overtime tie.

Captain Dainton steps up to help UM net playoff appearence

By Steve Levine
Collegian Staff

In the last game of the regular season, the captain of the Massachusetts men's hockey team stepped up when his team needed him most.

Paul Dainton single-handedly saved the Minutemen's season Saturday by making a slew of clutch saves late in the Minutemen's game against No. 14 Maine. The only way the Minutemen would have missed the postseason was if they lost to the Black Bears and Providence upset No. 7 Merrimack. At the beginning of the third period Saturday, UMass trailed, 3-1, and was also aware of the Friars' 5-3 lead over the Warriors.

In what could have been the final game of his career, Dainton showed exactly why he wears the 'C' on his jersey. As his team rallied in the third to take a 4-3 lead, the captain stopped 14-of-15 shots, many of which seemed destined for the back of the net. Although Dainton let up a game-tying goal with less than two minutes to go, sending the game into overtime, he rebounded and made a number of saves, continually drawing bows from many of the 3,376 fans on hand at the Mullins Center.

As the last seconds of overtime ticked away, the Minutemen immediately took to the ice and celebrated around Dainton. UMass coach Don Cahoon saved a moment for him as well, congratulating him and thanking him for his heroics when the game mattered most.

"We got an immense effort from Dainton in critical situations…He's the captain and he really is a special kid and I think everybody's starting to realize that," said UMass coach Don Cahoon.

After falling behind, 3-0, in the first, Dainton and his teammates showed resilience late in the game, something they've done time and time again without seeing positive results.

"There were a couple of goals [in the first period] that you'd want back, and I knew the guys were looking at me to make saves," said Dainton. "I knew I had to make some saves to keep the momentum going."

The Mullins Center erupted when rookie defenseman Adam Phillips gave UMass a 4-3 lead with two minutes left to play. However, Maine scored 19 seconds later to tie the score. The Black Bears were not about to give up on the win, though, as they continually created strong scoring opportunities late in the third and in overtime. However, with each opportunity came a seemingly impossible save from Dainton, who was quick to acknowledge UMass' defense, which continually blocked shots, cleared rebounds and provided him good vision to make saves.

Dainton has accomplished many feats throughout his career, including claiming ownership of UMass' all-time saves record against Boston College on Feb. 25. Still, Dainton was not sure how his college experience would pan out after a few years out of school while he played in junior leagues in Canada.

"He asked coming to UMass his freshmen year… 'You know, I've been out of school for a while, what's this college thing all about?'" said Cahoon. "I tease him about it all the time, but he figured it out pretty [well]."

He certainly did.

Dainton has been a rock for the Minutemen for four years and his leadership has been unparalleled since his freshman year. He is consistently calm, poised and articulate, qualities that earned him the "C" at the start of the season.

The Minutemen will be looking for more of the same from their captain in the first round of the Hockey East playoffs, when they face off with Boston College in a three-game set beginning March 11.

UMass falls short but hosts playoff Tuesday

By Jay Asser
Collegian Staff

In its final game of the regular season, the Massachusetts men's basketball team became the victim of Fordham's first Atlantic 10 victory in 41 games Saturday afternoon at Rose Hill Gym in the Bronx in a 77-73 defeat.

Not only did the Minutemen (15-14, 7-9 A-10) end up on the wrong end of a feel-good story for a Fordham team (7-21, 1-15 A-10) that had its brightest moment come at the end of the season, but it also wasted an opportunity to lock up a home game in the first round of the A-10 tournament. Fortunately for UMass, it earned the first-round game nonetheless by way of an edge in a tiebreaker with Dayton, a team which the Minutemen defeated, 55-50, earlier this season.

UMass	73
Rams	77

"The loss hurts," said UMass coach Derek Kellogg after the game. "We had kind of our destiny in our own hands a little bit and Fordham took it away from us and played a better basketball game. I thought our guys let an opportunity slip out of [our] hands."

While it appeared the Minutemen were in a good position to head into the postseason with a win entering Saturday, the conditions which surrounded the contest weren't favorable for UMass.

"I feared this game since the schedule came out," said Kellogg. "You're playing them on the last day of the season, Senior Day, a team really playing with nothing to lose, and they played that way. I mean, they shot some 3's and made some plays that I haven't seen them make all year."

Despite receiving 30 points from senior Anthony Gurley, the Minutemen couldn't overcome a 13-point deficit in the second half, falling short of a comeback. After shooting 6-for-10 in the first half and tallying 20 of UMass' 33 points heading into the intermission, Gurley struggled in the second half, shooting 3-for-13.

UMass guard Javorn Farrell added 11 points, while forward Terrell Vinson scored 10 points and grabbed 10 rebounds for his first double-double of the season.

The Rams, however, received a stalwart performance from senior Brenton Butler on Senior Day, as the guard netted a career-high seven 3-pointers and scored 29 points in his final collegiate game.

Leading-scorer and rebounder Chris Gaston also recorded his 36th career double-double, with 19 points and 14 boards. The sophomore also chipped in four assists and a career-high four steals.

While it has struggled on offense this season, Fordham had fluid ball movement on Saturday, turning the ball over a season-low eight times and dishing out 19 assists on 28 made field goals. The Rams also shot 48.3 percent from the field, including 9-for-23 from beyond the arc, which Kellogg found concerning.

"I thought our ball-screen defense was terrible," said Kellogg. "We've gotten better at that throughout the season and we've actually worked on that. So to not have that work out the way it was supposed to, it was disappointing that the guys didn't execute how we had practiced."

The loss marked the second time this year the Minutemen allowed a team to pick up its first win in A-10 play. On Feb. 5, UMass fell to Saint Joseph's, 67-64, on the road in Philadelphia.For UMass' Farrell, having to endure another disappointing loss – especially in the final game of the season – was frustrating.

"Not again," said Farrell about his thoughts as a loss to the Rams seemed imminent. "[It was] like the St. Joe's game, where we went into [the home of] one of the worst teams in the conference… and gave away a game that we definitely should have won."

The Minutemen will put the regular season behind them and look to make a run in the conference tournament when they take the floor Tuesday night at the Mullins Center as the first round meeting against Dayton tips off at 9 p.m.

Jay Asser can be reached at jasser@student.umass.edu.

Cannella and Co. remain undefeated

By Herb Scribner
Collegian Staff

The Massachusetts men's lacrosse team didn't let up on its strong start to the season Saturday afternoon and cruised to a 9-6 win over No. 20 Brown.

"I thought it was a great effort on our behalf," said UMass coach Greg Cannella. "Brown's an excellent team, [and they have] tremendous athletes everywhere."

UMass	9
Brown	6

While the game started off back-and-forth, the third quarter saw a swarm of offense from the Minutemen. By the conclusion of the game, UMass (4-0) had two players with hat tricks in junior midfielder Anthony Biscardi and freshman attackman Connor Mooney.

Mooney and Biscardi helped the Minutemen offense, which lacked leading performances from attackmen Will Manny and Art Kell, who were both held scoreless despite a combined seven shots.

"When Will Manny and Art Kell get shut out and [you] win, you've got to be happy," said Cannella.

Mooney said this game was an indication of how he's adapting to the UMass style of play.

"I'm definitely getting a little more comfortable playing in the system," he said.

"He brings a different element to our attack," said Cannella of Mooney. "He's just a hard worker [and a] tremendous kid as a person and as a teammate."

Junior Greg Rushing played impressively against the Brown Bears (1-1), as he secured a career-high 13 groundballs and went 10-for-14 on faceoffs.

"I think Rush expects that more than us now," said Cannella. "You've got to be really happy for a guy like Rush."

JAKE BACHEY/COLLEGIAN

Freshman attackman Connor Mooney celebrates after a goal against Brown Saturday. UMass stayed undefeated, winning 9-6.

Minutemen recieve HE bid with OT tie

By Pete Vasquez
Collegian Staff

As the overtime buzzer sounded at Saturday night's home game against Maine, the Massachusetts hockey team gathered in a circular embrace as the Mullins Center roared around them. UMass (6-21-6, 5-16-6 HEA) clinched the final playoff spot in the Hockey East Tournament with a 4-4 draw, a spot that just moments earlier seemed to be slipping away.

UMass	4
Maine	4

After falling behind, 3-0, in the first period, and trailing, 3-1, with one period to go, the Minutemen fought back to give themselves the point they needed to stave off Providence and continue their season.

Facing a deficit of two goals entering the third period, and with Providence leading Merrimack, 5-3, after two periods, UMass coach Don Cahoon made a decision.

"We made a decision that we were going to go in and talk to the guys and let them know right up front what was going on," said Cahoon. "We didn't use the word, 'desperation,' but you could tell that they played with desperation in the third period."

Cahoon equated the first intermission feeling to surviving inside a foxhole. Trailing, 3-0, he knew communication was critical.

"All of us sit in [the locker room] after [the] first period that we had tonight and you start staring and wondering," Cahoon said. "You need each other. We talk about foxholes

See HOCKEY on page 6

JOY BERNSTEIN/COLLEGIAN

Sophomore Dee Montgomery makes a pass in a game earlier this season. UMass lost to Charlotte in the opening round of the A-10 tournament Friday, 77-66.

Minutewomen close out season

By David Martin
Collegian Staff

Though they shot 49 percent overall behind sophomore Jasmine Watson's game-leading 25-point performance, the Massachusetts women's basketball team could not overcome a first half deficit, as Charlotte ended their Atlantic 10 postseason with a 77-66 loss on Friday evening.

The Minutewomen (7-23, 3-11 A-10), who came within seven points of the lead just minutes into the second half, could not take control of the game away from the 49ers (23-9, 9-5 A-10).

Watson had an impressive performance in which she logged a team-best eight rebounds, three assists, two blocks and two steals, in addition to her 25 points. Watson also went 9-for-14 from the charity stripe.

Seniors Cerie Mosgrove and Megan Zuile also broke the double-digit mark with 11 and 10 points, respectively. Sophomore Shakia Robinson also contributed with eight points.

UMass	77
49ers	66

Four 49ers put double-digit figures on the scoreboard. Jennifer Hailey led the team with 18 points and nine rebounds, just slightly ahead of Shannon McCallum's 14 points and eight assists. Epiphany Woodson ended the day with 13 points, while Kendria Holmes scored 10 points.

UMass opened up the scoring just 24 seconds into the match, but it would prove to be the team's lone advantage of the afternoon. The 49ers then went on a 16-2 run with 14 minutes remaining in the first half, and would close out the half with a 36-26 advantage over the Maroon and White.

The second half seemed to pick up right where the first left off, with the 49ers scoring the first basket to reestablish a 12-point lead. UMass would then, however, score five straight points to come within just seven points of the 49ers' lead. The run would end prematurely, though, with the 49ers going on their own 8-0 run, keeping the deficit in double digits the rest of the way.

In a postgame interview with UMassAthletics.com, UMass coach Sharon Dawley was still pleased with the way the team played against a tough conference opponent.

"There are always things you want to go back and do differently, but I was real[ly] impressed with our effort," said Dawley. "I think we did a much better [job] the second time we played them than the first, even though it is on the road. I just liked our grit. When they would get a lead, we would just run back and get back at them. That is a real credit to our character."

At the final buzzer, the Minutewomen shot 24-for-49 overall (49 percent) on the night, while going 5-for-18 (27.8 percent) from beyond the arc and 13-for-18 (72.2 percent) from the free-throw line. In comparison, the 49ers shot 29-for-65 overall (44.6 percent), 5-for-15 from three-point range and 14-for-20 (70 percent) at the charity stripe.

Charlotte went on to win its game against Richmond, 68-63, on Saturday afternoon, but was unable to stay hot against Xavier in the A-10 semifinals, who won the contest Sunday afternoon by a score of 69-53.

In summing up what has surely been a difficult learning season for the Minutewomen, Dawley was nothing less that proud of the work ethic shown by her team.

"This season did not go as planned, we would have liked to have had a better season," she said. "But these girls just kept fighting, and [that] just says a lot about their character."

UM students go to the polls

SGA elections for president, trustee run Tues. until Thurs.

The three candidates for Student Government Association president, from left, Nathan Lamb, David Robertson and Yovin Roh, debated last week.

By Ashley Berger & Sam Hayes
Collegian Staff

On the eve of the Student Government Association's annual elections, the candidates for SGA president and student trustee are jockeying to garner as many votes as possible and are expecting the best.

The SGA elections for president and student trustee begin Tuesday after weeks of campaigning. The elections start at midnight on March 8 and end at 11:30 p.m. on March 10. Students can vote at the Campus Center Tuesday through Thursday between 9 a.m. and 5 p.m., or any time online at CampusPulse.

SGA Chancellor of Elections Zach Dawson is working hard with the elections commission to make sure everything goes well.

"We want to have a smooth running online election," said Dawson, who was named this year's chancellor at a Nov. 11 SGA meeting.

Dawson explained that the commission doesn't just work this one week, but that they have been working leading up to the election, too.

"We have been advertising through The Collegian, around campus and through our debate," said Dawson, referencing the March 1, Collegian-sponsored debate between the candidates for president and trustee.

One of the candidates for president, junior Nathan Lamb, said his campaign is simply continuing to repeat its message by hitting the streets and "just trying to talk to as many people as possible, so voters have adequate information at their disposal for when they vote."

"We are expecting a close race, but we're expecting to win," said Lamb confidently.

"I feel good, I think it will be close, but I'm confident that we have presented our ideas well," Lamb continued. "It's up to the students to decide which candidate's ideas they feel stronge[st] about."

Lamb is running alongside the current UMass Democrats president, junior Emily Jacobs. The pair is running on the platform that they are the ticket which can best serve the needs of UMass students. One of the senator's current projects is what he is calling the UMass FreeDD program, a proposal which would provide free transportation services to students late on Friday and Saturday nights to ensure that people get home safely and don't drink and drive.

Another of the three candidates, junior public health major Yevin Roh, is running on the platform of bringing change to student organizations and attempting to make the SGA more reflective of the student body. As a member of many Registered Student Organizations (RSOs), Roh is an active member of the UMass community who says he hopes to bring a student-centric change to the SGA which would embrace cultural diversity on campus. Roh and his running mate Wellynn Louis both hope to bring awareness and services to underrepresented students.

See SGA on page 3

Mock Trial heads to nat'l championships

The UMass Mock Trial Team took second place at the AMTA Worcester regional last weekend. They now move on to the nationals championships.

By Alyssa Creamer
Collegian Staff

The University of Massachusetts mock trial team recently defeated a majority of college mock trial's top-tier schools, taking second place and several top attorney and witness awards in the American Mock Trial Association's Northeast Regional Competition, held two weekends ago in Worcester, Mass.

Placing second of 26 teams behind Columbia, UMass' successful undefeated finish (8-0) has led them to qualify for the opening round of the National Championships, set to be held in White Plains, N.Y. this coming weekend. Competing in the championship rounds will be a first for UMass mock trial.

"As a whole, this has just been a monumental and incomparable season for our club," said Joseph

Board discusses meter options, landfill plan

WILLIAM PERKINS/COLLEGIAN

At this week's Select Board meeting, Board members discussed possible changes to downtown parking meters.

By William Perkins
Collegian Staff

A number of updates and improvements could soon be coming to Amherst's parking display machines.

Last night, members of the town's Select Board were presented with a proposal that would replace the 12-year-old pay-and-display machines at many of the town's parking lots with new machines that would take several forms of payments not presently offered.

Town Manager John Musante presented the proposal to board members, saying the main goal of the proposition is to help to improve visitors' experiences in downtown Amherst.

"Our goals … came down to making the downtown area more attractive to visit," said Musante, who noted the proposal was put together with input from an ad-hoc committee that consisted of community members.

"The basic recommendation [of the proposal] is to replace what are called our pay-and-display machines by pay-by-space [ones]," Musante added.

The new machines - which, if approved, would be implemented at different locations in different phases - would help to encourage new forms of technology for paying for parking fares, Musante said. They would accept credit and debit cards, in addition to change, as forms of payment, and would also allow people to pay their fees through cell phones.

"You'll have more ways to pay for your parking - more convenient ways," Musante said.

Those who park would no longer have to place paper receipts in their vehicles and would also be able to pay their fares at any location, if the new machines were installed, Musante said.

If the proposal were given the go-ahead, the new machines would be phased in this spring at the Boltwood Garage parking lot, the town hall parking lot, the Amity Street parking lot and the parking lot near CVS on North Pleasant Street. An additional phase, which would occur sometime in the next fiscal year, would implement the machines at locations on both Main and Spring Street. And another phase, which would likely occur during the 2013 fiscal year, would replace the machines at the Pray Street parking lot, and would also possibly replace some street meters.

The town currently has $94,000 in available funds that it could pay for the first phase implementations with. An additional $37,000 would have to be added to the 2012 fiscal year budget to pay for credit card transaction and secure network fees from the machines. And it would also cost the town approximately $30,000 to implement the second phase of machines.

The town would also have to place pavement or post markers that would identify the various parking spots at the parking lots if the changes take place.

Additionally, if the parking changes were to take place, fees would be increased at street meters from 40 to 50 cents per hour, while they would continue to be 50 cents per hour at the machines. And the cost to lease a reserved space at the Boltwood Garage would increase from $650 to $750 each year, while the yearly permit-parking fee would be set at $25.

The newly proposed measures sparked a bit of discussion between Select Board members last night, and also drew reaction from Tony Maroulis, the executive director of the Amherst Area Chamber of Commerce.

"I think we're going a long way with this plan to get parking right in this town," said Maroulis, who added that the new system "really will improve the visitor's experience to a great degree."

While there were concerns raised about intricacies of the proposal by some Select Board members, it was determined that they would hold off on making a decision on the matter until their March 21 meeting.

Elsewhere last night, Musante briefed members on a preliminary proposal to convert an old landfill on Route 9 into a solar panel site. The proposal could markedly improve the town's environmental standing, and Musante said he would have more information on it in a few days. Members last night also discussed the upcoming town budget.

William Perkins can be reached at wperkins@student.umass.edu.

Shoe line does a 'Civic Duty' by using all recycled materials

By Ashley Siegel
Collegian Correspondent

When Steven Weinreb was laid off from his job in 2009, he never looked back. Rather than joining a growing number of Americans who found themselves in the unemployment line, Weinreb dreamt up a business plan: a shoe line with a conscience. Out of that idea, Civic Duty Shoes were born.

"My frustration soon became my motivation to start a company that cares," Weinreb explained. "I am determined to prove that we can be successful and still be socially, environmentally and fiscally responsible."

From his past business ventures, Weinreb knew about Tyvek, a water resistant, breathable material, best known for its use as a protective shield on many homes. By using exclusively environmentally-friendly glues and dyes, Civic Duty is able to produce a unique product.

Beyond its stated commitment to environmental stewardship, the company is attempting to give back some of its profits to help others in need. Each year, Weinreb says the company will produce a specific design with 100 percent of the profits benefiting a charitable organization in the U.S.

Customers are urged to submit worthy organizations and the Civic Duty team will select the top five for fans to vote on. This year, Civic Duty announced Common Ground Relief in the Lower 9th Ward of New Orleans will be supported by the sales

See CIVIC DUTY on page 3

Civic Duty is a new line of shoes being sold nationwide which uses entirely recycled material.

Police Log: Feb. 24 – March 1

Thursday, Feb. 24

At 11:35 a.m., officers received a report from an individual who said that they were a victim of fraud. According to a UMPD police report, the victim had received several statements from their credit card company pertaining to an account in their name that they had no knowledge of opening. This led the individual to believe that someone had illegally opened an account in their name. The statements received thus far indicated fraudulent spending activity amounting to over $1,600. An investigation has been launched by detectives to identify the suspect.

At 11:40 a.m., police took a report of larceny from a victim who claimed that someone had stolen a bag that had been left unattended in Bartlett Hall for 15 minutes the previous Friday. The bag allegedly contained approximately 30 pills of the prescription drug Adderall. Anyone who saw anything suspicious is asked to contact UMPD.

At 12:38 p.m., officers responded to the Isenberg School of Management for a report of vandalism. Upon arrival, the reporting party showed officers a urinal that had signs of damage, as though someone had tried to rip it off the wall. In addition, blood found on the urinal in question appeared to indicate that the perpetrator had sustained an injury in committing the vandalism. A call to University Health Services (UHS) found no evidence of anyone with such injuries seeking services, as officers were informed UHS had not recently received any patients with lacerations. The investigation is ongoing, and anyone with information is asked to contact UMPD.

At 1:59 p.m., Schuyler Thompson Schuler, 19, of Apt. 2, 61st Street, Brooklyn, N.Y., was arrested on various charges. At that time, an officer allegedly spotted a vehicle speeding on the access road leading up to the South College loading docks. The driver then reportedly parked illegally near the docks. Upon spotting the officer approaching the vehicle to make contact, the driver made a U-turn and fled the scene, allegedly almost striking several vehicles and pedestrians as she ran a red light at the Commonwealth Avenue intersection. She then allegedly squealed her tires and sped down Commonwealth Avenue in the direction of Route 116 with officers in pursuit. After reportedly striking several snow banks and nearly flipping her car, the driver eventually pulled over on Rte. 116, where officers approached the vehicle. Subsequently, Schuler was arrested without a struggle on charges of failure to stop/yield, two marked lanes violations, reckless operation of a motor vehicle, failure to stop for police and speeding. Schuler is a student at Hampshire College.

Friday, Feb. 25

At 1:57 a.m., Kevin Robert Allard, of 81 Church Street, Ware, Mass. was arrested for trespassing. Earlier that same night at 12:35 a.m., an officer allegedly spotted a young man walking down Massachusetts Avenue, stepping out in front of passing cars in an attempt to wave them down, but consequently forcing them to swerve into the opposing lane to avoid striking him. Believing this to be a hazard, the officer went to confront the suspect, but before he could do so, a vehicle stopped and picked him up. The officer then pulled over the vehicle in which he was now a passenger and identified the individual before issuing him a trespass notice and warning him not to return to campus. At 1:57 a.m., however, officers responding to a suspicious persons call near the Lederle Graduate Research Tower allegedly found the same individual loitering in the area, in violation of his trespass. Allard was then taken into custody on the trespassing charge.

At 9:26 p.m., two individuals received summonses to Eastern Hampshire District Court in Belchertown on charges of liquor law violations. Officers patrolling Lot 32 East discovered two parties with a 12-pack of Miller Light beer and one 750 milliliter bottle of Jack Daniels whiskey in the trunk of a car that belonged to one of them. The alcohol was confiscated and both suspects will be summonsed to court to answer to charges of violating liquor laws.

At 11:31 p.m., Kenneth Goddard, 20, of 15 Westwood Drive, West Brookfield, Mass. was arrested on charges of liquor law violations. An officer travelling southbound on North Pleasant Street allegedly observed a black Toyota pickup truck run a red light at the intersection with Massachusetts Avenue. After pulling the vehicle over, the officer reportedly noticed a large quantity of beer in the vehicle, which was later counted at 31 containers. A check of the driver's license revealed he was under 21 years of age, and subsequently, Goddard was arrested on charges of being a minor in possession of alcohol. His car was towed from the scene.

Saturday, Feb. 26

At 12:53 a.m., William J. Doherty, 21, of 50 Quincy Ave., Winthrop, Mass. was arrested for operating under the influence and a one-way street violation. Officers travelling northbound on Thatcher Road reportedly observed a Toyota Camry travelling eastbound turn onto what was described as a "clearly marked" one-way street. After pulling the vehicle over outside of the North Apartments Building A and making contact with the driver, the officers allegedly detected an odor of alcohol inside the vehicle. In addition, the operator's eyes were reportedly glossy and bloodshot, leading the officers to suspect he was intoxicated. He allegedly failed a field sobriety test and, after blowing a blood alcohol content nearly twice the legal limit of .08, Doherty was taken into custody for OUI and a one-way street violation. Ernie's Towing was summoned to remove his car.

At 9:46 p.m., Maria Marciano, 19, of 141 McKay Street, Beverly, Mass., and Lizbeth Monaghan, 20, of 136 Ridge Street, Millis, Mass., were arrested for disorderly conduct. At that time, officers were summoned to the Southwest Horseshoe for a report of a large fight. Upon arrival, they allegedly discovered two female parties screaming at each other and exchanging blows, both of whom officers detained and separated for questioning. Against the orders of the officers, the two females continued to shout at each other. Marciano and Monaghan were then both arrested for disorderly conduct.

Monday, Feb. 28

At 11:52 a.m., officers were summoned to W.E.B. Du Bois Library for the report of a male who was allegedly being loud and disruptive while carrying on a phone conversation. Upon making contact with the individual creating the disturbance, the officers learned that he was having an argument with his girlfriend. The suspect complied with the officers' requests for him to leave, stating that he was planning to go to a homeless shelter anyway and would not be returning to the library.

At 1:11 p.m., officers received an online report from a victim of a hit-and-run. The reporting party stated that he had parked his red Toyota Corolla in the lot near Totman Gym the previous night at 6:00 p.m., and returned the following day to find that his bumper had been cracked, apparently by the impact of another vehicle. The investigation is ongoing.

At 9:48 p.m., officers responded to McNamara Hall after a female resident called to report that a male individual with whom she had encountered problems in the past was in the building visiting his girlfriend. The resident also told police that she had consulted a Residence Director, who confirmed that the suspect was not permitted to be in the building. The suspect had left McNamara by the time officers arrived, and thus no action was taken against him.

Tuesday, March 1

At 6:44 p.m., officers received a report from UMass cheerleading coach Kelly Proctor, who claimed that someone had stolen an amplifier valued at $200 from the Curry Hicks cage. Anyone who saw anything suspicious is asked to contact UMPD.

Mock Trial off to N.Y. for national openers

Courtesy Joseph Mendes / Mass Mock Trial Team

The UMass Mock Trial team is headed to White Plains, N.Y. for the opening round of the AMTA national championship after placing second in the Worcester regional last week.

MOCK TRIAL from page 1

Mendes, senior and captain of the team in an email. "It's also been a moving, emotional experience for myself and co-captain Holly Galvin."

"We've gone from a team who didn't win anything from 2007-2009, to a remarkable, confident and talented group of students who just seem to keep winning," he continued.

Mendes won an individual award for scoring 20 ranks in each of the two rounds he participated within as an attorney – the highest amount of points a competitor can score at a competition.

Mendes also said it was a great honor to win his individual award, and that he would not have had the opportunity to do as well had it not been for the help from his teammates.

Danny Bernard, a freshman member of the team, scored 19 ranks for his performance as a witness during the competition.

"I was very happy to win the award at this tournament, and it couldn't have been done without the help of my other teammates," said Bernard in a phone interview. "We really put together an incredible case. To go from 0-8 three years ago at regionals, to 8-0 this year, is a testament to the hard work we put in."

The team's case involved a parent suing a toy company called "Happyland Toy Company" because a two-year-old child ate a set of beads called "the Princess Beads." The father was suing the company because the beads contained a dangerous chemical and the parents felt they were not given fair warning about its effects.

Bernard portrayed a pharmacologist during the trial. Prior to the trial, the team prepares both sides of the case, with most team members having roles on both sides.

Bernard said he is looking forward to facing some of the top teams in the nation and advancing onto nationals. Mendes also echoed this excitement.

"It's kind of surreal thinking about where the team has come from over the past three years," said Mendes. "We're just really excited to go and have the chance to compete in the championship rounds. We've had a lot of success this year both individually and team-wise, and we really feel we have earned our spot."

The Northeast Regional Competition was also the first time UMass mock trial has gone through a competition undefeated, and this year is also the first season in which the team has won four team member awards.

If UMass places within the top six teams during the championship rounds, the team would then advance into the national tournament, which will be held in Des Moines, Iowa from April 15-17.

SGA presidential candidates Nathan Lamb (left), David Robertson (center) and Yevin Roh (right) all believe their platforms will prove to be winning formulas in this week's SGA elections.

SGA elections begin Tuesday

SGA from page 1

"The students I have talked to [about my stances] respond very positively," said Roh. "They are happy to hear there is someone running who has fought for students on a policy, financial and advocacy level," Roh said. "Students are especially receptive to the peer judicial boards, and the comprehensive changes to the sexual assault policy I have been working on," he said of revisions to the Code of Student Conduct (CSC) he has been central to drafting, focusing on what constitutes consent and making legal definitions more practically understandable.

"We are preparing for this election by talking to as many students as possible about the issues they care about, and educating them about the fiscal future of UMass," said Roh. "Our platform is to have an SGA that mirrors the student body and, through our face-to-face interactions, we hope to establish the relevance of SGA to students not just post-election, but during the election."

Roh is optimistic about voter turnout, explaining that "I feel excited walking into the election. We have three passionate tickets to choose from, and I expect this to encourage more students than ever to vote."

The final of the trio of candidates, junior Dave Robertson or, as he terms himself, the "Meal Plan Guy," is looking forward to working with dining services to implement a rollover meal plan swipes proposal if elected, and says he would work to bring more funding to RSOs.

Robertson, alongside his running mate and current associate speaker of the SGA Senate Tina Kennedy, is also working on a larger scale to increase funding for UMass and to abolish a potential flagship fee that could be placed on UMass Amherst students if the University's Board of Trustees votes to levy such a fee this spring. The pair will also look to lower fees and deal with the budget gap the University currently faces.

"Our last minute preparations are not that substantial, as we have been preparing for these days for two weeks," said Robertson.

"We are trying to get people to vote for us by telling them the truth, talking about our experience, and showing our sincerity on wanting to better the campus with ideas that are new and haven't failed in the recent past," Robertson said.

Robertson was the only candidate to admit he is a bit anxious leading up to the election.

"On the eve of the election I am nervous, but overall excited to reach out to the community and talk to the students and see how I can work for them," he said.

Shoe company says recycling, charity are part of 'Civic Duties'

CIVIC DUTY from page 1

of a black and gold low-top sneaker.

"There has been a huge response to the brand from college students across the country," said Weinreb. "I get emails all the time telling me how much they love the brand and what we are doing. Many of them mention that they identify with either the eco-friendly piece of the brand or they love the brand mission to support a different social cause every year. I love how students today are so involved with causes and take their 'Civic Duty' seriously."

Starting last holiday season, Civic Duty debuted its first "Core Collection." The collection consists of five unisex styles from low-tops to high-tops, a chukka boot and slip-ons each available in a range of neutral and bright colors. The collection, which ranges in price from $54-59 is available on the brand's website Civicdutyshoes.com as well as select boutiques nationwide.

The 'toaster' is burning the bread

Lauren Vincent

Fair and balanced once actually meant fair and balanced. There was once a time, long, long ago, when journalism was the fourth estate and policies were made to protect the public interest. It seems like an unrealistic fantasy now that cable companies and networks are forming alliances and withdrawing every bone that's been thrown to us in recent television history.

Media consolidation has been occurring for the last few decades, a result of the deregulation begun under President Ronald Reagan. The dissolution of the Fairness Doctrine, which required that television and radio broadcasters ensure that each viewpoint was heard when covering controversial issues, was only the tip of the iceberg. Further, since Mark Fowler, chairman of the Federal Communications Commission at that time, declared the television to be nothing but "a toaster with pictures," why regulate just another household appliance?

Never mind that the "toaster" reached millions of American homes and was a main source of knowledge of current events for many, and shaped perceptions in the public mind.

The point is that this isn't news. It's a child-like argument being broadcast on national TV as if it were.

It was a far cry from the birth of the Fairness Doctrine, in 1949, when networks were considered public trustees.

Now the business-friendly atmosphere of the Reagan era gave the media industry an amount of power that was unprecedented, allowing owners to yield unlimited influence over what went in and what was left out of the messages going to the public.

Today we have what many consider a hegemony of media – meaning dominant people and groups exert influence over others. According to media-watchdog group Free Press, the Big Six are Disney, CBS, General Electric (which owns NBC), Viacom (which owns MTV), News Corp. (which owns Fox) and Time Warner (who own Warner Brothers). These are corporations, not public trustees anymore. CEOs like Rupert Murdoch have their eye on the bottom line and are trying to make as much money as possible. So what do we get? Sensationalized media that's sure going to keep us entertained, but not exactly informed.

This is evidenced by Fox News and CNN's recent coverage of Anjem Choudary, an extremist who is advocating the adoption of Sharia Law in the United States. According to the Council on Foreign Relations, Sharia Law is the moral code that influences law and policy in most Muslim countries. Searching this man's name on FoxNews.com yields a similar number of results as on CNN.com. Why do we care about him?

Obviously and undoubtedly, the United States will never adopt Sharia Law. This one man advocating an unpopular point of view will clearly not gain ground in a secular country. Given that Christianity is the dominant religion in this country – its holidays are the only ones considered national ones, while every president in U.S. history has been Christian – and anti-abortion activists have not yet managed to reverse Roe v. Wade based on Christian principles, it is not plausible that the government will be convinced by Anjem Choudary that the U.S. needs to follow the Islamic moral code. So why treat him as a threat?

There are extremists of every kind and yet a non-violent Islamic radical is one which the media decides to pay attention to. It is a clear effort to continue the polarization between Muslims and non-Muslims that our country endures today. Just as the seemingly endless fight over the "Ground Zero mosque" gained a media spotlight for so long, this kind of thing will further fuel the fire and depict the discussion as Muslim versus American.

Choudary appeared on Fox News' "Hannity" and over half of the interview is him and Sean Hannity yelling over each other to be heard. What are Americans supposed to learn from this? How is this effective? It's only effective in painting the Muslim religion as barbaric and extreme as Sean Hannity lists Choudary's beliefs, without the network giving us another picture of Islam.

The point is that this isn't news. It's a child-like argument being broadcast on national TV as if it were.

This solitary British man wants a policy change from the United States. Since when does that mean it's going to happen? Many more people want same-sex marriage to be legal in every state and that hasn't happened yet; while it is a far more reasonable request, at least in my opinion and I assume in the minds of many. The fear-mongering of cable news networks provides a narrative of Muslim vs. Christian, which is translated into Muslim vs. American.

Fox News strategic analyst Lt. Col. Ralph Peters said on the O'Reilly Factor: "I am sick of hearing that Islam is a religion of peace. Well, if Islam is a religion of peace, fine, start acting peaceful. But I haven't seen a lot of Southern Baptist suicide bombers lately, and I will not stand for moral relativism. Nine-eleven wasn't our fault; it was fanatics who attacked our country because they hate what we stand for." What this is to me is a generalization of Muslims as terrorists and Christians as peaceful, and therefore Muslims hate America.

This is one example of how the media can push a certain agenda on us. The limited viewpoint is a symptom of media conglomeration. It's interesting to see the American coverage of the Middle East protests in comparison with Al Jazeera, the Arabic-language news network. I suggest to anyone interested in expanding their horizons to explore alternative media. Research the newspaper you're reading or the TV show you're watching and find out who owns it, and see if you notice a difference.

The ticket of prudence and foresight in the SGA elections

Dan Stratford is an SGA senator and a Collegian columnist. Columnists' views regarding the upcoming election are entirely their own, and do not reflect the opinion of The Daily Collegian Editorial Board.

Dan Stratford

When people think of March, three things typically come to mind: Saint Patrick's Day, midterms and the anniversary of the untimely demise of Julius Caesar.

However, there is another event that occurs over the course of three days in early-mid March – the Student Government Association's spring elections.

Though the elections themselves are not quite the cause for revelry and merry-making that Saint Patrick's Day is, they are still a grand endeavor that will, at least for the next year, greatly affect the course of public life among students and administrators alike.

However, experience is not everything, as important as it may be. The mental clarity to solve the puzzles of today depends upon the foresight needed to predict the challenges of tomorrow. Though clarity and foresight are inextricably tied to experience, they are best reflected in a candidate's platform.

The elections this year will occur on March 8, 9 and 10, after two weeks of arduous campaigning. There are officially three tickets, comprised of the candidates for SGA president and student trustee, that are standing for election this semester. But, in the humble opinion of this columnist, only one is worthy of serious consideration by the average student – that with Dave Robertson for SGA president and Tina Kennedy for student trustee.

This column could be saturated with insipid adulation for Robertson and Kennedy, or it could be an exposition of the palpable issues that will be considered this election, and how they are best prepared to rectify them. I choose the latter approach.

Experience in politics is a priceless commodity, and this is true for all levels of government, especially student government. Faced with antagonistic administrators, monumental problems both financial and bureaucratic and a student electorate made indifferent by all of the above, the work of the elected student official is constant. From managing the SGA's various branches to meeting with administrators and representatives from Amherst, there is simply too much to do. Placidity is a word that simply does not appear in the SGA vocabulary.

As a consequence of this, the SGA desires only the most judicious and charismatic of students in key leadership positions. Thankfully, these qualities are inherent in much of the student body at the University of Massachusetts, but it is only through the crucible of experience that they become obvious in the political context.

If experience were the Alpha and the Omega of politics, then one could confidently say that the victory of Robertson and Kennedy is assured. Robertson has been involved in the SGA since his freshman year, serving for two years as the Central Area governor and this year in the Executive Cabinet as secretary of University Policy and External Affairs.

Kennedy has served for an equivalent length of time in the Senate, being chair of the Finance Committee last year. She serves as associate speaker of the Senate this year, and has had to act as speaker on several occasions, each time with the steadfastness of a true leader. Some may question the so-called "insider status" of these two candidates, but such fears are unfounded, as the true mastery of any organization originates within its own ranks. Unlike others in the SGA, they do not exploit the politics of fear and division, nor do they hesitate to decry those who attempt to count the passage of nebulous resolutions as substantial legislative achievements.

However, experience is not everything, as important as it may be. The mental clarity to solve the puzzles of today depends upon the foresight needed to predict the challenges of tomorrow.

Though clarity and foresight are inextricably tied to experience, they are best reflected in a candidate's platform. Aside from breadth of experience, it is the platform that Robertson and Kennedy have assembled that is most impressive.

It is a prudent road map for the future of student life, grounded in a belief best espoused by Abraham Lincoln in his "House Divided" speech:

"If we could first know where we are, and whither we are tending, we could better judge what to do, and how to do it."

The substance of their platform is certainly a fitting realization of President Lincoln's words. It includes programs in which the strained pocketbooks of students will find a kindred spirit, such as permitting the rollover of meal plan swipes from the fall semester to the spring, aiding the acquisition and dispensation of electronic textbooks and increasing funding of those groups which are the very embodiment of student life, Registered Student Organizations and student agencies.

In Robertson's capacity as secretary of University Policy and External Affairs, he has acted as the SGA's chief diplomat to other governmental entities, including Amherst, where he is in the process of negotiating a decrease in the burdensome $300 fine one can incur from throwing a party off-campus.

An important distinction between the Robertson-Kennedy platform and their opponents is the origin of its planks among average students.

The platform itself is a vindication of our republican system – that the needs of the many can be amassed into a platform that will reflect the needs of students for years to come, executed by seasoned hands through an organization representative of those same students.

Edmund Burke once said in a speech to his constituents in Bristol that "government and legislation are matters of reason and judgment and not of inclination."

It cannot be more firmly asserted that this philosophy of government represents the moral and pragmatic sentiment governing the SGA. It cannot be more voraciously contended that the greatest ambassadors of this worldview are Dave Robertson and Tina Kennedy. The sincerity of their platform and the adroitness and experience they will bring to bear on its execution have not only won my heart and mind – they have also won my vote.

'Rango' wrangles with identity crisis

"Rango," the latest release from director Gore Verbinski of "Pirates of the Caribbean" fame, features Johnny Depp in an animated film that doesn't know its target audience.

By Ian Opolski
Collegian Correspondent

In "Rango," a theatrically-minded chameleon trying to find himself winds up stranded in a wild West-style desert town, so he fashions himself a new identity as Rango, the daredevil sheriff. But when the town's water supply starts to dry up and Rango is forced to investigate, does he have the strength to live up to the life he has created for himself and save the day?

At first glance, "Rango" might appear to have a lot going for it. Directed by Gore Verbinski ("Pirates of the Caribbean") and voiced by a number of famous stars, including Johnny Depp as the titular character, Isla Fisher and Abigail Breslin, the film is made up of several ingredients that should make for a successful and enjoyable animated flick. Unfortunately, "Rango" falls far short of its potential.

The biggest problem is that the film seems to have as much of an identity crisis as its main character. For starters, the humor tries to straddle the line between childish and adult, which ultimately renders it appealing to a very select audience. With few exceptions, the jokes directed toward kids are so standard and clichéd that even the most uncultured children would roll their eyes. Produced by Nickelodeon, the film naturally contains a number of instances of slapstick physical comedy: Characters are frequently hit over the head, back into cacti and fall from great heights.

When the writers attempted verbal humor, they rely on perhaps the stalest jokes in the history of comedy, including the always-not-funny standard of telling a character not to look down from a height (but then he does). At times, "Rango" is so boring that it seems like the filmmakers were coasting on the hope that Johnny Depp's voice would be enough to keep you interested. As good as Depp is, even in voiceover, this is not the case.

While such banality wouldn't mark out "Rango" as particularly bad, the humor directed at adults might be even worse. On top of a surprisingly heated vocabulary for a PG-rated film, certain lines are so jarringly inappropriate that you'll spend more time wondering if the kids in the audience understood them than you will actually laughing. Among the topics covered in the film are prostate glands, mammograms and one mother's "active social life." Usually, animated films throw in a few lines of that nature as a small gift to the parents in the audience. In "Rango," however, adult-level humor makes up the bulk of the jokes. Children will not understand it, and adults will be left more bewildered than amused. After all, if we're watching a kids' film whose opening lines contain the phrase "moist with apprehension," should we laugh or be repulsed?

"Rango" also makes a number of references to other famous films, which, again, children will not understand. There is, of course, a reverential treatment of traditional Westerns, but with this homage come all the faults of Westerns, including fight scenes that go on far too long. Bizarrely, a huge plot point is an extended reference to the film "Chinatown," which, however unsubtle it appears in the film, will most certainly go unappreciated by a younger crowd.

On the positive side, the film's animation is fantastic. Its characters and landscapes are rendered in painstaking detail, and there are times when the background in particular seems more like a photograph than an animation. It appears, however, that the filmmakers spent the majority of their energy trying to make the characters as physically hideous as possible.

For a children's movie centered on talking animals, the lack of anything cute and cuddly is quite off-putting. One character, for example, is a bird with an arrow shot through his face; another is some type of shrew with a truly repulsive snout. The characters are so ugly, in fact, that it's sometimes difficult to tell what kind of animal they're supposed to be representing. The filmmakers likely thought that this general ugliness would contribute to a gritty, Western-style feeling. Again, that consideration is not likely to engage its target audience. Very young children might actually be frightened of a few sequences, particularly those featuring Rattlesnake Jake, one of the film's antagonists.

Despite its famous voices and skillful animation, "Rango" flops because it cannot decide what kind of movie it is. It barely caters to the children, who should be most entertained by it, and its referential concessions to adults ultimately drag it down. Like the title character himself, the film puts on airs being something it shouldn't be. Not even Depp can save it from its own mess.

Ian Opolski can be reached at iopolski@student.umass.edu

The lifespan of a shoe: even footwear expires

By Alexia Elejalde-Ruiz
Chicago Tribune (MCT)

Dearly beloved, we are gathered here today to bid a fond farewell to some cherished companions: our shoes.

From the faithful running shoe to the whimsical sandal, from the sensible work loafer to the sexy stiletto, all shoes reach a point at which they have outlived their usefulness, and we must let them go.

Our time together may seem fleeting, but we hang onto favorites past their prime at our peril.

"The shoe wears out in the area where we overload it, so the part where you need the most support isn't there," said Minneapolis podiatrist Paul Langer, clinical professor at the University of Minnesota. "A worn shoe can exaggerate the biomechanical faults you already have."

A loss of support and cushioning can cause shin splints, Achilles tendinitis, knee pain and plantar fasciitis, a common form of heel pain. As a shoe's sole and heel wear down unevenly, the likelihood of twisting an ankle increases. In severe cases, old shoes can cause stress fractures, Langer said.

Unfortunately, there's no clear expiration date for a shoe, whose lifespan depends on the quality of construction, how well you take care of it and where and how often you wear it. But there are some guidelines for determining when it's time for your shoes to pass on. The following guide to shoe death draws from the advice of Langer, author of "Great Feet for Life: Footcare and Footwear for Healthy Aging" (Fairview; $14.95); Karen Langone, president of the American Academy of Podiatric Sports Medicine; and cobbler Randy Lipson, owner of Cobblestone Shoe Repair in St. Louis.

Athletic Shoes

The cushioning on these wears down fastest because they suffer from fast starts, stops and changes in direction, plus more pressure than walking shoes, Langer said. When you run, the pressure you put on the shoe is two or three times your body weight. When you land from jumps in sports such as basketball or volleyball, the pressure is seven to eight times your body weight.

As a general rule, the life of a running shoe is 300 to 500 miles, Langer said, though it varies with your body weight, gait and surface on which you run. Following that rule, someone who runs four miles, four times a week should consider replacing shoes after about six months, while a more casual athlete could wait a year. Running shoes typically can't be repaired.

One way to check if running shoes need to be replaced is to look at the midsole, which is the foam part of the shoe between the outer sole (the bottom of the shoe, where the treads are) and the upper (the top of the shoe, where the laces are). When it starts to wrinkle deeply, the shoe is losing its cushioning and getting worn out. The midsole warps with heat, sun exposure and moisture, so if you run somewhere damp, it breaks down faster.

Casual Work or Running Shoes

As a rule of thumb, Langone said, if you wear a pair of shoes to work three to four times a week, after a year or so they'll either need fixing or trashing. You know it's time to repair or replace when you have scuffed heels or flat spots on the outer sole, or when the back edge of the heel gets so worn that it's angling sharply, Langone said. Another sign is when inside pieces of the shoe poke through, like a nails showing in the heel. One test is to set the shoes on a flat surface and look at them from behind, Langone said. If they tilt to the side, it's time to fix or toss.

Leather Dress Shoes

If you buy good-quality shoes and take good care of them, resoling and re-heeling when necessary, they could last five to 15 years, Lipson said. Whether repairing is worth the cost depends on how much you paid for the shoes in the first place, as high-quality leather resoling runs $35 to $45. If they're inexpensive shoes, it's probably smarter to just buy new ones. (The leather sole needs replacing if when you put your thumb in the center of the outer sole at the ball of the foot, the leather feels soft instead of firm.) One thing to keep an eye on is the leather on the upper part of the shoe, which can get stiff if not regularly cleaned, polished and conditioned, Lipson said. Once it hardens, the leather can crack where the shoe bends, and there's nothing you can do about it. In addition, these shoes can suffer damage to the toe box, the cardboard frame at the toe of the shoe, such as indentations from kicking or being stepped on. That's too costly to fix, Lipson said, so it's time to toss.

High Heels

Because the heels are narrower and the soles are usually thinner, high heels wear down faster than flatter shoes, Lipson said. The most wear happens near the toe on the bottom of the shoe, because that's the area that bears the most weight. If the thickness of the sole has worn down by half, it's time to resole or replace.

The heel also wears down quickly, so as soon as you start to see the nail poke through, get new heel lifts. High-quality heel lifts can last twice as long as the originals from the manufacturer, Lipson said.

Sandals, Flip-Flops

The upper part of a sandal bears a lot of stress to keep the foot in place, making for a shorter life than enclosed shoes, Langone said. Stretched or broken straps mean it's time to replace or, if they're very expensive shoes, repair.

The same heel and sole issues apply to sandals as other shoes. So if those Crocs are starting to look like lopsided pancakes, time for a new pair.

Tread Lightly

To minimize the eco-impact of tossing your footwear, consider these options:

For gently worn shoes, donate them to a charity such as Soles4Souls, which distributes them to the needy.

For athletic shoes that no longer have any business being on anyone's feet, submit them to Nike's Reuse-A-Shoe program. The company separates the shoe's materials – the rubber from the foam from the fabric – and grinds them down to make raw materials for running tracks, tennis and basketball courts. Visit Nikereuseashoe.com for drop-off spots.

Curren$y worth hype

By Stephen Hewitt
Collegian Staff

Although near-freezing weather conditions pierced the area last Friday night, storms of boisterous young men and women still packed the Pearl Street Ballroom to witness rapper Curren$y live in concert.

Before Curren$y, known as "The Hot Spitta" to his passionate fan base, took his place on the stage, the crowd was first given a taste of some local flavor to satisfy their hip-hop cravings.

After DJ Theory warmed up the turntables and played some bass-heavy rap tracks, Connecticut-based hip-hop group Split Second assumed its role on stage at precisely 9 p.m.

With their six-song set, the duo – comprised of rappers Xavier Louis "Xcel" Reed and Jared Jackson, also known as "JJax" – treated the crowd to never-before-heard songs, which will all appear on their forthcoming mixtape, "Barely Legal."

Songs such as the appropriately-named "Friday" and "Barely Legal" gave a sense of what they were about, with a little something to energize the crowd as the night progressed faster than flatter shoes, Lipson said. The most wear happens near the toe on the bottom of the shoe, because that's the area that bears the most weight. If the thickness of the sole has worn down by half, it's time to resole or replace.

After a few tracks, including hits such as "I Get Dough" and "One Way Ticket," the two exited the stage to introduce the one and only Curren$y, who assumed the stage at about 10:45 p.m. to chants of "Spitta."

The New Orleans, La. native more than satisfied the hungry crowd, performing a plethora selection of songs from his two latest albums, "Pilot Talk" and "Pilot Talk II."

Performing what seemed like a best-of from each album, Curren$y illustrated his "Life Under The Scope" while also rapping familiar tunes like "King Kong," "Audio Dope II" and the first verse to the popular "Glass House," which also features Wiz Khalifa.

Here and there, Spitta would motion to the DJ in the background to cease sound while he rapped off-the-dome freestyles and a cappella versions of songs, much to the delight of the audience. Perhaps the most entertaining part of the night came in the latter stage of the show, when Curren$y suddenly and surprisingly jumped off his platform into a sea of fans who were eager to lay their hands on the rap icon.

After a mosh pit effectively ensued around him, which tested the abilities of the Pearl Street security, Spitta was finally able to climb back onto the stage and out of sight, which spawned a "one more song" chant from the rambunctious crowd.

Curren$y happily obliged, offering them some late-night "Breakfast" a cappella-style as he exited the stage for good, leaving his unruly fans with another memorable chapter in the life of the Hot Spitta.

Stephen Hewitt can be reached at shewitt@student.umass.edu.

Last Friday, the Pearl Street Nightclub in Northampton presented a concert headlined by rapper Curren$y. The show also featured local artists L.A.N.K. and C-Banga.

UM offense strong in 2nd half, 3rd quarter

By Jay Asser
Collegian Staff

While halftime is often taken for granted, the Massachusetts men's lacrosse team uses it as valuable time to adjust and prepare for the second half. Thus far in a young season, UMass has benefitted from the intermission, creating separation from opponents in the third quarter.

"We've made some adjustments, but I think it's more the guys going 'OK, we have 30 minutes, let's go win the next quarter,'" said UMass coach Greg Cannella. "I think they're focus and their ability to buckle down has been great so far."

In its latest win, a 9-6 result over Brown on Saturday at Garber field, the No. 5 Minutemen (4-0) were deadlocked with the Bears at four apiece entering the half. In the third period, however, UMass scored three-straight goals to take a lead that would not be challenged for the remainder of the contest.

Senior Ryan Huntsterk set the tone of the charge, recording the first score of the half less than a minute into the third period (14 minutes, 18 second mark).

Similarly, in their 14-10 victory over Hartford on Feb. 19, the Minutemen trailed 7-5 at halftime before exploding in the third period to change the complexion of the game.

UMass outscored the Hawks, 6-1, in the third frame, including four consecutive goals (three by sophomore Will Manny) to take an 11-8 lead into the fourth and final period.

"I think we just settle down on both sides of the ball," said Cannella. "When we've played in those third quarters, we've been able to score first in those third quarters and create those one or two-goal cushions. That also helps our defense to relax and gives them confidence to relax, too."

While the scoring coming out of the intermission has been timely, the defense has had just as much to do with dominating the second half. Along with the one-goal effort by the UMass defense in the third period against Hartford, the Minutemen also held Army scoreless in the third frame in the season opener.

For the season, UMass has allowed four scores to opponents in the third period, compared to eight, nine and nine goals in the first, second and fourth quarters, respectively. Of the 103 shots taken by opponents against the Minutemen, only 19 (18 percent), have come in the third period, while UMass' scoring (13) and shots (44) are the highest of any period.

Though Cannella and the coaching staff offer adjustments to the players at halftime, Cannella admitted that his players are the ones who take the responsibility and bring it onto the field for the second half.

"I think the things that you hear at halftime, the people that have spoken, not only the captains but the leaders of the team, they have the ability to go out there and make a difference on the field and make the right decisions out there," said Cannella. "I think they've done that."

The Minutemen will look to continue their success against Albany on Tuesday on the road.

In their two games this year, the Great Danes have been inconsistent coming out of halftime. In its season opener, Albany failed to score a goal in the third period, while allowing three goals to Drexel in a 14-7 loss.

On March 5, however, the Great Danes scored five goals in the third frame, the most in any period for the game, en route to an 11-9 victory over Delaware. The stretch included four-straight scores by Albany in the first eight minutes of the second half.

With the season in full-swing and three games left at home for the year, Cannella recognizes that his veterans have upped their focus for the second half of contests, not wanting to have this season finish like the last.

"I think especially the senior class, there's obviously a sense of urgency with those guys," said Cannella. "For those guys, they have nine [games] left. That's essential to any team's success, any team that I've coached, for sure."

Junior Anthony Biscardi rips a shot into the net against Brown last Saturday. Biscardi is part of a strong offensive side for UMass.

Xavier, Temple, Richmond, Dukes earn first-round bye

ATLANTIC 10 from page 8

Fun fact 4: Other than the Chicago State game, Saint Louis and its opponents have only combined for over 130 points three times. The Billikens lost all three games.

The surprisingly not lopsided game: No. 12 SJU at No. 5 GW

Until Feb. 5, this game is no contest. The Hawks had dropped their first nine conference matchups before beating UMass on that date. Including that game, Saint Joseph's has gone a respectable 4-4 to finish the season, including a win over St. Bonaventure.

Going further, when George Washington and Saint Joe's met earlier this season, the Colonials won 77-71 not exactly a rout.

All of this, of course, is dancing around the fact the Colonials are much better and playing at home. SJU's wins over the Bonnies and Minutemen, in addition to the close game against GW, were all at home.

While the Colonials aren't exactly world-beaters, they've gotten this far by winning the games they were supposed to win. GW is 0-5 against the top four seeds in the A-10, but is 10-1 against everyone else, with the loss coming against the Bonnies.

In the first round, though, that's all a team has to do. Pick the Colonials, easily.

Fun fact No. 5: Saint Joseph's is at the bottom of the conference in 3-point shooting defense at .369. George Washington, though, is right behind them in 13th with .367.

Tournament notes

No. 1 Xavier, No. 2 Temple, No. 3 Richmond and No. 4 Duquesne all have a bye for the first round and will be waiting for the winners in the second round of the tournament Friday, March 11 in Atlantic City, N.J. If they advance past the Flyers, the Minutemen will take on the top-ranked Musketeers.

Rainstorm spoils Buzz Classic

By Michael Wood
Collegian Staff

UMass	0
UAB	1

UMass	0
PSU	1

A severe rain storm prevented the Massachusetts softball team from finishing off its weekend schedule in Georgia as the Buzz Classic Tournament was cancelled after one day of play.

Rain from Friday night through Saturday night drowned any possibility of playing on Sunday and all tournament games were called off. There was originally a revised version of the schedule put out on Sunday morning, but after the fields were deemed unplayable, the games were cancelled. None of the games will be made up later in the season.

In the revised schedule, the Minutewomen would have played a doubleheader, facing North Carolina-Greensboro at 11 a.m., then Kennesaw State following that game at 1 p.m.

The Maroon and White did play twice on Friday, but fell in both matchups.

In Game two against Alabama-Birmingham, the Minutewomen kept the game scoreless until the top of the eighth inning when UMass starter Sara Plourde allowed one unearned run and UMass couldn't answer in the bottom half.

Using the International Speed-up Rule for extra innings in tournament play, a runner was placed at second base to begin the eighth inning. The Blazers then used a sacrifice bunt to move her to third base, and Caley Walden drove in the game-winner with a sacrifice fly to right field.

After Blazer starter Alisha Smith gave up one run through seven innings, Leigh Streetman relieved her in the eighth and struck out the side in order to finish the game and seal the victory.

Meghan Carta recorded the sole hit for UMass when she singled up the middle off Smith in the bottom of the fourth inning. Plourde allowed the one hit while walking three and striking out 15 Blazers.

Earlier in the day, against Penn State, Plourde threw six complete innings and allowed one run. The only blemish on her stat line for the day was a home run to center field. Unfortunately for the Minutewomen, that proved to be all Penn State needed to seal a victory.

The Nittany Lions plated th one run of the game in the bottom half of the third inning. Cassidy Bell sent a pitch from Plourde sailing over the center field wall for her first home run of the season and came around to score on the team's single hit of the day.

Jackie Hill went the distance on the mound and prevented UMass from mounting any sort of comeback. She scattered four hits over seven innings, walked three and struck out seven batters.

Kyllie Magill has led what little offense there has been for UMass so far this season. Through 12 games, Magill is batting .306 with four extra-base hits and four RBI. She has one home run and is 3-for-4 in stolen base attempts. Magill also leads the team in errors with four.

UMass fell to 2-10 on the season with the losses. The team will look to get back on track this week as it travels back to Florida to face Toledo and South Florida in the first games of the USF Under Armour Showcase next weekend.

SPORTS@DAILYCOLLEGIAN.COM

Kellogg & Co. should defeat Dayton tonight

While we don't get to see the class of the Atlantic 10 in action until this weekend, we do get four solid match-ups in the opening round of the conference tournament.

Nick O'Malley

Surprisingly, even the No. 11 and No. 12 seeds have a shot in a middle part of the conference that's been all over the place during the last leg of the regular season.

THE WILD CARD GAME: NO. 8 UMASS VS. NO. 9 DAYTON

By all accounts and predictions, the Minutemen should come "out of Tuesday's first-round matchup against Dayton at home.

Should.

Unfortunately for the Minutemen, the conditional tense is a pretty solid way of weighing their 2010-11 season, in which they've beaten some solid teams, hung with some very good teams and lost to some bad teams.

The same team that started 7-0 has dropped four straight at two different points during the season. The same team that went to overtime against a ranked Temple team got beat down by an equally good Xavier team by 29. The same team that beat a good Rhode Island team twice also lost to two teams that had no conference wins, one of which was on the last weekend of the season.

Early on in the season, it was easy to label UMass coach Derek Kellogg and his team as a group of young upstarts that was full of spirit and grit and other positive sports clichés. Then, as the Minutemen slumped into conference play on a 1-6 streak, the negative clichés became in vogue.

Then, after another rise and fall in conference play, it became quickly aware that no one had a damn clue how good this team was.

The first reaction would be to label UMass as a team that played up to its competition. Currently the No. 8 seed, the Minutemen are 5-1 against seeds No. 6-10 and 4-0 against seeds No. 6-9. At the same time, UMass was also 0-5 against the top five seeds in the conference, which makes sense.

What makes little sense, though, is the fact that the Minutemen were 2-4 against the bottom four teams in the conference, winning their first two before dropping their last four against those teams.

UMass' performance is based heavily off of the play of senior guard Anthony Gurley, how it fares in the 3-point shooting game and how their defense plays on a given day. In those factors, the Minutemen are all over the map and all the stats in the world aren't going to predict which team comes out on Tuesday.

So, to keep it simple, one must look at one spot on the map – the Mullins Center, where the Minutemen beat the Flyers, 55-50, in their first conference game of the year. UMass is 9-7 at home and 6-6 anywhere else. Take the Minutemen at home, it's the only thing on this team that makes sense.

Fun fact No. 1: UMass allows the lowest overall field goal percentage in the conference (.399), and has the lowest 3-point field goal percentage (.296).

Fun fact No. 2: Dayton has the fewest blocks in the conference. UMass has the fewest assists in the conference.

THE GLASS CANNON GAME: NO. 10 LSU AT NO.7 SBU

La Salle has the second-ranked offense in the conference along with the worst scoring defense. St. Bonaventure has the conference's top scorer in A-10 All-Conference First Team forward Andrew Nicholson, who's averaging 20.5 points per game. He also has the highest field goal percentage.

While not as extreme, the Bonnies also boast a better offense than defense, ranking sixth and 11th, respectively. More importantly, though, when the Bonnies get into a shootout, they get work done. SBU is 6-0 in games in which its offense score 80 points or higher. Meanwhile, the last five teams that beat the Explorers all scored at least 80 points.

If this game turns into a shootout – and it probably will – look for the Bonnies to come out on top.

Fun fact 3: No more than three weeks after beating Ohio, 112-107, in quadruple overtime, the Bonnies went deep again, beating Charlotte, 92-88, in triple overtime.

THE GRINDER: NO. 11 SLU AT NO. 6 URI

Saint Louis and La Salle both had six conference wins and bring exponentially different games with them. The team the Rams drew is currently dead last in the conference in scoring defense.

While this matchup reads more like the No. 5 vs. No. 12 game, URI has something to fear in St. Louis – a slow-tempo game that lowers the scoring margin.

This was evident in the Billikens' last four wins before losing to Xavier to close out the season. In wins against Duquesne, Dayton and Charlotte, both teams combined for under 120 points. The exception to this is SLU's 90-52 win over Chicago State, which, after extensive research, is in fact a real school. They're the Cougars.

The Rams are good in a lot of areas, but are not spectacular in any of them, outside of featuring the A-10's fifth-leading scorer and sixth-leading rebounder, James Delroy. Statistically, they're about as boring as St. Louis' style of play. Burn!

URI has been putting away mediocre teams all season, but the last meeting between the two teams ended in a two-point win by the Rams. If there's going to be an upset, it'll probably happen here. Saint Louis is one of those miserable teams to watch that will upset a team almost out of spite.

See ATLANTIC 10 on page 6

Playoffs reach Mullins Center

By Herb Scribner
Collegian Staff

The Massachusetts men's basketball team has been waiting for tonight's first-round Atlantic 10 Tournament game against Dayton its entire season.

Getting there was the hard part.

After a disappointing 77-73 loss to Fordham on Saturday, the host of tonight's contest was up in the air. The Minutemen (15-14, 7-9 A-10) were blessed with the news that they would host the Flyers (19-12, 7-9 A-10) for the first time ever in the history of the Atlantic 10 Tournament.

"At the end of the game we were all disappointed, but then another opportunity opened up for us. [It was] something we were playing for all season," said center Sean Carter. "It's been rough for us, [but we're] just trying to get ready for this game. Everybody has the same goal in mind. This is a game that's very important."

Carter explained that before and after Saturday's contest, the team was checking scores and figuring out potential opponents.

Carter said the Minutemen "definitely have to take advantage" of hosting the first-round game against an opponent it already defeated earlier this season.

Dayton returns to the Mullins Center after losing, 55-50, to the Minutemen on Jan. 9. The contest was highly defensive and lacked offensive electricity, which UMass has shown at times this season.

"It was awhile ago, so I think both teams have changed some," said UMass coach Derek Kellogg at practice on Monday. "I still respect them as a team and a program. I think they're one of the more talented teams in the conference."

The talent of the Flyers stems from senior forward Chris Wright, who is tied for sixth in the conference in rebounding. During the last game between these two sides, Wright (13.7 points per game) was held to a pair of points.

While Carter said that the Minutemen will try to contain Wright again, he expects the defense to heighten from both sides.

"The defense of both teams will be picked up," said Carter. "Around this time of year, it's now or never. Both teams are going to come out and fight."

While Carter said that the game would be defensive, Kellogg said that he expects the game to open up a little more and that, while no one should expect to see 90-plus points by the Minutemen, there will be more scoring.

"I want to have the pace of the game," said Kellogg. "I'm anticipating a little bit more of a pace."

MARIA LISINSKI/COLLEGIAN

Senior guard Anthony Gurley dribbles up court against Temple. Gurley is third in the A-10 in scoring with 19 points per game. UMass coach Derek Kellogg will look for Gurley to lead the team to postseason success.

Kellogg will look for guard Anthony Gurley to control the pace, as he has been on a scoring tear as of late with a 30-point performance against the Rams on Saturday. Gurley was recently named to the A-10 Third Team for his success on the offensive side of the ball this season.

Gurley and UMass will look to build off the impressive A-10 playoff performance last season, when the team won its first tournament game since 2002 when they defeated Charlotte, 59-56.

Despite the motivation to continue its string of luck in the A-10 postseason, Kellogg wasn't quick to forget the atmosphere that arrives along with the Flyers in tonight's game.

"It's conference tournament time," said Kellogg. "It gives everybody a chance in college basketball to do something special, to be a Cinderella team."

At practice on Monday afternoon, the potential glass slippers (Adidas sneakers) arrived on the court and created smiles all across the Minutemen faces.

For Kellogg, the Minutemen show an enormous amount of care and compassion for the team, which will be a key element as the postseason unfolds.

"One great thing is that you know that they care and they want to do something," said Kellogg. "There was some emotion in the locker room. At least if they want to play and want to continue to go, then we have a chance."

Herb Scribner can be reached at hscribne@student.umass.edu.

No. 5 UMass streaks to Albany

JAKE HACHEY/COLLEGIAN

Junior Steve D'Amario celebrates with freshman Connor Mooney against Brown, a game which saw Mooney net a hat trick. Mooney and Anthony Biscardi, who also scored three goals against Brown, will aid the UMass offense that heads to Albany tonight.

By Stephen Sellner
Collegian Staff

The No. 5 Massachusetts men's lacrosse team puts its four-game winning streak on the line on Tuesday afternoon with a tough road test at Albany.

Albany (1-1) grabbed its first win of the season on Saturday in its home opener, 11-9 victory against Delaware, but lost its season opener, 14-7, at Drexel the week before.

"You [have to] love the way they play," said UMass coach Greg Cannella. "They play hard, it's a tough group, good athletes, some really crafty players…good intensity, hustle, all those things that I love in a team."

Albany features a young attack with freshmen cousins, Miles (three goals) and Ty Thompson (four goals), and junior Joe Resetarits. The Hamburg, N.Y. native leads the team with five goals this season and cashed in on three scores against the Minutemen last season.

Brian Caufield anchors the midfield unit for the Great Danes. The senior can beat a team with both his scoring and passing, tallying 10 goals and 22 assists a year ago. The rest of the group possesses great depth and the athleticism to play effectively in both the offensive and defensive zones.

"That makes those guys really dangerous in transition as well and Albany can get the ball up … and go to the goal and be … true threats," said Cannella.

Albany has shown two goalkeepers this season, with freshman Edmund Cathers and junior John Caroll each starting a game. Cathers earned the win on Saturday against Delaware, making him the likely starter on Tuesday. The Syracuse, N.Y.-native has made 12 saves and allowed 12 goals in 75 minutes of action.

Offensive balance has been an instrumental aspect to the Minutemen's hot start to the season. Last weekend's win over Brown ended with freshman Connor Mooney and junior Anthony Biscardi earning hat tricks, while junior Steve D'Amario added a pair of goals for the Minutemen. Biscardi leads the team with eight scores, followed closely by sophomore Will Manny with six goals and four others with five.

"[Balance is] important every game … Not only that balance, but just to be willing to remain unselfish," said Cannella.

Cannella added that he hopes to continue to get more players involved in the scoring as the season progresses.

Both teams will be working on two days rest, as opposed to having the typical week of rest and preparation.

"You really have to be mentally sharp for games like [these]," said Cannella.

Cannella added that he might need to utilize his depth more in order to keep his team fresh for the third and fourth quarters.

John Fallon Field has not been kind to the Minutemen over the years. UMass has dropped its last three contests at the venue, but Cannella knows that number is more a result of a quality opponent than the location of the game.

The Maroon and White emerged victorious in last year's matchup, 11-6, on March 9 at Garber Field. UMass trailed 4-1 in the second period before outscoring the Great Danes 10-2 over the final three frames. Kell had two goals and three assists on the day, while Hantverk netted two goals as well.

The Minutemen are off to a fast start early in the season, jumping four spots to No. 5 in the nation. It marks the first time UMass has been in the top five since the 2003 season. Cannella has been particularly impressed with his team's consistent effort early in the season, but knows it is hard to repeat that intensity game after game.

"That's the hardest part of this [season], to be consistent over the marathon. It's not a sprint…I tell [the players], 'Listen, it's not how you start, it's how you finish.'"

UM PERI report prepared in response to EPA regulations

Officials from the Environmental Protection Agency scan muck for oil residues. The EPA has a number of regulation changes, particularly involving its rules on air pollution.

By Matthew M. Robare
Collegian Staff

A report by the Political Economy Research Institute at the University of Massachusetts titled "New Jobs – Cleaner Air: Employment Effects Under Planned Changes to the EPA's Air Pollution Rules" has seemingly made an impact in the debate over the Environmental Protection Agency's effects on the economy.

"We released this report on Feb. 8 of this year in [Washington], D.C., at a conference sponsored by an organization called the Blue Green Alliance," said James Heintz, associate director of PERI and co-author of the report.

"Our timing turned out to be really fortuitous in the sense that the new, Republican-dominated House was having hearings with Lisa Jackson, who's head of the EPA the day after this report came out. We didn't plan it that way, but it happened. The EPA is under a lot of pressure now because there's a lot of rhetoric that the EPA is destroying jobs, keeping the recovery from happening and because, I think, the EPA is under such attack and there were Congressional hearings, this report has gotten a lot of attention."

The report was prepared in response to two regulations the EPA was expected to issue under the Clean Air Act's 1990 amendments: the Clean Air Transport Rule and the National Emissions Standards for Hazardous Air Pollutants for Utility Boilers rule, also known as Utility MACT, which stands for Maximum Available Control Technology. According to the report, the Utility MACT rule "will, for the first time, set federal limits for hazardous air pollutants such as mercury, lead, dioxin and arsenic."

Heintz said that the Utility MACT rule was court-mandated as well as the transport rule, "and that's looking at utilities in one state, when they pollute, actually make it difficult or impossible for neighboring states to meet their federal clean air standards."

The report concluded that implementation of the new rules would lead utilities to "invest almost $200 billion on capital improvements, including almost $94 billion on pollution controls and over $100 billion on about 68 thousand megawatts of new generation capacity" between 2010 and 2015 and over the same period, those investments will result in 1.46 million jobs created.

"We look at two sets of investments," Heintz said. "One is the adoption of pollution control technologies, so these are kind of expensive investments that the utilities have to put in place things like what are called 'scrubbers' to clean up sulfur dioxide and so forth. We also look at new capacity additions, so the electric sector's expected to expand over this time period, but it might invest in different types of technologies

Texas State University graduate students Colby Bohannan and William Lake spearheaded the development of a new type of scholarship.

Texan students make award for white men

By Sam Butterfield
Collegian Staff

A group of graduate students at Texas State University has come up with a new kind of need-based scholarship, and have even created their own non-profit 501(c)(3) group to bankroll their mission.

Texas State graduate students Colby Bohannan, William Lake and several others last spring launched the Former Majority Association for Equality (FMAFE), which is intended to benefit white male students left out of grants and financial assistance intended for demographic groups thought of as more financially deserving.

Lake, the group's treasurer and a grad student seeking an MBA at Texas State, located in San Marcos and north of San Antonio, said he and a few friends got together last year and

Students protest clinic

Nearly three dozen community members, including University of Massachusetts students, protested a crisis pregnancy center yesterday.

By Michelle Williams
Collegian Staff

Across the globe, women celebrated March 8 as International Women's Day. In Amherst, a group of students and community members celebrated with a protest.

Approximately three dozen people gathered on the Amherst Commons to protest Birthright International, a crisis pregnancy center located on North Pleasant Street.

The protest was organized by six students and community members.

Prof. Brown tests Conn. river

The 410-mile long Connecticut River is the center test site of Professor Casey Brown's latest research.

By Katie Landeck
Collegian Staff

As climate changes in precipitation and river flow persist, University of Massachusetts Assistant Professor Casey Brown feels that methods of water management may have to change with it.

"There is growing scientific evidence of changes in climate and understanding of how water is managed makes clear that [water management] is currently not well designed for a major change in climate," said Brown.

In order to test his theory, Brown recently received a five-year, $419,907 the Faculty Early Career Development Program [CAREER] grant from the National Science Foundation, an independent federal agency with a mission to support research in all fields of science and engineering, to fund his research. According to their website, about 600 CAREER grants are given out annually.

Presently, water management practices are based on how much precipitation the river has historically seen and the way the river flows. According to Brown, climate change could alter river-flow and precipitation patterns, and he feels the current trends in water management are an impetus for

SGA trustee candidate arrested

According to an article Tuesday in the Daily Hampshire Gazette, Widlynn Louis, a University of Massachusetts candidate for Student Government Association Student Trustee was arrested on Sunday for what is her second arrest this semester.

Louis, 20, was arrested on charges of violating Amherst noise bylaws at 23 Shumway St. over the weekend.

According to the Amherst Police Department's Arrest Status Report for the month of February, Louis was charged with aggravated assault and battery with a dangerous weapon.

The Daily Hampshire Gazette's police log for Amherst reports that Louis allegedly struck her roommate with a doorknob after an argument over the replacement of said doorknob.

Widlynn Louis was arrested Sunday on charges of violating town noise bylaws. She is currently in the running for SGA student trustee.

SGA Chancellor of Elections Zachary Dawson could not provide a comment on Louis' activity or her judicial history.

"If found guilty in breaking the student code of conduct, the Elections Committee can give a student a warning, invalidate an election or nullify it," he said.

According to an e-mail from Dean of Students and Associate Vice Chancellor of Student Affairs Jo-Anne Vanin to Dawson, Vanin said, "I cannot provide you with a student's discipline history. If you require that information, the student must provide that to you."

According to an SGA law, "Violation of Title VIII, Section 1, The Elections Commission may, upon a two-thirds vote of its member attendance at a scheduled meeting, and up to thirty calendar days following an election, take any one of the actions prescribed herein for violations of Title VIII of the By-laws of the SGA: 1.Warning, 2.Suspension, 3.Invalidation, 4.Nullification."

UM out of A–10 tourney

By Herb Scribner
Collegian Staff

Before Tuesday night's game, the Massachusetts men's basketball team thought it held an advantage in hosting a first round Atlantic 10 conference tournament game.

For the Minutemen, those sentiments could not have been more wrong.

UMass fell, 78-50, to Dayton in a game that knocked the Minutemen out of the Atlantic 10 Tournament and more than likely ended its season.

"It hurt a lot, we didn't want the season to end like this, we wanted to keep playing," said sophomore guard Freddie Riley. "You always want to end the season with a win, it hurts."

While Riley was first to speak in the postgame press conference, senior guard Gary Correia had similar sentiments to Riley seconds later.

Amherst community members and students marched around downtown to Birthright International, a crisis pregnancy clinic, to protest the clinic's practices and express their want for greater transparency from the clinic.

Protesters oppose B.I. clinic

BIRTHRIGHT from page 1

One organizer, Madeline Burrows, a second-year at Hampshire College, said the protest was about giving women the right to choose if they want to carry their pregnancy to full-term or not.

"I think this is about human rights, basic equality and a woman cannot have equality if she can't control her body," said Burrows.

She said the protest was also to seek more transparency about what a crisis pregnancy center is.

"Birthright does a very good job of being deceptive. On their website they say they don't want to engage in the debate about abortion, but [they are] very clearly not in support of abortion," said Burrows.

"They target women, just like all other crisis pregnancy centers do, who are in unwanted pregnancies, women who they refer to as 'abortion-minded individuals,' which is such a dehumanizing branding, and they lie to women," said Burrow. "They claim to offer unbiased pregnancy services and counseling but what they really do is use scare tactics to guilt women into not having abortions, and to make them feel bad about their decisions, and there is no place for lies in reproductive health."

Calls made to the Birthright International clinic in Amherst for a response were not returned.

Critics of crisis pregnancy centers often say the centers offer only pregnancy tests and counseling intended to persuade women to not have abortions.

There are more than 4,000 crisis pregnancy centers in the United States, according to the report, "Perspectives on Sexual and Reproductive Health" by the Alan Guttmacher Institute, compared to less than 750 abortion clinics across the country.

According to a 2006 Washington Post review of federal records, "anti-abortion and crisis pregnancy centers have received well over $60 million in grants for abstinence education and other programs" from the federal government.

The Birthright International clinic on N. Pleasant Street is the only crisis pregnancy center in Amherst.

On the homepage of Birthright's website they ask, "Are you pregnant and in need of help?" Below the question the homepage reads, "we can offer you free pregnancy testing, completely confidential help, non-judgmental and caring advice, friendship and emotional support, legal, medical and educational referrals, prenatal information, maternity and baby clothes, housing referrals, social agency referrals, information on other community services, adoption information."

Protesters marched from the Amherst Commons at 3 p.m. down N. Pleasant Street towards the clinic. As they began to march, organizers lead the protesters in the chant, "abortion is health care, health care is a right!"

While the protesters were marching and chanting, several drivers honked as they drove past.

Participants in the march chanted "pro-life men have got to go, when you get pregnant let us know!" as they arrived at the Birthright International clinic.

The clinic, that has office hours from 1 p.m. to 3 p.m. on Tuesdays, was closed when protesters arrived.

While outside of the clinic, organizers offered the megaphone to participants who wished to speak.

One protester, Carolyn Gutierrez, spoke about her experience with abortion clinics, and expressed a need for federal funding.

"The reason why I'm here today is because five or six years ago, I was pregnant and needed an abortion. The guy that I was with and [I] were cashing our paychecks in order to be able to afford it," said Gutierrez.

Gutierrez added that while she was happy with her decision to have an abortion, she wished more resources were available for women to explore their options in a safe environment.

Burrows agreed that there needs to be a safe environment for women to make their choice about an unplanned pregnancy.

"I've seen first-hand how inaccessible it is to get an abortion is post-Roe v. Wade America," said Burrows.

She spoke of an experience in high school where a friend seeking an abortion asked her to come to the clinic for moral support, and they were heckled by male protesters.

"There were two male anti-choice protesters outside who were calling us out as we went in," said Burrows. "Walking into the clinic we had to go through security and metal detectors. There was a security guard who searched our bags ... It was so powerful to see that first hand what women experience everyday for electing to have a choice over their bodies."

Near the end of Tuesday's protest, Natalia Tylim, another protest organizer, presented a petition to the group and asked for everyone to sign.

The petition called for crisis pregnancy centers, such as Birthright International, to be more transparent about the services they offer and their agenda. The opening line read, "Crisis pregnancy centers often pass themselves off as comprehensive reproductive health clinics, when in reality they refuse to offer abortion, birth control services, information or referrals, tricking women into entering an agenda-driven, anti-choice center."

The petition asks for Amherst town representatives to pass a bill that would require centers to disclose if they provide abortions or emergency contraception and if they have a licensed medical professional on site. A similar bill was recently passed in New York City by the city council.

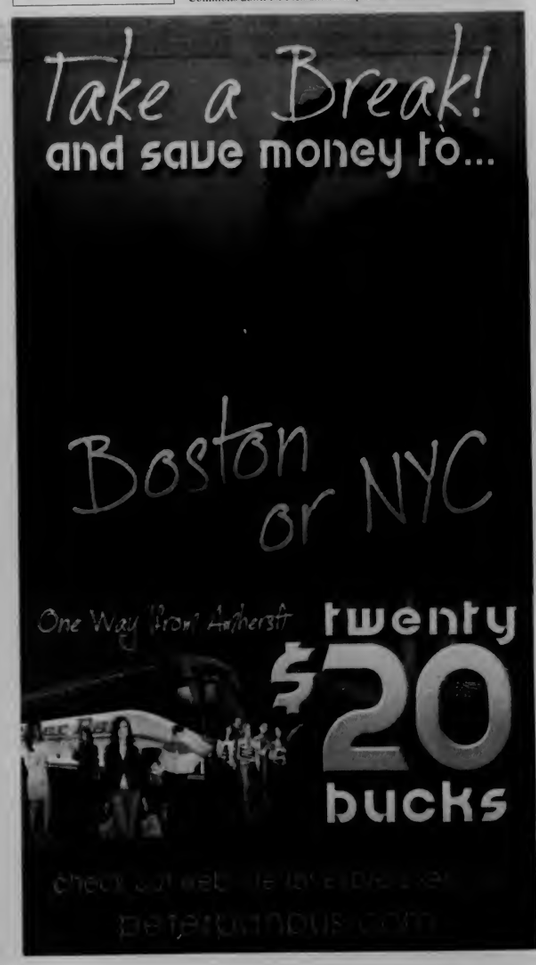
Tylim said the petition will be given to town representatives soon.

Rally-goers ended the event by leaving signs and protest materials on Birthright International's doorstep.

Michelle Williams can be reached at mrwillie@student.umass.edu.

MICHELLE WILLIAMS/COLLEGIAN

Protesters carried signs and chanted as they marched from Amherst Commons down N. Pleasant St. to protest in front of the B.I. clinic.



Prof. receives grant to study water systems

RIVER from page 1

restructuring its processes. Over the course of the project, Brown hopes to develop "robust" methods of water management that will be able to adapt to a wide range of possible futures.

"We don't know what the future climate will be so we are going to design methods that do well regardless so they have to be adaptive and flexible so they can respond to future problems," Brown said.

Brown's work will primarily address flood risk and how to provide ecological sustainable stream flow. According to Brown, this is a challenging combination as these two issues work against each other.

"The more you control flood risks, the less friendly it is from a habitat standpoint," Brown said.

Brown will be conducting his research on the 410-mile long Connecticut River basin that services most of Western Mass. and parts of New Hampshire and Connecticut.

"The Connecticut River seemed like a really interesting basin," said Brown. "It is local and has all the big issues that rivers deal with hydroelectricity, floods, endangered species, recreation and drinking water."

Brown will build models of the basin in MATLAB, an engineering software that creates a controlled environment in which mathematical tests can be run. He will then see how the river responds to differences in climate as well as different water management practices.

"It is all just equations," said Brown. "They represent the river and how it works."

UMass graduate students Scott Steinschneider and Sarah Whateley will write the equations. According to Brown, they will be building the models in MATLAB, applying the different management approaches and writing up the results. "I am excited to work on the project," said Steinschneider. "It gives me the chance to learn a lot of techniques and tools and work on something that will hopefully make a difference in the region."

In order to construct accurate models of the basin and current water management processes, Brown and his students will be talking to the water managers who work on the river and asking them to detail their current practices. However, besides these initial conversations, the team will not actually go to the river.

"We don't go to the river," said Brown. "There are no boats in this project. I wish there were though."

Katie Landeck can be reached at klandeck@student.umass.edu.

Local group fights to save historical farm

COURTESY/FRIENDSOFHAWTHORNEFARM.ORG

The gardens of the Hawthorne farmhouse on E. Pleasant St. in Amherst were recently purchased by the town.

BY SAM HAYES
COLLEGIAN STAFF

In an effort to save the rolling hills, 100-year-old trees and the old Hawthorne family farmhouse at 235 E. Pleasant St. the Amherst group Friends of Hawthorne Farm have circulated a petition, which they will present at the March 21 town meeting, to preserve the nearly 7-acre parcel recently purchased by the town.

Hawthorne Farm, closed in 2007, was purchased for $500,000 by the Town of Amherst after a unanimous vote at a town meeting in spring of 2010. It was purchased with funds from the Community Preservation Act which provides funding for recreation, open space and affordable housing.

Currently the plot of land is scheduled to have a mixture of affordable housing near E. Pleasant St., green space, open wetlands and recreational fields near the abutting Amherst's Wildwood Elementary School.

As a reaction to the purchase of the land, Friends of Hawthorne Farm was created in late 2010 because they said "it became clear that town government was ignoring requests that came from us as concerned individuals."

Friends of Hawthorne Farm member Robin Karson said, "We realized that this old farmland was invisible to town government, and that a friends group ... might be a way to galvanize people who had a different model in mind than development of a soccer field."

In her pamphlet, "A Plan For Hawthorn Farm," Karson explained that the group thought "that the old farm land could more sustainably and creatively be used for community and teaching gardens, preserved open space and wildlife habitat." Karson also authored an article under the same title, and was published on Dec. 3, 2010 in the Amherst Bulletin.

In an e-mail interview Karson calls the current plan "frankly stupid" saying that "this could be a wonderful vital center for community gardens, walking trials [and] nature study."

However, The Friends of Hawthorne Farm are not petitioning strictly to get there way, they are petitioning for a new process.

"Ideally, [town manager] John Musante, and the select board would respond [to our petition] by realizing that the current process is seriously flawed and appoint a new committee which represented different constituencies to suggest next steps," said Karson. Currently, the project is headed by the Amherst Leisure Services and Supplemental Education group and the Housing Partnership, a group that works on affordable housing in Amherst.

Town Manager Musante sees the project differently.

"The town didn't buy the property to do nothing," said Musante in a phone interview.

He explained that they are "working to fulfill what the town meeting supported," to follow through with their three goals of green space, housing and recreation fields because that is why $500,000 was unanimously appropriated to the project.

Against the claim that they need new committees for fairness Musante said that the town is "engaged in a public process," and all residents are able to contribute.

He reiterated that nothing has been decided yet and "even if we had a plan we still need the money." No money other than the half million to buy the land has been authorized.

Musante also said there is an "on-going study" to find the feasibility of converting the farm's house into the affordable housing or whether they will build a new structure.

The opposing groups will meet at the March 21 town meeting when the petition is presented.

Karson said that at the town meeting she hopes for an "engaged response" by the public. She says that the Friends of Hawthorne Farm have not come up with a backup plan if the petition fails.

Andrea Leibson, an employee of Amherst Ballet, abutting the Hawthorne Farm parcel at 29 Strong St, said she "wants to see what makes sense for the town."

"I can understand the balance between need for green space and space for kids to play," said Leibson, "but kids need a space to play."

If interested in signing the petition email list, Carol Betsch, Friend of Hawthorne Farm and wife of Robin Karson, at cjbetsch@gmail.com.

Sam Hayes can be reached at sdhayes@student.umass.edu..

MATTHEW M. ROBARE/COLLEGIAN

University of Massachusetts Associate Director of the Political Economy Research Institute James Heintz recently spoke about a PERI report that has gained media attention as it dissects the EPA's economic effects.

Prof. Heintz authors analytical data on EPA

PERI from page 1

in terms of generation, not just pollution control."

Additionally, the report cites a study by Dr. Ira Shavel and Barclay Gibbs of Charles River Investments, a Boston-based consulting firm that projected that the new regulations would result in "35 gigawatts of coal plant retirements by 2015" because it would be unprofitable for the power companies to invest in regulatory compliance of some older plants.

"There are a few things to keep in mind. One is that these new standards that are coming into place are just extensions of regulations that were created under the 1990 amendments of the Clean Air Act," Heintz said. "Congress under the first Bush administration passed air pollution control legislation that affected the utility companies, so the efforts to control acid rain and all of that came on at that time. So these [proposed regulations] are really an extension of all that. Utility companies have been investing in new capacity and in pollution control technology, so it's been happening for over two decades."

The White House Office of Management and Budget was cited as reporting that since the Clean Air Act was first enacted in 1970, for every $1 spent on compliance with regulations, there have been $4 to $8 in benefits.

"Congress requires that you do a cost-benefit analysis of the costs of compliance with federal regulations versus the benefits that you get out of them," Heintz said. "The EPA has done this ... not specifically on this set of regulations ... but for some of the other regulations that it imposes. For these standards a lot of the benefits you would get are health benefits. They're talking about controlling very toxic emissions from power plants. Other EPA benefits are increased agricultural productivity and protecting ground water."

The report mostly focuses on the regulations' effects on the Eastern Interconnection, one of three electricity grids for the continental United States. The Eastern Interconnection contains the 35 eastern states, the District of Columbia and parts of South Dakota, Montana and Texas. According to the report, 73 percent of electricity in the United States is generated in the Eastern Interconnection and the Transport Rule will be applied only to those states.

"History has proven," the report's executive summary read, "that clean air and strong economic growth are mutually reinforcing. Since 1990, the [Clean Air Act] has reduced emissions of the most common air pollutants 41 percent while [the] Gross Domestic Product] increased 64 percent."

Matthew M. Robare can be reached at mrobare@student.umass.edu.

Texas State students form new scholarship

FMAFE from page 1

decided to start the group after they realized that no organization, as they saw it serving to benefit struggling white males existed.

"Basically when we were coming up with this idea, two friends of mine and I were just talking, we realized there really isn't anything out there that specifically does address the poor caucasian male who is trying to pay for school," he said to the Collegian in a phone interview. "So we decided we would go ahead and put something together for that."

The group formed last March. Lake explained, but was unable to gather enough money to begin offering scholarships until next semester. He said that while much of the attention the organization has received has been over race, the members' real focus is on aiding Americans on the lower end of the socioeconomic ladder.

"We've really hit the national media spotlight, that attention has primarily been over race, but the real message we've got here is poverty affects all people and all races. It doesn't discriminate, and everybody needs help at some point," he said.

One University of Massachusetts professor who focuses on race and society, however, views this as an eternal trend of empowered groups attempting to retain social control.

"American history tells us that [there] has always been two countries," said journalism professor Nicholas McBride. "Hard times rekindle those ever-burning fires of myth that says it is the despised other that is causing 'us' economic and educational misery."

McBride said he feels social divisions prevent some from attaining the same level of educational opportunity as others, and that the 'pull yourself up by your bootstraps' ideal which holds that everyone has equal chances at succeeding in life is a social myth.

"Look, everybody in this country should be guaranteed opportunity," he said. "This 'up from your bootstraps' mythology is just that, and the manipulators who profit from the myth just keep it going while raking in the dough."

While McBride held that social equality is far from reality, the FMAFE's board members say others have met their mandate welcomingly.

"We've had a really positive response so far," Lake said. "We've raised enough money to pay for our fall scholarships, for the fall semester we're paying five $500 scholarships, and we've had enough support so far that we're increasing the spring scholarships to $1000, so we'll do five $1000 scholarships for next spring."

All of the organization's funds, Lake explained, come from individual donors, not charities, foundations or think tanks.

"[The money is] coming completely from small, one-time donations on the website," he said "We don't have some giant foundation or something backing us, it's just people who believe in what we're saying donating online."

To apply for the scholarship, white male students can visit the Association's website, at FMAFE.org.

Lake called the application "fairly comprehensive," noting that "there's a lot of stuff you have to fill out for it."

"After you meet the initial requirements of 25 percent caucasian and male, after that it's an academic and needs-based scholarship," he elaborated. "Basically you just go on the website, hit apply, print it out, fill it out, get it back to us," he continued.

Applications for the FMAFE fall 2011 scholarship are now available. They must be completed and mailed by June 1.

The free market can benefit Wisconsin workers

Harrison Searles

Whether it is the throng of protesters outside and within the Wisconsin State Capitol holding posters with witty one-liners, or students outside the Student Union flying the red flag of socialism, the shadow of Scott Walker's new budget has been cast across the United States. Despite the impression of the situation prima facie, the recent protests have provided an opportunity uniting for both those progressives who desire strong workers' rights and those conservatives who desire minimizing the government's role in society.

The reason for this is that even though Walker is determined to take away the public workers' unions the ability to bargain collectively, he is only doing so for the unions of state employees.

The workers in the private sphere are still left free to collectively bargain, and this provides a perfect opportunity for disillusioned workers to provide an alternative to what will soon be the collective-bargaining-free services of Wisconsin on the free market. This serves both the interests of progressives and conservatives there in that not only will it reduce the role of the government in that state, but it will also provide workers now in the public sector with a choice to move to the private.

Like it or not, Walker will most likely succeed in his efforts at ending collective bargaining among public employees in Wisconsin. As a result, if we believe what those on the left have been saying about this, it will leave the individual worker helpless when it comes to the demands of his employer. Instead of the entire work force being able to unite against demands like increased work hours and pay cuts, they will now be shoved down each worker's throat under the treat of being fired. Again, I emphasize that this is if we believe that what the legions of protesters outside of the state legislature in Madison.

Then again, if we believe what Walker and his supporters say, the unions are bullies that are able to collude with politicians and provide the unionized workers with an excessive level of income for the jobs that they do which are paid by taxpayers, who also do not only have no seat at the bargaining table, but is not even in the room. In this narrative, the public unions symbolize all that is wrong with American politics, because they represent a privileged class that is able to extort wealth by political means.

If there is any violation of workers' rights in Wisconsin, it is because of this lack of competing employers for employees to go to, not the curtailment of collective-bargaining.

It would seem that these two narratives of events in Wisconsin are opposed and incompatible. However, that is not true since the two opposing sides are both taking stands on different issues: One is taking a stand against what is perceived to be an affront against one of the most basic rights of workers and another is taking a stand on the perceived privileges of a certain class and the dire fiscal conclusions that result from them.

Any plan that could hope to somehow bring the two together would have to rely on the fact that the two parties are opposed on different issues, thus providing some room to provide a solution to the problem amenable to both.

This can be done by providing workers with options of employment but nevertheless reducing the amount of money that the state government has to spend. The easy way is to privatize many of the services that are now in the public sphere but whose workers will, if Walker's plan is passed, will no longer have the right to bargain collectively.

For example, the teachers' union has been one of the most outspoken groups in protesting the action and has also been able to gain some sympathy. Indeed, they have managed to make this an issue of workers' rights, but also an issue about education by asserting that without a powerful union behind teachers the quality of the service provided by schools will be diminished.

Perhaps this is all true, but what is the key element here is not the fact that the public employees' collective bargaining rights have been curtailed, but that the workers do not have another source of employment.

A singular employer, the state, has a monopoly over some services and their employees have no other choice to practice their set of skills. Unlike in an industry where there is healthy competition, a school teacher can offer their skills to a competitor, like a Catholic or private school, only very rarely and often with difficulty. As a result, the individual school teacher is stuck with that single employer that has the vast majority of the market in their hands and must give in to that employer's demands to keep the job. If there is any violation of workers' rights in Wisconsin, it is because of this lack of competing employers for employees to go to, not the curtailment of collective-bargaining.

By opening up this market to competitors, it would be a boon to the workers since they would be able to offer their services to multiple employers and take the package that they value the most. If company-X does not let the employees collectively bargain then they can move over to company-Y that will, and if company-Y does not let them neither does Z then they can create their own company. Furthermore, if it is true, as the teachers' union has so asserted, that the quality of education is reduced without collective bargaining then those companies that do allow it will naturally rise to the top in a market.

Thus it would seem that opening markets now dominated by the state of Wisconsin to more competition would benefit workers by giving employees a greater choice of employers and provide an opportunity for the teachers' union to prove that collective bargaining increases the quality of their service.

In the end, there is a position that can both broaden the rights of workers while at the same time do so without putting stress on Wisconsin's budget, or any other state for that matter. This is by opening up sectors now essentially monopolized by the state to competition by private companies thereby giving workers in those sectors a wider set of employers to choose and providing another source for the services that the government has now has the burden of providing. Such a program would be a benefit for both concerns regarding the rights of workers and the fiscal sustainability and role of the state thus making it a potential way of settling the differences between the two camps.

Respect should be before Amendments

Chelsea Whitton

We live in a nation where if citizens are concerned with the way government is running we can protest and create new political parties and not worry about being attacked by military planes overhead or a fear of civil war – as has happened in Libya.

We live in a nation where your voice counts and matters. But what happens when our First Amendment rights are torn down from their honorable place in our society and are twisted in the inaccurate and raging words from organizations such as the Westboro Baptist Church in Topeka, Kansas?

The "Church," which in my mind operates as purely a meeting place of evil is run by Rev. Fred Phelps and his family. For a church group of less than 100 people they made themselves quite present, as they do in protests, in the media last week when they won a Supreme Court ruling on the First Amendment. The church runs protests and functions as a full blown anti-America propaganda campaign essentially arguing that everything going on in the world is a result of God's attempt to demonstrate that He hates us and the way we have conducted ourselves on this Earth.

I couldn't disagree more.

The Supreme Court saga began after Lance Corporal Matthew Snyder, a Marine, was killed on duty in Iraq on March 3, 2006. His funeral was held seven days later in Westminster, Md. where friends and family prepared to lay the fallen hero to rest. The Westboro Baptist Church published an essay filled with hate against Matthew's father, Albert Snyder and protested at his son's funeral claiming that his death was a sign of God's hatred for the direction America is headed.

On June 5., 2006 Snyder brought his largely understandable intolerance for the group to the federal Fourth Circuit Court of Appeals in Maryland against the church and Fred Phelps for charges of defamation, invasion of privacy and intentional infliction of emotional distress.

Early this month, the Supreme Court ruled in an 8-1 decision in Snyder v. Phelps that the First Amendment protected the church's right to picket at funerals. Justice Samuel Alito was the one judge to not tolerate the church's behavior under any extent of the law.

I'm with Alito.

We are in a war right now currently fighting against extremist political and religious parties along the Pakistan border, in Afghanistan and Iraq. Though I would hope that the Westboro Baptist Church has no intentions of carrying out violent acts against innocent civilians in our country or anywhere else, they are a functioning hate group under the protection of our democracy's laws. How is the United States to fight hate against minorities, gays and religious diversity abroad if we can't control those groups' power in our own nation?

The church uses children as sign holders and message promoters. With colorful signs proclaiming, "God hates America," and "Go to Hell" in blinding colors, I think this should upset you. They argue that God hates America because of U.S. foreign and domestic policies and gay rights in our country. They claim that we are doomed. Its organizations such as these that are creating a great polarity within our country and after the shooting in Arizona in January, this was evident and true. What America needs is unity and respect for opposing sides, not words of hatred and ignorance.

Justice Samuel Alito was the one judge to not tolerate the church's behavior under any extent of the law. I'm with Alito.

The URL of their website is so hateful and so unacceptable that it cannot be printed. If you look for images of the Westboro Baptist Church, search results show their signs which proclaim things like, "Thank God for [improvised explosive devices] IEDS." God didn't create IEDS. God didn't create this ideology. It fosters within the ills of society.

I truly believe that though the Supreme Court ruled that the church's protest and public statements were within the statutes and regulations of the First Amendment - they've done a great disservice to what freedom of speech means in our country.

If you have something to dissent to - fine, if you disagree with the current political system in place - great, go run for office. But if you feel as if you can speak for God through signs of hate against gays and blame the wars of the last decade on America's punishment from God, pass judgment upon fallen soldiers and proclaim America is doomed, how can you call that a church? It's a religion of hate that has no place expressing itself in the name of God.

Do I believe that the eight Supreme Court Justices thought that the Westboro Baptist Church is deserving of any merit for winning the case? No. Do I believe that deep down the justices thought this church should win the case? No. Do I know they did it to uphold our rights as citizens to voice our opinions? Sure. While it may be out of the judicial branch's decisions and legislative branch's decisions that the places where First Amendment protections are either limited or unlimited are determined and it may be up to us citizens, who make up our democracy to say that we are not okay with Westboro Baptist Church's role in society and in the media. There is no place for such intolerance in public protest.

Whether or not you believe in God in this case isn't exactly relevant, politically speaking of course. I am a Christian and it is beyond my comprehension as to how the church can describes itself as following God. The debate is whether or not you believe in respect for everyone; it's about whether or not you take the law and rights as privileges with the honor and dignity it commands. It's about understanding that when a solider dies in war for this country, whether or not you support the war and internal issues within the country, that solider doesn't stand for the country as a whole – that soldier is an individual who dedicated his life towards protecting our country in some form. That solider deserves honor, respect and thanks, and the soldier's family deserves peace before First Amendment rights are considered.

In an 8-1 Supreme Court ruling, I'm siding with the minority. I've decided I am not okay with the lack of responsibility our judicial system showed in executing a logical decision when it came to protecting the rights of grieving family members.

Try and remember

Max Calloway

I'm very small. Countertops and cabinet doors tower above me on either side. Before me stands a gate. I don't know what's on the other side. I'm afraid. I hear a deep rumbling, as if a heavy stone was being dragged across granite. Two moons flash in the abyss. White pillars arranged in a row. I'm terrified.

The scene ceases.

As far as I can recall, that's one of my first vivid memories. I know where it happened. We were living in a small apartment in Tarrytown, NY. I even know why it happened. My dad and I were taking a nap together and I just happened to wake before he did. Curious, I wandered into the kitchen and found myself confronted by Jackie, the border collie who was constantly trying to eat me. But I don't know what it means. All I know is that, at an early age, I confronted the unknown, the abyss. In it I faced the beast.

I'm in a large room. It's dark. Nap time. The deep, syncopated breaths around me form a poly-rhythm, but I don't know what that means.

If you were partial to Freudian analysis you'd say that this encounter would explain why I'm hesitant to jump headlong into unknown situations. There could be a monster lurking and I sure as hell do not want to get eaten. Or maybe, if you knew me and my propensity for jumping into unknown situations, you'd say this encounter signifies the beginning of my desire to conquer the unknown. Perhaps it explains my love of dogs; fearful of them as a child, I long to have them under my command now that I'm an adult.

I'm in a large room. It's dark. Nap time. The deep, syncopated breaths around me form a poly-rhythm, but I don't know what that means, I'm three. I'm not tired and I lay beneath my cot wide-awake. Batman's with me. I hear the double door open and I scramble on top of the cot and close my eyes tight.

That was from preschool, if the age didn't give it away – just another of my memories from childhood. Maybe it speaks to my distain for autocratic authority. Or better yet, it's a great explanation for why I watch those early Michael Keaton "Batman" flicks whenever I'm sick. Or maybe it explains why, despite gross overacting and a predictable plot line, I still enjoyed the non-Heath Ledger parts of "The Dark Knight."

A tree branch. My hand reaching out into space to no avail. Weightlessness. Death.

I didn't die but I did fall out of a tree once while pretending to play dinosaur hunters with a childhood friend when I was six. And if you'd asked me then, I'd say it felt like dying. Goes to show just how reliable memory can be.

But so what can we say about memory?

Cognitive science is at the cusp of answering this question. Troll the science section of any respected newspaper and you'll find an article on the latest development in human memory. But what does it mean and who cares?

These choice episodes bear meaning on my life because I can recall them. The taste of fear, the breathlessness of my misinterpreted death, the powerless irk at hearing that door open. Theses feelings are not yours. No matter how lucid I describe them you'll never know what impact they've had on me. So why the theories? Why the unquenchable desire to map it all out?

Empathy. We want to know what it's like to be other than ourselves. It's human.

We are born into this world and are aware that we're aware. We take in stimuli and can reflect on it. Granted some are better at that reflection process than others, but we can all do it. In fact, some people are so good at it that they try to reproduce it. They write, paint, sculpt, and compose. They are driven by some sort of madness that compels them to re-present reality. But why? And is it even worthwhile?

I'd argue yes. It's entirely worthwhile.

I know very few people will actually read these words. Yet I write them. I sit, apart from the people I care about – and those I care not to care about – and write, alone. Could I be working on a more worthwhile venture? Of course. I could be studying neuroscience with the hope of becoming a great scientist who will unlock the mysteries of memory in order to help those suffering from amnesia or chronic, short-term memory loss. But instead I sit and type.

But that's art. That's what makes us human – those people who observe and can't help but want to share with those around them what they've gleaned from all this.

ARTS@DAILYCOLLEGIAN.COM

'Vagina Monologues' arrive at UMass

By Kate Evans
Collegian Staff

Last Thursday, Friday and Saturday, a crew of female performers put on a production of "The Vagina Monologues" to a largely female audience. The play, which consists of 32 acts, covered topics including orgasms, female genital mutilation, sexual abuse and forced prostitution.

University of Massachusetts students, faculty and local residents gathered in Bowker Auditorium this weekend to listen to performers talk about one thing – their vaginas. The monologues discussed sensitive topics such as female genital mutilation and sexual abuse, as well as comical topics like what the typical UMass student's orgasm sounds like.

"The Vagina Monologues," the award winning play by Eve Ensler discussing women's lives and sexuality, was performed last Thursday, Friday and Saturday evenings on campus. The humorous and heart-warming play is run by V-Day and was sponsored by the Everywoman's Center and VOX. V-Day is a global movement to end violence against women and girls and raise awareness through the funds obtained from Ensler's play, according to literature handed out at the event. The Everywoman's Center is an organization on campus that provides a variety of services to campus and community women, based in both emotional and more direct needs. VOX is a group for the voices at Planned Parenthood.

"The Vagina Monologues" are a series of interviews and true stories of real-life women's experiences, acted out by others.

Tables were set up on either side of the Bowker lobby, some selling chocolate vaginas and others promoting safe sex by giving away condoms, stickers and information booklets. One table promoted the importance of keeping young girls in school in areas of lower economic status where there isn't enough money to buy personal hygiene products.

As the lights dimmed and the crowd grew silent, the women who filled the stage were beautiful. They were all wearing variations of black and green, donning pretty hairstyles and giving off strong auras. One of the performers rocked sparkly green high heels, while others wore green boas, green earrings and green scarves.

There were 32 acts in total, and the crew of female performers divvied up their time by acting in several skits each. In the first act, Letisha Marie Harris told the story of a woman who realized that pubic hair is there for a purpose, and that you can't just pick and choose the parts you desire.

The next act, titled "The 'Wear and Say' Lists," had the packed audience roaring with laugher. The first piece of the act asked the question, "What would your vagina wear?" The answers ranged from solely jewelry to leather jackets. The second part of the act asked the question, "If your vagina could talk what would it say?" Though the answers varied, the initial response yelled in unison by all performers on stage was, "Slow down!" The almost-entirely female audience clearly agreed shown by their laugher and a rumble of murmurs.

Though the performers certainly knew how to get the audience comfortable, the middle of the play was anything but comical. The performers discussed female genital mutilation, which is a procedure practiced in some cultures where part or the entire clitoris and other parts of the vagina are removed to deny the woman pleasure.

Another monologue told the story of a boy that wanted to be a girl, but was beaten until he acted like people told him he "should." Beginning off as a sad story, the audience appeared uplifted to hear the boy, after growing into a man, finally made the decision to transition into the woman he had always wanted to be.

Actresses Susan Callender and Nina Goodwin told the horrific story of women held captive as prostitutes of the Japanese military during World War II. The performers portrayed a perfectly angry and scarred depiction of what it might be like after experiencing something so horrific.

As four performers reclaimed the "C-word," they slowly stripped off their layers to reveal one letter on each woman's t-shirt, spelling out the word. Rachael Bazzett, Jasmine James, Erika Sian and Melissa Urban screamed the word repeatedly until the audience chanted with them, feeling liberated.

In the last monologue, the entire cast gathered on stage to perform a series of specialized orgasms. The "College Student Orgasm" moaned over deadlines, the "Harry Potter Orgasm" gasped spells, and the "UMass Orgasm" had the audience keeled over in fits of laughter as one performer added a sexier touch to "Go UMass."

"The Vagina Monologues" is packed with hilarious, informative and heart-breaking material that every woman should see. Although it was a bit difficult to hear some of the introductions to the monologues, the majority of the performers displayed strong acting skills and a sense of vibrancy that radiated into the audience. Chocolate vagina lollipops in hand, the crowd filed out of Bowker excitedly chattering with friends over their favorite skits.

Kate Evans can be reached at kvevans@student.umass.edu.

The cast of "The Vagina Monologues" stretches before their performance at Bowker Auditorium on March 3. The show was sponsored the Everywoman's Center and VOX.

How to make sake sexier

By Rick Kogan
Chicago Tribune (MCT

While it is unimaginable that you might one day hear the person on the stool next to you at the local tavern say, "How 'bout another sake, and one for my pal?," it is possible that the heretofore misunderstood or unknown rice-based alcoholic beverage of Japanese origin will become a mainstream libation and perhaps even hip.

Though many of us are relatively set with our drink of choice, the drinking habits of the young can be varied and fickle. My colleague Lauren Viera has chronicled these habits in the paper and enlightened me about such "popular" contemporary concoctions as the Gage's Straw Patch, which pairs muddled summer strawberries with Hendrick's gin, Green Chartreuse, lemon and rosemary simple syrup, and comes garnished with rosemary.

Many years ago, I charted in print the rising popularity of tequila. Now you can wander into many restaurants/bars and find dozens of varieties.

Mason Horowitz and John Robinson are businessmen who have spent a considerable amount of time in Japan, while Kerry Tamura runs the stylish Chicago saloon called Murasaki, a place operated by his late father for more than 20 years as a Japanese businessmen's bar.

Together they have started Chicago Sake, billed as "Chicago's First Sake School and Consultancy."

Their aim, to borrow from their handsome website (chicagosake.com), is to "introduce (or in some cases reintroduce) Chicagoans to the depth and diversity of one of the world's most refined alcoholic beverages." They hold frequent classes and offer counsel to restaurants and bars. They also set up sake tasting events for organizations, businesses and individuals.

They argue that "sake has not been presented in an accessible, substantive or compelling way to the American drinker. Chicago Sake is motivated by the belief that premium sake rivals the world's finest grape wine and craft beer in depth, complexity and overall character."

I'm not quite sure about that. But after spending some time at Murasaki sampling all manner of sake, I can say that it is much more interesting and complex and, for lack of a more technical word, tasty than we could have imaged, having previously partaken of the drink served cheap, hot and in little carafes.

In matters such as this, I always consult the experts at the Billy Goat, that subterranean tavern within stumbling distance of the Tribune Tower. Jeff Magill has been the day bartender there for 30 years and in that time has never served (the bar doesn't carry it) nor been asked by a customer to serve sake.

But he is a thoughtful, open-minded man and says, "It occurs to me that with more sophisticated eating trends, which include a greater accessibility of Japanese food - my kids are crazy for sushi - that it's an eventuality that sake will become increasingly popular."

I will know that day has come when there's a bottle (or two) of sake behind the Billy Goat bar.

Getting fit in time for spring

If you want to tone up a bit before the snow finally melts away, try taking a Zumba class at the UMass Rec Center.

By Kaitlyn Bigica
Collegian Staff

The dreary weather on campus has caused a prolonged period of students hiding under their sweatshirts and layered cloths, but spring time is just around the corner and so it's time to shed a few pounds before you shed the layered look.

If you are not already using the amazing University of Massachusetts Recreation Center, then take advantage of the breaks you have between classes and spend an hour or so breaking a sweat. Try taking a class at the gym to motivate you to work hard. When you take a fitness class, you have an instructor who knows what they are doing. They combine different movements to work target areas of your body. You'll also often find yourself pushing through a tough workout when in a group. There is a great selection of classes the Rec Center provides that are targeted towards all levels of physical ability. Try cardio kickboxing, and use boxing moves to tone your entire body while listening to upbeat music. Hop on a bike at spin class and push yourself to continuously spin during an hour-long period. Try a hip-hop class where you'll incorporate freestyle moves and original hip-hop choreography for a full body workout. You can also try a Zumba class, Pilates, yoga, fitness swim and core strengthening to get your body into beach shape.

If you're not the type who enjoys taking group classes, then try a few of these workout tips on the third floor of the gym. Break up your cardio workout into three, 20-minute segments. Start with 20 minutes on the treadmill, and then head over to an elliptical for your second set followed by your final set of 20 minutes on a bike. If you haven't been to the gym in a long time and that sounds too ambitious for you, then try 10 or 15 minute sets. One of the best things you can do at the gym to enhance your workout, is to confuse your muscles by constantly changing your activity. Moving from one machine to the other will also make your time at the gym less boring. Do not cool down in between these sets; you don't want your heart rate to drop too low as you switch machines.

If you decide that 20 minutes on the treadmill was enough for you, then push yourself to try 10, 60 second wall sits before you leave the gym. To do this, stand with your back against a wall. Slide down the wall while bending your knees until your legs form a 90-degree angle (as if you were sitting on an invisible chair). Hold this position for 60 seconds, stand and take a 20 second break, then repeat 10 times. By doing this you'll get some extra tone in your glutes, quads and hamstrings. You don't have to do 10 the first few times you try this. Start with three sets, then six, then nine and finally 10. Once you reach 10 sets, challenge yourself. During your wall sit, (while keeping your heels on the floor) raise your right foot, then left, then both. Repeat this throughout the 60 seconds of your fifth and tenth rep, and your legs will feel toned and ready for the beach.

Going to the gym will not only help you shed a few unwanted pounds, it will also make you healthier, which is something to strive for year round. Take advantage of the great recreational facility we have on campus and get ready for spring weather!

Kaitlyn Bigica can be reached at kbigica@student.umass.edu.

Riley ignites for 15 points in playoff loss

M HOOPS from page 8

The Flyers found success from forward Luke Fabrizius and guards Juwan Staten and Operion Spearman. While the team shot over 59 percent from the field, forward Chris Wright also helped out with 10 points, a clear difference from the six points he scored against UMass earlier in the season.

While the game started off with defensive pressure from both sides, similar to the last contest between the two on Jan. 9, UMass' offense failed to compete successfully when the game opened up. The Minutemen could not find the net with the 29 shots they took in the first, including shooting a dismal 2-for-15 from beyond the arc.

Gurley headed the Minutemen offense in the first, continuing his hot streak. Despite 4-for-12 shooting Gurley led the team with 10 points in the opening half. It wasn't a pretty 10 points either, as Gurley often found himself struggling to get to the rim.

Gurley was the only Minuteman to have more than two points at the end of the first half.

It wasn't only the offense that struggled for the Minutemen, as their defense couldn't find a way to maintain the Flyers. Dayton shot over 54 percent from the field and 70 percent from the perimeter. Fabrizius and Spearman shot lights out for the Flyers, going a combined 5-for-6 from the 3-point line in the first half.

The loss rounds up a season that saw the Minutemen have their best start since the 1995-96 season at 7-0, and will be the final career game for Gurley, Correia and center Hashim Bailey if the Minutemen do not accept an invitation to the College Basketball Invitational.

"We had some bumps in the road obviously," said Kellogg. "We didn't play the way we wanted to especially the last few games. I'm not sure if playing another tournament or game is going to help us."

Sophomore guard Freddie Riley dribbles through defenders during UMass' first round loss against Dayton. Riley was the leading-scorer for the Minutemen, shooting 5-of-9 (4-of-8 from 3-point range) on his way to 15 points in 17 minutes.

Sampson Carter goes up for a layup during UMass' 78-50 loss to the Flyers on Tuesday night at the Mullins Center. Carter scored six points and added one rebound and one assist.

UM offense struggles against Flyers in A-10 Tournament

Senior guard Anthony Gurley, UMass' leading-scorer this season, dribbles around a Dayton defender. The game may have been the last for Gurley and fellow seniors Hashim Bailey and Gary Correia.

OFFENSE from page 8

While the performance for UMass seemed a far cry from its outing against Temple two games earlier, Kellogg attributed the lack of confidence for his team on Tuesday night to the heartbreaking loss to the Owls.

"I think if we win that Temple game, it gives us a huge boost confidence-wise and probably play a little better around Fordham and then, who knows what would have happened tonight," said Kellogg. "We probably wouldn't have played Dayton this way."

Though the Minutemen offense was at its worst on Tuesday night, it wasn't unprecedented. Against the Flyers in its previous meeting on Jan. 9, UMass shot a lowly 27.3 percent from the field and 2-for-12 (16.7 percent) from 3-point range. Nevertheless, the Minutemen were able to win that contest, 55-50, as Dayton had trouble of its own scoring the ball.

The only other time UMass scored 50 points this season was in a 79-50 loss to Xavier on Jan. 12. That performance was similar to the one exhibited by the Minutemen on Tuesday night, as UMass managed 18 points in the first half against the Musketeers. The difference for the Minutemen in the two games was at the free throw line.

The shooting from the field against Dayton, while low, was relatively plausible, compared to the missed opportunities at the charity stripe. The 42.9 percent shooting from the line in the loss was the second-lowest mark of the season, as the Minutemen converted only 2-for-10 in the first half. The only occasion in which UMass made both of its free throw attempts came with 1:39 remaining in the game as forward Raphiael Putney sunk both of his chances.

After beginning the year 7-0, the Minutemen had struggles on offense down the stretch and didn't play up to Kellogg's standards.

"We had some different things transpire throughout the season and we didn't play exactly the way I wanted to especially kind of the last couple weeks here," said Kellogg.

Jay Asser can be reached at jasser@student.umass.edu.

Busch, Cotto, Perno highlight UM's effort at Championships

TRACK from page 8

most impressive coming from Gina Perno. Perno took first place in the preliminaries in the 1000 meter dash on Saturday, finishing with a time of 2:54.12.

The results in the 500 meter dash proved to be the best collective effort that UMass put up during day one's events. Deanna Julian (1:16.10), Sarah Bittermann (1:16.19), and Michelle Jenssen (1:16.34) finished third, fourth and fifth place in the event, respectively.

Day two concluded the indoor season for the program, as the team failed to earn any points.

Perno, after qualifying in preliminaries in the 1000 meter dash, took third place in the event with a time of 2:52.18. Perno's time was her second-best performance of the season in the event.

In the triple jump, senior Stephanie Aguguo took seventh place, posting a mark of 39-10.50. Like Perno, Aguguo's mark was her second best of the season, just 4.75 inches short of her season's best.

With indoor season officially wrapped up, the Minutewomen will look ahead to their outdoor season, starting April 1 at the Sam Howell Invitational.

Scott Cournayer can be reached at scournoy@student.umass.edu.

The Massachusetts men's and women's track and field teams will begin their outdoor season starting April 1, when both teams head to Princeton, N.J. for the Sam Howell Invitational.

Sophomore forward Terrell Vinson scrambles for a loose ball during Tuesday's game against Dayton. Vinson registered three points and five rebounds in the loss.

Hofstra still undefeated, SJU, Drexel struggling

By Matt Catizone
Collegian Correspondent

With Saturday's 15-9 win over Harvard, Hofstra men's lacrosse team remained undefeated through its first four games.

Facing the Crimson at home in Hempstead, N.Y., the No. 6 Pride played with high intensity throughout the entirety of the game.

Junior midfielder Brad Loiveaux was the first player to score on either side, giving Hofstra the lead five minutes into the game. Immediately following the first goal, Harvard's Jack Doyle ripped an unassisted goal to tie it up.

The teams would exchange goals and stay tied until the Crimson's Eric Slingerland assisted Jeff Cohen for a goal, giving Harvard its only lead of the day, 3-2.

From there, the Pride scored three-consecutive goals, two coming from senior Jamie Lincoln who added another before halftime, giving him four in the game and Hofstra a solid 9-6 lead.

Hofstra scored the first two goals of the second half, giving them a comfortable 11-6 lead. For the remainder of the game, both teams would continue to trade goals, with the Pride ultimately coming out on top, 15-9. Lincoln finished the game with five goals and an assist, while fellow senior Jay Card finished with three goals and three assists. Harvard's Alex White finished the contest with a goal and three assists.

This was the second-straight win for Hofstra against an Ivy League opponent, the other coming last week at home against Princeton, 11-9. The Pride's next game comes Saturday at home against Air Force (1-3).

SJU remains winless

Saint Joseph's dropped its third game of the season to remain winless.

Facing Big East foe Rutgers at home, the Hawks appeared as though they would hang with the Scarlet Knights, keeping them off the board until Michael Diehl scored an unassisted goal with four minutes left in the first quarter to give Rutgers the lead.

The Scarlet Knights later scored two goals within eight seconds to make it a 3-0 game. The Hawks put one into the back of the net with three seconds left in the first quarter when senior attackman Scott Cullinan beat the goalie.

Rutgers scored three goals in the second quarter and five in the second half and hounded down on the Hawks to hold SJU to an 11-1 loss.

The loss to Rutgers puts the Hawks at 0-3 on the season, having also lost to Lehigh and Bryant. Next week they face Drexel, a Colonial Athletic Association rival.

Drexel struggling

Drexel hasn't found a stroke of luck when it comes to competing against some of the top teams in the nation. This was on display Sunday when the Dragons dropped an 11-7 decision to No. 3 Notre Dame.

In the end, Notre Dame was too much for the Dragons to handle, going on a big second quarter rally and holding off a late Drexel push to win by four.

Coming into this contest, Drexel stood at 1-2. The Dragons lost their first game of the season on the road to Virginia, 11-9. A week later, they got their first win of the season by beating Albany at home and last week, they lost a heartbreaker to Villanova, 14-13.

The early season struggles hurt Drexel, but they certainly do not ruin its season.. Next Saturday Drexe takes on a struggling SJU team at hom ,

Matt Catizone can be reached at mcatizone@student.umass.edu.

Hofstra's Steve Serling controls the ball in a game against Delaware. Hofstra was ranked sixth in the nation prior to its latest win over Harvard.

Flyers shoot down Minutemen

UM falls behind early in loss against Dayton

M.HOOPS from page 1

"I know [there are] only three or four teams that end their season with a win," Correia said, who was visibly upset. "I just knew I didn't want to go out like that. I'm lost for words man. If we had another chance to play again, I would."

UMass	50
DU	78

Correia went on to say that if he had the chance to compete at midnight, he would get out on the court and play the game against the Flyers all over again.

"I'm not sure if the guys were nervous, if Dayton was that good tonight, it was ugly on some different fronts," said UMass coach Derek Kellogg. "I think they may have lost [some confidence]."

Riley, who entered the game with four minutes, 44 seconds remaining in the first half, provided life to the ailing Minutemen offense with 15 points. While Riley made small dents into the Dayton lead, most of his contributions gave life to the crowd.

Senior guard Anthony Gurley led the team at the end of the first half with 10 points, but after an apparent injury early in the second half, never returned to the game.

"Anthony's hurt and a little banged up," said Kellogg after the game.

The offense struggled mightily throughout the entire game, shooting 18-for-64 from the field. The charity stripe wasn't kind to the Minutemen either as they shot just over 42 percent.

JEFF BERNSTEIN/COLLEGIAN

UMass head coach Derek Kellogg looks on in despair as his team falls short in the first round of the Atlantic 10 Tournament on Tuesday night at the Mullins Center.

M&W offense struggles as Flyers surge ahead

By Jay Asser
Collegian Staff

Playing in front of its home crowd and under the spotlight, the Massachusetts men's basketball team didn't show up in any facet of the game, especially on offense.

In a disappointing loss to Dayton in the first round of the Atlantic 10 Tournament, UMass had its worst offensive performance of the season, tying a season-low with 50 points. The Minutemen shot just 28.1 percent from the field, 20 percent from the beyond the arc and 42.1 percent from the free throw line.

"To go basically 2-for-[10] from the free throw line in the first half, to go, I don't know, 1-for-whatever from 3, to miss four or five fast-break layups or wide open layups," UMass coach Derek Kellogg said. "I'm not sure if the guys are nervous, if Dayton was that good tonight. It was probably a culmination of a lot of things tonight but it was kind of ugly on some different fronts."

The struggles for the Minutemen began early, as UMass mustered 16 points in the first half. Aside from senior leading-scorer Anthony Gurley, who poured in 10 points on 4-for-12 shooting from the field, no Minutemen player scored more than two points in the first 20 minutes.

Gurley, in his final game wearing a UMass uniform, finished the game with 10 points after sitting for a majority of the second half with what appeared to be a re-aggravated ankle injury.

The lone spark for the offense was guard Freddie Riley, who scored all of his 15 points in the final 20 minutes. In the first half, Riley played a sparing three minutes after not entering the contest until the four minute, 44 second mark.

See OFFENSE on page 6

Cannella and Co. drop first game of the year

By Stephen Sellner
Collegian Staff

The No. 5 Massachusetts men's lacrosse team could not dig itself out of a 6-2 halftime deficit, dropping its first game of the season, 9-8, at Albany on Tuesday.

Senior midfielder Ryan Hantverk beat Albany goalkeeper Edmund Cathers with 30.2 seconds remaining with the Minutemen down one, 9-8. UMass' Greg Rushing won the ensuing faceoff and UMass coach Greg Cannella called timeout to give the Minutemen one last chance to tie. Mike Fetterly had a solid look, but Cathers stoned him with seconds remaining for one of his eight saves in the final period.

"Give Cathers credit…" said Cannella. "He [stood] in there and made the save."

Minutemen goalkeeper Tim McCormack made 10 saves in his first loss of the season, while Cathers, a freshman, tallied 17 saves and surrendered just 8 goals to a UMass team that was averaging 10.5 scores per contest this season.

Joe Resetarits had three goals for the Great Danes (2-1), including two crucial fourth quarter scores to secure the victory for the home team. Hantverk, Connor Mooney and Art Kell each cashed in with a pair of goals for the Minutemen (4-1), who dropped their first game of the season.

"Our guys gave a tremendous effort," said Cannella. "Give Albany a lot of credit. It was a really good win for them. But our guys fought back. They never quit on each other and that's a really good sign to come back on the road."

Trailing 7-4 in the third period, UMass strung together back-to-back scores from Kyle Smith and Kell to cut the lead to one. Resetarits' second goal extended the lead to two after beating Tim McCormack with 10:55 remaining in the game. Less than a minute later, Mooney netted his second goal to make it 8-7, but Resetarits responded yet again to push the margin back to two.

"It seemed like every time we made a run, Albany was able to respond… and that's what good teams do, especially at home," said Cannella.

The Minutemen outshot Albany, 47-28, including a 20-2 advantage in the fourth quarter, but UMass could not find the equalizer.

The Maroon and White got off to a slow start, quickly falling behind, 2-0, after first period goals from Resetarits and Ty Thompson at the 0:55 and 3:30 marks respectively. Kell put the Minutemen on the board later in the first on an assist from Will Manny at the 7:36 mark, but the Great Danes countered with three unanswered goals over the first and second frames from Miles Thompson, Rocky Bonitatibus and Matt Johnson to create a five-goal advantage.

The Minutemen stormed out of the gates at the break, outscoring its host, 4-1, in the third frame to help cut the deficit and keep themselves in the game.

"They dominated possession…" said Cannella. "They won faceoffs and slowed the ball down … [The early deficit had] more to do with Albany than anything else."

UMass was in a similar situation two against Hartford earlier in the year, trailing 7-5 at halftime. The Minutemen dominated the second half of that one to grab a 14-10 victory, but they were not so fortunate this time around.

The loss marks the fourth-consecutive time UMass has fallen to Albany at John Fallon Field, with its last victory coming in March of 2002.

"I expect [the team] to come back out on Thursday for practice and work extremely hard," said Cannella.

The Minutemen remain on the road for four of their next five contests as they try to rebound at Providence on March 15 at 4 p.m.

Stephen Sellner can be reached at ssellner@student.umass.edu.

MARIA UMINSKI/COLLEGIAN

Sophomore attacker Will Manny controls the ball in a game earlier this season. Manny had no goals and three assists in UMass' 9-8 loss against Albany on Tuesday.

Season continues for UMass

By Scott Cournoyer
Collegian Staff

With the commencement of the outdoor season just a few weeks away, the Massachusetts men's and women's track and field squads continued their winter campaigns over the weekend in Boston at the IC4A and Eastern College Athletic Conference Championships, respectively.

After an impressive showing by UMass representatives at the New England Championships the weekend of Feb. 25-26, subsequent qualifiers for IC4A's didn't disappoint on day one.

The star that shined the brightest was a likely suspect in senior pole-vaulter Sean Busch, who took home this year's Atlantic 10 Conference's Student-Athlete of the Year award on March 4.

Busch propelled to new heights, both for himself and for the UMass records books Saturday. The Stow, Mass. native cleared a height of 16-0.75, ranking tops in the program's history. The height clearance was good for sixth place in the event overall.

Junior Zachary Koncki was also impressive for UMass on day one, competing in the long jump. Koncki, who has won both New England and A-10 titles this winter, jumped a distance of 21-8.25, good for 22nd place.

Senior Daniel Barry continued his campaign with positive results in the mile run. The six-foot-four, Sheffield, Mass product placed 11th in the event with a mark of 4:08.82. The time tied him for fourth-best in school history.

Other Minutemen who competed in day one's preliminaries were Paul Grafov and Joe Doyle, who teamed up with Barry and Scott VanderMolen in the 4x800 meter relay.

Grafov, although he did not qualify for day two, did post impressive results in the relay, as well as the 500 meter dash. In his first IC4A event in his career, he posted a time of 1:04.86 in the 500 meter, finishing in 22nd place.

Doyle, who competed in the 800 meter dash, finished 23rd with a time of 1:52.66. He also tied for the fifth-best time in the event in the program's history on day one.

On day two, the Minutemen saw only one athlete compete for UMass, as Tyler Cotto continued his historic senior campaign with and impressive show. The Holliston, Mass. native competed in the 60 meter hurdles, posting a time of 7.99, good for a third-place finish.

The men completed the weekend with 8.50 points, tying Lehigh for 31st place. The outdoor season will begin on April 1, pending any NCAA Regional qualifiers.

Minutewomen compete at ECAC's

Day one saw notable performances from a collection of Minutewomen athletes as well, the

See TRACK on page 6

COURTESY UMASS ATHLETICS

Senior pole-vaulter Sean Busch broke records on Saturday by clearing a height of 16-0.75 in the event. The mark set the all-time record for UMass, and was good for sixth place overall at the IC4A's.

Commuter Sen. Cody impeached

ELLIE ROSUS MILLER/COLLEGIAN

Members of the SGA last night voted to impeach Sen. Bill Cody, pictured at podium, after several members deemed his alleged intoxication and subsequent behavior at several meetings was highly inappropriate.

By Ashley Berger
Collegian Staff

Last night, the Student Government Association ended Sen. Bill Cody's term in the senate for a vareity of misconduct during previous meetings.

Prior to the SGA Senate body meeting of Feb. 23, the Ways and Means Committee held an informal gathering to briefly discuss whether or not to support the Collegiate Readership Program, which looks to encourage relationships between colleges and universities and their local newspapers. Cody, a member of the committee, and Sen. Lindsay Vitale, also a committee member, got into a discussion about the program which ended with Vitale in tears.

Before the senate was called to order, Speaker of the House Modesto Montero asked Cody to leave, on the grounds the he made a fellow senator feel unsafe, unwelcome and uncomfortable, because he was allegedly intoxicated. Cody and other SGA members had spent the afternoon drinking at the Graduate Lounge located in the Campus Center.

After Cody's refusal to leave, Montero called the University of Massachusetts Police Department (UMPD) to have him escorted out of the meeting. A UMPD police officer escorted the alleged inebriated senator from the meeting, and it proceeded as normal.

Last week's meeting ended with Chair of the Ways and Means Committee Josh Davidson motioning to impeach Cody, claiming that he had repeatedly attended senate and committee meetings inebriated and had proved to be a difficult and destructive force in these meetings.

In this week's meeting, a special order was sponsored by the Rules and Ethics subcommittee motioning to expel Cody from the senate.

The Rules and Ethics subcommittee, as represented by Sen. Nick Barton, stated that Cody had been ejected from previous meetings for disorderly conduct. After he allegedly verbally accosed Vitale and was subsequently banished from the Feb.23 meeting, Cody left Montero a voicemail that contained expletives. These incidents were the evidence that the Rules and Ethics subcommittee considered when making the case against Cody.

Barton last night addressed Cody and made clear that, "We really feel that this is an unfortunate incident, but we see no other option but expulsion. We want to make sure that we do not condemn Bill Cody as a bad person, but find that he can no longer work in the senator."

Cody then was allotted 20 minutes to make his case. With a perhaps smirk-like grin on his face and a Mountain Dew can in his hand, Cody took to the podium.

He stated that neither he nor Vitale had been consulted by the Rules and Ethics Subcommittee in regards to the incident.

Cody said that Jo-Ann Vanin, the associate chancellor for student affairs and the dean of students, did not find that they could convict him on enough evidence that he had violated any student policies.

In his account, Cody made it clear that the UMPD officer who escorted him out of the meeting made no attempt to actually confirm whether or not he was drunk. "He did give me a breathalyzer, he did not put me into protective custody, he walked me to the bus stop and let me go home," Cody recounted.

"I talk to people in my own personal way. I don't know how she felt scared or threatened," Cody said about Vitale. "It is unfortunate that she felt that way. I apologize that she felt that way. I wish she could say how she felt threatened."I was only frustrated with her because I felt that she had not given enough attention to the matter that was at hand," Cody said, in an attempt it

UMass Boston student flies to Ghana to teach

FAL ERVIN

Stephen Muse, a UMass Boston student and former George Washington University student, stands on the far right with members of the GW ONE Campaign chapter two years ago.

By Alyssa Creamer
Collegian Staff

Two years ago, University of Massachusetts Boston student Stephen Muse hopped onto a Ghana-bound airplane to pursue a 12-week long test of humanity he'd envisioned since his junior year of high school.

Then a soon-to-be sophomore at George Washington University, Muse's independent projects about worldwide humanity and promotion of the ONE Campaign, which aims to raise awareness about and help impoverished areas of the world, propelled him to postpone his undergraduate graduation date to gain first-person insight into pressing issues facing Africans.

After traveling to Africa in 2009, Muse made immediate plans to return, is currently back in Africa, and this spring, he's bringing other Massachusetts students along.

Muse found, plane ticket needed

Thin with a polite demeanor, Muse attributes his energy and enthusiasm to his passion for personal missions to help those he considers need it the most.

"I knew I wanted to go to Africa at the end of [my sophomore year]," said the 22-year-old Muse. "It was time. I was in love with the idea of traveling to Africa, and I had been for many years."

Muse's friend Shelley Bishop, from Belchertown, Mass. connected Muse with the right people to send him overseas.

Bishop's connection led Muse to the organization HardtHaven Children's Home, located in Kpando village in Ghana and run by Edem Richard Adjordor.

Muse informed Adjordor that he would be buying his ticket to Ghana with plans to arrive on African soil in three months. Adjordor had no issues with taking Muse along, but his organization did not have a set itinerary for Muse's trip.

According to Muse, when he asked what he would be doing as a volunteer, Adjordor replied, "we'll figure that out when you get here."

No set itinerary – Many projects

The volunteers at HardtHaven Children's Home made it a policy not to make decisions for the local residents, but rather, to "provide a helping hand," Muse said, to whatever projects the villagers wanted completed.

"I think I knew before, but I really realized the people there have an idea of what they want done," said Muse. "They don't need outsiders dictating how to improve their lives. They just need a little extra help. They have the vision of what they need, and [the volunteers] are just there to help make that vision come true."

For the first six weeks, Muse settled in with Adjordor's family, residing within their compound in Kpando. Over a dozen people lived within the compound.

"I really felt part of his family," said Muse. "And it was quite a life. I had to learn to handle laundry by hand and adjust to taking bucket baths in ice cold water just like everyone else in the family."

While living with Adjordor's family, Muse wore several different hats, at times working at the children's home entertaining and educating the children, other times teaching young students or holding wound-care clinics to instruct locals on basic to advanced aid techniques.

He told locals, particularly children, to make sure they boil all of their water in the sun, as drinking water in Ghana often contained E. coli strains from people burying feces too close to standing water.

Less access – Many dying

Muse said he tried to stay focused

Researchers develop cutting-edge technology for wounds

By Brian Canova
Collegian Staff

Researchers are developing technology that could one day "print" human skin on wounded soldiers and burn victims.

The technology was developed by modifying standard inkjet printers. Vials of the patients' cells are substituted for ink cartridges and skin, and new layers of tissue are printed directly onto the affected area of a patient's body.

The technology, developed at the Wake Forest Institute for Regenerative Medicine, will be funded over the next five years with $45 million from the Armed Forces Institute of Regenerative Medicine (AFIRM), a branch of the Department of Defense. The project has been in development for approximately three years.

The concept for biological skin printing has been around for years, but biotechnology has only recently become ready for the creation of functional tissues and organs.

Biological printing technology would be used to treat burns of varying degrees and damaged tissues of varying types while avoiding scarring altogether. Cells from the patients own body would be harvested and replicated in a specialized environment and prepared for spray on application to the affected area.

With the new technology, severe burns would be expected to heal within three weeks, according to Lt. Col. Brian Moore, Deputy Director of AFIRM.

"While this treatment will first be tested in burns, it's possible that it could also be used to treat scarring from previous burns - by removing the scarred tissue and rebuilding skin," said Karen Richardson, the senior communications manager at the Wake Forest Institute for Regenerative Medicine.

The technology could be used in scar reversion to treat debilitating instances where scar tissue restricts the range of motion near the joints or prevents the flexing of the feet and hands, according to Moore.

Biological skin printing also offers the ability to treat patients with severe burns over a large portion of their body.

"Current methods require grafting, which means to surgically remove a piece of healthy skin and transplant it to the burned area. This is not only very painful, but in some patients there is not enough unburned skin to harvest," said Richardson.

Student follows his heart to Ghana

MUSE from page 1

on delivering useful information, and as far as his daily agenda went, he said, "sort of made it up as he went along."

"I basically had no training," said Muse.

Muse explained that while he taught basic health care, doubt surfaced about his effectiveness at times because of his limited knowledge of the medical field.

With restricted access to health care and a scarcity of hospitals surrounding the villages, Muse witnessed a number of illnesses among African youths.

"It was heartbreaking. I realized more when I was there that health is crucial to anything else. I can't teach kids to learn anything if they're starving to death," he said.

According to Muse, for the volunteers, the local hospital's children's ward held the most depressing and frightening scenes of young children dying from typhoid, malaria, HIV or malnourishment.

There are vaccines and treatments for all of these diseases and conditions; however, some Africans' access to the information about the treatments, as well as actual medicine is marginalized.

Today, Muse wants to gain a master's degree that will allow him to become a physician's assistant in order to have a greater medical background.

Youths vie for peace – Chiefs shake on it

At the end of July, Muse became involved with the organization YES, Ghana [Youth Empowerment Synergy, Ghana]. The group set up a peace camp intended to bring together young adults from warring villages in an effort to try to bring an end to the conflict.

The two villages, Nkunya and Alasanyo, are of relatively small size, and for over a decade, they have been fighting for control of a small territory atop the teeny mountain that rests between their borders. Both villages consider the territory a holy spot. And hundreds have perished in the fight to gain its control.

The peace camp signed up 25 teenagers from each village, all aged 15-18, to live, work, play and learn together for a week. The group organized activities with experts and counselors to help the students discuss the conflict. All of this took place in a nearby neutral village's school.

"All of the kids were best friends by the end of the week," said Muse.

According to Muse, at the week's end, the teenagers put on a show for the two chiefs of each village, who had not met in years.

"They had made these massive peace banners," said Muse. "It was incredible to see them all standing before their respected elders, shoulder-to-shoulder, asking for the same thing. The chiefs listened and got a very powerful message."

Moved by the youths' presentation, the leaders shook each other's hands, agreeing to bring peace within the teens' lifetimes.

Going Back

Muse landed back in Massachusetts in early September of last year. The experience had made more than an impression.

"I knew I wanted to spend the rest of my life there after I finished my education," said Muse.

Muse's next plane ticket to Ghana was then booked for Jan. 3, and this time Muse was set to stay for eight months.

His father and two brothers, Dan, 28, and Michael, 20, were thrilled for Muse's discoveries, while his mother, who was proud but frightened of losing a son, recited the same cautions she'd presented before his first trip.

"Nothing can stop me from returning. I can't forget the smiling faces and pure optimism everyone had there," Muse said.

This year, Muse is organizing a trip for ten students from the Boston area to take an alternative spring break in Ghana sometime in early March.

He is also further developing HardtHaven's community resource center so that volunteers can have structured projects at their disposal without having to wait for Adjordor's go-ahead to "start being useful."

Alyssa Creamer can be reached at acreamer@student.umass.edu.

Protein ADAM 13 may prevent, treat cancer

By Michael Roberts
Collegian Correspondent

Researchers at the University of Massachusetts have discovered a new function of the protein ADAM 13 that many feel could be promising in preventing and treating cancer and facial defects during embryo development. The study was published in the February issue of "Developmental Cell."

There are two distinct parts of the ADAM 13 protein, one section resides outside of the cell membrane and one within. The researchers have discovered that the part within the cell membrane functions differently and independently than the part outside of the membrane.

The mechanism of the outside segment has been studied thoroughly over the past 15 years, according to Dominique Alfandari, a member of the UMass department of veterinary and animal science, and one of the principal researchers of the study. It acts as a pair of scissors that cuts proteins on the surface of cells. This cutting process, in most cases, sends a signal to the cell which can change its function.

"[Scientists] understand what the implications are of losing that function in the protein," said Alfandari. The significance of this research, Alfandari noted, is the discovery of how the inside portion functions. Its role is ultimately to activate neural crest cell migration, which occurs during the embryonic stage and is essential in forming nearly every facial feature in vertebrates. "If you don't have these cells, you don't have a face. You don't have teeth, you don't have eyes – nothing," said Alfandari.

The ADAM 13 protein is what activates these cell migrations which form distinct facial features and also the bones of the face. "It shouldn't surprise anyone that a biological process this complicated is regulated at many levels and through multiple pathways," said Steven Scholnick, director of the Developmental Biology and Genetics program at the National Institute of Dental and Craniofacial Research. Malfunctions of the ADAM 13 protein during embryonic development could result in facial defects, such as cleft palate.

The researchers experimented on frog embryos by removing or mutating the ADAM 13 protein to show how this protein functions in cell migration and facial formation. The experiments usually ended with dire results. Likewise, defects that prevent neural crest migration in humans usually result in unviable embryos. When the defects are milder they result in facial anomalies such as cleft palate. The researchers hope that understanding the molecules important for neural crest migration in frog embryos will help detect and prevent these defects in humans.

In addition, abnormal activation of ADAM proteins in adult cells can increase their ability to move throughout the body and interfere with natural functioning, research shows. Therefore, increased activation of ADAM proteins in cancer cells could lead to increased metastasis.

This study could potentially lead to better cancer treatments, as the ADAM protein plays a role in tumor growth in adults. According to Alfandari, scientists can "use this knowledge to try to prevent [cancer cells] from either escaping or invading other organs." This research also is likely to help treatment development. "It's very probable that this discovery would help people design new drugs to prevent cancer metastasis," said Helene Cousin, another researcher at UMass.

Alfandari is proud of the work done by himself and his colleagues. They have been studying ADAM proteins since the late 1990s.

"Dr. Alfandari and his colleagues, in fact, have been leaders in working on the role of the ADAM proteins in craniofacial development for some time," Scholnick said. "This [study] is a very nice example of how research teams working with different models can study the same biological process in complementary ways. Some of the experimental approaches taken in this study are only possible in an organism like Xenopus [aquatic frog species], helping to make the case for taking diverse approaches to a biological problem.

"The teachers [students] have here at UMass are discovering things that nobody else in the world is discovering," he added.

The research was conducted in cooperation with a member of the faculty at the University of California San Diego.

Alfandari and his colleagues have plans for further research.

Michael Roberts can be reached at mwrobert@student.umass.edu.

Researchers are beginning to develop technology that would use printers to replicate layers of tissues, and would possibly revolutionize the process by which burn victims and the wounded are treated.

Innovative methods of skin treatment in works

SKIN from page 1

Once the technology becomes affordable people who burn themselves cooking in the kitchen could have new skin printed directly onto their wound in a matter of hours, or could have their unwanted scars surgically removed and fresh flesh grown in its place.

Richardson added that this technology will be considered in treatment for skin ulcers and in patients with diabetes.

Moore explained that similar technology is already being used to repair heart and bladder tissues.

The first step in the process involves taking a stamp sized skin sample from the patient, isolating cells, and replicating them in a specialized environment.

Pluripotent stem cells, cells capable of differentiating into nearly all cell types, would ideally be isolated and transformed into cultures of specialized cell types, according to Moore.

The next step involves scanning the wound to determine its size and depth. From this scan, an automated program reconstructs a 3D model or "map" of the damaged or missing skin - so that the printer can apply the correct type and number of cells for re-growth, Richardson explained.

"Different types of cells are placed in vials - along with a gelatin-like material that helps the cells adhere to the wound. All are 'printed' directly onto the wound," said Richardson.

"In animal studies, mice with wounds similar to burn wounds healed in three weeks with bioprinting. In animals without the treatment, wound healing took five weeks," Richardson added.

Testing of the technology, which is currently in the pre-clinical phase, has been limited to mice, but researchers hope to begin testing on larger subjects such as pigs soon, said Moore.

"The goal of the project is to develop a treatment that can quickly cover and stabilize a wound. Research has shown that the longer it takes to cover a wound with skin, the higher the risk of infection, complications and death," Richardson said.

Human clinical testing is still approximately five years away and Moore predicts that a Food and Drug Administration licensure will follow three to five years after that.

Moore thinks there will be a big civilian market for the technology and described the investment as "high-risk [and] high-benefit." He added that the project currently has garnered the support of Lexmark, a company that manufactures printers, and hopes to continue to get industry interested in the project.

Once licensed, the technology will simultaneously be made available to the military and public.

Brian Canova can be reached at bcanova@student.umass.edu.

Roll call vote decides Cody's impeachment

IMPEACHMENT from page 1

clear that he had no personal hatred or angst against Vitale.

Cody ended his account saying: "I am glad we get this opportunity. It is up to you senators to decide the outcome.""If this was unimportant to me, I would just resign. Or I would stop showing up," Cody added. "I care about this organization and I feel that I have brought a lot to it."

Following Cody's presentation, eight minutes were given to sides to make a case in favor of impeaching Cody or vice versa.

Sen. Matt Reilly was the first of four senators to plead against the expulsion. "There is simply not enough evidence and there is a lot of ambiguity. It is unfair to make assumptions," explained Reilly. "Some people are more susceptible to crying, but crying is not evidence that a terrible act was committed."

"I was at the Grad Lounge that day with Bill. We each had three or four beers, and then came to the SGA and RSO mixer and ate some pizza. I was confident that we were both sober by the time of the senate meeting," said Andrew Prowten, the SGA's secretary of outreach.

When the eight minutes was up, eight minutes was then given to the opposing side.

An enraged Montero was the first to speak in favor of impeaching Cody.

"This is not an isolated incident. It is not even about the intoxication at this point. This is about how he attacked Lindsey, and the fact that he made another senator uncomfortable, and I will not have that in my senate," Montero shouted.

Through his anger, Montero personally complimented Cody, saying, "You are a passionate and hard-working individual. I will never take that away from you."

Vitale also spoke for the impeachment of Cody. "I am upset that he humiliated me in front of other RSO's. I was mad that he said that I didn't do anything for the senate and didn't take it seriously."

In a roll call vote, it was decided that the special order passed and Cody was impeached, to which he reacted with elongated "boo."

SGA President Brandon Tower commented, "This was a legislative matter and the senate has the right to determine their own membership."

Following the decision Davidson said, "Unfortunately the situation had to happen. I feel the senate made the right decision; we have high standards for our members and his presence was disrupting the budget allocation process which is the most important thing that the SGA actually controls."

"I wish he had resigned or he had moved to another committee. I did not want to impeach him, but the committee could not go on with him there," said Vitale. "This was not a personal matter; it was only for the committee. We have 180 budgets; we need to buckle down without distractions."

The SGA will decide it new president and trustee Thursday night. The SGA's next meeting is scheduled for March 23.

Ashley Berger can be reached at aberger@student.umass.edu.

EDITORIAL@DAILYCOLLEGIAN.COM

Louis' arrest record should close the door on the Roh-Louis ticket

Columnists' views regarding the upcoming election are entirely their own and do not reflect the opinion of the Daily Collegian Editorial Board.

If SGA President and Trustee candidates Yevin Roh and Widlynn Louis' campaign flyers are to be trusted, the promise of providing "input" to revamp the University of Massachusetts Student Code of Conduct will not happen. Among many questionable actions that have plagued this and previous election seasons, the behavior displayed by Widlynn Louis – Yevin's running mate – leaves me and many UMass students with a clearer picture of the race on the last day of elections.

Dmitriy Shapiro

Louis's two recent arrests by the Amherst Police Department, one for alleged felony assault with a deadly weapon (brass doorknob) and this weekend's arrest for alleged noise violations, has been covered by The Collegian and the Daily Hampshire Gazette. The real question begging to be asked is what kind of character judgment does Roh possess for selecting Louis to represent UMass as trustee?

Presidential candidate John McCain was criticized upon his selection of Sarah Palin because of her immense lack of political intellect and inability to logically respond to questions asked by media representatives. I would argue that Palin was a major reason for McCain's loss. Now imagine if Palin had a "felony assault with a deadly weapon" on her record – or two arrests within weeks of each other? McCain's judgment would be severely questioned to the point of invalidation.

Logically, I can suspect that Roh a good guy by accounts of people I have talked to – has trouble making sound decisions. Personally, I had kept an open mind to all of the campaigns while seeking information to aid me in making an educated decision. Roh must have known of his running mate's arrest record during the campaign, or should have if he is qualified to be SGA president. Knowing this but still continuing on with Louis as a running mate makes me wonder if he is really thinking of the school's well-being or his own activist career.

The school would have been better served if she had been dropped from his campaign when he first found out. Instead, they have angered members of the student body with their lack of common sense in leaving themselves vulnerable to receive further negative public relations. If deciding on a running mate could backfire so badly on Roh, imagine what could result from his presidential decisions? I'm certain that his choices for his executive board, judging by the ticket's record until now, won't ensure that their promise to create a "student government that mirrors the student body" or "Make UMass Safer" will be kept.

The student trustee is probably the most consequential student position on campus. This one student is elected to represent our student body to the UMass Board of Trustees in Boston, a board whose power is the last word in the most important decisions facing our campus.

This would include dealing with the fallout of the new "flagship" fee being added to the student bill. If elected, Roh proposes to impress this prestigious board by presenting someone who likewise has questionable people and political skills.

Arrests published in the Amherst Police Log are public information that can help students make the correct decision. If you don't want your picture on the front page, don't get arrested or don't run for office.

A group of upset protesters attended yesterday's SGA meeting in support of Louis. The only logical reason for this was intimidation, since, for the most part, they were not senators and did not address the senate before the meeting. The group herded themselves in and out at odd times, only to finally find out that the disqualification of Louis was not on the docket and would not even be mentioned.

As a columnist, I represent only my own opinion. Personally, unless a drastic demonstration of competence is demonstrated in the last day of the election, which is highly unlikely, I feel that, at least, I could be confident in scratching off one of my options. Just solid logic; no disrespect intended.

Dmitriy Shapiro is a Collegian columnist and can be reached at dishapir@student.umass.edu.

Why SGA doesn't have votes

Every year, the Student Government Association elections come around and feature the organization at its finest: well-organized campaigns, intricately-run elections, candidates showing how they're going to make their sizable funding work for the students. It goes on for three days and, now that voting can be done online easily, students don't really miss the memo.

Nick O'Malley

Still, it's rare if more than even 15 percent of the total student population votes (Last year's election drew 14,58 percent). Why? Let's go over a few reasons.

Reason 1: With age comes irrelevance

The longer students are on campus at the University of Massachusetts, the more they're apt to realize how important the elections are. That or they'll stop caring. This is particularly pertinent for graduating seniors, who are voting for a president and trustee they'll never see in office.

Sure, it's important in the long run, but the election's effect on students who aren't coming back next semester is negligible. Keeping in mind both graduating seniors and students who aren't coming back to the University, that's at least a quarter of the student population that doesn't have a vested interest in the elections.

There's also the issue that most efforts by the SGA focus on the affairs on campus, lowering the interest of students that live off campus. It's great the SGA played a role in getting new laundry machines and bike racks, but there's still only about 10 visitor parking spaces at the Townhouses.

The main reason I'm going to end up voting is because my friend who's a senator may end up beating me to a pulp if she finds out I didn't vote (I'm working on it, OK?).

Reason 2: Senators by default

While it's true that the elections do show the SGA at its finest, most students either already have preconceived notions about student government or aren't going to be bothered at this point.

By the time spring elections roll around, many students are aware that, in some cases, not enough students ran to become an SGA senator as there were available slots. They also may have heard of reports of senators showing up intoxicated and getting thrown out of meetings. They also may have heard of the red tape and hoops dialogue has to jump through for anything to get done at an SGA meeting. Some students just don't identify with that government. It's no fault of the SGA – they're trying.

Reason 3: It sounds too much like school

Meanwhile, there are students who don't want to be dragged into politics – even if it's campus politics concerning them. Maybe some students have stuff to do, like this hypothetical student:

"You know what? I really don't feel like doing this," said hypothetical student. "I just want to go home and browse the Internet for, like, two hours before I have to do like eight billion pages of reading and work on this stupid paper due Tuesday. Man, why did I even take a polisci course?"

"Maybe I don't feel like taking 15 minutes to find out about each candidate," continued hypothetical student. "Well, I guess I could just go off of the 12 flyers I got coming back from Franklin today. Wait, I have to make an account for Campus Pulse? Screw that. When's voting open in the Campus Center? Ah screw it, I'll do it next year when I find out what's going on."

Reason 4: You can only get freshmen once

My first year on campus, the only reason that most of my friends ended up voting was because then-candidate Malcolm Chu's campaigners were out in force in Butterfield and we got hounded while walking through Franklin on the way to eat.

We were young, naïve and figured, hey, we should probably vote. Semesters of realizing that they actually didn't care that much about campus affairs and that a lot of races are pretty much decided already have justified, in their minds, not voting.

Don't worry, they didn't read The Collegian either. They still don't, even though we still hang out all the time, and they know I write. Yeah, thanks guys. I see how it is.

Reason 5: Procrastination

Day one: 'Oh man, I should vote when I get home.'

Day two: 'Crap, I forgot to vote. No worries, I just gotta remember to do it tomorrow.

Day three:'Alright, seriously. I'm going to vote before I go to bed tonight. I put it off yesterday and I'm going to vote online right now before I forget.'

Day four: 'Ah crap, it's over isn't it?'

Reason 6: "What does the SGA do, exactly?"

If you pay attention, it's easy to find out about the many things the SGA does to help people on campus. It does actually do important work. But to access this information requires, you know, reading and stuff. Who has time for that? In case you do have time, today is the last day to vote.

Nick O'Malley is a Collegian columnist. He can be reached at nomalley@student.umass.edu.

The 6 levels of friendship

Returning home is always a bit surreal for me because I generally imagine my hometown as exactly the way it was in high school. Time does not allow this to happen and I am always somewhat surprised by the differences that have taken place while I was absent, be it the opening of a record store or the retirement of a favorite teacher. Nothing is static; everything changes with the notable and somewhat surprising exception of key friendships that I obtained in high school.

Eddie Hand

I say that this is surprising because I was told by pretty much everyone I knew that had been through college that those bonds would go away, and that I would make new friends who would replace the old ones and the old ones would just fade out of my life over time. This isn't to say that I don't have new friends here in Amherst, or that I've lost touch with some of my high school friends, but they haven't replaced the life-long ones and I wonder why this is; at what point does someone become irreplaceable?

I can't answer that question. I don't think anyone can.

This topic came up during a conversation with a friend of mine during last semester. It was about four in the morning, and we were aimlessly driving, either around Concord or Lexington (at this hour of the night all roads look exactly the same) and what we did, for reasons that probably made a lot of sense at the time, was create a system in which we could actually place people in our lives.

As far as we could tell, there are 6 primary relationships you can have with a person.

A total stranger (1): You have maybe seen this person on the train once or twice and have had a short conversation, and this is the extent of your experience with this person.

A colleague (2): This can be someone you work with or go to school with. You know their name, maybe you've even worked with them on a project before or been to the same party, but that's about it.

An acquaintance (3):You know this person and you've spent a decent amount of time with them. You'd rarely go out of your way to hang out with them but you have no problem if they just happen to be invited too. This is the most liberal group because you don't actually have to like these people but anyone that you've gotten to know well enough will fall into it at some point. Some will never leave it, some will move ahead, and some will go back and forth forever.

A friendship (4):. These are the people that you know reasonably well, and you actively enjoy spending time with them. Sometimes they might annoy you, and you probably wouldn't sacrifice yourself to save them in the event of a "Cloverfield" type monster attack, but you'd still totally go see a movie with them on Friday night or take care of them when they chugged down one too many Four Lokos. For some reason, most of the girls that my friends date were originally girls that held this type of relationship with me. Usually, these are the people that I hang out with but don't put a lot of effort into seeing if they aren't around.

A close friend (5): The same as No. 4, but more-so. What is the difference between a "4" and a "5" is really in the eye of the beholder and very often the differences are so subtle that they meld into one group. For me, however, there are two distinct differences. The first is that I actually care about the feelings and actions of my close friends and the second noticeable trend is that No. 5's generally bring out the best in me. Now, the latter isn't exactly something tangible. It's completely metaphysical, but that is why level 5 is such a wildcard. You might actually run into a burning building to save this person. There is a good chance that they will be the first person you call if you want to see the midnight showing of the latest teen wizard movie starring Daniel Radcliffe.

Family and Significant Others (6):. These are people that you can say "I love you" to and it's not a method to trick them into sleeping with you or to get a work visa. Not really much more to say.

I find myself hooking up with No. 3's more than any other number, though if you drink enough it's likely that you've done that with a No. 1 at some point. I have never dated anything higher than a 4, and even that was questionable. I have been a No. 3 to someone that I thought was a No. 5. These things aren't always mutual.

The high school friends that I mentioned are No. 5s, though some have trickled into lesser ranking territory. My college friends float somewhere between categories "3" and "4." Although, my roommate is a solid "5."

I recognize that these numbers are arbitrary because like most things, they change over time. I may consider someone a "5" one day, but if he were to seduce my girlfriend he'd go straight down to the lowest of "3"s and then after a long enough period of separation, all the way down to a meager "2." What they do is serve as a measuring stick for how much one likes someone at an immediate moment.

Relationships may be intangible but there are still some we value more than others.

NEUTRALITY NEEDED FOR LIBYA UPRISING

Dear Editor,

The drumbeats and media propaganda machine are in full swing in attempting to push the United Sates into some sort of active military role in Libya. It would be the dumbest thing we could possibly do. In World War II Hitler made the classic military mistake of opening up a second front to the war that led to the well documented and total failure of his war. Today the United States is already involved in two wars with marginal success, loss of many American lives and a major drain on our economy. It would not only be foolhardy, but downright stupid for us to get involved militarily in Libya. Yet the drumbeats continue.

The United States cannot continue to be the world police force. Further, the situation in Libya is much more complex than appears on the surface. It is not only the good people of Libya seeking freedom, but a mixture of people that include those associated with radical Islam. We seem to have short memories about what happened in Afghanistan where we supported Osama bin Laden and the Taliban against Russia. The result of that was Sept 11, 2001 and a continuing disaster for America. When will we learn?

Our world police force strategy, even for seemingly good causes, has been a major failure. We need to accomplish things through diplomatic means and by having Europe and other countries step up and not rely totally on the United States.

The American people are urged to put the drumbeats and propaganda that is constantly being fed to us into perspective and not allow ourselves to be stampeded into still another military conflict.

SUFFERING OF SLED DOGS

Dear Editor,

This is in response to the Collegian Article, "Iditarod starts 39th rendition Saturday in Alaska ."

For the dogs, the Iditarod is a bottomless pit of suffering. At least 142 dogs have died in the race, including two dogs on a doctor's sled that froze to death in the brutally cold winds. What happens to the dogs during the Iditarod includes death, paralysis, frostbite, bleeding ulcers, bloody diarrhea, lung damage, pneumonia, ruptured discs, viral diseases, broken bones, torn muscles and tendons and sprains.

During the race, veterinarians do not give the dogs physical exams at every checkpoint. Mushers speed through many checkpoints, so the dogs get the briefest visual checks, if that. Instead of pulling sick dogs from the race, veterinarians frequently give them massive doses of antibiotics to keep them running. The Iditarod's chief veterinarian, Stu Nelson, is an employee of the Iditarod Trail Committee. They are the ones who sign his paycheck. So, do you expect that he's going to say anything negative about the Iditarod?

During training runs, Iditarod dogs have been killed by moose, snow machines, and various motor vehicles, including a semi tractor and an ATV. They have died from drowning, heart attacks and being strangled in harnesses.

Dogs have also been injured while training. They have been gashed, quilled by porcupines, bitten in dog fights, had broken bones, and torn muscles and tendons. Most dog deaths and injuries during training aren't even reported.

Iditarod dog kennels are puppy mills. Mushers breed large numbers of dogs and routinely kill unwanted ones, including puppies. Many dogs who are permanently disabled in the Iditarod, or who are unwanted for any reason, including those who have outlived their usefulness, are killed with a shot to the head, dragged, drowned or clubbed to death. "Dogs are clubbed with baseball bats and if they don't pull are dragged to death in harnesses....." wrote former Iditarod dog handler Mike Cranford in an article for Alaska's Bush Blade Newspaper.

Dog beatings and whippings are common. During the 2007 Iditarod, eyewitnesses reported that musher Ramy Brooks kicked, punched and beat his dogs with a ski pole and a chain. Jim Welch says in his book Speed Mushing Manual, "Nagging a dog team is cruel and ineffective...A training device such as a whip is not cruel at all but is effective." "It is a common training device in use among dog mushers..."

The Iditarod, with all the evils associated with it, has become a synonym for exploitation. The race imposes torture no dog should be forced to endure.

QUESTION 2 SHOULD BE PUT INTO PRACTICE

Dear Editor,

The Collegian article on Ballot Initiatives published on February 25, was a balanced piece and did mention some reasons people oppose these so-called "reform" proposals.

Another reason for opposition lies in the practical politics of the drug policy reform movement.

The 2008 Ballot Question 2 on marijuana decriminalization, was one of these initiatives. It was not passed by politicians. It required citizen votes to succeed. Because of Question 2, UMass students today, unlike those of earlier "generations," do not have to fear jail – or fear the insidious government practice of using the threat of jail time to force people to betray their friends.

Question 2 was an important first step, however, much work remains to be done. Many activists around the state are hoping to put a Question on the ballot in 2012 to end marijuana prohibition entirely. UMass' own Cannabis Reform Coalition will no doubt be out there, working to collect the signatures necessary to bring this measure to the voters. Anything that stymies this, as Senator Rosenberg's proposals do, will be a terrible setback to the cause of Freedom in Massachusetts.

I would urge everyone to contact their legislators, and get them to oppose these bills, S. 13 and S. 314.

Sincerely,
Terry Franklin

'Glee' stuck in neutral in second season

By Nick O'Malley
Collegian Staff

"Glee" is a beautiful chaos.

A show so full of potential, Ryan Murphy's TV-musical creation has evolved into a monolithic multimedia enterprise that's already shattered the record for most Top 100 hits on the Billboard charts and will soon devour us all.

In terms of hype and popularity, "Glee" continues to rise and entrench itself in pop culture and as a ratings giant. With Simon Cowell gone, it has the potential to usurp "American Idol" as the flagship program on Fox. Despite all this, the show's second season has been awful.

Apart from the pointless themed episodes, the main problem with season two is that there is no point to it. Season one was a magically autotuned Cinderella story about misfits getting the glee club off its feet and making it to regionals. In season two, the group mentions nationals every third episode or so, choosing instead to focus on themed filler episodes in which the events rarely have any long-lasting effect.

If there was a plot to season two, it would have to be acceptance and homosexuality, as evidenced by the focus on Kurt's eventual departure from the glee club. The problem with this is not the content. It's the fact that it's just a theme – not a plot – that the writers consistently work into the episodes. That, and the character this theme focuses on left the main setting for the show. So, where are we going with this?

As Hitfix.com's Ryan McGee noted, "Glee" has no consequences. No matter what happens during the course of the show, it can be reversed by someone transferring or just forgetting what people were doing two episodes prior. Whenever the characters on the show try to shut down the glee club or when the Jesse character supposedly joined the club, the audience knows it's an empty ploy. They just sit back and say "No. This is stupid. Shut up and sing the next song." The show hasn't had any suspense since the first episode of season two when the short girl magically transferred and hasn't been heard from since.

We all know Kurt's coming back. There's no way he's not coming back from "Tolerance Hogwarts" at the end of the season with some big emotional scene that plays on it being a surprise. No. We already know it's happening. Just tell us if he's bringing the other kid with him.

Unfortunately, "Glee," among other things, is a show that builds for the moment – for the headline on blogs, for the next hit on iTunes, for the big guest star – without making enough concessions for the context. While this format is the best way to make a killing off of the show, especially in the YouTube clip age, it doesn't make for great television.

The show struggles so hard to put characters in different positions (usually for musical numbers) it burns through potential story lines and forces the show to grasp at straws during the second season. "Sure, why not have the girls play football? All we need to do is make sure that they perform 'Thriller' on a football field in the episode after the Super Bowl."

Then there's the show's greatest travesty: The destruction of Sue Sylvester's character.

At the outset of "Glee," Sue Sylvester was everything viewers could ask for: over-the-top and hilarious, an invincible antagonist. But then the creators did something strange: they took her down as an antagonist and left her in an odd high school limbo of aimlessly trolling the school, moping and throwing tantrums. She's not even funny anymore.

Where the writers went wrong was in their attempt to make her a real person. Sue Sylvester is larger than life; she needs no feelings. It was one thing when they introduced her sister with Down Syndrome; it made her a great antagonist with one deep secret. But then she married herself, joined the glee club, got a borderline offensive minion to follow her, got all depressed and, most importantly, lost her mystique.

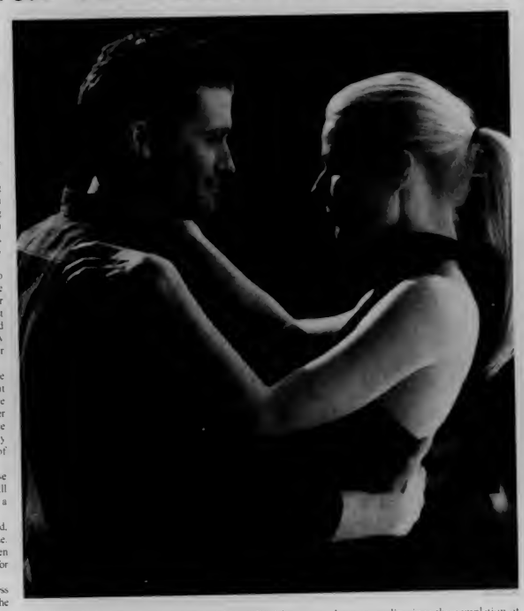
As of the most recent episode, "Glee" does not have a named antagonist, something that the show is in constant need of. It's hard to depict New Directions as the underdog against the rival glee clubs that we never actually see. Technically, Sue Sylvester is on one of those rival schools, but we never see her there and she's hardly a threat anymore, or at least haven't been one for most of season two.

For now, "Glee" looks as if it's going to stay in cruise control as it rakes in millions from TV and iTunes. All that's left to do is hope that the writers start trying to find a legitimate plot by season three.

The show's going where it wants to go, plot be damned, and you better be strapping yourself in for the ride. Otherwise you're going to get flung out of your seat when you start wondering where the $100,000 sets come from for a club that's supposed to be short on funds.

Where'd the pyrotechnics come from for a pointless rehearsal? Don't worry about it; John Stamos is married to the one character and Gwyneth Paltrow's coming back.

Nick O'Malley can be reached at nomalley@student.umass.edu.



Most aspects of the popular television show "Glee" have gone down in quality since the completion of its first season. The show is more focused on having big-name guest stars than creating an interesting plot.

Beantown flicks rule

Ben Affleck, director of "Gone Baby Gone" and "The Town," is a Boston native and his movies are high-quality depictions of the city.

MCT

By Sam Dang
Collegian Correspondent

A Boston film is one that highlights the citizens, the atmosphere, and ways of life (not "Legally Blonde" or "The Social Network"). Honorable mentions include "Blown Away," with Jeff Bridges and Tommy Lee Jones as Irish bomb makers, in which a police truck explodes in Kenmore Square, "Edge of Darkness" with Mel Gibson, shot in Boston and Northampton, and the original "Thomas Crown Affair" with gorgeous shots of Back Bay. "The Fighter" is not included in the list as this reviewer has yet to have the ability to fully analyze it. However, Christian Bale's performance is riveting and spot on.

No. 5: "The Boondock Saints" (1999)

Troy Duffy's gritty and comic throwback to vigilante films explodes with over the top action and great use of Boston locales. It's just a fun and crazy film. Willem Dafoe as a gay and at one point, cross dressing, cop solidifies this film as memorable and entertaining.

No. 4: "Gone Baby Gone" (2007)/"The Town" (2010)

Both films successfully beat Dennis Lehane's "Mystic River" for a spot at the list. Ben Affleck, who directed both of these films, fully utilizes the locations, beauty and danger of Boston. From shooting a robbery at Fenway Park to just shots of South Boston, he captures the enthralling nature of Boston. He's also one the best directors on the list who doesn't overplay the accents. Watch the nominated performances of Amy Ryan ("Gone Baby Gone") and Jeremy Renner ("The Town") as unapologetic, scene-stealing Bostonians.

No. 3: "Monument Ave." (1998)

Denis Leary's tour de force about a low level Charlestown car thief who must combat his boss, the murder of his cousin, the police, and the town's code of silence. It's a startling character piece that really encapsulates the heritage and struggles of the life in Charlestown. Fans of "Rescue Me" will enjoy the overlap in cast and references.

No. 2: "The Departed" (2006)

Crime thrillers don't get as exciting as "The Departed," and this is the film to bring attention to Boston and create the 30 percent tax incentive to film here. Rapid and witty dialogue (this is one of the more quotable films on the list) and explosive performances by Jack Nicholson, Mark Wahlberg, and Leonardo DiCaprio drive the movie.

No. 1: "The Friends of Eddie Coyle" (1973)

Hands down, the best film set in Boston ("Fever Pitch" might have a chance next time). Essentially a big influence on "The Departed" and "The Town" as it deals with a low level criminal played by the legendary Robert Mitchum, who must contend with facing 20 years in prison and ratting out his criminal friends (including Alex Rocco, a fringe member of the Winter Hill Gang) and getting caught. "The Friends of Eddie Coyle" is a low-key film, absolutely driven by incredible performances and dark noir touches. It is truly a classic.

New TV shows in bloom this spring

By Naychelle Lucas
Collegian Staff

Ah, spring. The birds are chirping, the snow is slowly melting and new shows are premiering on television. It's the perfect combination of bliss. Trading in snow boots for sandals and gloves for sunglasses can put a smile on anyone's face. With warmer weather brings another favorite time of the year: a new spring lineup. What's new, which popular favorites are returning and which have gotten the axe?

New Comedies

"Breaking In" will be airing on Fox on Wednesdays at 9:30 p.m. Premiering after "American Idol" on April 6 and written by Adam Goldberg, "Breaking In" is a half-hour workplace comedy about a team of unusual geniuses who have been picked to work at a high-tech security firm. The company is run by Christian Slater's character, Oz called a "manipulative mastermind" in the Fox Broadcasting Company's description of the show – who makes his staff go through extreme measures to prove his protection services do the job.

The show, a creation of "Happy Madison Productions," is likely going to hilarious "Breaking In" puts the workplace comedy in an original type of workplace setting, where the staff is not only in the office bantering back and forth, but is also out on exciting missions.

"Happy Endings" airing Wednesdays at 10 p.m. on ABC, is a romantic comedy as well as a take on modern friendship and what one group will do to stay together. Six young people, Max, Penny, Brad, Alex, Jane and Dave have been friends forever, but after Alex and Dave, the couple who brought them all together, break up on their wedding day, the whole group deals with the fallout.

The comedy stars Casey Wilson, a Saturday Night Live alum, and Damon Wayans Jr. The preview looks funny. However, the show seems more like a Saturday night date night movie than a television show. The premise is fit more for an hour and a half romantic comedy, and producers may not be able to stretch it out over the 13 episodes ABC has ordered. It would do well at the box office, but whether it survives the small screen has yet to be seen.

Axed Shows, Uncertainties and Returning Favorites

After receiving bad ratings, Fox has cancelled the romantic comedy "Running Wilde" and has yet to air the series' remaining four episodes. CBS's "$#*! My Dad Says" and ABC's "Better With You." The show has yet to be renewed for another season and it is undecided whether we will seem these episodes this spring.

But there is some good news. Fox's "Raising Hope" has been doing well in its spot after "American Idol" and has been renewed for a second season. Also, the new show on the block, "Traffic Light" hit a series high last week at 7.40 million viewers, putting it behind only "Idol."

On ABC, "Cougar Town" will be returning April 18 following a 90-minute episode of "Dancing with the Stars," but will return to its regular time slot of Wednesday night on April 20. "Happy Endings" will air back-to-back episodes on Wednesday, April 13 following a new episode of "Modern Family." "30 Rock" will celebrate is 100th episode with a one-hour special on NBC Thursday, April 21.

Naychelle Lucas can be reached at nllucas@student.umass.edu

"Breaking In," a new comedy premiering on Fox and starring Christian Slater as boss Oz, features a gang of geniuses working for a security company. Under the umbrella of Happy Madison Productions, the show has a lot of promise.

UM hosts Seawolves

W LAX from page 8

which team plays better in net.

Florence has been playing at a top level as of late, but she has also been getting a great deal of help from her defense.

"The defense in front of her [Florence] is doing a very good job of forcing some pretty low angle shots which is allowing her to make those saves," McMahon said.

The Minutewomen have also seen an increase in productivity from the underclassmen, as freshman attacker Katie Ferris scored four goals to help propel the team to victory over UNH.

The transition Ferris is making from the high school level to the collegiate level is not an easy one, but Ferris noted that the older players, as well as McMahon, have really helped this process.

"The older girls are definitely there for me all the time, and if I have any questions, they are always there to answer them and help me – all the time," Ferris said. "Angela is a great coach and has a great personality, and she is someone that I would want to work for, and work hard for everyday."

The hard work that the team has been putting in has been paying off so far, and the Minutewomen are looking to add to their five-game winning streak by defeating the Seawolves in just their second home game of the season.

Nicholas Bellofatto can be reached at nbellofa@student.umass.edu.

UMass coach Angela McMahon instructs her team at practice earlier this season. McMahon has directed the Minutewomen to 5–0, its best start since the 1985 season and will lead the team against Stony Brook on Saturday at McGuirk Stadium.

Junior attacker Danielle Pelletier defends a Vermont attacker in a win earlier this season at McGuirk Stadium. Pelletier, along with freshman Katie Ferris, have made a difference on the offensive end.

Freshman Ferris adjusting to collegiate game, earns accolades

FERRIS from page 8

first action on Feb. 23 in a game against then-No. 18 Boston University. Ferris scored her first collegiate goal with four seconds left in the game to lift the Minutewomen to their first win over the Terriers since 2007.

"I didn't expect it at all," said Ferris. My knee still hurt. I just had to suck it up, go in and perform."

In her last two games, she has scored nine goals, including a team-high five in a 16-7 win at Siena on Feb. 26 and four in an 11-4 win at UNH on March 2.

Her adjustment to the college game may appear swift, due in large part to the guidance of her teammates.

"The older girls are definitely there for me all the time. If I have any questions, they're always there to answer them for me," said Ferris. "The speed of the game [is] much faster than anything in high school. That was definitely the hardest thing to adjust to.

Ferris is tied for the Atlantic-10 lead in goals-per-game (3.33), despite making less than half of her total shots (.455 percent). Aside from the speed of the game, McMahon believes that it's difficult to adjust to the elevated talent of college opponents.

"She's still in that learning curve of trying to find the difference between playing high school and college," said McMahon. "The goalies in college games are a little better. They play better angles, so I think she's going to make adjustments and hopefully improve that shooting percentage.

Ferris was excited to learn that she earned Atlantic 10 Rookie of the Week honors for her second-consecutive week. More so, she is pleased to help her team gain national recognition for their perfect start to the season.

"I was very excited about getting ranked, finally, because I know this team hasn't been ranked in a very long time and this is the best start we've had in a long time," said Ferris.

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

Warriors play Black Bears in first round

HOCKEY EAST from page 8

this season so far.

Sixteen seconds into the second period, the Friars were finally on the board but not for long. At 14:12, Cucci scored a goal and 30 seconds later, he tallied yet another goal for the Warriors.

At the start of the final period, the Friars were down 5-1. Throughout the game, he Friar had five power play opportunities to score. Merrimack was so far successful on 2-of-4 power play opportunities.

However, Merrimack sophomore Stephane Da Costa scored at 14:05, making the Warriors 3-for-5 in power play opportunities.

Merrimack will proceed to play Maine at Lawler Arena in North Andover, Mass. this weekend in the opening round of tournament play.

HEA Tournament begins Fri.

The 27th Hockey East Series Quarterfinals starts this Friday, March 11. The Minutemen will face off against the Eagles Friday evening at 7 p.m. BC is the No. 1 seed while UMass is the bottom seed at No. 8.

UNH finished the regular season with a record of 19-9-6. The Wildcats, the No. 2 seed will host No. 7 seed Vermont at the Whittemore Center.

Boston University, the No. 3 seed, will be playing No. 6 Northeastern. The date is not determined yet due to a scheduling conflict at Agganis Arena.

The final matchup will be between Merrimack and Maine, the No. 4 and No. 5 seeds, respectively. The two will square off at Lawler Arena, as the Warriors will host a playoff series for only the second time in school history.

Amy Chaunt can be reached at achaunt@student.umass.edu.

Freshman Branden Gracel prepares for a faceoff against Maine last weekend at the Mullins Center. The Minutemen take on No. 1 seed B.C. in the first round of the Hockey East Tournament, beginning Friday.

Musketeers win Atlantic 10 championship, Gonzaga steamrolls Gaels in WCC final

W. HOOPS from page 8

than 36 percent. On the contrary, Duke shot for 46 percent and outrebounded UNC 38-27.

While the Blue Devils led for most of the game, the Tar Heels were never far behind; at intermission, Duke led, 37-32. Duke took a secure lead when the Tar Heels went scoreless for six and a half minutes in the second half. Chapel Hill's Jessica Breland attempted a comeback by making two consecutive shots, one from behind the arc.

However, when the Tar Heels finally got back on the board, they trailed by 12 points with 3:10 remaining. Although Duke won 81-66, Breland still registered 27 points, two rebounds and one assist. Hot from its six-game winning streak, Duke will make its 17th-straight appearance in the NCAA Tournament this March.

Gonzaga Wins WCC

Saint Mary's did not have a prayer against Gonzaga on Monday night as the Bulldogs toppled its West Coast Conference foes, 72-46 en route to claiming the WCC Tournament Championship.

The Gaels (19-12, 10-4 WCC) were aggressive offensively in the first half, going to the baseline 13 times and making nine free throws. They started strong on the defensive end as well, holding Gonzaga (28-4, 14-0 WCC) scoreless for a four and a half minute span. However, the Bulldogs led by eight at the half.

In the second half, Gonzaga stepped up its defense and outscored Saint Mary's 44-26. The Bulldogs put the game out of reach when Courtney Vandersloot made a 3-pointer to make it 37-23. Vandersloot had a team-high 16 points, a career-high 16 assists, two steals, and a block. At one point, she converted an up-and-under reverse layup that Saint Mary's Louella Tomlison, the NCAA's career-leader in blocked shots, was not able to stop. Vandersloot was selected Most Valuable Player of the tournament.

The Bulldogs have secured their spot in the NCAA tournament, where they advanced to a sweet sixteen spot last year.

Xavier Lands Atlantic-10 title

Ta'Shia Phillips carried Xavier to its fourth A-10 title in five years on Monday evening. After playing two previous games on Sunday and Saturday, Phillips showed no signs of fatigue. The 6-foot-6 powerhouse logged 39 minutes and totaled 26 points during the Musketeers 67-60 victory over Dayton. Phillips, who is currently second in the NCAA in rebounding, finished with 15 rebounds.

Dayton's offense was strong in the first half, completing three 3-point shots. Justine Raterman shot six-for-seven from the field and one-for-three from behind the arc. By the end of the first half, Dayton (21-11, 9-5 A 10) led 35-30.

In the second, Xavier (28-2, 14-0 A 10) exhibited tougher defense and held the Flyers scoreless for four minutes. After accounting for more than half of Xavier's points in the first half, Phillips made the go-ahead basket with 1:32 to play. Amber Harris and Special Jennings secured the lead by making a combined three free throws.

The Musketeers have received an automatic bid for the NCAA tournament, making it their fourth-straight appearance.

Trevor Bray can be reached at tbray@student.umass.edu.

A Xavier player attempts to box out a Stanford player in a game this year. The Musketeers defeated Dayton for the A-10 title.

Minutewomen look to stay unbeaten Saturday

By Nicholas Bellofatto
Collegian Staff

The No. 19 Massachusetts women's lacrosse team under UMass head coach Angela McMahon is off to its best start (5-0) since 1986. During the '86 campaign, the Minutewomen began its season undefeated through six games, and with a win over Stony Brook this Saturday, the 2011 UMass squad could tie that mark and add to the programs history.

The Minutewomen posted one of their most impressive wins of the season on March 2, as defeating New Hampshire, 11-4. The win over UNH was the first time that the Minutewomen squad defeated the Wildcats since 2005.

Adding to this already impressive start to the season, the Minutewomen were one of just 20 teams in the nation to be undefeated after completing two full weeks of play. The team is firing on all cylinders, as the play in goal, defense, midfield and attack has improved since the beginning of the season.

"I think the one thing that we are happy with is how we have been improving, and that is the biggest thing," said McMahon. "That's been our goal, is just to get better every single game and every day we are at practice."

Not only have the Minutewomen been improving, they have also been winning on the road. Having played only one home game this season, the Minutewomen have proven that they can beat nonconference opponents even when the other team holds home field advantage.

In the Minutewomen's win over UNH, Junior goalkeeper Katie Florence grabbed a season-high 16 saves on 21 shots, which was just two saves short of her career-high.

"She [Florence] is just playing great, she is stepping up her game, and I think she is getting better," said McMahon. "She has always been a very good goalie, but for her to continue to improve has really helped our team, and has really helped spark the momentum going the other way."

Stony Brook is coming off of a 15-8 loss to John Hopkins this past Saturday, which puts them at 2-2 thus far this season.

In the Seawolves' last outing, starting goalie Mickey Cahill grabbed a season-high 15 saves, but the 37 total shots by the Blue Jays were simply too much for the team to overcome.

With the goalies for both squads posting their best outings of the season in their last game, this matchup could come down to

JEFF BERNSTEIN/COLLEGIAN

Junior attacker Nina Sarcona looks to make a move against Vermont in a victory this season. Sarcona has helped freshman Katie Ferris adjust to the college game in the attacking end.

After early season injury, Ferris making a difference for UMass

Dan Gigliotti
Collegian Staff

Massachusetts women's lacrosse coach Angela McMahon bolstered an already potent scoring unit this past season by recruiting a touted attacker in freshman Katie Ferris.

As promising a player as she proved to be, growing pains were an impediment for Ferris to begin the season that were as much physical as they were mental.

An early season injury kept Ferris sidelined for the first two games of the season, but in her first action, her impact was immediate.

"Her vision for the cage and her ability to put the ball away is one of the best I've seen of any of the girls I've ever coached," said McMahon before the Minutewomen's game at New Hampshire.

Of the five leading point-scorers on the UMass (5-0) roster, four of them are upper classmen, including seniors Jackie Lyons and Haley Smith and juniors Jesse O'Donnell and Danielle Pelletier.

Second on that list is Ferris, who, in three games this season, has scored 11 points (10 goals, one assist) and two-game winning goals.

With an outstanding high school resume to her name and with Ferris's recruitment, McMahon was confident that her skills would translate quickly into the college game.

Ferris, native of Carthage, N.Y., led Carthage Central High School to four-straight New York state championship appearances and set the state record for most goals scored in a season (138 goals) in her junior season.

Through phone calls and visits, McMahon invested a lot of time courting the touted freshman over the past two years. Ferris chose to follow McMahon to Amherst from Connecticut, where McMahon was the head coach because of her coaching style and personality as well as the program's potential for national success.

"I just think she's a great coach, [she] has a great personality. She's someone that I would want to work hard for everyday," said Ferris.

"I think she really liked my style, not only with the type of coach I was, but the type of person I was," McMahon said. "She felt like she could come here and was going to be taken care of and looked after and be, also, challenged and pushed to her limits, in terms of getting better."

For the first two games of this season, Katie Ferris stood on the sidelines, nursing a minor leg injury, according to McMahon. She watched as UMass squeezed out a 12-10 win at Holy Cross on Feb. 16 and won handily at home against Vermont 17-9 on Feb. 19.

Then, Ferris finally got her

BC takes HE crown, tourney begins Fri.

By Amy Chaunt
Collegian Correspondant

The Whittemore Center Arena this past weekend was ecstatic, as Boston College sophomore forward Pat Mullane clinched a 4-3 win for the Eagles after scoring the game-winning goal over New Hampshire Saturday.

BC finished their regular season with a 26-7-1 record under their belt, compared to last season, when they had 29 wins.

After the first period, the Wildcats led the Eagles 1-0. With nearly 13 seconds remaining of play in the second period, there was nothing separating the teams with a score of 2-2.

Three minutes, 52 seconds into the third period, BC finally took their first lead of the game. However, it didn't take long — just six minutes — for UNH to even the score. Finally, with the help of Mullane, BC defeated UNH with a final score of 4-3.

The win for the Eagles is their fourth-straight, as the team will host the Massachusetts at Conte Forum in Chestnut Hill in the opening round of the Hockey East Tournament.

Friars split series with Warriors

With the support of a sold-out Lawler Arena crowd, senior night was a success for Merrimack senior forward Joe Cucci. Friday night, Cucci scored two goals, his 13th of the season, as the Warriors beat Providence College Friday night, 6-1, but fell Saturday, 5-3.

The Friars needed a win in order to qualify for one of the eight playoff spots. But in the first period, the Warriors scored three times and the Friars were left out of the Hockey East Tournament. Two of the goals were scored by junior Ryan Flanigan, who has scored 10 goals

Duke center Krystal Thomas contributes to the Blue Devils' cutting down of the nets at the Atlantic Coast Conference tournament. The Blue Devils defeated in-state rival U.N.C. and will host the first and second rounds of the NCAA Tournament.

Duke defeats UNC, Thomas nets 21 pts.

By Trevor Bray
Collegian Correspondent

The North Carolina rivalry became even bitterer after the Duke women's basketball team finished a 15-point victory over North Carolina on Sunday afternoon.

Point guard Jasmine Thomas led the Blue Devils (29-3, 12-2 ACC) with 21 points and was crowned the tournament MVP. Thomas and head coach Joanne McCallie have been a dynamic duo, appearing in four title games in the past four seasons, two of which resulted in a tournament wins.

The Tar Heels (25-8, 8-6 ACC) appeared to be tired from their previous three games as they hoped to become the first ACC team to win four conference games in four days. UNC beat its previous three opponents with leads no smaller than 14 points and did not allow any opponent to shoot better

Study finds climate change can be linked to a longer allergy season from ragweed

By Nancy Pierce
Collegian Staff

Climate change isn't just contributing to rising sea levels and warmer temperature. It can also leave people suffering from allergies further into the year.

A United States Department of Agriculture study with collaborators including Agricultural Research Service, allergy and asthma clinics, University of Massachusetts assistant professor of public health, Christine Rogers and other contributing universities found that over a period of 15 years, ragweed season lasts longer and ends later due to climate change.

The study published in Proceedings of the Natural Academy of Sciences suggest ragweed season is ending up to a month later and can be a result of higher temperatures in northern latitudes and the delay of frosts.

According to Webmd.com Allergies Health Center, at least one in five Americans suffers from allergies. The Allergies Health Center also said more common allergies are seasonal allergies related to pollen, weeds and grass.

Ragweed is classified as a severe allergen by Pollen.com with unpleasant and harmful effects beginning its season in late August and ending with the first frosts of the year.

Dr. Dan Dalan, owner and allergy doctor of Allergy and Asthma Care and associate professor of medicine at the University of North Dakota said Allergy and Asthma Care was a location providing data for the study.

Dalan said the information included in the study displays how the probability of people being exposed to more allergens is increased. He described the findings as "amazing" in that several years of information was summarized and it was an opportunity to learn how the environment affects allergies.

Dr. Fred Mudawwar a physician at Hampden County Physicians and a consultant for University Health Services said seasonal allergies greatly bring down public health because they affect so many people at the same time.

"With climate change, allergies will definitely be affected," Mudawwar said. "They're miserable, they can't focus as well, they become less efficient"

Allergies are on a gradual increase for the population overall, according to Mudawwar.

The study authors indicate the recent projections of Intergovernmental Panel on Climate are consistent with their research. According to the IPCC Fourth Assessment Report, annual warming is projected to be two to three degrees Celsius warmer across western, southern and eastern continental edges, and over five degrees Celsius at higher latitudes. The report also projected warm temperature extremes are likely to become more frequent and last longer in North America.

Charlie Walthall, national program leader for climate change at Agricultural Research Service said weeds, vines and poison ivy are experiencing the enhanced fertilization effect.

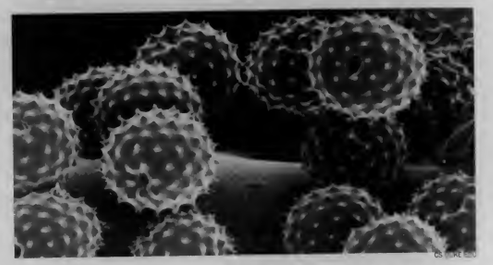
Walthall explained, when plants are exposed to excessive nutrients, it can produce stronger plant growth. He also mentioned how some plants are highly receptive to carbon dioxide. With excess carbon dioxide in the atmosphere, he said plants can become more competitive and resistant to herbicides.

Walthall explained if the conditions for the plants to survive are lasting longer, such as warm temperatures and access to sunlight, the plants will linger longer into the year.

He described the study's findings as "something we need to plan for and adapt to." Walthall also mentioned the northern latitudes see more effects of climate change and gave examples of wide swings in temperature, precipitation and vegetation patterns as well as melting of glaciers and permafrost.

Walthall talked about changes in the environment such as seasonal shifts being a consequence of climate change and what made the allergy season last longer. He also noted plant life cycles changing and noted a change in types of species as well as the actual ecosystems in which they live.

Nancy Pierce can be reached at npierce@student.umass.edu.



COURTESY OF

Studies are showing that many types of pollen are surviving longer due to an increase in temperature and a overall delay in frost, increasing lifespan.

The Intergovenmental Panel on Climate Change predicts extreme warm temperatures will become more frequent and last longer in North America.

Northwestern under fire for sex act in class

By Jodi S. Cohen & Lisa Black
Chicago Tribune (MCT)

Northwestern University, fielding a torrent of criticism after a professor allowed students to view a live sex act involving a phallic device and a willing exhibitionist, is now grappling over the long-cherished tenets of academic freedom and its boundaries.

The university initially appeared to support the actions of psychology professor J. Michael Bailey in a statement released Wednesday. But by Thursday morning, Northwestern President Morton Schapiro announced that the school would investigate amid an unfolding scandal.

Schapiro said he is "troubled and disappointed" by the live sex-toy demonstration in a campus auditorium last week, and that it was not in keeping with Northwestern's mission.

More than 100 students watched the optional, after-class demonstration, during which a woman stripped, lay down on a towel and allowed her fiance to penetrate her with the device. The demonstration followed a discussion about kinky sex and female orgasm.

"I have directed that we investigate fully the specifics of this incident, and also clarify what constitutes appropriate pedagogy, both in this instance and in the future," Schapiro said in a prepared statement. "Many members of the Northwestern community are disturbed by what took place on our campus. So am I."

At issue is whether the demonstration is protected by the long-standing principle of academic freedom that allows faculty to teach controversial subjects – from religious views to denial of the Holocaust. Questions center on whether the demonstration offered any educational value.

In a prepared statement Wednesday, Bailey acknowledged hesitating before allowing the couple to perform the sex act. He said that he decided to say yes after realizing his "inability to come up with a legitimate reason why students should not be able to watch such a demonstration."

Bailey, in the syllabus for the human sexuality course that ends with a final exam next week, acknowledged that the class would be "skewed toward controversial and unusual aspects of sexuality."

But Lance Gravlee, who teaches a human sexuality course at the University of Florida, said Bailey crossed the line.

"This case is so far on the other side of the line that it doesn't strike me as difficult to figure that out," Gravlee said. "I can't imagine, I just can't imagine doing something like this in a classroom.

"I don't think that an act like this could be justified by principles of academic freedom," he continued.

Gravlee said he tried to suspend judgment and think about whether it could have been an educational experience. The people involved in the demonstration said they were trying to disprove misconceptions about female orgasm.

"In my own teachings I have discussed myths and misconceptions about female orgasm. You can do that and stop well short of bringing it into the classroom," he said. "They would have a hard time convincing me that this was an appropriate way to challenge misconceptions."

Sarah Lowe, 19, a sophomore communications major, witnessed the demonstration and said she was not bothered by it. But she said she was glad that it took place in an auditorium, rather than a smaller classroom, which would have been too close and awkward.

She said that the warnings could have been more explicit, as she didn't really understand what she was about to see until the woman began removing all her clothes except for her bra.

"I was basically interested to see how it works," Lowe said. "There wasn't anybody who was angry or expressed disgust. They asked questions about the lives of the presenters. It was very informational, I feel, about the sexual diversity that exists."

She said that lectures given earlier in the semester dealt with animals, evolution and mating before moving on to human topics. More recently, the lectures focused on human sexual behavior, "good and bad."

This quarter, 567 students had registered for Bailey's class; all were required to take a prerequisite psychology course. In addition to the class, Bailey hosts after-class lectures, such as the one last week, and student attendance is optional.

The university provides Bailey with extra funds to pay for costs associated with the after-class activities. Ken Melvoin-Berg, a speaker on kinky sex who brought the couple to class, said he expected to get paid $300 to $500. The couple who demonstrated the device was not paid, Melvoin-Berg said.

Deirdre McCloskey, a University of Illinois-Chicago professor who has criticized Bailey in the past, said he aims for shock over substance.

"He is prepared to use people in any way to show how cool he is," said McCloskey, a transsexual who criticized Bailey's 2003 book, "The Man Who Would Be Queen: The Science of Gender-Bending and Transsexualism."

Bailey's class syllabus lists the book as required reading.

Rachel Durchslag, executive director for the Chicago Alliance Against Sexual Exploitation, said that the demonstration could have traumatized students, especially if they had experienced sexual assault or abuse.

"We're relieved that the students apparently received some warning about the graphic nature of what they were about to see," Durchslag said. "It's worth investigating, however, if the value of what was learned was really worth risking that level of trauma."

Defining academic freedom and its boundaries is usually left to faculty members, said Greg Scholtz, a director at the American Association of University Professors.

The organization defines academic freedom as the freedom to teach, conduct research, address institutional policy and speak on broader social, economic and political interests.

He declined to weigh in on the Northwestern controversy, but said "if a question arises as to the fitness of a faculty member, that question should be reviewed by his faculty peers.

"Academic freedom does not protect professional misconduct and incompetence in teaching research," Scholtz said. "The question is, who is to determine whether something is of a nature of misconduct or incompetence?"

But Lowe doesn't see the need for Northwestern to investigate.

"Personally, I feel that the less it's talked about the sooner it will go away," she said. "It doesn't really merit an investigation."

And student Natalie Houchins said there was educational value.

"We all learned some things," she said. "We learned about kinky sex culture, reasons they do it. We learned how these instruments work."

MCT/COURTESY OF NORTHWESTERN.EDU

Some students who attended the live sexual fetish demonstration at Northwestern said they were not disgusted by the act and regarded it as a learning opportunity.

"A REVOLUTION WITHOUT DANCING IS NOT A REVOLUTION WITH HAVING" - EMMA GOLDMAN

EDITORIAL@DAILYCOLLEGIAN.COM

Scooby Doo to Dinkeloo: Busting the myths

Matthew M. Robare

I've always been into mythology. As a child one of my favorite books was a thick volume called something like "Gods and Heroes of Ancient Greece" by some guy with a Germanic name and Edith Hamilton's classic "Mythology." I was enthralled by Arthurian legends and modern works with a strong mythic dimension, such as "Star Wars" and "The Lord of the Rings" exerted a great influence on me.

For a long time, I thought myths were things of the past, consigned to fantasy and science fiction in this modern and supposedly enlightened age. I guess it just goes to show that you need neither gods nor Greek men being rubbed down with olive oil to make a myth, because the University of Massachusetts is full of them.

Last Halloween, I wrote an article on ghosts at UMass with information generously supplied by the UMass History Club. I even walked around campus with a giant camera from the journalism department at night to take pictures of some of the places mentioned. I didn't see any ghosts, although Stockbridge House/the University Club and the Old Chapel are really creepy at night, especially since there was some sort of faint red light coming out of the Chapel. I think it was an exit sign, but I much prefer to imagine that the reason it's been closed forever is because a bando stumbled upon the Gates of Hell down there. On some days, it can certainly seem as though the campus was designed by some baleful demonic influence.

Anyways, the first myth I heard was on a campus tour during my orientation. The tour guide explained that Fine Arts Center was a) shaped like a piano and b) had originally been intended for a college in Arizona. I believed it then and I wish it were true today because the exterior of that building is so ugly that a fin de siècle aesthetic poet would commit suicide upon seeing it. Harsh, perhaps, but all too true. Speaking of the FAC, I can't be the only person on campus who thinks that upside down face that was painted on it last year looks more like a giant bird flew over campus and relieved itself there.

But back to the point: The FAC neither looks like a piano (and was never intended to) and was not supposed to go to Arizona. The Collegian put together a glossy magazine some years ago and talked to the architect, John Dinkeloo and no, I'm not making that name up.

One of the other early myths I encountered as a freshman was the famous "Scooby Doo" legend. According to this myth, the creator of "Scooby Doo; Where Are You?" was a UMass alumnus and he based the five main characters of the cartoon show on the stereotypes of the Five Colleges. To wit, Freddie, as upper class and well-educated, represented Amherst College; Daphne, as beautiful and upper class, was Mount Holyoke; Shaggy was a hippie and therefore stood for Hampshire; Velma was smart and stood for Smith; while Scooby, the animal, indicated ZooMass. It goes without saying that these stereotypes are a load of bull, but there are versions that identify Velma with Smith not because she was intelligent but because some viewers thought she was a lesbian. Personally, I always thought she had a thing going on with Freddie because they seemed to be the only ones ever to solve any mysteries.

But, this too is false. For one, Hampshire College didn't open until after "Scooby Doo" had premiered, as Snopes.com pointed out and for another, you could take any five colleges and match stereotypes to characters. It's like the guy who claimed he could predict the future using a computer program that analyzed the Bible when you can use the same program to pull out "predictions" from any long work, like "Moby Dick" or "War and Peace."

Some myths, however, are true. In my sophomore year I began hearing all sorts of stuff about Butterfield dorm – that in the '70s, its kitchen was shut down because they were making more money than any other dining hall or store on campus because they were using it to sell drugs and that they seceded from the United States afterwards. The jury's still out on the drugs, although it wouldn't surprise in the slightest, but in my sophomore year I did discover that Butterfield had in fact, seceded.

I tracked down Marc J. Randazza, who is now a lawyer, but in the early '90s was president of Butterfield.

He said they seceded in response to the Gulf War and the UMass administration came down hard. He said they were free-spirited and formed an actual community, but administration officials quoted in a UMass Magazine article said they intervened for two reasons: One was that they had reports that there were high school students at Butterfield parties and two, a student was injured trying to replace a pirate flag the administration had taken down. After that, everyone was removed and Butterfield was converted into the freshman-only housing it is.

Today, the Free Republic of Butterfield lives on in MySpace, if you can call that living. But that's the way things are: The dreams die while the myths live on.

Matthew M. Robare is a Collegian columnist. He can be reached at mrobare@student.umass.edu.

The Donald to trump GOP candidacy

Eddie Hand

I'm no Donald expert. I know he has a catch phrase and a reality show. I know his hair is very silly, he owns a lot of buildings, golfs religiously, dated lots and lots of beautiful women but is now married. He gives hope to funny looking people anywhere that with enough money they too can find love (or at least sexual gratification).

Now, Trump is saying he might run for president in 2012. Before we treat this like some sort of joke, we have to ask ourselves, "Why shouldn't he run?" He might seem a little ridiculous at times, but it's not like he's Charlie Sheen or something. I'm sure many of you would contend that he lacks the political experience and knowledge of our government necessary.

I wonder though, how much experience a politician really needs these days. Sure knowledge of law and international policy probably helps, but the guy has so much practice dealing with underlings that he has his own show where people compete to be just that. Is there that much of a difference between a business leader and a political leader? He's a commanding presence and as close to a professional leader as one can be.

My next line of reasoning is purely selfish so you'll have to bear with me. I'm sure that many of the men and women reading this take politics very seriously; I am not one of them. I treat it the way I treat anything else

I see on TV – as entertainment. That's why I loved the California race all those years back when Arnold Schwarzenegger went up against a porn star named Mary Carey and Gary Coleman for governor. How awesome was that? It was pure reality TV, except it was on the news instead of VH1.

> The Republicans need a guy like this in the competitions, especially considering the fact that they have no real candidate at the moment.

In fact, both Carey and Coleman ended up doing reality shows themselves. If Trump goes up against say, Sarah Palin, beats her and then makes her his running mate then we get a pair of reality TV stars verses the uber-charismatic Barack Obama. News ratings would go through the roof. They could put the debates on pay-per-view and the audience would still be huge. Politics has already become such a polarizing circus, why not take it one step further?

Moving on, the Donald has proved time and time again that he knows how to win. "The Apprentice" and "The Celebrity Apprentice" have been wildly successful. The Republicans need a guy like this in the competitions, especially considering the fact that they have no real candidate at the moment. Maybe Trump wouldn't win the nomination, but he could certainly invigorate the base. He already managed to piss off the Ron Paul fan-base by saying he had no chance to win in a speech at the recent CPAC gathering. If he raises up a little hell, it could do wonders in regard to people getting out and voting, and if anything that's what the GOP needs right now.

Well, that or a charismatic figurehead that can go up against Obama in debates. Trump would probably be good at that too. He oozes confidence and already knows what its like to perform for an audience of millions.

Trump is also apparently germophobic to the extent that he never actually shakes anyone's hand because of his fear. This sort of personality quirk might sound like a total disaster in the White House After all, not shaking the hand of a foreign leader or diplomat seems like an enormous sign of disrespect. In this age of terror, this could actually be a blessing. We don't know what kinds of poisons the enemy (whoever that may be in 2012) will be using.

So will he actually go and do it? Aside from the sheer entertainment value that would come with it, I think it's within the realm of reason, He's already a business mogul, TV star and gazillionaire. Politics seems like the logical next step. Let's face it, the guy is kind of an egomaniac. He thrives off this kind of attention.

Why not let him run for the GOP race?

Eddie Hand is a Collegian columnist and can be reached at ehand@student.umass.edu.

Virtual school is realistically a catastrophe

Chelsea Whitton

Imagine you are 6-years-old. You don't know what alcohol tastes like. It's a Friday. Spring is coming and you can wait to go get some air before school starts.

Life is good. You're in first grade, you are missing a few teeth but so is everyone else. You wake up, brush your teeth, throw on your favorite outfit, at this time of my life it was floral jumpers (they weren't "cool" according to some) and your oxford shoes. Then you run downstairs, drink some orange juice, eat breakfast (in my case usually a corn muffin) say goodbye to Mom, grab your backpack filled with your favorite glossy puppy folder and homework planner and run out the door to catch the bus. Your friends are standing at the bus stop looking just about as lame as you do, and you love them for that.

Life is good, simple and everyday feels different.

Okay, now imagine you do all of this except the leaving the house part, seeing your equally dorky friends at the bus stop part and seeing that other kids have also lost teeth and as a result look like vampires part. Take away the smile as you run out of the house to see your friends or the obligatory hug goodbye from Mom.

That's right kids. You are not in home school, you're in virtual school, which is already in practice in Massachusetts. There is a virtual school nearby in Greenfield at the Mass Virtual Academy. So rather than being obnoxiously sheltered like home school, you're stuck staring at a computer screen all day, while "normal" kids with "normal" parents get sent to school to interact with other human beings.

What is virtual school you may ask? No, it's not some "Zenon: Girl of the 21st Century" hologram teacher type deal. That would be cool compared to what virtual school really is. It's worse much worse.

Do you think it's annoying to have to use Spark all the time here at the University of Massachusetts? I do. Okay, well, virtual school is sort of like being on Spark for your entire education, or like taking an online course, for about 13 years of your life. For six or so hours a day. If I was six and was told that I would be going to online school I think I might drop out then and there. They'd be lucky if they would get open internet explorer before I yell, "I quit!"

> No matter what age you are in K-12, there are a few simple requirements that are impossible to meet if you attend virtual school.

In virtual school, you don't have your next crush named Peter to impress next to you, you can't go home and call up Sally and talk about how fat Mrs. B looked in that tacky red skirt, or how you wish Mr. Z wasn't married or how you can't tell if Mr. K really went to Columbia for the reasons he told you he did.

No matter what age you are in K-12, there are a few simple requirements that are impossible to meet if you attend virtual school.

First, there are in-person questions that exist for an in-person teacher. Yes, a human being that can answer questions may be important in developing some sort of view of the world for an uninformed youngling.

Second, the classroom has necessary resources: rocks for mineral studies, Bunsen burners for chemical experiments, large-scale world maps for geography and so on. The classroom setting is extremely important for absorbing class material.

Third, if you attend online school, you aren't making any correlations with memories and events. There won't be moments during high school when you look back with peers and say, "Remember the time that Billy fell into the coy pond on the top of the mountain? (This did happen). There will be no memories associated with the crucial learning process that develop who we are and how we view the world.

It makes me sad that for these children in virtual school that there will be no Mrs. Castle telling you that she is cross with you because you don't understand the concept that 25 cents is a quarter (such is my case). It makes me sad that these kids won't feel the need to raise their hands in class and ask a question that they are passionate about finding the answer to. Instead they will use the internet as a human connection to knowledge, global and, most importantly, social knowledge.

An elementary school is where you sit at long cafeteria tables, drink two percent milk, do your fractions on paper and sit next to classmates from your town or surrounding towns that you'll get to become best friends with.

Virtual school doesn't provide the documents, papers and coloring projects from that fifth grade space project you did. There is no opportunity to go to school assemblies, to star in the school play and find out you can sing and act. Virtual school, aside from minimal contact with your parents, doesn't even involve talking. How are these children supposed to development cognitive communication skills and public speaking skills if the only language they know is html?

In an ironic way, virtual school is supposed to be hands-on, but presents itself as entirely hands-off. There is no one nagging you to finish the last math problem before the bell rings for lunch, there is no music class with Mrs. K, where 30 fourth graders think they might just have a knack for playing the recorder or dabbling on the piano.

According to a Daily Hampshire Gazette article, "Meeting Monday on Hadley virtual school proposal," the Hadley School Committee is currently deciding on a proposal whether or not a virtual school will be implemented.

If approved, the article reports, "the new school would have 245 students from all over the state next year, 450 the second year and 500 the third year according to the proposal. It would be called Hadley Virtual Academy of Massachusetts. Earlier, it had been referred to as the Hadley Virtual Innovation School."

In his State of the Union Address, President Barack Obama outlined that the U.S. education system needs reform. I won't deny that. Actually, I fully support that notion. After hundreds of teachers in Rhode Island lost their jobs to a state with more than fragile economic conditions, this country needs teachers, better paid, in-person teachers, and this country owes it to our children for an affordable, high-quality education. Obama's message, whether you agree with his politics or not, was true. This country needs to teach children, give them the skills to test better and to do better in math and the sciences.

Staring at a computer screen form the age of five-to-18 isn't going to teach a kid half of the necessary social skills or global awareness needed to make it in this world. I hope this virtual school crap is some new-age yuppie parent fad that will hopefully fade out or change as quickly as Apple changes their iPad models.

Chelsea Whitton thinks education is important and can be reached at cwhitton@student.umass.edu.

10 great drinks for your St. Patty's Day

From Irish cream, the midori melon liquer, to Guinness, the possibilites are endless for ingredient combinations for green drinks on St. Patrick's Day.

By Ashley Berger
Collegian Staff

Does Irish whiskey make you frisky? Are you particularly partial to wearing green? Are the Dropkick Murphys your all-time favorite band? Do you like to get drunk quickly? Are you not really a fan of Guinness? If the answer is yes to any or all of the above, follow these recipes for some good, green Irish intoxication.

1. Everybody's Irish

For one day of the year, everyone is Irish and thus, everyone must drink like a true Irishman. Mix two ounces of Irish whiskey, one tablespoon each of green crème de menthe and green Chartreuse. By mixing all types of Irish alcohol, you'll feel very festive.

2. Irish Coffee

For all of you who want to get up as early as the bars will let you in to commence drinking, but need some caffeine to help you wake up, try this well-known recipe. Mix one and a half ounces of Irish whiskey with strong hot coffee, and top with whipped cream and brown sugar for a powerful morning wake-up.

3. Leprechaun

Not feeling naturally lucky today? Get a little Leprechaun in you and maybe that luck will change. Mix two ounces of Irish whiskey and tonic water, and garnish with a lemon to make this lucky liquid.

4. Green Goblin

Looking to get spooky this St. Patrick's Day? Try this recipe that will give you the chills. This recipe will require a variety of different alcohols, but the result will be a sweet and sour potion.

Mix one ounce of peach schnapps, one ounce of vodka, one ounce of coconut rum, and one ounce of green apple schnapps. Finish it all off with sweet and sour mix. Be sure not to drink too many of these or you'll end up looking a little ghoulish by the end of the day.

5. Irish Car Bomb

If you thought that car bombs would never actually kill you, think again – this mixture is deadly. Fill three quarters of a pint glass with Guinness and top with a half shot of Irish whiskey. Pour a shot of Baileys Irish cream in a separate shot glass. Drop the shot glass into the mixture and chug as the flavors mix together to form a fizzy and foamy mess.

Honey reserve whiskey leaves drinkers buzzing

By Matthew M. Robare
Collegian Staff

The trouble with many whiskeys – especially those in the price range of most college students – is that they can have a harsh taste and can therefore be unpleasant for developing palettes. Well, Evan Williams Honey Reserve, a straight Kentucky bourbon infused with honey, has solved that problem. The Honey Reserve manages to combine the sweetness of honey with the kick of quality whiskey without compromising either element.

Plus, it has a great price: A 750 ml bottle will only set you back $13.99.

If the honeybee and the words "Evan Williams Honey Reserve" on the label don't tip you off, pour a shot and smell it. It has a lovely amber color and the whiskey and honey smell combine nicely to form a bouquet that is neither too sharp nor too sweet. But the taste is really something, starting out honeyed and sweet and then cascading into smooth, hot whiskey. It's like every whiskey molecule is trapped inside a bubble of honey that effervesces in your mouth.

Shots of this stuff are not recommended. To enjoy it properly, sip and savor. There are also a few cocktails that can be made with the Honey Reserve. The website suggests: "Ginger Honey," Honey Reserve over ice, filled with ginger ale; "Honey Splash," combine the Honey Reserve, cranberry juice and lemon lime soda (like Sprite or Mellow Yellow) and pour over ice; "Lemon Honey," with lemonade and "The Stinger," Honey Reserve, ordinary straight bourbon, an energy drink and grenadine shaken and poured into a chilled shot glass.

Soon after first encountering the Honey Reserve, I invented a cocktail, currently unnamed: pour equal amounts Evan Williams Honey Reserve and Bacardi Grand Melon, a watermelon-flavored rum, into a chilled glass.

The chilled glass brings out all the flavors of both the Honey Reserve and the Grand Melon, and the scent takes on distinctive watermelon characteristics. On the tongue, the flavors combine like two soulmates very much in love reuniting after a long time apart and who were very, very lonely.

The Evan Williams distillery is owned by Heaven Hill Distilleries, Inc., bottled in Bardstown, Ky., and named after an 18th century distiller.

See WHISKEY on page 7

Collegian staff writer Matthew M. Robare recommends blending Evan Williams Honey Reserve with Bacardi Grand Melon.

With his latest release, "Smoke Rings for My Halo," Kurt Vile has expanded his sound to be simulataneously more laid-back and accesible.

Kurt Vile sending signals in 'Smoke Rings for My Halo'

By Mark Schiffer
Collegian Staff

Kurt Vile has been playing the same stoned classic rock riffs for several years now. What elevates him to the upper-echelon of indie-rock songwriters that he now occupies is a glorious lack of self-consciousness about this aesthetic, to the point that it damn well refuses to come across as derivative.

From his first released recordings with The War on Drugs to his latest release "Smoke Ring for My Halo," he's maintained a sun-baked, dusty guitar sound that has called back to the classic rock of old, while still managing to assert an independent sound.

What differentiates this new album from his previous works is a sudden tightening up of his rambling aesthetic. Even on his previous release, "Childish Prodigy," we as listeners were able to see the change occurring with the shift to major label Matador. There was a noticeable opening-up of his music, allowing for more instrumentation. Although his work with The War on Drugs was relatively polished, his solo work for the most part maintained a rambly, dusty sound.

This change only serves to make this performer's exceptionally 70s folk-rock based tunes more accessible to the average listener. Potential future single "Jesus Fever" brings to mind echoes of George Harrison's solo work and 70s AM pop along the lines of America. Once again, this isn't to call it derivative. Rather, it almost feels like a cassette by one of those named performers left in the tape deck for too long. It sounds just slightly overexposed, like a worn-out burned CD from high school. The guitars strum and he sings in his brambly, Marc Bolan-esque voice that "if it wasn't taped you could escape this song/But I'm already gone," as though the music itself is from a bygone era.

One could easily accuse this aspect of the music as a lack of a sense of place. But it isn't that simple. Instead of coming across as derivative, the music has a charmingly self-reflexive element, which doesn't come across as simple irony. Instead, it reminds one of listening to "Classic Rock in Spring," as the performer himself put it on his earlier album, "Constant Hitmaker." Kurt Vile's beautifully nostalgic music deserves a larger audience than it has received thus far. With "Smoke Ring for My Halo," it may finally receive one.

Mark Schiffer can be reached at mschiffe@student.umass.edu.

Green drinks: from Baileys to Guinness to Midori

DRINKS from page 6

6. Nutty Irishman

For a shot that will leave you feeling nutty after just a few, try this recipe. Fill half a shot glass with Irish cream liqueur and fill the rest with Frangelico. Because the shot does not include any particularly potent alcohol, it goes down easy and will more than adequately get you started.

7. Shamrocked

Arguably a new synonym for "wasted," getting "shamrocked" will leave you feeling green into the next morning. This drink combines fruity and Irish flavors that provide for a sweet and simple drink. Mix two ounces of Midori melon liqueur with one ounce each of Tullamore Dew Irish whiskey and Irish cream liqueur. Shake the ingredients together and enjoy.

8. Irish Blond

Like blondes as much as you like drinking? Can't actually get a blonde to be by your side for the day's events? Try this recipe that will mix blondes, booze, and fun. Mix two ounces of Irish whiskey, three quarters of an ounce of orange curacao, one quarter Fino sherry, and orange bitters.

9. Green Mist

Looking for a light concoction that is both fruity and fantastic? Mix a half ounce of banana liqueur, a half ounce of cherry brandy and one ounce of green crème de menthe. Top the glass with ginger ale and enjoy.

10. Emerald Isle

Though you may not be able to afford the plan ticket to Dublin this year, this recipe will transport at least your mind and taste buds there. For the easiest recipe on the list, mix one teaspoon of crème de menthe with one ounce of gin and enjoy over ice.

Ashley Berger can be reached at aberger@student.umass.edu.

Evan Williams Honey Reserve scores high

WHISKEY from page 6

Evan Williams was an immigrant from Wales who is credited with being Kentucky's first whiskey distiller. Heaven Hill is the world's largest family-owned distillery. It was put together after the repeal of Prohibition by a group of investors led by a branch of the Beam family, who still owns it.

Evan Williams Honey Reserve was introduced in the fall of 2009, Evan Williams Cherry Reserve was launched in September of last year and eggnog premixed with bourbon is available during the winter Holiday season. The Honey Reserve was awarded a Silver Medal at the 2010 San Francisco World Spirits Competition.

According to the website, bourbon must be made from a mash of at least 51 percent corn and aged in a charred oak barrel for at least two years, although the Evan Williams brand bourbons are aged four years or more.

The Honey Reserve is 35 percent alcohol, or 70 proof. It is an extraordinary drink and worthy of at least a taste.

Matthew M. Robare can be reached at mrobare@student.umass.edu.

Minutemen search for season's 1st W

By Eric Mansfield
Collegian Staff

The Massachusetts baseball team began its season last Friday with four losses over three days, including two to Michigan and two to Sam Houston State at the Bearkat Invitational in Huntsville, Texas.

The Minutemen started off with the Wolverines (2-9), who began their season going winless in the Big East/Big Ten Challenge, playing against the likes of then-No. 21 Louisville, then-No. 22 Connecticut and St. John's.

The scoring started in the second inning with RBI singles by Zach Johnson and Kevin Krantz and continued the following inning as the Wolverines tacked on two more runs, making it 4-0. Michigan would tack on its final run in the bottom of the seventh.

In his first at bat of the season, senior captain Eric Fredette gave the Minutemen (0-4) scoring hopes with a two-out double. The Minutemen squandered the opportunity and then went the next five innings without a hit. Finally in the seventh, UMass threatened with two singles by senior Peter Copa and freshman Dylan Begin, but Michigan kept it from scoring.

The eighth inning saw another threat from the Minutemen, this time resulting in a pair of runs. Freshman Josh Messier started things off with an infield single and sophomore Rich Graef reached on an error. Messier would score on a single by sophomore Anthony Serino while Graef would reach home on an RBI groundout by Copa.

That would be all, however, as Michigan's Jake Engels ended the threat by getting Begin to fly out to end the inning. Engels would also pitch a scoreless ninth.

In their second game against the Wolverines, the Minutemen took an early lead but couldn't hold on, resulting in an 11-6 loss.

Highlighting the increased offensive output was Copa, who finished with two hits and an RBI. Serino and Fredette also scored two each for UMass.

Taking the loss for the Minutemen was junior Leif Sorenson, who allowed six runs, four earned, on eight hits, two walks and two strikeouts. Sorenson also hit five batters.

UMass coach Mike Stone said that Michigan was a beatable team but the Minutemen just didn't play well enough, adding that while moving forward, shaking the rust off and getting comfortable will prove important during the early stages of the season.

The first contest against Sam Houston State was a 9-1 loss which extended the Bearkats' winning streak to seven games.

Copa tallied the only run for the Minutemen with a solo home run in the seventh inning.

Junior Glen Misho took the loss for UMass, going five innings, giving up six runs, four earned, on seven hits with three walks and one strikeout. Sophomore Dennis Torres pitched four innings of relief in his collegiate debut, allowing one earned run on four hits with four strikeouts and a walk.

In the last game of the weekend, much like the first, the Minutemen rallied late but ultimately came up short, losing 6-2.

Seniors Matt Gedman and Kyle Multner each finished with two hits for UMass.

"Sam Houston is an excellent ballclub," said Stone, adding that the Bearkats were particularly tough on the base paths.

The team will look to bounce back this weekend when it heads to Winter Haven, Fla. for a two-week road trip that will include eight games, starting with Toledo (4-7) on Saturday and Bradley (6-4) on Sunday.

Toledo, who will have already been in Winter Haven for four games, has started off the week with a win over Yale and a loss to Xavier. Bradley, which, like UMass, will not have played since last Sunday, is coming off of two wins over Morehead State and Indiana.

Stone said that every aspect of UMass' game needs to improve, notably its pitching and short game (bunting, base running). The pitching will improve with the players' continued focus on strengthening their arms through long toss and having better command of the strike zone.

Eric Mansfield can be reached at eamansfi@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Senior Matt Gedman rounds first base after hitting a home run last season. Gedman and UMass will look for their first victory of the season when play Toledo on Saturday.

JEFF BERNSTEIN/COLLEGIAN

Sophomore Cyndil Matthew takes a lead off second base in a game last season. The Minutewomen will take part in the USF Under Armour Showcase in Florida this weekend.

UM softball travels for Florida showcase

By Michael Wood
Collegian Staff

After rain washed away last weekend's tournament in Georgia, the Massachusetts softball team will travel to Florida this weekend to take part in the USF Under Armour Showcase.

The five-game set starts on Friday when the Minutewomen will play their first doubleheader of the weekend against Toledo and South Florida.

UMass (2-10) has never faced the Rockets in softball before, but the two will be similarly matched when they meet on Friday. Toledo has been outscored 77-28 in its first 10 games and currently sits at 1-9 on the year. The Rockets have two players batting over .300, one more than the Minutewomen, and have given up 19 unearned runs on defense.

The Bulls have fared better in their first 20 games this spring, going 11-9 and using four pitchers to win games. Gina Kafalas leads the squad in both batting average (.379) and stolen bases (9).

UMass' Sara Plourde has experience pitching against USF, striking out 14 last season and allowing three runs. In that game, Plourde received a win after former Minutewoman Michelle Libby hit a two-run single late in the game for the go-ahead run.

A day later, UMass will play another doubleheader, this time taking on Colorado State, then Green Bay for the first time in the program's history.

The Rams are also struggling this year, going just 4-15 so far. UMass is 2-1 against them in history, dropping its most recent meeting last season, 2-0. Brittany Palish is the driving force of Colorado State's offense, batting .407, while Alysa Greckel represents the power threat, tallying six home runs and 16 RBIs.

What the Rams lack, however, is pitching. Kelsey O'Brien has seen the most time on the mound thus far and has posted an earned run average above 10 in just 36 innings.

In the nightcap, UMass will take on Green Bay, which it has also never played before. The Phoenix have only played four games and are 1-3. Allison Goecks is the Phoenix's best hurler, recording a 2.47 ERA.

Play will conclude on Sunday against St. John's. UMass has never faced the Red Storm either, and will look to Plourde to contain Chelsea Durning, who is currently batting .403. The Red Storm are 7-12 and also have four players with double-digits in RBIs.

The Maroon and White are entering the weekend on an eight-game skid. Over that span, they have been shut out five times and only scored more than one run on two occasions. Junior pitcher Sara Plourde has had a slow start to the season, giving up 29 runs (20 earned), 40 hits and 32 walks.

The offense has struggled to score as well, not offering Plourde any run support. Right now, Kyllie Magill leads all Minutewomen with a .306 batting average, 11 hits and six runs scored. She's the only player on the team hitting over .300 and the next closest player, Tiffany Meeks, sits at .235. The team as a whole is batting .174 with only 25 runs scored and 87 strikeouts through 12 games.

Following the USF Under Armour Showcase, UMass will travel to North Carolina to open up Atlantic 10 play in a two-game series against Charlotte.

Michael Wood can be reached at mcwood@student.umass.edu.

1st-round pairing set as UM faces BC

By Pete Vasquez
Collegian Staff

It took the Massachusetts hockey team up until the final game of the regular season to narrowly escape with a spot in this weekend's playoffs. Now that the Minutemen are there, they must take down defending national champion Boston College in a best-of-three series at Chestnut Hill, Mass.

The Minutemen controlled their fate last weekend, needing to get one point in order to qualify for the postseason. A strong-willed third period in the finale against Maine gave them a 4-4 tie and the opportunity to extend their season. It was an opportunity they expected to seize before the season began.

"We absolutely didn't want to get into a situation where it would've been the first time we hadn't been in the playoffs since my second year here," said UMass coach Don Cahoon. "I knew we were a young team and that there was going to be difficulties. But at the end of the day, I expected to be playing in the postseason."

The Eagles will face off with the Minutemen for the fourth time this year. BC has won all three meetings this year, with two of those games played at Conte Forum. While UMass is winless against BC this year, its troubles trace back to last year's playoffs.

The two teams met up in the first round of the Hockey East tournament last season. The Eagles ended the Minutemen's season by sweeping that series 6-5 and 5-2, respectively.

BC beat UMass, 5-0, on Feb. 4th of this season, holding a 43-16 shot advantage. The Minutemen held the deficit to 2-0 for most of the night, but broke in the third period, allowing three more to reach the back of the net.

The other two games were tight one-goal affairs. The same night Paul Dainton became the all-time saves leader for UMass, the Minutemen, down 4-1 at one time, fell short in their comeback attempt, eventually falling 4-3. One night later, the Eagles completed the home-and-home sweep in Conte Forum with a narrow 2-1 victory.

However, Cahoon has grown accustomed to the number of close calls this season.

"We've had games won and not been able to close them out, but we've competed – outside of one weekend – in every one [of those games]," said Cahoon. "That speaks to what we're all about so we've got to find to do that one more thing or make one more play or save in the crucial situation in order to turn those close calls into some successes."

The last time the Minutemen won at BC was on Nov. 17, 2007, in a 3-2 victory due in large part to Dainton's 30-save effort.

A similar, if not better, effort will be needed from the senior captain if the Minutemen are going to stand a chance.

"It's going to take a complete effort by a lot of people and clearly the biggest challenge is [Dainton] in the goal," said Cahoon. "He's knows he's going to be threatened so he has to be sharp.". Dainton and the defense will have their hands full for the second-straight weekend, dealing with a standout star and one of the nation's best.

The Eagles feature the conference's top goal scorer in Cam Atkinson. His 27 goals highlight a roster that boasts six different 10-plus goal scorers for the season.

"We've got to be able to play with all of their weapons," said Cahoon. "Most teams have one line that's clearly superior to the others. They call their Atkinson line their big line but they've got three offensive lines that are very capable and we need to be able to play with those three lines and get our own opportunities."

The Minutemen will walk a fine line between generating those opportunities and having it backfire on them.

"We need physicality but we need to stay out of the box," said Cahoon. "That's crucial for us."

Pete Vasquez can be reached at pvasquez@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Freshman Troy Power skates against a Maine player earlier this season. The Minutemen will take on Boston College this weekend in a best-of-three series in the postseason.

Forward Cam Atkinson puts a shot on goal earlier this year. The junior leads the Eagles and the entire Hockey East with 27 goals, while recording 20 assists and 47 points.

Huskies claim series opener to conference tournament

By Steve Levine
Collegian Staff

Following the conclusion of games last weekend, the Hockey East Association announced the pairings of its playoff teams for the upcoming 27th annual Hockey East Tournament.

The tournament's quarterfinal round will showcase Hockey East regular season champion Boston College hosting No. 8 Massachusetts on Friday. The Eagles (26-7-1, 20-6-1 HE) clinched the conference title on Saturday when they defeated New Hampshire, 4-3, on the road. BC swept UMass (6-21-6, 5-16-6 HE) in three games this season. The teams also met last year in the quarterfinals, when the Eagles won both games en route to their league-record ninth tournament title.

Another rematch of last year's quarterfinals is in store when No. 2 New Hampshire hosts No. 7 Vermont. Last year, the Catamounts defeated the Wildcats on the road in the best-of-three series in the first-ever conference tournament meeting between the two teams. However, UNH took the season series, winning two games and tying in one this season.

No. 3 Boston University will entertain No. 6 Northeastern at the Agganis Arena. The two teams played a home-and-home series last weekend, with each team winning one on the road. BU (18-10-8, 15-6-6 HE) won the season series, 2-1. On Thursday night, the Huskies edged the Terriers, 4-2, to take the 1-0 lead in the series. After being knotted at one goal apiece late in the first period, Northeastern reeled off three scores in a span of under 11 minutes to take the lead for good. Steve Silva led the way for the Huskies offense, recording two goals while goalie Chris Rawlings made 37 saves in the victory.

No. 4 Merrimack will host No. 5 Maine, which bested the Warriors in this year's season series (2-1). Both of Maine's victories came during the weekend of Feb. 25, when the Black Bears swept the Warriors at home. The last time the two teams met in the playoffs was in 2004, when Maine defeated Merrimack in the quarterfinals en route to claiming the Hockey East Tournament title.

Hockey East is often considered to be one of the nation's most competitive conference, as five of its 10 teams are ranked in the top 20 in the country. According to the USCHO national rankings, the Eagles finished the regular season at No. 2, Merrimack at No. 9, New Hampshire at No. 10, Boston University at No. 13 and Maine at No. 14.

After winning the Hockey East and the NCAA tournaments last year, the Eagles are the clear favorites to win the tournament. They've scored the most goals (131) and allowed the least (76) at the same. They are led by a slew of point-scorers, including junior Cam Atkinson (27 goals, 20 assists), senior Brian Gibbons (15 goals, 30 assists), sophomore Brian Dumoulin (2 goals, 26 assists), senior Joe Whitney (4 goals, 23 assists) and junior Jimmy Hayes (16 goals, 10 assists), among others. Aside from their offensive production, BC boasts senior goaltender John Muse, whose 23-5-1 record, 2.08 goals against average and 0.927 save percentage ranks among the best in the country.

Last year, the Eagles made relatively easy work of their opposition in the NCAA Tournament, knocking off Alaska-Fairbanks in the first round, 3-1, Yale in the quarterfinals, 9-7, Miami (Ohio) in the semifinals, 7-1 and Wisconsin in the championship, 5-0.

Roh elected SGA president; Kennedy voted in as trustee

By Sam Hayes and Ashley Berger
Collegian Staff

The day before University of Massachusetts undergraduates bolted for spring break, elections for Student Government Association president, student trustee and area governors came to a close with a turnout of nearly 3,000 voters. Junior Yevin Roh was elected to the post of SGA president, while junior Tina Kennedy netted the title of student trustee.

"I thought the election had a great turnout," said SGA Elections Chancellor Zachary Dawson. "I was really impressed with all the candidates, and especially with how Yevin and Tina ran their campaigns."

Dawson said this year's election was exciting for him.

"It was a close race," continued Dawson. "The top two candidates were within 100 votes of each other for both the presidential and trustee candidates."

Roh, who won by a mere 72 votes, said he felt before results were announced that the race between he and juniors Dave Robertson and Nate Lamb would be neck-and-neck.

"I was cautiously confident that I would win, but I knew it would be a close race," Roh said. "My cautious confidence came from the fact that I have worked with and helped a panoply of student groups."

Throughout the election, Roh said he admired both opposing candidates. He added that he is excited to work with them during his presidency.

"I have a great respect for Dave Robertson," said Roh. "He and I currently work together on several student issues, and we have collaborated in the past."

In a post-election interview, Robertson said he has a few concerns about Roh's election.

"Yevin may be too quick to fight the administration before gaining the full information about situations," said Robertson.

He also expressed concern that Roh may not "remember the average student."

"He has a tendency to focus on differences, and yes, we all come from different backgrounds and we all have things to be proud of," continued Robertson, "but we're all also in this together as UMass students, and it is good to have an empowered student base, but while we should be proud of each other's backgrounds, we should also focus on what makes us similar."

"I don't know much about Nate," Roh continued, referencing Lamb. "We haven't formally met until this semester. Regardless of the outcome, I hope both will continue to fight for the issues they campaigned for; I will happily work with them as a student and as SGA president for the welfare of our peers."

Although candidates do not run on a technical ticket together, candidates for SGA president and student trustee this year, as in the past, ran as conceptual running mates. Roh's running mate, Widlynn Louis, whose campaign in the days before the election may have suffered from reports in the Daily Hampshire Gazette and the Massachusetts Daily Collegian of her two arrests this semester – one for alleged aggravated assault with a deadly weapon and another for an alleged violation of Amherst's noise bylaws – fell to Kennedy.

"I am excited to work with Tina," said Roh. "Like Dave, I have known and worked with Tina since our freshmen year. I know from past experience that I can work well with her. We share similar politics, and most importantly, a dedication to students."

Roh said he has a lot of plans for the near future, adding that he is enthusiastic about beginning. He said his initial aim is to focus on preparing for the June UMass Board of Trustees meeting to "protest the flagship fee and defend changes to the Code of Student Conduct that the CSC review committee and I have worked on."

According to Roh, these changes include "the development of clearer and updated policies on hate crimes and what constitutes hate speech, a new bathroom policy for gender non-conforming students, and a more comprehensive sexual assault policy.

Roh also said he feels strongly about generating support and feedback regarding changing the role of the current peer judicial board system.

"It would allow students that take responsibility for minor policy violations to be treated justly as a peer, and not just a student ID number," said Roh. He added that he believes as a university, the number of sanctions delivered to students suggest a disconnect with what the University's goals should be, which is keeping "education our goal – not punishment."

"UMass currently hands out more sanctions than it does diplomas; my hope is that the opposite can be true," said Roh, who gained this statistic from the University's student legal services.

"By using peer judicial boards, we can help ease the number of cases seen by the Dean of Students office, allowing them to give the due attention to serious policy violations," said Roh. He said he believes violent crimes should require the attention of the Dean of Students, but that the office "is being clogged up by minor offenses" that could be addressed with the peer judicial board. He also stressed how he feels peer-to-peer education about the ramifications of minor violations could help students feel more aware of how violating a noise violation within the dorms affects other students.

Roh ran on a platform that suggested he would be bringing greater diversity to the campus.

"Exploring diversity helps each of us here at UMass. Every person is an individual, but also a sliver of a multitude of backgrounds and cultures we can all learn from to better prepare ourselves for an increasingly globalized world," he said.

"I do not operate under a narrow definition of diversity that only includes color," he continued. "Students here at UMass have visible and hidden identities that extend far beyond race, and it is time we made a safe space for dialogue to happen."

Roh plans to set up SGA tabling during "convenient times for students" in the Campus Center so that students can interact with SGA senators and express concerns they would like the SGA to focus on.

"I really look forward to working with each individual and group who comes my way," said Roh. "I am very open to feedback and criticism, both positive and negative. If any person has an issue with my administration, I would love to have them contact me personally and talk to them one-on-one.

"I have a lot of thank you emails to send to the people who have helped put me in a position where I can visibly fight for students," said Roh.

Kennedy also defeated her opponents by a small margin. She won with 1,090 votes, while

The proposed Gateway Development Project calls for turning the former UMass fraternity row along North Pleasant Street into taxable properties.

Gateway plan moves forward in Amherst

By Matthew M. Robare
Collegian Staff

The Gateway Development Project – which aims to build a mixed-use development on a now vacant lot on Amherst's North Pleasant Street, where the University of Massachusetts' fraternity row once stood, inched closer to becoming a reality before spring break, when the Amherst Redevelopment Authority (ARA) hired ACP Visioning & Planning of Columbus, Ohio to consult on the project.

"The process is really just beginning," said John Coull, chair of the ARA. "Everything is on the table, and nothing is off the table."

UMass bought the 1.86-acre piece of land from the national Alpha Tau Gamma fraternity in 2007 and had the houses torn down. The lot has been empty ever since.

"The main thing the University wants to get out of it is to create an attractive link between campus and downtown," said UMass Deputy Chancellor Todd Diacon. "We think an attractive development will help recruit students and their parents."

Larry Kelley, an Amherst accountant and ARA member, said the presence of Diacon and Nancy Buffone, the executive director of external relations and university events, at ARA meetings is "how I know UMass is serious about this." He added that the Gateway Project is the closest he's ever seen the town and the University work together.

Diacon said that the next step in the project is the visioning process. ACP will try to get many different views from "stakeholders" – neighbors, students, university faculty, administration, staff and others who might be affected by the project – as possible. He added that other properties in the "Gateway corridor" – both sides of North Pleasant Street from the intersection with Massachusetts Avenue to Kendrick Park – were under consideration for inclusion in the project.

Last September, the University and the town signed an agreement called the "University of Massachusetts–Town of Amherst Gateway Redevelopment Project Partnership to Expand and Improve Housing." The agreement outlined the reasons for working together, with the two main points being that "the availability and affordability of quality housing directly affects the ability of the University of Massachusetts Amherst to attract and retain students and ... The Town of Amherst needs to develop improvements to the tax base." The agreement also stated that the school and the town would be "full partners" in the process.

"The Redevelopment Authority has lots of discretion," Coull said.

Kelley expanded on that, saying that the ARA has eminent domain power, which allows them to take properties needed for the project. "The town has eminent domain, but it takes them forever to use it," he said.

Coull said that students will be consulted "early in the process, to make sure they're included." After the visioning process is complete, he said, ACP will produce a "charrette," or model of the proposal in the next three months, then the ARA will go to Town Meeting, either in the fall or next spring, and request that the area be rezoned for mixed-use development. If Town Meeting members approve the change, then the University will apply to the Massachusetts General Court for permission to give the property to the town.

"The state has oversight over its own property and we need special permission to dispose of it," Diacon said.

Kelley said the project is potentially worth millions of dollars in tax revenue for the town. "The frats were privately owned; they paid the town taxes," he said, but UMass, except for the UMass Hotel at the Campus Center, is tax exempt. According to Kelley, around half of the property in Amherst is owned by tax exempt organizations, with the three largest tax exempt entities being Amherst College, UMass and the town itself. He added that while the University does pay an annual sum to the town instead of taxes, the amount is very small compared to that of other schools.

He compared the proposed mixed-use development to the Village Commons in South

Obama issues student service challenge

The White House is challenging students across the country to give back to their campus communities. Specifically, President Barack Obama's administration is asking faith-based and secular student groups to come together on campuses throughout the nation to participate in a year-long service program being called the President's Interfaith Community Service Campus Challenge.

Obama announced the creation of the program, which is sponsored by the White House Office of Faith Based and Neighborhood Partnerships and supported by the Corporation for National and Community Service and the Department of Education, last Wednesday in a video message posted on the White House website. The challenge has been developed in the hopes of harnessing the manpower of a diverse array of service-based organizations on college campuses and encouraging "campus-based religious and non-religious organizations to partner together with local community organizations or houses of worship to tackle specific, year-long community service challenges," according to a March 17 release from the White House Office of Media Affairs.

President Obama said he

Nearly 3,000 students vote in SGA election

ELECTION from page 1

Louis secured 989 and candidate Emily Jacobs held 693.

Surrounded by friends and campaign volunteers the night the results came in, Kennedy described her feelings that night as being "so overwhelmed with emotion ... relief, happiness, excitement." She said she "wanted to call [her] parents straight away."

Kennedy admits she was slightly surprised by her win and even more surprised when her running mate, Robertson, lost his election.

"Dave and I were prepared for two things, as is any ticket, to lose together or to win together. I think what added mostly to my shock was that Dave had not won and I had," she said.

"I'm still going to do everything I said I was going to do anyway, but just outside the SGA most likely," said Robertson, who was unsure about what exactly his role with the SGA would be next year. He added that he feels his connections and contacts with administrators at UMass who were looking forward to working with him had he been elected will help him continue with the plans on which he ran.

These plans include focusing on creating an SGA-funded program for undergraduate students to gain training from members of the department on advising, similar to the peer mentor position in UMass Residential Life. Robertson also wants to help elevate what he feels is a negative perception of UMass' Greek life amongst the Amherst and UMass communities by gaining better press for Greek life's positive events.

Despite her shock at the election results, Kennedy said she looks forward to working with Roh.

"I know [Roh] to be a sensible individual who understands the notion of camaraderie," she said. "In truth, at the end of the day we might have been on opposing tickets, but we have respect for each other and we have each others' backs."

Kennedy noted that she will stick with the initial plans she outlined during her campaign as part of the Kennedy Robertson ticket, by continuing to push for meal plan reform and improved advising, an issue Roh has also discussed.

Kennedy said increasing affordability for students is not only a long-term goal, but also her top priority.

"We were elected by the student body to serve and advocate in the best interest of the students, and that is what we intend to do," she said.

Current trustee Mike Fox will train and teach Kennedy about the position throughout the semester.

Fox will stay on through June and Kennedy will continue to be associate speaker until he leaves.

Residential area gubernatorial elections were also held.

Evan Pleasant won the position of Central governor in a landslide, as did Jenna Adelsberger for Orchard Hill. Kenneth Zhou won for Northeast and Emily Warnock won for North. Joshua Haney narrowly beat out Nick Julian to win the gubernatorial race for Southwest.

Elsie Spencer won the race for Sylvan governor, lieutenant governor and secretary with three votes in each category. Maria Burden is the new commuter governor.

All of the new positions begin for the fall 2011 semester.

Alyssa Creamer contributed to this report. Sam Hayes can be reached at sdhayes@student.umass.edu. Ashley Berger can be reached at aberger@student.umass.edu.

Springing forward

The Pioneer Valley sprang back to life this March, as these chickens at Simple Gifts Farm in Amherst resumed their outdoor posts.

Town brings in firm to assist development

GATEWAY from page 1

Hadley, which is a development across the street from the Mount Holyoke College campus. Except, he noted, the Amherst proposal is "10 times bigger and better."

Kelley envisions the development as having retail and office space, as well as restaurants and some high-end student housing. "I'm going to work very hard to make sure it happens," he said.

The main obstacle to the project, Kelley noted, is that zoning changes require the approval of two-thirds of Town Meeting members.

"There are folks who want it to remain an open field," Kelley said. "All they need to do is convince 60 to 65 people to say 'no.'"

He said that the people who oppose the Gateway project are worried that any new student housing will be like fraternity row or Hobart Lane – a street in North Amherst that has become known for its raucous atmosphere.

According to the Amherst Bulletin, a group of residents formed "Amherst Citizens Concerned About Gateway" and submitted a petition to the Amherst Select Board asking them not to appropriate the money needed to hire the consulting firm. John Fox, a Fearing Street resident associated with the group, could not be reached for comment.

"The process is really about to start," Coull said. "Right now it's a big emphasis on process."

"UMass can do anything they damn well please there," Kelley added. "They're a thousand-pound gorilla and the town is a 50-pound chimpanzee."

Diacon told the Amherst Bulletin in December that if the zoning changes aren't approved, UMass will probably undertake the project alone.

Matthew M. Robare can be reached at mrobare@student.umass.edu.

JOIN THE NEWS TEAM

Program aims to unite groups

CHALLENGE from page 1

feels community service can bring together people from all walks of life behind a common mission, and that using faith-based programs as an engine for development can strengthen community ties and individuals' faiths.

"As a Christian who became committed to the church while serving my community, I know that an act of service can unite people of all faiths – or even no faith – around a common purpose of helping those in need," he said in the video message. "In doing so, we can not only better our communities, we can build bridges of understanding between ourselves and our neighbors."

As part of the challenge, both faith-based and non-religious groups from colleges and universities can log onto www.whitehouse.gov/interfaithservice to post their plans for year-long service drives to better specific community needs. The White House will then "recognize" the projects it deems most effective and helpful for community development, according to Wednesday's statement.

According to the release, several such programs are already underway at campuses across the country. The University of Illinois Champaign-Urbana presently has a program in place bringing together the InterVarsity Christian Fellowship, Hillel, the Muslim Students Association and Buddhists for World Peace along with the community's Salvation Army to help earthquake victims in Haiti, while several faith-based groups at Vanderbilt University in Tennessee will work together to build a house through Habitat for Humanity, according to the release.

TO BENEFIT THE AMHERST SURVIVAL CENTER
Prizes awarded by age/gender/team
Wheelchairs and strollers welcome
Health fair
Public welcome
Cash raffle day of race

REGISTRATION & FEES
Register online by **Wed., March 23, 2011 by 3pm** at www.umassdining.com
Race day registration also available
$10 for UMass students on a meal plan
$12 for Five College students not on a meal plan
$15 for public
Lunch and t-shirt included in entry fees
A portion of the entry fees will be donated to the Amherst Survival Center

SCHEDULE
Check in begins at 9:00 am at Berkshire Dining Commons
Race begins at 11 am
Prizes award at noon
Lunch and Health Fair to follow

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

MONDAY, MARCH 21, 2011

"He who sees the calamity of other people finds his own calamity light." - Arabic Proverb

EDITORIAL@DAILYCOLLEGIAN.COM

Libya's explosive bailout

So we're at it again, eh? Only this time it's the French that are looking for glory. Western leaders met in Paris the other day to decide what to do about Libyan leader Muammar Gaddafi and his whole "no mercy" policy towards his citizens, and eventually settled on a time-tested strategy: precision bombing of strategically-important ground targets.

Max Calloway

Western powers pounding on a dictator's troops isn't unique, but what is rare is that France seems to be leading the effort. In fact, over a week ago, French President Nicolas Sarkozy was calling for military support for Libyan rebel fighters who are quickly losing ground to Gaddafi's minions, while President Barack Obama was trying to give friendly advice to the bloodthirsty dictator, urging reform and respect for international human rights standards.

Now, I can't blame Obama. Two unpopular foreign wars, a "recovering" economy and a lot of whackos demanding, again and again, to see his birth certificate make dealing with global crises like these a touchy venture, to say the least. American military advisors, tired of playing babysitter for the country whose parents they murdered, kept reminding everyone that deposing a dictator is the easy part; it's the nation building that gets tricky.

But drawing comparisons between Iraq and Libya is pointless. With the former, the U.S. unilaterally invaded and systematically dismantled the infrastructure of a nation, while subsidiaries of a company, Halliburton, whose cookie-jar then Vice President Dick Cheney had his hand jammed in, rolled in under the auspices of democratic reconstruction.

Saddam Hussein wasn't exactly warm and cuddly, but his people hadn't yet called for his head when our Abrams tanks and F-15s rolled in to "shock and awe" with guns blazing. So, when U.S. contractors were slow to provide basic necessities and began killing civilians, the people of Iraq, in the form of armed insurgent activity, started calling for our exit. And why shouldn't they?

Okay, so yes, Saddam systematically tested chemical weapons on minority populations; had countless arrested, tortured and killed by his secret police; started an unpopular war with his neighbor Iran that ended in massive casualties and no real change to the Iran-Iraq status quo, aside from increased tensions and a lot of graves. Generally, Saddam was a mean guy – but Gaddafi is too.

The important distinction between the two cases is that in Libya, the citizens instigated the violence against their maniacal tyrant; the U.S. didn't do it for them. This might be an obvious point, but it's one that has been mostly ignored in coverage of the Libyan crisis.

The Libyan people tried to pull an Egypt, they wanted to go the way of Tunisia; the problem is they have an absolutely insane autocrat with a sizeable armory and a will to power so horrifying it puts the Joker to shame.

When the U.S. took away the agency of the Iraqi people, we were playing a very dangerous game. Here were a people who had lived in relative comfort – well, aside from the constant fear of government-sponsored kidnapping and what not – and we came on in and literally destroyed their country. So when the Iraqi people didn't have medical care, potable water or reliable electricity after getting a revolution they didn't ask for in the first place, it's no wonder they took up arms.

The West got spoiled with Tunisia and Egypt. Relatively little blood shed and a peaceful transition to new constitutions with publically-accountable elections on the horizon. Even Yemen, Bahrain and now Syria are diplomatic no-brainers: urge the government to respect human decency and push for timely reform. So when Gaddafi started brutally cracking down on peaceful demonstrators, and those peaceful demonstrators turned into an armed rebellion, the West revealed its guilty conscience. If you want proof of this collective guilt, just look to Hillary Clinton's recent reassurances to the global population that the decision to help out Libya wasn't unilateral.

I understand why all of our leaders are being so apologetic, but I'm not so sure they need be. The Libyan people tried to pull an Egypt, they wanted to go the way of Tunisia; the problem is they have an absolutely insane autocrat with a sizeable armory and a will to power so horrifying it puts the Joker to shame. So to see the U.S. and its allies use their firepower in support of a popular revolt in this case is actually refreshing.

I'm not condoning a bombing campaign that is most likely going to result in needless civilian causalities, but when I think about the piles of historical documentation on the extreme and horrifying measures tyrants often go to in order to retain power, I can't help but feel like I'm staring at a lesser of two evils scenario.

Regardless, military officials are still cautious and have been quick to warn that Islamic extremist organizations will be quick to seize this opportunity to bolster support under the "the West is only after our resources" banner, but please take a moment to really consider this.

The Libyan people have risen against a dictator who's been a staunch ally to the West in the War on Terror. Part of the reason Gaddafi has been as buddy-buddy with the West – despite his questionable record as a leader – is because Libya is oil rich. So if the West's military actions are in support of a liberated Libyan people's right to take more control over their lives and country, then it seems that no matter who we back, we will always appear as though we're grabbing resources.

Anyway, we're assisting a popular uprising instead of performing it for the Libyan people, but the real red-herring in this situation is France. They were the first to drop bombs and it seems Sarkozy is tired of France being the butt of all the jokes in the Security Council. Good for you France, I have a feeling Obama will have no problem bequeathing to you the title of "Global Policeman."

Unemployed? Try South Korea

With graduation looming, student loans about to activate like time bombs, and the U.S. economy still in rehab, many American college graduates are seeking employment in an unlikely place: South Korea.

Rachel Dougherty

South Korea is quickly becoming one of the most popular destinations for American students seeking to teach English abroad after college. If you've visited Craigslist in the past year or so, you may have noticed an advertisement for Teach Abroad South Korea that pops up with almost every search. The advertisements are simple: great pay and accommodations, and no teaching experience necessary – all you need is an undergraduate degree and a willingness to relocate.

An American college graduate teaching in Seoul through a Fulbright Teaching Assistantship and acquaintance of the author, says teaching English in South Korea can be a great experience for students looking to work and travel after college.

"The cost of living is good here, people are friendly and generous, and you will have a better shot at learning Korean than any other Asian language – it's got an alphabet and it's not tonal," said the author's acquaintance. "There is also a fairly large population of 'foreigners' – mainly English teachers – in Korea right now."

According to a May 2010 GlobalPost.com article, there are more than 22,000 foreign English teachers living in South Korea. The majority of these teachers seem to be young college graduates from the United States.

"The Korean government wants their people to learn English," says Caroline Gould, Assistant Director of Career Services at UMass. "They asked, 'Who can we get to teach our citizens English for cheap?' And they thought, 'Aha, the Americans!'"

As South Korea continues to grow into its role as an Asian economic power, there is a mounting pressure for citizens to learn English in order to compete in the global economy. As a result, the Korean government has invested a lot of money in order to attract native English speakers to teach in the country's schools. That's why the deals for English teachers in South Korea are better than programs in almost any other country. In fact, only Saudi Arabia beats them out with an average yearly salary of $75,000 a year for English teachers.

Through the Council on International Educational Exchange (CIEE), teachers in South Korea can earn between 2 and 2.7 million won – about $1,700 to $2,300 – per month. Another popular program in South Korea, the English Program in Korean (EPIK), pays between 1.8 and 2.1 million won per month ($1,500-$1,800). Both programs provide free housing, paid medical insurance and vacation time, and some compensation for flight costs in and out of the country.

They asked, 'Who can we get to teach our citizens English for cheap?' And they thought, 'Aha, the Americans!'"

Of course, teaching English in South Korea is not without its risks. There's the crime rate, the possibility of getting ripped off by the South Korean government, and, oh yeah, the threat of nuclear war between North and South Korea. Even with the benefits, is it safe for Americans in South Korea?

"First of all, I wouldn't let fear over tensions between North and South Korea deter you from coming here," said the author's acquaintance. "I have found that these tensions have had a very minimal effect on my daily life and on the lives of my Korean coworkers, host family, etc."

Her attitude was echoed by Eunkyul Claire Park, a South Korean citizen and former UMass international student.

"I understand that you're somewhat worried about the political situations around here," said Park. "No one can surely say about the situation right now, but actually most of the people doubt the possibility of war breaking out, or of a worse situation. Besides that, I'm sure you'll have so much fun here."

Even without the threat of war breaking out along the thirty-eighth parallel, there is still the possibility of being ripped off by the South Korean government. South Korean laws are not the same as U.S. laws, and if the deals they are offering sound too good to be true, well, sometimes they are. According to Gould, their government is known for sometimes going back on deals.

"They offer to pay your flight and housing if you agree to stay for 10 months," said Gould, "then kick you out of the country on some pretense after nine months."

There have also been cases in which teachers' vacation time is not honored, particularly in the case of EPIK. If you want to avoid being scammed, it's best to research the programs ahead of time. If you are interested in teaching abroad at all, be prepared to do a lot of your own research. UMass doesn't have many resources on the subject – career services will give you the virtual tour of eRecruiting and some pamphlets, and the International Programs Office will only give you more pamphlets. The campus Work Abroad Fair was the best – their pamphlets had pictures and colored ink.

The best way to learn about teaching abroad is simply to talk to people who have done it and research the programs you want to participate in and the schools you want to work through. See you in Seoul.

Aparment hunting for dummies

Excited about getting off campus and finally living in your own apartment or house next year? Make sure you're aware of your rights and what to look for before you sign that lease.

Kimberly Wilson

Looking for apartments or rental houses can be both exciting and stressful. There are so many factors you have to think about before you commit to a lease that it can be overwhelming. However, if you know your rights as a tenant before you sign on the dotted line, you'll have a much easier time deciding on a future home.

The hunt is just one piece of the puzzle, but luckily there are many resources to assist in the search. Craigslist and many other websites offer lists of available apartments. Even UMass has a website full of information about off-campus housing: www.umoch.org. The Internet is a great source of information, but it is also a breeding ground for scammers, so be careful; verify the website's credibility before entering any personal information. And check out a few properties before making a thoughtful decision. Remember, you'll be living and paying for this place for at least a year.

We all know rent has to be paid, but there are some things you might not know.

Making the decision about which apartment you want to commit to should not be done lightly. Take time to think about your options and figure out the best home for you. Try to figure out what your budget for living costs will be for the following year, including rent, electricity, heat, groceries, transportation and other costs. Undertaking these basic steps should help you determine what you can really afford before you're locked into a lease that's too expensive.

Make sure you look at the property before you agree to sign the lease. Create a statement of conditions, and put any necessary repair agreements in writing with your landlord to ensure they will be completed (and you will not be charged). Talk to prospective neighbors to see how the property is managed, and what the neighborhood's like.

Don't put any money down to hold an apartment unless you're positive you're going to rent. Although, according to the Massachusetts Office of Consumer Affairs and Business Regulation, your money should be returned to you before the landlord takes you on as a tenant, it may be difficult to recover the funds.

Once you decide on your apartment, it's time to look at the lease. State regulations require a landlord to include certain information in the written lease, including the names, addresses and phone numbers of owners and other people responsible for the care and repair of the property, the people authorized to receive notices of violations of law and to accept notice of lawsuits on behalf of the owner, and the amount of the security deposit and your rights under the Security Deposit Law. Before you move in, the landlord can only require you to pay first month's rent, last month's rent, one month's rent as a security deposit, and fees for installing a lock and keys.

We all know rent has to be paid, but there are some things you might not know. You cannot be demanded to pay anything more than what is listed above before moving into your apartment; you cannot be charged interest or penalties for late rent until 30 days after the rent is due; the landlord can, however, begin the eviction process as soon as the rent is late, even if it's only by one day; an increase in the amount of rent you pay can be any amount however, the increase cannot be applied until your lease term expires.

If you pay a security deposit on an apartment when you receive a receipt of the deposit or within 10 days of your tenancy you should receive a statement of the present conditions of the property, a list of all items, their conditions, and any existing damages. There is room for negotiation, but a corrected copy of the statement must be returned to the property holder within 15 days of your receiving it. If you do not return the corrected copy of the statement and decide to sue later for the recovery of your security deposit, the court may not rule in your favor. It would be awful if there was a hole in the wall when you moved in, and you got charged for it when you moved out. Any corrected list must be returned to you by your landlord within 15 days of signing, along with a written response of agreement or disagreement. These signed statements are used to judge any future charges resulting from new damages. If a statement is not given to you by your landlord, you should write your own and send a copy to your landlord. In order to have your security deposit returned to you, you must leave the apartment in the condition it was when you moved in. Be sure to clean up when you're moving out.

If you have complaints against your landlord or have any questions about your rights, you can always contact FTC Consumer Response Center by phone, at 1-877-FTC-HELP (382-4357), or online at www.ftc.gov. You can also call the Consumer Protection Divisions of the District Attorney's offices; Franklin County (413-774-3186), Hampshire County (413-586-9225) for informal mediation between you and the company. The University also offers assistance through Student Legal Services at (413-545-1995) or email at slsoa@stuaf.umass.edu.

"You have your moments. Not many of them, but you do have them." - Princess Leia, The Empire Strikes Back

ARTS@DAILYCOLLEGIAN.COM

'Paul' phones home, pulls in laughs

By Kevin Romani
Collegian Correspondent

Although "Paul," a new film from British comedy duo Simon Pegg and Nick Frost, may not live up to the expectations previously set by "Hot Fuzz" and "Shaun of the Dead," it still offers plenty of laughs and endless allusions for dedicated science fiction buffs.

The story follows an adventure shared by best friends Graeme (Pegg) and Clive (Frost). The two are English natives on holiday, visiting America on a trek that begins at San Diego's Comic-Con festival. Here, both characters define what it means to be a geek, as they are in utter bliss walking amongst costumed Ewoks, Orcs, and superheroes.

The rest of the trip consists of the two traveling to every spot in the American Southwest where extraterrestrial activities have been rumored to have occurred. At one of these spots, the pair have their very own encounter, as they meet an alien named Paul (voiced by Seth Rogen). It is in no way a dream come true for the duo, however, as Paul is on the run from the government and needs the help of Graeme and Clive in order to "phone home."

The film is a sort of fusion between two groups of prominent filmmakers who have produced some of the more memorable comedies of the past few years. In one corner, Pegg and Frost have made a name for themselves serving as both writers and stars of "Hot Fuzz" and "Shaun of the Dead." The two films paid homage to the buddy cop and horror genres respectively, and lent an incredibly original and dry sense of humor to each story. The two co-wrote and co-star in this film as well, as is evidenced by the similarity of "Paul" to "Hot Fuzz" and "Shaun of the Dead" in the way it celebrates its particular genre; this time out, it is the world of science fiction.

In the other corner is Judd Apatow, as "Paul" includes several familiar actors and crew members from Apatow's large team of filmmakers. Apatow has produced many successful contemporary comedies, such as "Knocked Up" (which he also directed), "Superbad," and "Forgetting Sarah Marshall." All of these films share a particular style of humor, which is memorable mostly because of the dialogue. The conversations in Apatow's productions often are witty, crude, and wide-ranging. "Paul" is no different, as the dialogue is full of clever and outrageous language (most of which comes from the title character).

Pegg and Frost may have purposely let their script fall into the hands of veteran Apatow director Greg Mottola ("Superbad"), as both are well aware of the box office success that Apatow's films have enjoyed. "Hot Fuzz" and "Shaun of the Dead" are more of cult classics than they are financial hits, unlike Apatow's recent works. Whatever reason the writers had for incorporating Apatow team members is irrelevant, as the two varying senses of humor blend together well.

The film's biggest success comes from its fantastic references to past science fiction films. The film borrows exact quotes and scenarios from the likes of "Star Wars," "Aliens" and the early films of Steven Spielberg, just to name a few. "Paul" is in no way poking fun at these films; instead, it tries to honor them. The references never feel forced, and always fit nicely into the scenes. Some may be predictable, but that is the way sci-fi fans want it.

While this aspect of "Paul" is the film's greatest achievement, it may also serve as a major problem for the film's success. Since so much of the film's humor relies on the audience's knowledge of previous science fiction films, many casual movie-goers will miss out on some of the jokes. There is plenty of humor that does not involve allusions to other films, but "Paul" is clearly made for the sci-fi buff.

The one major disappointment in "Paul" is its lack of character depth from the two leading roles (Pegg and Frost). Fans of "Hot Fuzz" and "Shaun of the Dead" know that a major element of those films' greatness was the amount of character that went into Pegg and Frost's roles. In their latest venture, the two are playing caricatures of themselves. It is clear the characters are geeky best friends, but the story does not explore them in any lengthy detail, and they do not change as the film progresses. Since most of the humor does come from the references to other sci-fi works or from Paul himself, it feels that the Graeme and Clive characters are just along for the ride, narrating the story as it goes along.

"Paul" is a buddy comedy, but it is unable to excel in creating a convincing, dynamic relationship between the two lead characters like other recent Apatow productions. A major contribution to the success of "Superbad" was the relationship between the two leads, Seth and Evan. Who could forget the two ending their epic night by drunkenly declaring their love for each other in sleeping bags? There are little to no moments like this in "Paul." This flaw is not enough to ruin the film, but it is enough to prevent it from being an instant comedy classic.

British comedy duo Nick Frost and Simon Pegg co-wrote and star in "Paul," a film about a pair of science fiction fans who discover an extra-terrestrial named Paul on their trip to America.

Overall, "Paul" is a fun and engaging movie that will please many. In the lackluster movie season that is February through April, "Paul" is a bright spot. There are several humorous cameos from both the comedy and science fiction realms that will satisfy audiences. It may not match up to the past works from the actors and creative team, but it is certainly not a failure.

Kevin Romani can be reached at kromani@student.umass.edu.

Bright Eyes refocus

Bright Eyes vocalist Conor Oberst welcomes the crowd's cheers at their recent performance at the House of Blues in Boston on Thursday, March 10, where the band was joined by indie band The Mynabirds.

By Acacia DiCiaccio
Collegian Staff

Indie band Bright Eyes visited the House of Blues in Boston on Thursday, March 10 with Laura Burhenn's band, The Mynabirds. Though the musical production of the headliner was spot on, something was off. Bright Eyes, the epitome of angst-filled folk mixed with aching tragedy, only performed two slow songs in their set of 24.

The concert opened with the talented Mynabirds, a new group with a bluesy country, Rilo Kiley-esque sound. The catchy tunes kept fans on their feet while they awaited the main event.

The crowd was filled with fans in their 20s who anticipated the Bright Eyes tunes that shepherded them through their younger years of self-doubt and misunderstanding since the band debuted in 1995. The Bright Eyes sound, dotted with the inseeurities of lead singer Conor Oberst, has become an anthem for teens across the world over the last 15 years. What these fans weren't aware of when they entered the venue, however, was that the show they were attending would carry a very different sort of sound.

Bright Eyes came to fame through Oberst's melancholy lyrics when he was only 15. With Oberst now over 30-years-old, and Bright Eyes close to retirement, the band is stuck in an awkward balance between Oberst's juvenile image and the reality of his personal and artistic maturity. The result of this dilemma became a combination of 31-year-old Oberst using unneeessary profanities to display his abhorrence for authority, while nixing the majority of his sad songs in exchange for a more hyped-up rock performance. This confusion in image may have not bothered the fans just looking for a good time, but for some in the crowd, there was a strong disconnect between what built Bright Eyes into an indie staple and what fans got.

Those who desired an intimate connection with the artist and his music at the concert were let down. Most notably, Oberst seldom spoke. While his quietness may have stemmed from an introverted personality, it came off as narcissistic. It was almost as if Oberst knew fans attended for him, and that he performed simply to further his fame.

Oberst took no nonsense, however. When an audience member continually shouted "Free Bird!" he called him out, sarcastically praising him for his originality.

The set list was an interesting selection of their newest album, "The People's Key," and older songs from all different eras, even including one track from 1995 titled "Falling out of Love at this volume."

Bright Eyes kept their fans pumping through the marginally upbeat song selection, assisted by Oberst's electric guitar. However, by the time the band slowed down for a breather, the song "Poison Oak" felt more like a screeching halt than a quiet interlude.

The band played in front of two egg shell-shaped arches that illustrated the silhouette of the trumpet player beautifully. However, most of the colorful lighting and strobes appeared tacky and added to the big-shot rock concert atmosphere, rather than the quiet ambience of a melancholy indie band.

It is not to say that Bright Eyes should be expected to adhere to any particular list of songs. Bright Eyes has been around long enough that they can do just about whatever they please and fans will still love them. But those who came to adore Bright Eyes for their doleful tracks likely felt that something was missing. It was most likely an image choice. Bright Eyes' attempt to shed the whiny rep. Recent rumors of the band's demise could mean a well-deserved break for Oberst, who would be able to spend more time on his solo work and side projects (including Monsters of Folk and Desaparecidos). While Oberst's veins flow with talent and passion, the identity crisis that he experienced at the House of Blues this month proves that all good things must come to an end – or at least change with time.

Acacia DiCiaccio can be reached at adiciacci@student.umass.edu.

'Limitless' possibilities

By Malea Ritz
Collegian Staff

Eddie Morra, a character played by Bradley Cooper in his new film "Limitless," is a starving writer with a losing streak in life. When offered an untested method for experiencing immediate success, Morra poses the question, "Worth the risk? What would you do?" He soon discovers that a mysterious clear pill becomes "a sparkling cocktail of useful information" that gives him more brainpower than he ever realized he had.

"Limitless" keeps viewers in suspense as Morra's new-found fame and fortune foreshadow his inevitable downfall. What will happen when Morra runs out of his supply of limitless possibilities?

Director Neil Burger accepts the challenge of pushing the audience to imagine feeling the drug's side effects, and he displays this drive in the cinematography in particular. As Morra struggles with the potentially harmful effects of the pill, the audience is taken along through the journey with him. The rapid fast forward motion creates a queasy feeling for the viewer, while the mirrored imagery gives the audience a hallucinogenic experience. Multiple exposure cinematographs keeps the audience feeling the same sense of confusion Morra feels. Burger additionally tests movie-goers' tolerance, even shooting a scene upside down.

Complimenting Burger's attempt to immerse the audience into the world of "Limitless," the first-person narrative of Eddie Morra in the film allows the viewer to delve into the character's thoughts. The technique is comparable to reading Morra's journal or getting inside his head; this allows the audience to form a personal connection with the main character. Viewers feel a vast assortment of emotions for Morra as they witness the rollercoaster ride that is his life.

The acting in the film seems to be somewhat average, with no major breakout roles. As a disheveled writer, Cooper plays the role decently. However, he seems to shine as the "pretty boy" he becomes; it seems to be a role he is comfortable with, evidenced by his roles as the big shot in such films as "The Hangover" and "Wedding Crashers."

Robert De Niro joins the cast as Carl Van Loon, the shrewd executive of a Fortune 500 company. He also reverts to his typical role as a scheming tough guy, but has a relatively small role in the film in comparison to other actors. While not exactly a "bad guy," De Niro sees little character development in his role.

Australian actress Abbie Cornish stars as Morra's girlfriend, Lindy. She plays an average role, but rises to the occasion in one of the best action scenes of the film. Cornish's fear is felt by the audience due to the strength of her acting.

"Limitless" seemed to captivate audiences across the nation this weekend, bringing in $6.6 million on Friday alone, according to the Internet Movie Database (IMDB). The reason behind its success may be its introduction of an attractive concept: gaining the ability to access 100 percent of a person's brain at all times. While the movie claims humans can only access 20 percent of their brains, this myth is deceptive, as people use their entire brain (however, not necessarily all at the same time).

Despite the factual error in the film's concept, the idea seems to have gotten people thinking that the possibilities for their own heads could be "limitless."

Malea Ritz can be reached at mritz@student.umass.edu.

Bradley Cooper portrays Eddie Morra in his new film, "Limitless." When the struggling writer is offered the chance to unleash his potential, his newfound success comes at a grave cost.

JEFF BERNSTEIN/COLLEGIAN

A PSU attackman looks to dodge a UMass defender in the Minutemen's 8–7 loss Saturday at Garber Field. The Minutemen start their three-game road trip next Tuesday at Harvard.

Cannella, Minutemen lose 2nd game of 2011 campaign on Sat.

M.LAX from page 8

Two players that did sneak past the Minutemen defense were Kyle Vanthorf and Tom LaCrosse, who netted four and two goals, respectively. They were aided by Shane Sturgis (one goal), who continued to make runs up the field throughout the entire contest.

For UMass, sophomore Will Manny worked around the Nittany Lions' defense for two assists on the day, adding to his total, which puts him at No. 11 in the nation.

Anthony Biscardi also had an impressive performance, as he served as a momentum-changer late in the game. Down a goal, Biscardi nailed the Nittany Lions' Ryan Link, which not only knocked him to the ground for a little while, but allowed momentum to shift, as Smith nailed his goal to knot the score at five going into the final quarter.

"Anytime you can make a big hit or a big play and change momentum ... you need those in games like this," said Cannella. "We didn't respond to that [play] well enough. We didn't use that energy coming off of that."

In the fourth, PSU scored two straight and then traded back-and-forth goals with the Minutemen. The final goal for UMass came from Biscardi with 56 seconds remaining, after trailing 8-6. Despite a late run by Hantverk, the Nittany Lions held on to win the CAA opener.

A positive for the Minutemen came from Anthony Toresco, who substituted for Greg Rushing on faceoffs due to Rushing's recent illness. Toresco aided the Minutemen in winning 12-of-18 faceoffs.

"Anthony had a nice day," said Cannella. "We're happy that he was able to come through, win draws and be confident. I think it's a confidence thing for Anthony, so we're happy for him [and] proud of him."

The loss comes on the heels of a 14-6 drubbing of Providence last Tuesday, which included hat tricks from both Hantverk and Kell.

Tied 2-2 midway through the first, the Minutemen scored five of the next six goals to take a 7-3 lead which they never surrendered.

Moving forward, UMass heads on the road for its next three games against Harvard, Saint Joseph's and Towson as conference play continues. Four of the seven CAA teams make the postseason, which begins on May 4.

Herb Scribner can be reached at hscribne@student.umass.edu.

UM begins week with win over SBU

W.LAX from page 8

them on goal. Despite the shooting onslaught, only eight of those shots beat the goalie.

The dismal 24.2 percent shooting effort was particularly bizarre for a Maroon and White team that has shot the ball at an impressive 44.5 percent on the season.

"They really put pressure on the ball and double-teamed us quickly when we were looking to drive. I think we just need to do a better job of being aware and, obviously, putting our shots away, because we had 33 shots. We had some pretty good opportunities to score. We need to just capitalize on those," said McMahon.

Before Saturday's loss, the Minutewomen were having a very successful week. They began their spring break by beating Stony Brook at home, a win that vaulted them up the national ranks from No. 18 to No. 12.

UMass piled up an insurmountable 14-goal first half lead, and saw nine different players score en route to a 20-13 win against Stony Brook.

Ferris and Sophomore Cori Murray led the team with four goals apiece, while Sam Rush and Haley Smith each came off the bench to record hat tricks. Danielle Pelletier added a pair of goals, and Lyons and Kelsey McGovern each provided two assists.

The Minutewomen dominated SBU, winning just about every relevant statistical comparison. UMass had an advantage in shots taken (40-27), groundballs (21-17), draw controls (20-14) and turnover margin (plus 4).

McMahon and company have games this week against Marist and Northwestern. The Northwestern game will be played Saturday at 7 p.m. under the lights at McGuirk Stadium.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Katie Ferris gets a hug from a teammate in a loss Saturday. UMass dropped its first game of the 2011 season at Garber Field.

UMass falls to Eagles after difficult season

HOCKEY from page 8

to reflect on its 2010-11 season.

The Minutemen lost their first nine games of the season before winning three straight games over Vermont, Quinnipiac and UMass-Lowell from Nov. 23 to Dec. 4.

Five consecutive losses followed before a home-and-home series sweep of the River Hawks on Jan. 14 and 15.

Then, UMass beat Vermont 6-0 on Jan. 22 at Gutterson Fieldhouse in Burlington for its final win of the season.

The Minutemen looked poised to make the Hockey East tournament after the win, sitting at seventh place in the conference standings with an opportunity to take possession of sixth place with back-to-back wins over Northeastern on Jan. 28 and 29.

But losses to the Huskies sent UMass into a tailspin of 12 consecutive winless games to end the regular season, gaining three total points while nearly falling out of postseason contention.

Nine of the Minutemen's final 12 games were played against ranked opponents, against which they were 0-16-3 against throughout the entire regular season.

A string of five straight one-goal losses to No. 2 Boston College, No. 6 Merrimack and No. 14 Maine from Feb. 18 to March 4 left UMass fighting for its once-looming playoff hopes in the final game of the season.

The Minutemen, sitting in eighth place in the Hockey East standings, were two points ahead of Providence entering their game against No. 14 Maine on March 5, with the Friars holding the tie-breaker. With Providence leading its game against Merrimack following the second intermission, UMass climbed back from a 3-1 deficit in the third period to take a 4-3 lead – before settling for a 4-4 tie with the Black Bears.

Last Saturday, however, the third period was the Minutemen's demise. After tying the game at the end of the second period, the Eagles' Jimmy Hayes scored two goals in the final frame to pull away with a win.

Senior Chase Langeraap scored an unassisted goal 21 seconds into the game to take a 1-0 lead after one period. BC answered back in the second period, when Hayes scored a power-play goal four minutes, 32 seconds into the second frame followed by a Joe Whitney goal to take the lead with 11:08 to go in the period.

Michael Marcou tied the game with 3:17 to go before the second intermission, but the Minutemen could not regain the lead.

Senior Paul Dainton finished with 30 saves in his final game as a member of the Minutemen. It was also the final game for seniors Langeraap, Shawn Saunders, Doug Kublin and Marc Concannon.

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

Misho earns shutout

BASEBALL from page 8

attempt. Freshman Dylan Begin hit a home run to left field to make the game 5-0 in favor of UMass.

Begin and fellow freshman Kyle Addie each collected two runs batted in on the day, establishing their presence at the bottom of the starting lineup.

Prior to the UMBC game, UMass rode back-to-back victories against Bucknell, 6-4, and Northwestern, 11-4, last Friday and Saturday.

Glen Misho continued his impressive early-season campaign, shutting out the Bison (8-10) through seven innings of work to go to 2-1 on the season. After back-to-back walks by Bucknell in the eighth, Misho gave up three consecutive hits, making the score 6-4, and knocking the starter out of the contest.

Leif Sorenson came on in relief, inducing two groundballs to escape the inning. Sorenson closed out the ninth for UMass, striking out the side after allowing two hits.

Freshman Nik Campero came through for the Minutemen with his first collegiate hit when he lined a single to right center after coming to the plate to pinch-hit. Campero drove in two runs to make the game 5-0 in the top of the eighth.

"I've been struggling a little bit, so it was nice to come in and be in that big situation," said Campero. "Your mentality's a lot different, because you haven't been in the game, so the key is to relax in the box and see a pitch to hit, and just drive it."

After trailing early on against Northwestern on Saturday, UMass scored six runs in the third inning to propel the squad to an 11-4 victory.

The Minutemen received another deep pitching performance against the Wildcats, this time from junior Rob Machado, who scattered 12 hits over six innings of work, delivering no walks while striking out a career-high eight batters. After surrendering two runs in the top of the first, Machado battled his way through the rest of Northwestern's lineup.

The Minutemen travel to Connecticut for one game to play Hartford, before opening Atlantic 10 play on the road against George Washington.

Scott Cournoyer can be reached at scournoy@student.umass.edu.

Plourde impressing

SOFTBALL from page 8

it was more than enough for the 2010 national strikeouts leader to earn the victory. Leading the charge on offense was senior Audrey Boutin, who went 2-for-4 and produced two RBIs.

On Saturday, UMass was right back to business with another doubleheader, and like Friday, the Minutewomen grabbed two wins to continue their terrific weekend.

Plourde pitched a one-hit shutout and struck out 10 in six innings of work to lead UMass past Colorado State, 7-1, in the first game of the day. She followed up that performance with an even better one in the nightcap, striking out 18 batters and allowing four hits in a 7-0 shutout win over Wisconsin-Green Bay.

Boutin continued her impressive weekend, going 3-for-4 against Colorado State, with a double and two RBIs, and then led the Minutewomen again against the Phoenix with another 3-for-4 performance and three RBIs.

Unfortunately for the Minutewomen, the offensive production wasn't enough on Sunday to complete an undefeated weekend, as they dropped the final game of the tournament in an 8-4 loss to St. John's.

After UMass jumped out to a 4-0 lead, the Red Storm used big third and fourth innings to come racing back, scoring eight unanswered runs to take the victory.

Plourde was nothing like her previous performances of the weekend, lasting just two and one-third innings, giving up two runs on five hits before being replaced by Webster.

Webster gave up six runs (five earned) in two and two-thirds innings to take the loss before Raymond relieved her, completing the game and digging the Minutewomen out of a bases-loaded jam.

Aside from her pitching performance on Sunday, the headline all weekend was the emergence of Webster, who produced heavily at the plate, going 8-for-14 on the weekend, including her first collegiate home run, a solo shot in the first inning against St. John's.

UMass used the momentum built off its successful weekend in its quest for its seventh- straight conference championship this past weekend when it traveled to Charlotte.

In the opening game of the two-game weekend on Friday, the Minutewomen trailed off offensively compared to its stint in Florida, but got job the done with another phenomenal performance from Plourde.

With a three-hit, eight strikeout shutout performance, Plourde picked up her seventh victory of the season, but it was Boutin's solo home run that led off the second inning that sparked the 1-0 victory and provided all the offense that Plourde needed.

The Minutewomen finished off the weekend on Saturday afternoon, and after a long, 14-inning affair with the 49ers, ultimately fell, 3-2.

Plourde, pitching for the second day in a row, showed off her stamina by going the distance of 13 and two-thirds innings, giving up three runs, two of which were earned, on six hits and recording 12 strikeouts.

With the bases loaded, Charlotte's Tenaya Tucker hit a two-out single in the bottom of the 14th to push the winning run across the plate. It was UMass' first regular season Atlantic 10 loss since falling to Fordham on May 3, 2009.

The Minutewomen will continue their A-10 schedule this weekend when they travel to Philadelphia, Pa. for a two-game series with Temple before a doubleheader with St. Joseph's on Sunday.

No. 10 UMass drops CAA opener Saturday

By Herb Scribner
Collegian Staff

UMass	7
PSU	8

With the No. 10 Massachusetts men's lacrosse team down, 8-7, to Penn State on Saturday afternoon at Garber Field, senior captain Ryan Hantverk sprinted down the field.

With the clock winding down, Hantverk rocketed the ball straight at the cage. The net rippled, the crowd cheered and the ball banged off the crossbar, giving the Nittany Lions the victory.

"I knew I had to get a shot on goal, I put everything I had into it, [but] it just hit the crossbar," said Hantverk.

"It nicked the top of the crossbar, that's why it didn't come straight out, so you're looking at three inches," said UMass coach Greg Cannella. "Overall I'll say the same thing. [I'm] disappointed, [but] not discouraged. The guys gave a really strong effort. Just a little bit of the execution wasn't there for us."

The Minutemen (5-2, 0-1 CAA) fell to the Nittany Lions (3-3, 1-0 CAA) on Saturday afternoon in the opening game of their Colonial Athletic Association season. UMass faced a tough goalkeeper in Austin Kaut, who notched 25 saves, an NCAA record for the 2011 season so far.

"He had a great day," said Cannella. "Twenty-five saves, that's a heck of a day, that's an All-American type of performance. He's made a lot of saves in every game and he was excellent today."

Although Kaut was a wall in the cage, the Minutemen did provide a heavy amount of offense against a lackluster PSU defense that surrendered possession on 22 occasions.

This included a 3-1 shelling in the third quarter, with goals coming from Anthony Biscardi, Kyle Smith and Colm Fleming.

While UMass displayed good offense throughout the entire game, including junior Art Kell's five points, it was the first quarter that proved to be the difference. After letting in three goals in the first quarter, the Minutemen held the Nittany Lions to one goal for the next two quarters.

Despite letting up another trio of goals in the fourth, the Maroon and White continued to hound the ball on the defensive front. The Minutemen held PSU to 27 shots, 11 less than UMass' total.

"You've got to give [Kaut] credit, but at the same time we need to get better at shooting and get our shooting percentage up," said Hantverk. "It's frustrating when you take more shots than a team and score less than them at the end of the game. We're still a confident group, we still know we can play [and] we still know we're good."

Unbeaten streak ends for McMahon & Co.

By Jackson Alexander
Collegian Staff

UMass	8
Albany	10

The Massachusetts women's lacrosse team began spring break with an unblemished record, but concluded its week by losing its first game of the season.

The Minutewomen dropped a 10-8 contest on Saturday to No. 15 Albany (6-0) at Garber Field and fell to 6-1.

"We're pretty bummed out with how the result came out today, but I've got to give credit to Albany," said UMass head coach Angela McMahon. "They really came out to play and gave us a tough game."

Albany's Taylor Frink led the way on offense with four goals and three assists, helping preserve the Great Danes' perfect record. Jodi Battaglia supported Frink with two goals and two assists.

Attackers Katie Ferris (three goals), Jackie Lyons (two goals), Jesse O'Donnell (two goals) and Nina Sarcona (two assists) led the way for UMass. Junior goalie Katie Florence also stopped nine shots in the cage.

Ferris' hat trick was her fourth in a row, raising her goal total on the year to a team-high 17 despite playing in just five games.

The Minutewomen never led in the game, and every time they made an attempt to overtake Albany, the Great Danes responded. UMass cut the Albany lead to one goal on six separate occasions and had an opportunity to overtake Albany late in the second half.

Down 8-6 halfway into the second half, UMass used goals from Lyons' and O'Donnell to knot the score at eight. With UMass finally eying a lead, the Great Danes received back-to-back goals from Frink and Kathleen Lennon to put the game away.

"In one respect, it's good to see us come back. Our backs were against the wall and we came back and tied the game," said McMahon. "In the end, we really needed a big play, and we needed someone to step up, and that didn't really happen."

The Minutewomen were unable to find the back of the net with any regularity, even though they took strong shots. They peppered Albany goalkeeper Anna Berman with 33 shots, nine of

Eagles eliminate Mass Attack in HE tourney over weekend

Dan Gigliotti
Collegian Staff

The Massachusetts hockey team's season ended last Saturday, March 12 with a 4-2 loss to No. 2 Boston College in the quarterfinal round of the Hockey East Tournament in Chestnut Hill, Mass.

In addition to last Saturday's loss to the Eagles (30-7-1, 20-6-1 HEA) Friday, the Minutemen (6-23-6, 5-16-6 HEA) fell to BC the preceding night and were eliminated from the tournament in a best-of-three series.

After fighting through the final minutes of the regular season to reach the postseason tournament, UMass coach Don Cahoon believed his players could have competed better, at least in game one.

"It wasn't BC's best effort, but we didn't push back," said Cahoon in an interview with UMassAthletics.com following the first loss. "We didn't play hard enough. It wasn't the playoff-type of competitive spirit that I'm looking for."

The Eagles went on to win its second-straight Hockey East championship last Saturday night over Merrimack, 5-3 at the TD Banknorth Garden while earning a No.1 seed in the NCAA Men's Ice Hockey Championship. Meanwhile UMass was left

Minutewomen finish weekend with 4 wins in USF Showcase

By Stephen Hewitt
Collegian Staff

The Massachusetts softball team notched a win for the first time in nearly two weeks on March 11, rounding out its trip to Florida in the USF Under Armour Showcase with a 4-1 record.

In the first matchup of their five-game weekend series that Friday, the Minutewomen offense returned to life in a big way against Toledo. After two weekends of inefficient production, UMass dominated the Rockets with a 17-0 thrashing in five innings, the most runs the Maroon and White have scored in a game since 2006.

Meghan Carta, Kyllie Magill and Tiffany Meeks each blasted home runs including a grand slam from Carta to lead the offensive explosion that saw the Minutewomen collect 16 hits.

Freshman Lindsey Webster was also a big factor, going 4-for-5 and crossing the plate three times in the rout, just over one week removed from her first collegiate start in left field.

Sara Plourde returned to her dominant form as well. The junior All-American struck out 11 and allowed just one hit in four innings of work before freshman Caroline Raymond finished the game with a shutout inning.

In the nightcap, it was more of the same dominance, as UMass notched a 4-0 victory against host South Florida to complete an undefeated day.

Plourde continued her excellent play, striking out 15 and only allowing two base runners in a complete game one-hitter.

Although the Minutewomen were only able to muster six hits at the plate,

JEFF BERNSTEIN, COLLEGIAN

Sara Plourde delivers a pitch in a game last season. Plourde struck out 11 and allowed just one hit in a 17–0 win over Toledo.

Baseball wins 3rd straight game after starting 2011 season 1–8

By Scott Cournoyer
Collegian Staff

The Florida trip for the Massachusetts baseball team did not start off as expected, as the squad dropped four consecutive games over the course of last week heading into last Friday's game against Bucknell.

"We started off the season real slow, not being able to help the pitchers out by scoring enough runs," said senior Matt Gedman. "We've been able to come on now and help our pitchers out, and that's been good for us."

UMass has won its past three games, including its most recent game against University of Maryland-Baltimore County, a 9-5 victory, on Sunday.

With starting pitching giving UMass deep, quality outings to go along with the offensive support at the plate, the squad's record stands at 4-8, as Atlantic 10 play creeps closer.

Sunday's game against the Terriers (3-8) saw sophomore Dennis Torres cruise through five shutout innings for UMass, surrendering only two hits and delivering no walks on just 59 pitches, on his way to his first career win (1-1).

Fellow sophomore Richard Graef gave the team a spark in the top of the first as he singled, stole second, advanced to third on a ground ball and came around to score on a sacrifice fly by Gedman.

Eight players in the Minutemen lineup recorded a hit, as the team opened the floodgates with a four-run fourth inning. After junior Tom Conley brought Gedman home with the bases loaded on a sacrifice fly, senior Peter Copa came home on a double steal

Proposal would give unused food to community programs

By Alyssa Creamer
Collegian Staff

A University of Massachusetts senior is looking to connect students with the community through cutting on-campus food waste and volunteering to join the fight against hunger.

Hotel management major and newlywed Steven Graves has been working over the course of this year to introduce a new program he is calling the Campus Kitchens Project (CKP) to the University. The program would help deliver ready-to-eat food that is unused from the Dining Services and other food-related campus-based organizations to local community-serving operations such as churches and the Amherst Survival Center for those in need.

Graves is heavily involved in the food business. He works in the Blue Wall at UMass' Campus Center and plans to move on to culinary school after graduation. And while Graves has a love and dedication for food service, he also has been attempting to address what he feels is one of the industry's biggest flaws: waste.

Graves began exploring an interest in discovering the depth of America's hunger issues while working in the food service industry and noticing that several elements of the process of commercial food production, such as over-ordering or simply the process of preparing food for large-scale consumption, leads to what he sees as a great deal of waste. To gain better insight, Graves enrolled last fall in a resource economics course titled Hunger and the Global Economy, taught by Professor Julie Caswell, head of the department of resource economics.

"In taking the course, I had hoped to discover ways to find out how food service providers could help curb the U.S.' hunger issues," said Graves in a phone interview. "I also found that the hunger issue in America was much bigger than I thought it was.

"Normally when you say 'hunger,' people immediately think homeless people, which is definitely an issue, but bigger than just that are people with low incomes who have families who have to make tough decisions between paying the heating or medical bills or going out and buying groceries," said Graves. "Those are the people, along with homeless people, who can benefit from this type of program."

Determined to find a way to contribute to fighting hunger, Graves attended last October's Western Mass. Hunger Summit held in Holyoke. It was there that Graves became acquainted with Michael Kurtin, the CEO of DC Central Kitchen, the parent organization of the CKP.

According to Graves, Kurtin told him that UMass would be a great place to launch a chapter of the CKP. In an email, Graves explained that the CKP, which was founded in 2001, unites student volunteers and community organizations in a food recovery program to provide meals to in-need populations within a university's community.

"Ever wonder what happens to all that left-over food from the DC's? Well, [for] now, it end[s] up as compost," continued Graves. "Our group seeks to recover unused food from Dining Services, local farms and other area businesses, as well as the Food Bank of Western Mass. With that food, we will create healthy, nutritious meals, and deliver those meals to community organizations that already serve those in need."

As stated on the CKP's web site, the organization's mission includes "strengthen[ing] bodies by using existing resources to meet hunger and nutritional needs in our community … empower[ing] minds by providing leadership and service learning opportunities to students, and educational benefits to adults, seniors, children and families in

If UMass student Steven Graves' drive to create a chapter of Campus Kitchens here is successful, food banks like the Survival Center may soon have new supplies.

Police Chief details bylaws before Board

By William Perkins
Collegian Staff

A batch of mixed results has come out of an assessment of recent violations of Amherst's noise and alcohol bylaws.

Members of the town's Select Board last night were brought up-to-speed on newly-compiled bylaw violation data by Police Chief Scott Livingstone who elaborated on the results in a presentation.

The data – which details all violations of noise, open container, keg and nuisance household bylaws from Sept. 1 of last year to March 1 of this year – shows that there has been a 38 percent increase in noise violations and a 229 percent increase in nuisance house offenses, while there has been a 16 percent decrease in the open container and keg offenses compared to 2009-2010.

One-hundred and sixty-six people were arrested, summoned to court or cited for unlawful noise violations during the assessment period, up from 120 compared to data from 2009-10. There was also a 35 percent increase in calls reporting such noise infractions, which Livingstone noted could have led to the increase of reported violations.

Forty-six people were arrested and summoned to court or issued citations for violating the nuisance household bylaw, which imposes liability on owners and residents who make loud noises or allow underage students to drink – a marked increase in offenses compared to the 2009-10 data, when only 14 people were charged with such offenses.

"There's a pretty dramatic increase in those," Livingstone said of the nuisance house bylaw violations, noting that the large increase in officer-reported offenses could have resulted from officers being able to better define and cite such households in violation it.

One-hundred and sixty-two people were arrested, summoned to court or cited for infractions pertaining to the open container bylaw – which bars denizens from possessing open alcoholic containers on public property – in the assessment, a decrease of 16 percent of violations compared to last year's figures. Livingstone said this decrease could be attributed to officers' better educating community members of when they would be in violation of the bylaw, noting that not everyone perceived in violation of the law is arrested or cited.

And 12 people were arrested and summoned to court or issued citations for violating the town's keg bylaw, which requires everyone in possession of kegs to hold a town-issued license, during the assessment period. This is a 40 percent decrease from the number of offenses reported in 2009-10.

Really, we don't have a big, big issue now with kegs," Livingstone said, adding that the department believes kegs no longer seem to be a main attraction at student parties.

Additionally, Livingstone noted, the assessment shows there weren't many repeat offenders of infractions.

"The number of repeat offenders is really nonexistent," Livingstone said. There were only six people who violated the bylaws more than once during the assessment period – slightly better than the number of people who violated the bylaws in the 2009-10 assessment, which totaled seven.

Last spring, members of Amherst's Town Meeting voted to increase

Caret takes the helm

Former Towson leader inherits UM system

By Nick Bush
Collegian Staff

Incoming University of Massachusetts system president Dr. Robert L. Caret comes to the Bay State with a unique record of problem-solving at his previous institutions. While President of San Jose State University, Caret oversaw the construction of the largest library west of the Mississippi River, the eight-storey Martin Luther King, Jr. Library. The library project was a collaborative effort between the city of San Jose and the university – the first of its kind in the country, and an example of Caret's skill at promoting cooperation between like-minded constituencies, which will be crucial in his new role as leader of the UMass system.

Caret will be replacing outgoing president Jack Wilson, who last March announced he would be stepping down this June after eight years at the helm. Wilson is widely credited with bringing together the UMass system, fostering research collaboration between schools and attempting to build a more cohesive

Robert Caret has been appointed the next UMass system President.

Senior dies on return from spring break trip

For the second time this month, University of Massachusetts students and UMass community members received an email titled "Sad News on a Loss to Our Campus Community" from Dean of Students Jo-Anne Vanin.

Monday's message announced the untimely passing of UMass senior William "Will" Werner, a kinesiology student who had recently returned to Massachusetts after a spring break trip to the Dominican Republic.

Werner was a native of Centerville, Mass., a community on Cape Cod, and had transferred to the state's flagship public university in 2008. He was on track to graduate this May, according to the message, and worked at the University in the new Recreation Center and in the Strength and Conditioning Department.

According to his Facebook page, Werner attended Barnstable High School and had worked last summer as a strength and conditioning intern at WCS Gattone Sports Performance in Buffalo Grove, Ill., northwest of Chicago.

Werner listed himself as a fan of the alternative rock band Tool and rappers Jay-Z and Eminem, as well as a sports enthusiast fond of ESPN's SportsCenter and the workplace comedy "The Office." On his Twitter page, his most recent activity was a retweet of a Charlie Sheen post. He additionally listed himself as a follower of the New England Patriots, former UMass basketball coach John Calipari, now at the University of Kentucky, and Red Sox infielder Dustin Pedroia.

In her message, Vanin sent her condolences to Werner's family, friends and colleagues at the University. Funeral arrangements were not immediately available, the message said, but when they are announced, interested parties can contact the Dean of Students office.

The cause of Werner's death was not immediately made public. The Collegian will have more information on William Werner as friends and family grieve and are more ready to speak about him.

Kerry cosponsors bill to repeal DOM Act

By Sam Butterfield
Collegian Staff

A prominent lawmaker from Massachusetts, the first state to permit gay marriages, has introduced legislation aiming to repeal the Defense of Marriage Act (DOMA), the 1996 statute which defines marriage as a legal union between one man and one woman.

In a Wednesday message, Whitney Smith, a spokesperson for John Kerry, the fifth-term Senator from Massachusetts, said Kerry had cosponsored legislation that would "restore the rights of all lawfully married couples, including same-sex couples, to receive the benefits of marriage under federal law."

Same-sex couples, even those recognized as legally married in their home states, are presently denied numerous federal marriage benefits, including social security protections.

The law both stipulates that states not recognizing the validity of same-sex unions are not required to recognize the legitimacy of couples married officially elsewhere and states that "the word 'marriage' means only a legal union between one man and one woman as husband and wife." According to Kerry's statement, the senior senator was the only member of the senate running for reelection to vote against the bill.

In the statement, Kerry said he has believed DOMA to be unconstitutional since its inception, and that he will continue to work to see it repealed.

"DOMA was wrong and unconstitutional when I voted against it 15 years ago," he said, "and it's equally wrong and unconstitutional today."

Kerry said he believes the bill hurts citizens and deprives some of basic rights.

"This discriminatory law treats loving, committed same-sex couples like second-class citizens by denying them thousands of federal benefits," he said. "It's overdue for Congress to ease the pain that Congress caused in the first place."

The senator also said he believes the nation has shifted in its stance on same-sex marriage since the bill first passed.

"America has undergone a transformation on these issues since 1996, and the law should reflect the reality of where we are now as a country."

Kerry and several of his colleagues in the Senate have proposed an alternate bill, the Respect for Marriage Act (RFMA), which would do away with DOMA and would provide marriage benefits to same-sex couples, though it would not require states to recognize same-sex marriages. RFMA would provide same-sex couples such benefits as Social Security survivors' and spousal coverage, the right to care for spouses under the Family and Medical Leave Act, the ability to file joint tax returns, and full family benefits for federal civilian employees.

RFMA was introduced in the House by New York Rep. Jerrold Nadler in September 2009, and has made its way to the Senate, where it was introduced by California Sen. Dianne Feinstein and is cosponsored by 18 other senators, including Kerry. The bill has been referred to the Senate Judiciary Committee, which is presently dominated by Democrats, including Chair Patrick Leahy of Vermont, Herb Kohl of Wisconsin, Feinstein, New York Sen. Chuck Schumer, Illinois Sen. Richard Durbin, Rhode Island Sen. Sheldon Whitehouse, Richard Blumenthal of Connecticut and former comedian turned lawmaker Al Franken of Minnesota.

Although the Republican-controlled House of Representatives may attempt to block the bill from going through, public opinion on homosexual-

Caret faces challenges in new role

CARET from page 1

UMass brand. Caret will inherit many of Wilson's current projects, including his ongoing branding efforts and the establishment of the UMass system's first law school in Dartmouth last year.

Caret will also be inheriting the university system's problems, along with its promise. UMass has long struggled to raise its profile, consistently battling dwindling state funding, a shrinking number of tenured faculty, low minority graduation rates and growing pains stemming from the diverse five-campus system's continued expansion. The man now tasked with forging UMass' future in the face of these disparate concerns is Caret, and his response may come to define his tenure as the 26th president of the 66,000-student UMass system.

The 63-year-old Caret is a New England native, having grown up in Biddeford, Me. Before completing his Ph.D. in organic chemistry at the University of New Hampshire in 1974, he became the first member of his family to attend college as an undergraduate at Suffolk University.

"As someone who was born and raised in New England, I can't tell you how delighted I am to be returning to this region and becoming president of the University of Massachusetts," Caret told The Daily Collegian. "They say you can't go home again, but I am doing just that.

"Massachusetts is a very special place to me. It is where I studied as an undergraduate and first glimpsed the prospect of what has become my life's work: teaching students and providing leadership at institutions of higher education. I was drawn to the former, which in turn led me to the latter. This is work that I take very seriously, and I am honored to have the opportunity to pursue it [at UMass]."

The progression of Caret's candidacy for president did not pass without contentious moments. As the UMass Board of Trustees interviewed candidates in late November, the Boston Globe reported that members of the search committee considered UMass Lowell chancellor Martin Meehan to be the board's likely choice. This prompted Gov. Deval Patrick to publicly demand a more transparent selection process, and Meehan ultimately withdrew his name from consideration. In a surprise move, UMass Board of Trustees Chairman Robert J. Manning proceeded to step down from his post, sighting Meehan's withdrawal as a factor.

Despite the sometimes grueling selection process, the choice of Caret has been met largely with praise since it was announced on January 13.

"[Caret] demonstrated to [The Board of Trustees] that he had he had done extensive research into our university, and has a clear understanding of our complicated history in getting state support," said Mike Fox, the UMass Amherst Student Government Association student trustee. "He has shown high levels of success at both previous universities where he has been president, and has shown an ability to improve the experiences of underrepresented groups, all of which greatly impressed the board."

Caret made his mark over the past eight years as president of Towson University, Maryland's second-largest public university, located just outside of Baltimore. Caret served as a faculty member, dean and provost at Towson for 21 years before leaving the school to become president of San Jose State in 1995, endowing him with firsthand experience across academia's many realms.

Caret faces the hefty challenge of lobbying Beacon Hill for increased legislative support, a goal which has proved elusive for UMass during much of its history.

In his recent budget proposal for the fiscal 2012 budget, Massachusetts Gov. Deval Patrick allotted $429 million for the five-campus UMass system, maintaining funding at its current levels. Outgoing-President Wilson has long warned that UMass will be facing a budget gap if state funding is not increased for the upcoming fiscal year, due to the impending loss of $37.8 million in federal stimulus funds set to expire and the current lack of state funding for nearly $17 million in raises and benefits for union contracts. If the final budget produced by the Massachusetts House and Senate in June keeps funding for the UMass system at $429 million, the next president will be tasked with overcoming a funding hole of more than $54 million. Caret will have no easy task in distributing the burdens of such a drastic economic discrepancy across a university system that for years has grappled with state funding levels lower than comparably wealthy states.

Caret seems prepared to fight hard to overcome the challenges the university system will face in the near future.

"The University of Massachusetts is critical to the future of the Commonwealth of Massachusetts, and that is a message that I am going to spread throughout Massachusetts and beyond our borders," said Caret. "We are central to Massachusetts' future. Yes, we have challenges, but I am confident that those challenges will be surmounted, and I believe that an important step in addressing those challenges is for us all – students, faculty, staff, alumni and administrators – to be more forceful and purposeful in telling our story."

Dr. Timothy Sullivan, Chair of the Towson University Faculty Senate, has worked with Caret directly for the past eight years and seen his administrative style first-hand.

"From what I've seen of [Caret's] management style, it is focused on understanding the institution," said Sullivan. "He consistently asks, 'Can we afford to do this and still achieve our mission?' Even if a particular program has fewer majors, it may be important to the institution, and you have to find a way to fund it."

"Caret has made a large impact on [Towson] over the past eight years," said Daniel Gross, Editor-in-Chief of the Towson Towerlight, the school's student newspaper. "Rather than working on student affairs issues, Caret seemed more focused on the big picture items, such as the business and marketing aspects of the university, and developing a master plan – and in general he has succeeded in getting Towson on the map," said Gross. "As far as Maryland's public higher education goes, the university is now second in size and prestige only to the University of Maryland College Park campus, and still growing."

According to Sullivan, one reason Caret was well respected and effective at Towson is the seriousness with which he took the opinions of others, especially faculty members.

"When we didn't agree on something, or there were differences in opinions, [Caret] was always a proponent of thoughtful discussion," said Sullivan. "He doesn't have a confrontational attitude, but rather aims for collaboration, which I think is a very good quality in a leader. When he has to make a tough decision, he gathers a lot of information and opinions in the process. I never felt like decisions were coming from the top down."

Another critical issue that may come to define Caret's presidency is the dwindling UMass faculty, which has been shrinking for nearly 20 years. According to a recent Boston Globe report, the UMass Amherst campus has lost nearly one-fifth of its tenure-track faculty over the past two decades, and in the past five years, the state has cut public higher-education appropriations per student by more than 13 percent.

Past attempts at expanding the faculty, such as the Amherst 250 plan, have been abandoned as funding became scarce. Now faced with a shrinking budget before even arriving, Caret will be in the difficult position of attempting to attract tenure-track faculty while simultaneously placating the fears of current faculty concerned about the fate of their programs.

"[Caret] has a very good reputation amongst the Towson faculty, and many of us are sorry to be losing him," said Sullivan. "He listens to you, and is easy to talk to. There have not been any clashes or crises between him and the University Senate during his tenure, and we've maintained a very good relationship."

Caret seems committed to using UMass' strengths to his advantage, while at the same time finding ways around the system's weaknesses.

"The University of Massachusetts is an institution with many strengths and has a strong and growing reputation throughout the nation," said Caret. "As we see with some of the recent announcements, the University is enjoying impressive growth in key areas like student demand and enrollment, research funding and technology transfer, and with its laudable fundraising and endowment growth."

According to Sullivan, Caret has shown a strong commitment to preserving academic programs, even in economically challenging periods.

"[Caret] started as part of the Towson faculty before moving into administrative work, and I think he has retained his understanding of the faculty's mindset," said Sullivan. "He's been very thoughtful in tough money times to protect academic programs. We've had some situations where smaller programs were brought together into one, but I don't think the faculty ever felt uncomfortable. Caret has always asked 'What's the most efficient way to accomplish what we want to accomplish as a university?'"

Wilson's tenure emphasized research growth, particularly at the flagship Amherst campus. Caret seems prepared to carry on Wilson's legacy here, with other campuses broadening their research commitments, including a planned expansion of masters and doctorate programs at UMass Boston.

Caret's time at Towson also featured a renewed concentration on expanding profitable research programs.

"Our campus has been evolving, and Towson is much more research-orientated than we were 10 years ago," said Sullivan. "Under Caret, we have been hiring young faculty and fostering a supportive environment for research. We don't have a long tradition of raising a lot of money on campus – but that has begun to change, as funds coming from research grants and contracts have nearly doubled in recent years." Caret may also be poised to focus on the UMass system's low minority graduation rate. In his eight years as president there, Caret oversaw a dramatic rise in Towson's graduation rates for black and Hispanic students. When Caret was named president in 2002, only 45.9 percent of black students graduated in six years from Towson, compared to a campus average of 56.6 percent. By 2008, the university had raised this graduation rate by a striking 24 points, graduating 69.9 percent of black students (almost four percent better than the new campus average of 66.2 percent).

According to 2008 data compiled by The Education Trust, black students at UMass Amherst graduate in six years at a rate of 56.3 percent, 12.7 points lower than the average of 69 percent school-wide. The 2008 graduation rates for Hispanic students at the Amherst campus were even lower, with only 51 percent graduating in six years, 18 points lower than the campus average.

The most recent data from The Education Trust shows UMass Amherst underperforming in this category compared to similar institutions, with more than 65 percent of black students graduating in six years at the University of California, Santa Cruz (65.9 percent) and Florida State University (69.5 percent). As recently as 2002, UMass Amherst graduated only 40.1 percent of its black students, and 52.1 percent of its Hispanic students in six years.

At Towson, Caret focused on admitting high-scoring students from strong public high schools, and then closely tracking each student's progress by establishing strong mentoring and counseling networks on campus. In 2005, he made the bold step of guaranteeing admission and a partial scholarship to all students from Baltimore who finished in the top 10 percent of their high school class. According to a Washington Post report, the number of black freshmen from Baltimore attending Towson proceeded to rise from 34 to 98 in just a single year. Caret then worked hard to ease the transition to college for freshmen from disadvantaged backgrounds, establishing programs that pair freshmen with mentors and illuminate the importance of teamwork and study skills.

CAMPUS KITCHENS from page 1

need," and "build[ing] communities by fostering a new generation of community-minded adults through resourceful and mutually beneficial partnerships among students, social service agencies, businesses and schools."

Graves said these ideas matched his and, he suspected, those of many students at the University, and, while he feels that the process of getting the program implemented has been more complicated than he would have desired, he remains hopeful.

"It's been a slow process of gaining student support and [negotiating] with dining services and the Department of Environmental Health and Safety at UMass," said Graves. "We've had meetings with them, but it's been slow."

In order for the project to begin, the organization would need approval and support from UMass Dining Services before it would receive national affiliation.

"Supporting [the] UMass community is always a good idea. In terms of the UMass Kitchens Project, we are just learning about it," said Director of Dining Services Ken Toong. "It is a very complex project that requires several level of approvals."

There are several logistical issues that have been presented, such as dining services not being far off on its predictions of daily food consumption, and that there also remains a spatial issue, as starting the CKP would require additional areas for kitchen space, refrigeration and food storage. According to Graves, there have also been intense concerns that students would not necessarily know how to handle the reused food properly.

"I don't think it's rare to find someone who gets excited about [fighting hunger]," said Caswell, the chair of the department of resource economics, in a phone interview. "It is, however, rare to find someone who really does it and successfully organizes to do it.

"Steve was able to recruit and bring in a lot of really good people to the project," she said. "I think that's the rare part is making it happen. I think one issue is the coordination with the University and having the University feel assured that the campus kitchens project will handle the food properly and be reliable," Caswell said.

Toong and Graves both said that currently, the UMass Department of Health and Safety is taking an active role in discussions with Graves.

"I know their main concern is food safety," said Graves. "We have that completely covered, though. The national organization has a great program that has a leadership team from each university take a course in Washington, D.C. to train in leadership and food safety."

A certain percentage of the volunteers would also be required to become ServSafe certified, which is the standard on food safety, Graves mentioned.

Funding concerns also appear to be less of an issue, as CKP's parent organization would fund the program for the first three years once a feasibility study has been completed by the University's dining services.

Prior to spring break, Graves and other student leaders, including several members of the Student Government Association, met with other on-campus food-based organizations, such as EarthFoods, People's Market, Garden Share and the Food and Beverage Management Association and Nutrition Club, to discuss their potential involvement. The meeting received nearly unanimously positive feedback from the different organizations in regards to working with the CKP – even framing it as the umbrella organization to connect the food-based groups, Graves said. EarthFoods has discussed the potential of sharing its kitchen space with the CKP.

"This project would give those organizations an opportunity to volunteer on campus," said Graves. "It provides a place for students to volunteer their time without leaving campus. Any student involved with political science, sustainability, food, nutrition or anything that has to do with sustainable food and the environment, will have a place to use their specific skills and volunteer."

"I really think it is an excellent way to use University resources to connect to and help the community," said Caswell, who has been teaching for 25 years.

RFMA would give gay couples federal benefits

MARRIAGE from page 1

ity and gay marriage does seem to have changed since DOMA passed. An October Pew Research Center poll found that 42 percent of Americans favor same-sex marriage, while 48 percent oppose. The year before, just 37 percent favored while 54 percent opposed, marking the first time since the topic has been tracked that fewer than half the nation opposed same-sex marriage.

Last month, President Barack Obama and Attorney General Eric Holder issued a statement announcing that they would direct the Justice Department to no longer defend challenges to the bill, specifically its third section, which defines marriage as between a man and a woman, calling it unconstitutional. Although the duo formally announced their opposition to the statute, it remains on the books, and while the administration will no longer defend the constitutionality of the law, Speaker of the House John Boehner, a Republican of Ohio, has announced his intentions to defend the third section, stating that courts, not politicians, should decide the bill's constitutionality.

On March 9, he announced that "after consultation with the Bipartisan Legal Advisory Group, the House General Counsel has been directed to initiate a legal defense of this law. This action will ensure that this law's constitutionality is decided by the courts, rather than by the President unilaterally."

The Bipartisan Legal Advisory Group is a five-member board composed of the Speaker of the House (Boehner), the House Majority Leader, Rep. Eric Cantor of Virginia, the House Majority Whip, Kevin McCarthy of California, the Minority Leader, Nancy Pelosi of California and the Minority whip, Democrat Steny Hoyer of Maryland. The group directs the House General Counsel to take certain stances on representing Congress' interests in legal matters.

Sam Butterfield can be reached at sbutterfield@dailycollegian.com.

If the Respect for Marriage Act passes, couples like this one would be entitled to federal marriage benefits.

Nuisance citations up from '10

SELECT BOARD from page 1

the fines for violations of any of the four bylaws to $300 per offense – the maximum amount the Commonwealth allows municipalities to charge for such offenses. One goal of the increase was to deter people from committing the offenses.

"The increase in the town bylaw fine is, I think, getting the message across – at least for the repeat offenders," Livingstone said.

He added that police tend to issue citation tickets rather than arrests because it saves officers' time – allowing for them to focus on other issues.

Select Board Chairwoman Stephanie O'Keeffe noted that the bylaws are part of a "multifaceted effort" with the University of Massachusetts to work in cooperation on town issues. She added that the cooperation of both entities is part of an effort to "find the right balance of quality of life."

Additionally, Julie Federman, the town's health director, noted the bylaws are part of a larger effort to improve the safety and health of Amherst's neighborhoods. The effort also includes possibly implementing tobacco use regulations at some properties, reviewing the UMass Student Code of Conduct, and commencing an outreach and education program on landlords' rights and responsibilities.

Elsewhere last night, members approved a measure that will implement new parking pay-and-display machines in parts of downtown Amherst. The machines will be implemented in several different phases, with the first phase slated to occur this spring.

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

TUESDAY, MARCH 22, 2011

"If we don't believe in free expression for people we despise, we don't believe in it at all." -Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

This is why you should support the Senior Campaign

Dean Curran

Spring can be a hectic time at the University of Massachusetts, especially for seniors. But while you are busy preparing for graduation and life after college, do not forget to participate in the time honored tradition of the Senior Campaign. Every year, seniors vote on the class gift in a student-led effort to create a culture of giving and appreciation for philanthropy at UMass. This year, the class of 2011 voted overwhelmingly in support of the Need and Merit Based Scholarship Fund, according to the Annual Fund.

The goal of the Senior Campaign Committee, which is composed of 26 students, is to raise $40,000 for the fund. A deserving student will be awarded a scholarship every year by subsequent Senior Campaign Committees until funds are depleted.

Though the University has been increasing its fundraising efforts for financial aid and scholarships, more students are requiring aid as the state cuts more funds to UMass. Our university depends on private support more than most students realize, and participating in the Senior Campaign is a once-in-a-lifetime opportunity to leave a lasting impact on it.

Some students object to donating to UMass because they already pay tuition. All students know it can be a great expense. But tuition only covers roughly 23 percent of the cost of educating each student, according to the UMass Amherst Annual Fund. And while UMass is a state-assisted public university, only about 27 percent of the annual budget comes from the government. The other 50 percent is provided by private philanthropy.

Most of this money comes from corporations such as Microsoft, who gave $2 million in grants over the past five years which went into developing the Learning Commons in the basement of the library. But before major companies will agree to support UMass, they scrutinize our school's pledge rates – the percentage of alumni, parents, friends and students who give back. Pledge rates are the universal indicator of satisfaction with a university, not just for potential corporate sponsors, but for national ranking systems as well. The higher a school's pledge rates are, the easier it is to raise millions in corporate support and climb the ladder of college rankings. Giving to the Senior Campaign helps boost UMass's pledge rates, which in turn make it possible to get corporate support.

In all these ways, your support of the Senior Campaign has a broader significance outside the class gift.

This provides more resources available to students and increases the value of a degree from UMass. In all these ways, your support of the Senior Campaign has a broader significance outside the class gift.

Plus, getting involved in the Senior Campaign is fun. The Senior Campaign Committee has four events planned. First, they're kicking off fundraising with two trivia nights on March 22 and 24 from 9-11 p.m. in the Grad Lounge. There will be free food, complimentary 2011 pint glasses, and prizes for winning teams (including prizes from American Eagle, the UStore, Bertucci's,and others).

On April 25, there's the Senior Shovel and Scoop, when the class tree will be planted, followed by ice cream sundaes in Memorial Hall. April 28 is gratitude day, when the Committee will raise awareness about the generous support UMass receives from its donors. Lastly, all seniors who pledge to the Senior Campaign by April 15 will receive an exclusive invitation to a wine and cheese event at the chancellor's house on April 28.

This meeting with Chancellor Robert Holub, his wife and others is an excellent networking opportunity. Participating in the Senior Campaign can be a great social experience as well as a generous way to help others.

After all the members of the Class of 2011 have moved on, their legacy will remain in the Need and Merit Based Scholarship Fund. As you prepare to finish your UMass education, be appreciative of the generous support of private donors that has made it possible. Consider helping deserving students who may have to leave school for financial reasons to get where you are.

The students that will receive the scholarship in the coming years will be eternally grateful for the investing in their futures. So give to the Senior Campaign, and go to some of the events. It's a great chance to unite with your classmates around a worthy goal.

Machiavelli reconsidered

Dan Stratford

Niccolo Machiavelli was and is many things to many people. To the city of Florence, Italy, he was an able civil servant and diplomat in the era after the expulsion of the Medici family and the re-founding of that city's republic. To Professor Leo Strauss, as quoted in "The Portable Machiavelli," he was a wicked and pernicious influence, even a "teacher of evil." To many high school and college students, he is both the muse and embodiment of the notion that the "ends justify the means" in politics. However, when examining someone as esoteric and complex as Machiavelli, one must take great care to avoid simple platitudes and sweeping judgments about this most auspicious citizen of Florence. Rather, it is imperative that Machiavelli be examined through the spectrum of the vast anthology of literature he produced. This was not only in the capacity of his authorship of "The Prince" and "The Discourses on Livy," but also his achievements as a poet and playwright. There is also another great achievement of Machiavelli's that all too often is forgotten even by students of politics and history: his capacity as the founder of the modern discipline of political science.

When people speak of Machiavelli, they often incorrectly assume that he was devoted singularly to the idea that humans are, at best, base creatures with no capacity for self-improvement, with rule by brutal autocrats being humanity's natural state.

However, through even a cursory study of this man and his times, one can come to the conclusion that both he and his writings are far more palatable than their reputation would suggest.

This is the infamous Machiavelli of "The Prince" that so many have come to queasily know and unfairly despise. However, at the same time, it is the Machiavelli that has been commandeered, emaciated, and stripped of intellectual depth by both those who wish to pervert his teachings and by the curriculum of the modern American secondary school, which regrettably no longer places a premium on the history of political thought. The latter is where the author of this column gained his first insight into the Florentine, and one that portrayed him in both an overly hostile and overly shallow manner.

However, through even a cursory study of this man and his times, one can come to the conclusion that both he and his writings are far more palatable than their reputation would suggest. For example, if one were to take "The Prince" — written by Machiavelli in exile after the return of the Medici family to power in Florence — at first glance, one might view it as a guidebook to authoritarian rule. However, Machiavelli, contrary to the teachings of Professor Strauss, was not first and foremost a political theorist, but a skillful observer of human nature. He was able to transform his prodigious amount of political experience in the relatively swift resurrection and destruction of the Florentine Republic into the perspective needed to inform his readers on not just the nature of politics, but on the very nature of man – his temptations, appetites and dual capacity for both barbaric savagery and prudent reasoning.

He elaborates rather clearly how, as a result of the imperfect and sometimes baleful nature of man, people must at times be governed in a manner divorced from morality out of sheer necessity. Mostly, however, he simply offers practical and effective political advice gleaned from his vast experience. For example, in the early chapters of "The Prince," he both extols the value of not depriving people of their native traditions or property because of lingering hatred that a leader can incur – a hatred that is best avoided.

In fact, he cites the numerous difficulties that arise from the conquest of a state and culture by one that is entirely foreign. He notes in Chapter Three of "The Prince" that, for this dilemma, "one of the best and most efficacious remedies would be for the person who has taken possession" to reside in their newfound dominion. The purpose of this is to not just for the conqueror to insure a smooth transfer of power and to ingratiate himself, but to also be able to respond to problems that arise or need to be otherwise dealt with.

History affords us numerous examples of this, including Alexander the Great taking a Persian wife after his defeat of Emperor Darius and Queen Victoria being crowned Empress of India.

In Chapter 18, however, he recognizes but does not relish the need for a generous helping of deception from time to time.

Indeed, he readily acknowledges that people may need to be deceived or at least endure a bending of the truth for their own good. Machiavelli notes that the honest leader is worthy of reverence. However, he also cites the fact that "one sees from the experience of our times that the princes who have accomplished great deeds are those who have cared little for keeping their promises ... in the end they have surpassed those who laid their foundations upon honesty." This bitter but candid observation is not without historical precedent. Franklin D. Roosevelt was prescient enough to see that the United States would soon be involved in a war with the Axis Powers, and quietly instituted a peacetime draft.

Concurrently, he placated isolationists with guarantees of neutrality. This, it can be said, was a form of "benevolent" deception that Machiavelli would tacitly endorse.

As amazingly objective as these observations are, they are not without a central purpose.

As Machiavelli observed the various flaws endemic to the human condition, and the need to govern accordingly, in "The Prince," he utilized those observations to promote his conception of a republican society that governs with those flaws in mind in "The Discourses." The true genius of Machiavelli was his reconciliation of government not with ideals, but with the very imperfect beings over which they reign.

Reaching Lakes of the Clouds

Natalie Beittel

The past two summers I worked for the Appalachian Mountain Club's Professional White Mountains Trail crew. This coming May, after I graduate from the University of Massachusetts, I will return to make it my third year on the trail crew. My first year on the crew was a blur. We spent the beginning of the season patrolling trails maintained by the AMC in and around the White Mountains of New Hampshire. Every morning our crew of 22 split into smaller groups, and were sent out to hike certain trails and chop out fallen trees from the winter storms. The first few patrols were nerve-racking. My body was in shock from the extreme physical strain, and I had never swung an axe before – never mind working through trunks and limbs often falling at inconvenient angles.

I jumped out of the truck at the trailhead every-day shaking with adrenaline and nerves jogging up the trail. Patrols are leapfrog style, the first person to hit a tree stops to clear it and the rest keep going on ahead. Reaching a blown-down tree I would panic while I chopped worrying about catching up with the rest of the crew. I did get used to the burn in my thighs climbing and knowing I would eventually catch the crew after a chop.

The last patrol of the season was a two-day adventure with a night spent at one of AMC's high mountain huts, Lakes of the Clouds, which sits on the shoulder of Mt Washington.

The last patrol of the season was a two-day adventure with a night spent at one of AMC's high mountain huts, Lakes of the Clouds, which sits on the shoulder of Mt. Washington. We woke as usual the morning of the last patrol and shoved our sleeping bags into our packs in addition to the usual stashes of food and our axes. At the parking lot we climbed out of the truck and started racing up the trail as usual. We started up the Airline Trail, which would bring us to the saddle between Mt. Madison and Mt. Adams. There were not many blown down trees going up, so without a break from hiking I quickly was sweating heavily and breathing hard as the crew kept a hard pace.

It had started to rain as we hiked, but it was when we broke free of the trees into the alpine zone that the wind slammed into my wet body chilling me. Stopping quickly I threw on a raincoat. Racing over the bare rocky trail I saw Madison Hut appear suddenly out of the clouds and made a detour inside. We had made a big climb up to 5,000 feet in about 2 hours. Luckily the hut crew had just made a batch of fresh fudge and I shoveled several squares into my mouth. Standing inside I started to shiver and headed back out into the weather with another crewmember. We wandered around disoriented in the clouds looking for a trail sign pointing us in the right direction.

I knew from looking at my map earlier that we would descend the Madison Gulf Trail into the crevasse between Mt. Madison and Mt. Washington, losing all elevation we had just gained only to climb back up later above the trees. The Madison Gulf Trail was steep and filled with slippery rocks, which we slid down, but the movement and being below the trees again warmed me up. Now in wilderness-designated forest, we chopped only what wasn't easy to walk over or under. The crew had been scattered before, was now back together and we moved quickly along.

The descent led us to an intersection with the Great Gulf trail and then to Chandler Brook trail. Chandler Brook was a steep straight shot up to the auto road on the north side of Mt. Washington. Climbing hand over hand it was now past 2 p.m. Having started at 8 a.m., we had yet to stop for lunch because it was too cold. The trail spit us out suddenly on the road just around the four-mile mark. On the road, the cold wind and rain once again whipped at us and walking up we were bent over trying to step. My face, hands and thighs quickly became numb with cold and I regretted not packing my rain pants and a pair of gloves.

A lone van came down the road out of the fog and shouted out the window that the weather was worse above. Thanks, good to know. The crew once again started to split up and spread out, as people were now tired and moving at different speeds. Struggling to place one foot in front of the other, I watched a crewmember pull out a black plastic trash bag and put it on over his t-shirt, obviously lacking a rain jacket. Unable to hear anything else over the wind, it flapped wildly and noisily around his body barely covering the tops of his arms.

Two crewmembers were ahead of me, and two behind, all falling out of sight. Finally, the Alpine Garden trailhead appeared on my left and I jumped off the road making the final crossover to lakes. I was very alone at this point and couldn't see more than 10 feet in front of my face. The Alpine Garden is a confusing place in the clouds, with no trees to herd you along the path, and all surrounding scenery lost in grey. My hands lost all feeling and I struggled to keep them inside the sleeves of my jacket but needed them to stabilize myself climbing along the rocks fighting the wind and the slipping.

In hindsight, this was maybe a bit dramatic, but I remember telling myself as I crawled along I needed to keep going or else I would die. Talking about the experience later, I found that other crewmembers had similar thoughts. Suddenly interrupting my morbid thoughts, I saw a bright yellow light appear in the distance and thought maybe I was now hallucinating and it was the sun, but it was my crew leader, even better. It was the happiest I have ever been to see anyone in my whole life. He was in a head to toe yellow rubber rain suit and huddled behind a rock shivering eating a sandwich. "Hey, buddy," he said to me with a smile. He had been waiting for me. Too cold to wait for the others we headed for the hut. I jogged when the terrain allowed, tripping over my own feet from the lack of feeling in my thighs. At the final intersection I would have been lost without my crew leader, as I took a left, confused from being frozen and the lack of discernable land marks. He steered me back right and finally, before we saw it though the thick clouds and rain, we heard the signature sound of the small windmills atop the Lakes of the Clouds hut and rushed to the door.

'Battle: Los Angeles' invades theaters

By Kate MacDonald
Collegian Staff

In "Battle: Los Angeles," the latest flick by director Jonathan Liebesman, Marine Staff Sergeant Michael Nantz is about to retire to a life of leisure, but he's soon deployed to a grim and dangerous battle zone. The scene of this war torn destruction is downtown Los Angeles.

A storm of meteors is hurtling towards Earth, but is expected to hit just off the coast of many major cities around the world. People don't find this to be a coincidence, and they soon realize that they're not meteors, but strategically coordinated extraterrestrial attacks. When the aliens begin exterminating the population, it's up to the armed forces to save the world, starting with L.A.

Aaron Eckhart, a veteran of action movies like "The Dark Knight" and "The Core," stars as the serious Nantz, playing him as a damaged sergeant with a stiff upper lip. Though playing the lead, his character is not the heart of the film.

Nantz, like the other characters, was simply not developed as fully as he could have been. While the plot does touch on the background of the various players, more of the plot is focused on the action sequences and scary scenes.

"Battle: Los Angeles" is made up of an easily recognizable cast, from R&B singer Ne-Yo as Corporal Kevin Harris, Michelle Rodriguez as Air Force Tech Sergeant Elena Santos and Bridget Moynahan as Michele, a veterinarian. A major selling point of the film is the fact that there is not one weak link in the movie. Again, though characters may not have been developed to their fullest, each part was performed well.

The same could be said about the cinematography. The movie employs the use of a shaky camera. While this can be confusing, even dizzying at times, it definitely adds to the thrill of "Battle: Los Angeles." The cinematography makes it seem like the movie is actually a documentary filmed through a camcorder, and the viewer is right in the thick of the battle. During action sequences, the shot bounces around and it isn't always clear what's going on. But that only adds to the excitement.

The soundtrack was nothing notable. It blended into the background easily and consisted of the usual strings and drums combination that characterize all war movies.

Though Liebesman's (known for "Darkness Falls" and "The Texas Chainsaw Massacre: The Beginning") plot and characters aren't robust, "Battle: Los Angeles" makes up for it with very impressive battle sequences and special effects. This comes as no surprise, with a budget estimated at upwards of $70 million. Viewers will certainly be impressed with the war-like images of the familiar big city. The CGI and intense gunfights make the film seem much more like a war movie than a sci-fi alien movie.

There is more action than dialogue in the film, and the majority of the lines are somewhat predictable, but it doesn't detract from the movie. "Battle: Los Angeles" could have easily been a dud. But the race to save the west coast quickly turned into a dangerous and exciting cat and mouse game. The special effects and fight scenes make the film worth the price of the ticket.

The one special effect that doesn't stack up against the likes of other classic alien movies is the way the aliens themselves look. They don't resemble anything recognizable from other alien movies. While this isn't necessarily a bad thing, it can be rather confusing when the audience has to take time to figure out what they're looking at.

"Battle: Los Angeles" is a story of human perseverance shown through forceful action scenes. It's the type of film that would appeal to just about any audience. Between the intense war aspects, the romantic undertones and the foreboding scenarios, there's something for everyone.

As with anything, there are smaller pitfalls. The soundtrack is almost non-existent, the characters' personalities could've used some more description and the aliens look odd. That said, the numerous shining parts of "Battle: Los Angeles" more than made up for it.

While this new movie isn't of the caliber of "Independence Day" or even "District 9," it's not entirely a write-off. Audience members won't be disappointed in "Battle: Los Angeles."

Kate MacDonald can be reached at kaithynn@student.umass.edu.

"Battle: Los Angeles," directed by Jonathan Liebesman and featuring Aaron Eckhart (pictured), paints a picture of war-torn Los Angeles through shaky camera work and an all-star cast.

Julian Casablancas, singer and frontman of the Strokes, had markedly less creative input on "Angles," the band's latest release. The album has been in progress since 2009.

Strokes' new 'Angles'

By Brian Canova
Collegian Staff

Today, the Strokes released their long-awaited fourth album, "Angles." The record slaps a surprising 80s synth-rock danciness onto their modern garage rock, which draws from The Velvet Underground and carried their inaugural album, 2001's "Is This It." While it can't surpass their first, it's their best album since and light years beyond 2005's catastrophic "First Impressions of Earth."

The band began writing songs for "Angles" in January of 2009 with the stated intention of getting into the studio by that February. A year later, following an incompatibility with producer Joe Chicarelli (Beck, U2), the band was hardly any closer to an album release. The album was ultimately recorded at Albert Hammond Jr.'s home studio in upstate New York.

The chief complaint about "Angles" is that lead singer Julian Casablancas fails to match the energy he's brought to his vocals in the past, and this is probably due to fundamental differences in the way this album was produced.

Casablancas, who ran the show in the songwriting process for the first three albums, shared in the creative responsibilities with the other band members on this one in order to get the album made. But even "share" might not be the right word. In fact, the music for the album was recorded in Casablancas' absence as he toured his solo album, 2009's "Phrazes For the Young," adding in his vocal parts afterwards. His distance from the production shows.

With an 80s synth rock sound and a faint hint of pop and funk a la Talking Heads, "Machu Piccu" kicks off the album with a surprising sound that's echoed through most of the album. "Under Cover of Darkness" calls to mind a much more produced "Last Nite" or "Is This It" off their first album, and "You're So Right" introduces a spacey trance-like song unique to the track list.

At the same time, some tracks feel disjointed and others a little whiney. Take "Call Me Back" for example. Even "You're So Right" could be described as the musical equivalent to one of those ransom notes cut out from the individual letters of a magazine, thrown together with a glue stick and a kid's pair of scissors.

Building off the same influences as their earlier work, including The Velvet Underground and The Cars, "Angles" also experiments with sounds from MGMT, a little Phoenix, Arctic Monkeys and even some Talking Heads on a few of the tracks. Listen to "Taken for a Fool," the first 10 seconds of "Games," or "Machu Piccu." "Life Is Simple in the Moonlight," the only song kept from the recording sessions with Chicarelli, sounds a bit like The Shins, and this makes sense given that he produced with them as well. "Gratisfaction" and "Two Kinds of Happiness," each worth a listen, round out the album.

The most exciting part of this album is what it might mean for their live shows, especially after a stellar performance on Saturday Night Live two weeks ago, playing new tracks "Under the Cover of Darkness" and "Life is Simple in The Moonlight" in their third live performance on the program.

Brian Canova can be reached at bcanova@student.umass.edu.

Top 10 green kitchen essentials to suit any lifestyle and budget

By Jordan Laio
Network.com (MCT)

The dividing line between green living and homesteading is blurry, but probably exists somewhere between recycling and vermicomposting. Wherever you lie on that spectrum, a big part of living a greener lifestyle is doing what's healthy for the planet and yourself. While truly living green means buying less stuff, there are some things worth buying (at least until you actually move to the homestead).

The following is a list of items, some of them more essential and some less, that should be in every green home's kitchen:

1. Reusable bulk bags: These are simple cloth bags with drawstrings used instead of plastic bags for your produce and bulk items like flour, beans, and nuts. Obviously, they are less useful if your local grocery store has an impoverished bulk section, but many food co-ops and natural markets like Whole Foods have pretty robust bulk sections. These bags are often made from natural materials and can be reused indefinitely. You get extra points for sewing your own bags or re-purposing other cloth bags (like the satchel Tom's shoes come in).

2. Canning jars: I think of canning jars as the backbone of a sustainable kitchen. They range in useful sizes from pints to gallons and are great for dry and wet food storage, sprouting (if you don't have a dedicated sprouting device), canning, and fermenting everything from kombucha to kimchi. Available at your local hardware store or food co-op.

3. Sprouting device: There are commercial devices made especially for sprouting that you may find in a green kitchen's pantry. Why sprout your own? It maximizes the nutrition of the foods you already eat and is way cheaper than buying sprouts.

4. Gallon crock: One of the telltale signs that you're really walking the walk is that you've got a nice earthenware crock for fermenting your community supported agriculture (CSA) vegetables. Lacto-fermentation enhances vegetable nutrient value and shelf life and uses about zero energy resources, compared to canning or freezing, which both require energy (either heat or electricity). You can occasionally pick up old crocks from yard sales, thrift stores or antique shops (check for cracks). Harsch makes the most functional crocks, if you don't mind spending over $100 a pop.

5. Miso paste: Why, out of all the foods out there, is miso so special? First of all, because it's so tasty and healthy. How tasty? Tasty enough that foods like miso have their own secret flavor category (other than sweet, salty, sour, and bitter) called umami. How healthy? Miso is probiotic, aids digestion, is a great source of vitamins and minerals, reduces risk of some cancers, is high in antioxidants and protects against radiation. To ferment it yourself could take a couple years, but to cook it takes about the same time as a Cup-O-Noodles, which we could call the anti-miso.

6. Coconut oil: Once shunned by the health-conscious because of faulty information, coconut oil is making a big comeback. It's versatile (the best vegan butter substitute) and tastes great. And compared to refined cooking oils (which are extracted with high heat and chemicals like hexane) coconut oil is much gentler on the environment. It also makes a great skin moisturizer and salve.

Canning jars, reusable bags, coconut oil and miso paste are just some of the many items a green kitchen should have on hand at any time. These items promote a healthy lifestyle and environment.

7. Rapadura: It's sugar. Why is sugar in the green pantry? Well, no doubt you already buy sugar in one form or other. Why not buy the greenest sugar out there? Rapadura is unrefined sugar with all of its vitamins and minerals still intact. Refined sugar, on the other hand, goes through a process involving chemicals like sulfur dioxide, lime, phosphoric acid and bleaching agents. Yeah, rapadura looks like dirt, but it's literally just dried sugar cane juice (not to be confused with "evaporated cane juice," which is just refined sugar).

8. Dr. Bronner's 18-in-1 Castile Soap: Use it for body wash, dish soap, shampoo, laundry, teeth brushing and more. Unlike most "soaps" on the market, it's biodegradable so you can even take it camping and wash your dishes in the river. And, of course, it's "magical."

9. A good cutting board: A good cutting board is like a badge of honor. It shows that you value your food and that you're buying those vegetables fresh from the farmers market (not pre-chopped at the supermarket). A good cutting board is one solidly built and made out of renewable wood (I've never met a plastic cutting board I liked. Not to mention it's not renewable). Extra points if it's made by a craftsman rather than by a multinational corporation.

10. "The Encyclopedia of Country Living." If you've got this book in your kitchen, you are well on your way to crossing the green living homesteading threshold. It's the bible of DIY skills, from baking bread to churning butter to building a chicken coop. Make sure it's left on the counter as a conversation starter.

Some other non-essential items (but for which you get major green-living cred): A grain mill, dehydrator, beer carboys and your own oil extractor for producing fresh vegetable oils.

Courtesy Hockey East

Goaltender Joe Cannata made 30 saves and allowed only one goal in semifinals win over New Hampshire, before stopping 30 shots in a losing effort to the Eagles in the final.

Merrimack defeats UNH, falls short to BC in final

Hockey East from page 8

a power play opportunity and evened the score at three apiece.

Atkinson took the spotlight again when he scored at the 14:49 mark, which proved to be the game-winner. The Eagles reassured their lead with 1:36 left in the contest when a wrist shot by Brian Dumoulin went past Merrimack goaltender Joe Cannata.

Merrimack bypasses UNH

Before Merrimack met Boston College, it had to defeat New Hampshire. On Friday evening, they did just that as the Warriors defeated UNH, 4-1. This marked the Warriors' first ever ticket to the Hockey East Championship game.

Warrior goaltender Joe Cannata had a nearly perfect game, besides one goal let in 7:20 into the first period. Stevie Moses had an electrifying play when he split through two Merrimack defenders and scored on Cannata.

However, within 10 minutes of the Wildeat's goal, the Warriors took the lead for good at 2-1

Both goalteinders, Cannata and UNH's Matt Di Girolamo, tightened up their game and stopped all shots in the second period, resulting in a scoreless frame.

Players of both teams were on their toes at the beginning of the final period. At 14:11, Mike Collins provided insurance for the Warriors, increasing their lead to 3-1. Within the last minute of play, Elliott Sheen scored on an open net and clinched the ticket to the championship game.

Cannata finished the game with 30 saves while Di Girolamo recorded 31.

BC heads to HEA title game

Goaltender John Muse was a key factor in Boston College's 5-4 victory over Northeastern during a semifinal game while on its way to the Hockey East Championship.

After the victory over Merrimack, Muse has a record of 21-1 in postseason games and a 13-1 record in Hockey East playoff games. The senior stopped 33 shots in the semifinal game and was named to the 2011 Hockey East All-Star first team and the Bauer Goaltending Champion for his effort.

The Huskies scored midway through the first period at the 13:48 mark to take the 1-0 lead. It was first-team Hockey East All-Star forward Brian Gibbons who came back not under three minutes later and evened the score at one apiece.

The Eagles continued to pressure goaltender Chris Rawlings, three goals in the second period and one more in the third, increasing BC's lead to 5-2.

Northeastern began to pull a comeback towards the end of the final period, with Garrett Vermeersch scoring on Muse at the 16:44 mark. With nearly a minute left in the game, Northeastern scored again, closing the deficit to one goal. BC, however, was able to close out the contest and move on to the championship game.

Amy Chaunt can be reached at achaunt@student.umass.edu.

Red Foxes enter game against UM struggling

LAX from page 8

dominated Marist and ended its season in embarrassing fashion, handing them a 20-5 loss.

Defending MAAC Offensive Player of the Year Alyssa Condon returns for the Red Foxes as their most lethal offensive threat. Condon leads the team in points scored with 22. Condon gets plenty of help from complementary players such as Jori Procaccini (17 goals), Ariel Kramer (14 goals) and Jamie Rotundo (11 goals).

For the second year in a row, both Alyssa Littin and Ashley Castano have shared time in the cage. Last season Littin started 13 of the team's 18 games, but so far this year, Castano has earned the majority of playing time, starting six of the Red Foxes' seven games.

Considering that Marist returns a majority of its scoring and both goalies from last season, its struggles in 2011 have been puzzling. However, a decrease in scoring and an increase in goals allowed is a possible explanation. In 2010, the Red Foxes scored 10.72 goals per game and allowed 11.61 goals per game, but this season they have scored just 9.71 per game while allowing 12.29 per game.

The Minutewomen are well aware that No. 2 Northwestern will be coming to town Saturday night, but they cannot overlook a Marist team that's hungry for a victory.

The game will be played at 4 p.m. in Poughkeepsie, N.Y.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

Jeff Bernstein / Staff Photographer

Junior Riley Perry, along with senior Nazy Kerr, has anchored the defense for the Minutewomen this season. Riley has a team-high 14 groundballs while starting all seven games so far.

Lower seeds are making mark in tourney

VCU heads to Sweet Sixteen after upsetting No. 3 Purdue

By Shannon Ryan
Chicago Tribune (MCT)

CLEVELAND — Selection Sunday brought record levels of eye-rolling and scoffing.

Columnists complained and analysts agonized about a weaker-than-ever NCAA tournament field that included seven teams with at least 13 losses. The expanded tournament just meant more unworthy teams, the line of thinking went.

Outrage was expressed that the selection committee allowed Virginia Commonwealth entry through one of the "First Four" games, but after No. 11 seed VCU's upsets against sixth-seeded Georgetown and No. 3 seed Purdue, there's a big ha-ha coming out of Indianapolis as the Rams went from debatable to darlings.

That was just one example of how the tournament prevailed again by producing thriller after thriller in the opening-round games to set up an exquisite mish-mash of powerhouses and mid-majors in the Sweet 16. The aspects that prompt millions of college basketball fans to fill out brackets were magnified by the success of teams deemed unworthy before the tournament.

The round of 64 saw six lower-seeded teams knock off a higher seed and produced enough "Shining Moment" highlights to last through both versions of the song.

Eleven games Thursday and Friday were decided by two possessions, including eight games that were decided by just three points or fewer. Through Sunday night, 17 games had been decided within two possessions.

VCU, Marquette, Richmond and Florida State became double-digit seeds booking trips to Sweet 16 destinations.

Marquette's new fight song might be "One of These Things is Not Like the Other." They're in the East Region to play No. 2 North Carolina – a narrow winner against Washington – in a bracket that also features No. 1 Ohio State and No. 4 Kentucky.

San Antonio fans will be the home of the underdogs in the Southwest Region, where No. 12 seed Richmond will play top-seeded Kansas, and 11-seeded VCU will play 10-seeded Florida State.

Top-seeded Duke is still alive after squeaking by eighth-seeded Michigan, which was saddled with 13 losses heading into the tournament, to play Arizona. The fifth-seeded Wildcats produced another surprise with a defeat of No. 4 Texas.

Connecticut guard Kemba Walker's legs are holding up and his smile is brightening up CBS and truTV telecasts while leading the Huskies to a meeting with ultra-athletic No. 2 San Diego State in the West Region.

In the so-called third round game – a name the tournament really needs to change back to second round next season – the first No. 1 seed fell when Pittsburgh stumbled against Butler on two killer, yet accurate, foul calls in the final two seconds.

So, eighth-seeded Butler might just be this year's Butler, having earned a trip to the Sweet 16 in New Orleans against fourth-seeded Wisconsin, which beat 13th-seeded Belmont and fifth-seeded Kansas State to advance in the Southeast Region.

BYU's Jimmer Fredette has continued to deliver with 66 points in his first two games of the tournament, beating Wofford and Gonzaga, to advance the No. 3 Cougars to a game against No. 2 Florida.

March Madness got started as Kenneth Faried and No. 13 Morehead State introduced themselves to the nation with a fantastic block and a one-point upset of Louisville in Denver. And who would have predicted Richmond would have to get by Morehead State for a trip to the Sweet 16?

Few would have predicted that third-seeded UConn, which was unranked in the preseason, and Marquette, which entered the tournament with 14 losses and a .500 conference record would be the last two Big East teams out of 11 standing.

Ohio State seems like the only top seed that looks like a top seed. The Buckeyes haven't been rattled yet, beating Texas-San Antonio by 29 points and George Mason by 32 points in Cleveland.

That makes the Buckeyes an aberration in the tournament, which so far has made a trend of tight games and upsets.

Junior guard Brandon Burgess celebrates a basket in Virginia Commonwealth's upset over No. 3 Purdue on Sunday.

JEFF BERNSTEIN/COLLEGIAN

Jackie Lyons looks to attack the defense in a game this season for the Minutewomen.

Minutwomen look to get back on track

Following its first loss, UMass takes on Marist

By Jackson Alexander
Collegian Staff

After losing its first game of the season, the Massachusetts women's lacrosse team must now regroup and hit the road again to face Marist on Tuesday.

Over spring break, UMass ascended the national ranks, reaching No. 12 after a sixth-straight win against Stony Brook. While the rank is the highest for the team since 1988, a 10-8 loss to No. 15 Albany grounded the previously sky-high Minutewomen. Despite the defeat, UMass still remains one of six teams in the nation with just one loss this season.

UMass coach Angela McMahon hopes her team can use Saturday's game to learn from its mistakes.

"While we don't want to lose, we obviously have some things that we need to work out and I think we will hopefully come out on Tuesday strong and ready to go," said McMahon.

Converting on opportunities is an area McMahon would like to see her team improve in from Saturday's game. UMass attempted 33 shots against Albany and could only find the back of the net on eight of them. Their 24.2 percent shooting was well below their 44.5 percent average.

The Minutewomen are led by freshman Katie Ferris on offense. She has 17 goals in the last five games, including four-straight hat tricks.

"We're definitely going to learn from [the loss] and fix our mistakes in practice," said Ferris.

Last year's leader in assists and goals, Jackie Lyons, paces the team with 14 goals and 11 assists. Haley Smith and Sam Rush have provided instant offense off the bench for the Minutewomen. Smith has 13 goals on the season, while Rush has two hat tricks over the last four games.

Senior Nazy Kerr, one of the vocal leaders of the team, leads the defense. Junior defender Riley Perry leads the team in groundballs with 14, while Katie Florence patrols the net for the Maroon and White. Florence carries an impressive 6-1 record, a .532 save percentage, and a 9.22 goals against average.

UMass and Marist are not familiar with each other on the lacrosse field. The meeting Tuesday will be the first between the teams in the schools' histories.

Marist (3-4), a member of the Metro Atlantic Athletic Conference (MAAC), enters Tuesday's game slumping. The Red Foxes have lost three of their last four and are coming off a 15-8 drubbing against Vermont.

In 2010, Marist won the MAAC tournament and earned a berth into the NCAA Tournament. However, the Red Foxes received the daunting task of taking down lacrosse-powerhouse Maryland in the first round. The eventual-national champion Terrapins

While stats are encouraging, McMahon seeks intangibles

By Nicholas Bellofatto
Collegian Staff

The Massachusetts women's lacrosse team lost its first game of the season this past Saturday, but when looking at the statistics from the game, intangibles could prove vital to its future success as a team.

After a 6-0 start to the season, which propelled them to a No. 12 ranking nationally, the Minutewomen lost 10-8 to No. 15 Albany. However, in the loss, UMass outshot the Great Danes by a margin of plus-11.

With 33 shot opportunities coming in the game, the Minutewomen were not lacking in opportunities to claim a victory. The issue, however, was that these 33 opportunities only led to eight goals by the Minutewomen, their lowest total thus far this season.

Though the loss was not a positive outcome, the fact that the Minutewomen still outshot their opponents is something that can be worked on heading into their next contest against Marist.

In the six games before Albany, UMass took less than 27 shots just twice and recorded a season-high 53 shots against Sienna. The Minutewomen came out victorious against Sienna scoring 16 goals on those 53 shots. In a 17-goal effort against Vermont, the Minutewomen took only 27 shots, scoring on more than half of their shot opportunities.

The team is familiar with success in the shots-on-net category because it has received a high level of production from several players, ranging from veterans to underclassmen.

Coupled with the poor shooting performance, UMass coach Angela McMahon noted that the team needed someone to make a big play at the end of the Albany game and she did not see that.

"In the end, we really needed a big play, and we needed someone to step up and that didn't really happen," said McMahon. "We're going to really challenge the team, the leaders, to see who's going to step up and make those plays when we need them."

Katie Ferris, who has posted a team-high 17 goals this season in only five games, also felt as if the loss was not so much because of the way Albany played as much as it was the way UMass did.

"I think we beat ourselves today. It is something that we could have controlled that we just did not capitalize on," Ferris said.

What McMahon and Ferris are talking about are intangibles, which do not turn up on the scoreboard, such as scoring in clutch situations. The Minutewomen have done this in the past, as they rallied from behind to beat Boston University with less than 10 seconds to play in regulation.

However, in the game against the Great Danes, the Minutewomen were facing an Albany goalie, Anna Berman, who leads the NCAA in goals-against average. Even so, the Minutewomen are among the best teams in the nation on offense, scoring nearly 15 goals per game heading into the contest.

The team has been producing very well in nearly every statistical category possible and even with the loss against Albany, it has shown positive signs. In the end, the Minutewomen season many not come down to the statistical categories so much as it comes down to someone stepping up when needed.

Cook takes fifth place in two events, VT duo claims victory

By Jackson Alexander
Collegian Staff

Jason Cook, a star diver for the Massachusetts men's swimming and diving team, finished in fifth-place in both the one and three-meter events this past weekend at the NCAA Zone A Diving Championships in Annapolis, Md.

The junior finished fifth out of 46 divers in the one-meter event with a final score of 612.75 and fifth of out 43 divers in the three-meter event with a final score of 665.05.

Virginia Tech teammates Ryan Hawkins and Logan Shinholser won the one and three-meter events, respectively. Hawkins posted a score 657.85 in the one-meter dive for the win, while Shinholser's final score of 790.05 in the three-meter dive was enough for the victory.

The event marked Cook's third straight trip to the NCAA Zone A Championships. He made UMass history in his freshman year when he became the first Minutemen diver to qualify and compete in the NCAA Diving Championships.

Cook, a native of Amherst, holds the Atlantic 10 record in both the one and three-meter dives. He has also helped lead UMass to three A-10 Championships during his time at the school.

He holds the school record in the one and three-meter dives with scores of 334.50 and 395.05, respectively.

Cook will look to build on his already illustrious career in his senior year at UMass next season.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

Boston College won its second-straight Hockey East Tournament Championship, in large part due to goaltender John Muse. The senior made 36 stops while allowing three goals in the victory over Merrimack.

Boston College tops Warriors in 27th annual HEA title game

By Amy Chaunt
Collegian Correspondent

Junior forward Cam Atkinson scored two goals on Saturday evening for the Boston College hockey team, including the game-winner as the Eagles defeated Merrimack, 5-3, in the 27th annual Hockey East Championship at TD Garden.

Hockey East

Atkinson assisted one goal during the first period and scored two goals during the third period. His play earned him the Hockey East Championship's Bill Flynn Most Valuable Player Award.

The game had an abrupt start when the first goals scored by each team were only 26 seconds apart. Less than two minutes later, BC scored again, making the score 2-1 11 minutes, three seconds into the contest. With 24 seconds remaining in the first period, Merrimack came right back and tied the score.

After a scoreless second frame, Merrimack began the third period, outshooting BC, 8-1, over the first eight minutes.

BC, however, took the lead when Atkinson scored for the first time at the 9:41 mark, making the score 3-2. Merrimack wasn't ready to give up as Ryan Flanigan took advantage of

UMass BASEBALL 2011 SOFTBALL SPECIAL

Fresh start for UM

By David Martin
Collegian Staff

New seasons often provide fresh starts. For the Massachusetts baseball team, this year comes with a promising pitching rotation and a youthful starting roster.

With their season already underway, the Minutemen (4-8) are looking to develop themselves into a team that is not only sound in the game's defensive fundamentals, but also a team that can swing the bat consistently.

"Offensively is where we need to get going," said UMass head coach Mike Stone. "Defensively we have done pretty well and the mound has been okay, but we need to adjust better offensively. It is early in the year, but we have not shown much yet at the plate, and that is an area that we have to be better with."

In their first seven games of the year, the Minutemen were held to just three or less runs six times. The lone time they scored over three runs in nine innings was in a game that saw the Minutemen lose to Michigan by a score of 11-6 on Saturday, March 5. However, they have shown significant signs of improvement in the batter's box as of late.

In their latest five-game stretch, the Maroon and White have scored at least six or more runs in each of their games and have scored 10 or more during three games. UMass went 3-2 over that span, compared to going 1-7 in eight games prior to their offensive awakening.

The upperclassmen have established themselves as the offensive leaders that the team needs. Senior Matt Gedman has been on fire thus far, bringing to the table a team-leading .422 batting average with 19 hits and eight RBIs in 10 games played. Senior Peter Copa has also had a remarkable start to the season, batting .300 with a team-best .650 slugging percentage, .491 on base percentage, 11 RBIs and four homers in 12 games played.

While power continues to develop at the plate, high hopes are being built just over 60 feet away on the mound.

Strong and effective pitching is critical in

See BASEBALL PREVIEW on page 2

Winning ways tested

By Pete Vasquez
Collegian Staff

The Massachusetts softball team is already well into its 2011 season, and as the Minutewomen try to attain to a winning record, the tough early schedule facing the young players is not making matters easier.

While Atlantic 10 play has just begun, the defending conference champions have already racked up the travel miles, beginning the year in Florida at the FAU Kickoff Classic. The club then made its way to California and participated in the Cathedral City Classic before returning to the east coast for two tournaments in Georgia and Florida.

So far, the opposition has featured some of the best teams in the country, including six games against top 25 teams.

UMass coach Elaine Sortino knew the non-conference schedule would be stiff this year, enough to challenge the team's culture of winning.

"Early on in the season, our team would be very challenged, being so young, by great competition," said Sortino. "But I also think it's the benchmark for where we want to be at the end. Our culture is we're used to winning. We had to accept some of these losses. It's not easy to lose. It just doesn't go with our psyche. It's a challenge to stay positive and keep your confidence, particularly as you're so young and you're getting kicked in the gut all the time with a loss."

Seven of the 18 players on this year's roster are freshmen. However, as each day passes, Sortino sees progress in her young players, with each steadily defining their role and growing more confident. Sortino is convinced that by season's end, the Minutewomen will compete with the top teams in the country for a national title.

UMass has already exceeded its loss total from last season, however. The schedule also highlights 11 NCAA tournament teams from 2010. However, that exposure is only going to help the club figure out what aspects of the game it needs to improve on, eventually increasing its chances of winning.

"That's very important because, ultimately, if we want to be a team that's in the national tournament, we need to know what the national tournament will demand from us," said Sortino.

Throughout Sortino's 32 years as the

See SOFTBALL PREVIEW on page 2

UMass features a variety of veterans, young talent for '11

By Michael Counos
Collegian Staff

As the grass and dirt of Earl Lorden Field becomes visible, the ping of metal bats and leather mitts can be heard as the Massachusetts baseball team prepares for their season in search of a second Atlantic 10 appearance in the past three seasons.

UMass features a variety of familiar veterans and young talent as the 2011 season gets underway. UMass coach Mike Stone is at the helm of the squad in his 24th season, sporting a career record of 580-496-2 with the Minutemen.

Last season, the Minutemen finished eighth in the A-10 with a 19-27 overall record and a 13-14 conference record. With the loss of the 11 lettermen and five pitchers to graduation, 16 freshmen have joined the team to accompany the eight veteran pitchers and 17 returning lettermen.

Senior second baseman Eric Fredette of Glastonbury, Conn., and senior outfielder Kyle Multner of Peabody, Mass., will honor the positions of co-captains this season.

Last season, Fredette was the recipient of the team's E. Joseph Thompson Most Valuable Player Award and was an A-10 All-Conference second team selection. The transfer from Vermont led UMass with a .384 batting average, with 31 RBIs, four homeruns, 32 runs scored and a team-best 19 walks, in his first season with the Minutemen.

Multner enters his senior season as the school's active leader in career hits with 119 and homeruns with 20. He appeared in 30 games in 2010, starting 28 and batted .262 with 19 runs scored and 18 RBIs.

"Both [Fredette and Multner] were voted to be captains by all of the players as they are both seniors that show good leadership and are popular among the other players," said Stone

Pitching

On the rubber, UMass will be relying on a younger pitching staff in 2011. Of the 13 pitchers, there is just one senior in left-hander Charlie Benson, five juniors, three sophomores and four freshmen. Freshman Aaron Plunkett of Essex Junction, Vt, is the only other southpaw on the squad.

"I think we definitely have a different look on the mound and these guys are going to have to earn their chance to start, but as of right now pitching roles are to be determined," said Stone.

Benson played in 12 games last season, going 2-1 with 16 strikeouts and a 6.65 ERA in 21.2

See BASEBALL ROSTER on page 10

Sortino's squad

By Michael Wood
Collegian Staff

With seven seniors from last year's team lost to graduation and only two in uniform this season, the Massachusetts softball team will rely on its youth, speed and pitching to carry it to a seventh-consecutive Atlantic 10 championship.

UMass may be younger this season, but it returns a healthy and strong core group of players who contributed throughout 2010. Kyllie Magill, Katie Bettencourt, Audrey Boutin, Meghan Carta and Jordan Storro all have playoff experience. Each of these veterans helped contribute to the Minutewomen's championship season last year, and Sortino expects them to step up even more this season to compensate for the loss of so much offense.

"I'm excited about this year," said UMass head coach Elaine Sortino in a UMassAthletics.com interview. "I think we have a very young and exciting group of kids that are going to keep the tradition going and become some great names."

Pitching

A softball team is only as good as its pitchers, and fortunately for the Minutewomen, they have a really good one in Sara Plourde.

Two years ago, UMass relied on Brandice Balschmiter to keep the team in games. After four seasons, Balschmiter owns the top spot in school history in saves, wins, complete games, starts, appearances, innings pitched and walks allowed. She's also second in shutouts and strikeouts. After her graduation in 2009, it was unclear who would replace her as ace of the staff. Enter Plourde.

As a freshman she only pitched in 11 games, but in that span, Plourde went 6-1 with five complete games and 67 strikeouts, while holding opponents to a .197 batting average. Last season, as a sophomore, she recorded 40 wins and earned 556 strikeouts, the highest total in both categories in the nation.

Then, in the A-10 championship last season, Plourde began to feel stress each time she planted her landing foot on the mound to throw a pitch. After some diagnosis, she was discovered to have a left hip injury, and one that would require some rehabilitation work in the offseason. However, Sortino said that she's shown no signs of trouble this year.

"[Plourde] is going to be back," said Sortino. "We've been very conservative with her, but I think her recov-

New idea of success

The Massachusetts softball team needs a new definition of success.

For most collegiate teams, winning a conference title would be considered a great accomplishment. For the Minutewomen, however, it should be more routine than anything. This year, UMass will go for its seventh-straight Atlantic 10 Championship title and its 15th in the last 16 years.

Steve Levine

Prior to the season, A-10 coaches picked UMass to again capture the conference title. Fast forward to May, when the Maroon and White dismiss Fordham or Charlotte in the final game and proceed to celebrate around junior ace Sara Plourde. What happens next? If history says anything, UMass will go on to the NCAA Tournament, only to be knocked out in the regional round, a round robin amongst four teams.

The trend began in 1999, broke in 2006 (when UMass advanced to the super regionals), and was revived in 2007, when the Minutewomen went 2-2 in the regionals but couldn't advance. UMass proceeded to make first round exits the following three years. Last year, the Minutewomen lost to Long Island and Boston University in consecutive contests, their first 0-2 NCAA Tournament start since 2005.

At the helm for UMass is Hall of Fame coach Elaine Sortino, who carries a 1,100-451-6 record into her 32nd season. Much like previous years, Sortino stated that her goal is not only to win the A-10 Championship, but to make it deep into the NCAA Tournament. The latter hasn't been accomplished since 1997 and 1998, when the Minutewomen lost in the Women's College World Series. In 20 NCAA appearances, UMass is 32-41.

While the Minutewomen tend to dominate teams in the northeast, they often fall to the powerhouses of other regions. This was demonstrated during late February's Cathedral City Classic, when UMass dropped five straight to California, Washington, Oklahoma State, Texas and Fresno State. These are the types of teams the Minutewomen would match up against late in the NCAA's, and a repeat performance like late February's is sure to produce another early round exit.

While cruising through the regular season and winning the conference is well and good, it shouldn't be good enough. Sortino and her players understand that, but it comes down producing when it counts. The Minutewomen were outscored 13-5 in the NCAA Tournament last year, as their hitting and pitching abandoned them.

Key losses from last year include outfielder Carly Normandin, who led the team in batting average (.400) and stolen bases (13) and first baseman Sarah Reeves, who was second on the team in batting average (.340) and RBIs (41) and tied for first in home runs (13).

While the two seniors will surely be missed, there's no reason to think the Minutewomen can't come close to or replicate the 17-0-1 conference record they posted last year. Senior catcher and utility player Meghan Carta will return along with juniors Katie Bettencourt and Kyllie Magill. The trio is depended on to lead UMass' offense along with several newcomers who Sortino is excited about.

The Minutewomen offense sputtered severely to start the 2011 season, scoring 25 runs in their first 12 games en route to a 2-12 start. They've resurged since then, though, exploding for a 17-0 shutout victory over Toledo before scoring 18 runs in their next three games for a four-game win streak.

Perhaps the most important player returning for UMass is Plourde. The bonafide ace went 40-8 last year, while recording a nation-high 556 strikeouts in 311.1 innings to go along with a 1.30 ERA. In 16 starts, she registered 12 complete games. When Plourde takes the bump, she gives her team a chance to win.

But we know the Minutewomen will win. They will win often throughout their A-10 schedule. They will probably win the A-10 Championship. The NCAA's, on the other hand, are an entirely different matter.

Much like the Red Sox or the Yankees, UMass' ultimate goal shouldn't be to have a successful regular season. Instead, it's to make the playoffs – and win it all. As each MLB season ends and the preseason begins, you can always watch as Derek Jeter calmly listens to the same, mundane questions which elicit the same, mundane responses. As bored as Jeter gets with the media, he's telling the truth when he says the season was a failure if his Yankees didn't win the World Series.

That's the same way the Minutewomen should think. With all of their success within the conference, they should be embarrassed with their lack of success out of the conference. Most people considered last year's season to be successful, and with a 42-10-1 record, that point would be very hard to argue. But UMass' measure of success needs to change. If winning the A-10 becomes routine, then it should no longer be considered an outstanding accomplishment. Sortino and her players need to focus on reviving the powerhouse UMass teams of 1997 and 1998 which made it to the College World Series.

Granted, advancing in the NCAA Tournament is no easy task. Every team involved is among the best in the country. The fact remains, though, that the Minutewomen haven't advanced past the first round since 2006, and there are no players from that squad on the current roster. It's a new group from four years ago – a group that should put all their focus on breaking UMass' streak of futility in the NCAA's.

A strong returning cast should ensure that the Maroon and White will enter the season not only as conference favorites, but as NCAA contenders. The question of whether or not UMass will have a successful season is rarely debated. If the Minutewomen don't succeed in the NCAA's, it should be.

Steve Levine is a Collegian columnist. He can be reached at slevine@student.umass.edu.

New NCAA bat regulations could change college baseball

NCAA baseball was introduced to aluminum bats before the 1974 college season. Since then, all schools across the three divisions use metal bats due to the trajectory of the ball and the way it favors the offensive aspect of the game.

It seemed like a match made in heaven for both schools and the players: schools loved the idea of saving money on bats that could not shatter, and hitters loved the idea of a larger sweet spot and the added power produced by metal.

Scott Cournoyer

After more than a decade without an inquiry by NCAA officials or any self-regulations imposed by top programs across the country, trickling down to D-III schools, the NCAA stepped in and enforced a lower limit on the weight of the bat before the 1986 season. The weight change, with itsts purpose to have a lighter bat that would decrease the impact on the ball, actually did the opposite, increasing as much as an estimated 10 percent. As the years went along and more changes were made to the designs of the metal bats, companies like Mizuno, Easton, Louisville Slugger along with others cashed in on the idea of mass producing aluminum bats that would support high fly balls traveling out of ballparks around the country.

Numbers throughout Division I baseball skyrocketed over a for the next ten 10-year mark, which saw hitting statistics expand astronomically and pitcher's earned run averages jump to new heights.

In 1998, the offensive outbursts became too noticeable for NCAA officials to not take action. The '98 season saw old hitting records fall by the wayside. New records were set for batting average (.306), runs-per-game (14.2) and homeruns-per-game (2.1). Pitcher's ERA's jumped to an average of 6.12.

NCAA baseball needed to make a change and did, working with manufacturers to create a metal bat with a more wooden feel and less of a sweet spot. The science behind it would be dubbed the "Ball Exit Speed Ratio (otherwise known as "BESR"). The development of a new, denser bat proved to be successful, as numbers throughout the NCAA dropped over another ten10-year period.

In 2008, however, offensive trends became apparent again, as numbers slowly increased over a three-year period. Batting averages rose from .296 to .302 between 2007 and 2009. Runs climbed by more than 1.5 per game in the same timeframe. The reason? The bats.

Like breaking in a new shoe, there's a method behind breaking in a composite aluminum bat. With the carbon fibers and glue inside the metal reshaping and breaking up with more and more use, the bat's performance improves over time, resulting in more flight on the ball.

So, with batting stats on the rise once again, the NCAA stepped in and facilitated a solution.

A new standard known as the Batted Ball Coefficient of Restitution (BBCOR) now measures the "bounciness" of the ball coming off of the bat after contact. When first designing the new standard, the goal was to create a bat that felt like wood, but acted like a metal bat.

Although the NCAA claims that the reason for the new regulations was to eliminate the risks of balls flying back at pitchers, corner infielders and even first and third-base coaches at alarming rates, fewer runs scored and an emphasis on pitching and defense would become the likely byproduct. Simply put, this new bat regulation, carefully calculated and not seemingly doomed to backfire like the composite method, will ultimately change the course of the game at the collegiate level for years to come.

This idea of a slower ball in a pitcher-friendly ballpark may benefit the pitching staff for the Massachusetts baseball team, possibly changing the culture and identity of the team for years to come. It could put a stamp on a program that, for the last few years now, has had trouble when it comes to pitching.

UMass coach Mike Stone embraced the new bat regulations.

"We use wood bats in practice throughout the fall," said Stone. "It teaches our players how to swing the bat correctly, and I feel it will really pay off for them with these new bats that have less pop."

Stone was critical of the old methods and products hitters were using.

"I believe the performance bats really hurt the game," said Stone. "There wasn't as much emphasis on working on the fundamentals, because the guys were hitting the ball out left and right. With less balls going out, defense and pitching come more back into the picture."

Senior captain Eric Fredette, a hitter in the middle of the lineup this year for the Minutemen, expressed that basic fundamentals at the plate still reign as the top priority –, no matter the adjustment with a different bat.

"We're definitely working on hitting more line drives in the cages and in practice," said Fredette. "However, you still have to bring the same principle from before to the plate. When it comes down to it, you can't change too much of your swing. Whether it's using a wood bat, metal bat, or these new BBCOR bats, you can't change your swing that much."

Whether it's still using basic fundamentals at the plate, or changing your game up entirely when it comes to hitting, many in the business of college baseball agree that a change in the style of the game is coming. Whether we see it immediately, next year, or somewhere down the line in the foreseeable future, a new bat will equal a new way the game will being played in a new way.

Other coaches around the country have expressed their views on the new regulations. Texas Christian head coach Jim Schlossnagle feels it's a major impact, saying colleges, "will be playing a different game in the spring," with more focus on defense and small ball. Schlossnagle went so far as to say that he believed that the bats used last year throughout the conference were "perfect," and that changing regulations now would make the game more "professional-style," compared to the unique style collegiate baseball provides the fans in that part of the country.

Although many coaches aren't so bold as to say that the game will become more like the professional leagues, many agree with his meaning behind Schlossnagle's words. Some parks play in favor of pitchers already, with deep outfields, wide gaps and plenty of area behind the foul lines for balls to be tracked down and caught.

With the new methods and new lumber adding to how the game is played may come a new identity to the way UMass baseball plays their game along with other teams around the country.

Scott Cournoyer can be reached at scournoy@student.umass.edu.

Offense still finding footing

By Eric Mansfield
Collegian Staff

Through the first nine games of the season, the Massachusetts baseball team had one win, a 2-1 defensive battle against Toledo highlighted by a strong pitching performance from junior Glen Misho. Misho's skill led him to be named Co-Atlantic 10 Pitcher of the Week.

What it did not lead to, however, were a ton of runs crossing the plate. In six of their games this season, the Minutemen have failed to score more than three runs. In all but five games to date this season, the Minutemen managed six hits or less.

UMass coach Mike Stone said that at this point in the season the lack of scoring might just have to do with shaking some of the rust off and getting outside to play.

While several of the team's 14 freshmen have been getting opportunities to show their worth, Stone said that the middle of the order has remained largely the same, consisting of team veterans like seniors Eric Fredette, Peter Copa, Kyle Multner and Matt Gedman. Copa leads the team with four home runs.

While Stone admits that it takes some time for the freshmen to get used to the college game, he believes it is also true that this year's bunch his responded well so far. Stone said they are a talented group of athletes who have shown good attitudes from the beginning.

One of the freshmen that Stone speaks highly of is Josh Messier. Messier, a New Bedford -native, has played at shortstop in all eight games thus far, and he managed five hits in his first 31 at bats.

Stone said he believed in "giving [the] younger kids a chance to play," and that it will just take time for them to adjust to the Division I game.

"[That's] part of the deal right now," said Stone.

Stone also noted that at this point in the season, three or four different spots in the lineup give the Minutemen flexibility, something that has changed annually.

While this year's statistics show hitting has not been the team's strength thus far, the March 15 contest with Army helped the UMass offense gain some steam and lead them in the right direction. More than doubling their hit total from any other game, the Minutemen had 14 hits in a 10-9 loss to the Black Knights.

Producing big for the Minutemen was the middle of the order. Gedman, Copa and junior catcher Tom Conley led the Minutemen with three hits a piece, combining to knock in six runs. Freshmen Adam Picard collected two hits and Messier had one.

The Minutemen, however, left many opportunities on base, stranding a total of 13 runners, seven of them coming while Copa was up to bat.

UMass continued to increase in its offensive creativity, as it earned scored 36 runs since the Army game, including a 26-13 advantage over Bucknell, Northwestern and UMBC for three-straight wins.

All of the early season travel does not bother Stone as he contemplates the offense. H, e said playing baseball up north is simply part of the territory and no one's complaining.

"[We're] glad to be here," said Stone.

Eric Mansfield can be reached at eamansfi@student.umass.edu.

UM favored to win A-10

SOFTBALL PREVIEW from page 1

UMass softball coach, she has guided the Minutewomen to 22 A-10 championships and 17-straight NCAA tournament appearances.

Last year, UMass went 42-10-1 in the regular season, including an undefeated 17-0-1 mark in conference play. Sortino notched her 1,100th program win when UMass defeated Fordham in the A-10 finals, wrapping up the sixth-consecutive conference championship for the Minutewomen.

This season, Fordham will likely provide the biggest challenge for UMass in the A-10. The Rams were ranked 27 in the preseason national rankings, just one spot behind UMass. Only two regular season meetings are on tap for both teams this season – a two-game series on April 29-30 in Amherst.

The Minutewomen begin their conference season in Charlotte before traveling to Temple and Saint Joseph's. The longest home stretch will be from April 22 to May 4 as six different opponents visit UMass, including in-state rivals Boston University and Boston College.

Other northeast teams outside of the A-10 that will visit the UMass Softball Complex include Dartmouth, Connecticut, Syracuse and Quinnipiac.

Earlier this season, the Minutewomen faced a Washington club that won the 2009 national title. UMass lost the game, 9-2, surrendering an eight-run third inning. This came after playing California earlier in the same day.

The home opener for the Minutewomen will be a doubleheader versus Dartmouth on Wednesday, March 30.

Pete Vasquez can be reached at pvasquez@student.umass.edu.

Misho large part of success

BASEBALL PREVIEW from page 1

a team's ability to establish itself amongst the competition. When looking at the starting rotation and the subsequent bullpen, Stone sees a lot of talent to work with this season.

"We have a lot of veterans that are throwing the ball and are showing the way as far as competing," said Stone. "We have had some good starts and a few really good starts so far, and that will probably get better as the season progresses."

UMass has seen several good pitching performances already on this year. The Minutemen staff has let up five runs or fewer six times this season and holds a 4-2 record when doing so. Junior right-hander Glen Misho has been a large part of the success with his performance on the rubber.

Misho is 2-1 with a 3.86 earned run average in three games started this season. He leads the squad in strikeouts with 15 – six of which were looking, also a team best – and in innings pitched with 21. Misho was also named the Co-Atlantic 10 Pitcher of the Week on Monday, March 14, for his complete-game performance against Toledo on March 12, in which he only allowed one run on eight hits with eight strikeouts.

As the team returns from its trip to the RussMatt Invitational in Winter Haven, Fla., Stone knows that the team has a lot of work to do in building for a successful season with such a young squad.

"It is a process. We are building and hopefully we will see some positive soon," said Stone. "We have a good mix of guys who have played the game at this level before and freshmen, and right now we are adjusting."

"We are doing a good job with the adjustment process, and we keep improving every day. We just need to play and get better," continued Stone.

Of the 31 players on the roster, 13 players are freshmen, with the majority of them playing positions in the field. The large amount of youth will not only prove to be key in replacing injured starters, should the need arise, but also will add depth and skill for games to come.

The University of Massachusetts' University Without Walls program allows students to take classes either on-campus or online.

UWW reports seeing its largest enrollment

By Ellie Rufus-Miller and Haleigh Finch
Collegian Staff

In the 2010-11 academic year, the University of Massachusetts' University Without Walls program reported its largest enrollment of its 40-year history. According to a press release, 344 students enrolled this year, which brought the total number of UWW students to 613.

The program accepts people of varying ages and geographical locations, with the youngest student being 22-years-old and the oldest, 75-years-old, according to the release. Sixty-eight percent of the people accepted to the program this year are from Mass., while a third hail from across the U.S. and one percent are international students.

University Without Walls is a program offered by UMass for adults who wish to complete their education and receive their bachelor's degree. UWW provides its students with the opportunity to design their own degree and take classes online. The program also allows students to earn credit for prior learning. Online classes allow students to earn their degree from anywhere at their own convenience.

"Students can complete their degrees 100 percent online," said Melanie DeSilva, Marketing and Recruitment Manager for UWW in an e-mail. "We also offer blended courses [some online and some in a classroom] or students can take their courses on-campus. Adult students need options, flexibility and support to be successful. We offer all three."

According to the release, there are a numerous reasons for the increased amount of applicants this year. "A difficult economy and competitive employment market are driving many adults back to school. With a longtime record of success in helping adults complete their bachelor's degrees, UWW is well positioned to meet the growing demand for degree

Biden hosts summit; releases college completion tool kit

By Sam Butterfield
Collegian Staff

As part of President Barack Obama's ongoing plan to boost college graduation rates nationwide, Vice President Joe Biden Monday hosted his first-annual "Building a Grad Nation Summit," in Washington, D.C., at which he asked the governors of each state to hold their own college completion forums and released a college completion tool kit offering ideas for ways to boost graduation rates.

"Right now we've got an education system that works like a funnel when we need it to work like a pipeline," said Biden in remarks forwarded from the White House Office of Media Affairs. "We have to make the same commitment to getting folks across the graduation stage that we did to getting them into the registrar's office."

One element of President Obama's call to "win the future" over the last several months has been a call to reshape America into an education capital, in part by launching a push aiming to make America the nation with the highest proportion of college graduates in the world by 2020. To reach that goal, according to White House figures, the U.S. will need to increase its number of college graduates by 50 percent, or roughly eight million additional graduates by 2020.

Secretary of Education Arne Duncan cited a familiar number in calling for reform and making graduating more college students a priority; in his opening remarks at the summit, he told the crowd that "America once led the world in the number of college graduates it produces, and now we've fallen to ninth."

Duncan emphasized the need for an educational overhaul to make America more economically competitive.

"While our educational advancement stalled, other countries have passed us by," he said. "We need to educate our way to a better economy."

The Obama administration is calling on state lawmakers to help it reach these goals. As part of the college completion push, the administration has calculated each state's share of the 2020 graduation goal and has delivered to governors a college completion tool kit suggesting policy changes and moves which the White House believes will help boost graduation rates.

According to the White House statement, "The toolkit identifies seven no-cost or low-cost strategies that governors can use, 15 related action steps and a series of existing federal resource streams from which to draw." Included in the kit are streamlined policies for reconciling standards for graduating high school and placement in college courses, steps to tailor state funding to state colleges and universities' facility in increasing graduation rates, steps aiming to ease the transfer process for students and ideas for reconnecting adults with some college experience but no degree to educational opportunities.

Duncan stressed that he believes the best jobs of the future will be where the most educated workforce is.

"The best jobs and fastest growing firms, whether in biosciences, technology, manufacturing, trade or entertainment, will gravitate to countries, communities and states with a highly-qualified workforce," he said. "In order for America to lead the world, every governor will have to lead the way at home."

Obama's administration is also attempting to make financial incentives available to states willing to change their educational practices to make college completion

White House officials held a "Building a Grad Nation Summit" on Monday as part of the Obama administration's initiative to "win the future" and improve national higher education retention rates.

Lecture sheds light on studying in E. Africa

By Herb Scribner
Collegian Staff

Professor Roland Adjovi's lecture in Thompson Hall sought to bring awareness to University of Massachusetts students about East African conflicts yesterday.

Adjovi is the academic director at Areadia Center in Arushia, Tanzania.

"It's about the African issue and raising awareness," said Adjovi. "It's about taking and sharing issues on what's going on on the other side of the world."

Adjovi's lecture was not only geared towards providing insight into study abroad programs, but also delivering information to those interested in the conflicts that have impacted eastern Africa, such as the number of social conflicts that have led to mass genocide.

Adjovi stressed to students that a primary concern about these conflicts is the lack of media attention and reactionary efforts to cease the warring parties. Countries such as the United Republic of Tanzania, the Republic of Rwanda, the Republic of Kenya, the Republic of Uganda and the Republic of Burundi are all seeing on varying levels deaths and inhumane activities, as these conflicts continue with little major efforts arising to end them.

Adjovi, who works in Arusha, Tanzania, has seen the effects of these conflicts firsthand and explained that all of these countries' human rights conflicts are being neglected to their detriment.

"What do you for them? Nothing has been done," said Adjovi.

Adjovi also said that the countries' political administrations have little to no control over the conflicts.

"States have no ownership," said Adjovi.

Adjovi's lecture also addressed the problem of a variety of contributing failings in the states' political, social and economic systems.

In regards to Burundi, Adjovi explained that there is a significant struggle between different social classes, in which one's skin color or status could dictate the level of violence another group would place upon another group.

"As we go deeper, it becomes less clear who we are," said Adjovi, as he pointed to students classified them by skin color to illustrate that something on the surface such as skin color does not reflect an entire person's being and how in Burundi, this social idea is not accepted highly.

Adjovi said during his lecture that Burundi's social conflict is unlikely to have a clear end because of political corruption within the nation.

"Nobody is taking specific action to address the country," said Adjovi.

He also discussed Rwanda and compared its social conflicts to that of Burundi's, while associating it with Rwanda's 1994 genocide as an example of the nations' similarities.

"[There's] no way to cope with the crime that has been committed," said Adjovi. "No one has tried to run a trial for the genocide in Rwanda in 1994."

Adjovi told the students that the sufferers of attacks of genocide often times don't speak out about their traumatic experiences. Meanwhile, according to Adjovi, there are debates about whether rebel groups – many of which are committing these violent crimes – are rising in power and influence.

"If people that suffer from genocide can say they can continue … what lessons have they learned about what's going on to their own people?" said Adjovi. "Almost nothing is being done at this stage."

Although no one has begun to run a trial, according Adjovi, he would like to see the political leaders of

Summit held to discuss education

GRADUATES from page 1

a larger priority. On Tuesday, the Department of Education announced it would be accepting applications for the 2011 Comprehensive Grant Program, a part of the Fund for the improvement of Postsecondary Education (FIPSE).

The grant will provide up to $20 million to colleges making proposals to implement plans seeking to increase productivity in success, aiming to reward reforms the White House believes could serve as models for the nation at large. Beyond the grant plan, the administration has also proposed the "First in the World" initiative, a plan which would provide $123 million to support programs spurring "innovative practices to accelerate learning, boost completion rates and hold down tuition." In addition, states may now apply for College Completion Incentive Grants, which would free up another $50 million for states which enact plans to produce more college graduates.

As part of the call to boost graduation rates, the Department of Education has also released figures detailing the number of graduates each state will need to produce by 2020 for America to have the highest proportion of college graduates in the world.

Arkansas, Louisiana, Nevada and New Mexico have the most work to do, as just 28 percent of Arkansas' population held degrees as of 2009. To help America become more competitive, that state would need to boost its number of graduates by almost 80,000, or nearly four-fifths of its current number of graduates.

Louisiana is in a similar position, just 29 percent of its population held degrees as of 2009. To meet expectations, Louisiana would have to increase its number of grads from 173,762 in 2009 to some 314,000 by the end of the decade.

Washington, D.C., Massachusetts, North Dakota, Minnesota, New York, Vermont, New Hampshire, Maryland and Connecticut have the least catching up to do. At least 45 percent of people between 25 and 34 in those states are degree-holders, with Massachusetts producing the most graduates of any state at 51 percent, falling behind Washington, D.C., where 65 percent of people between 25 and 34 hold degrees. As part of the projections, the Department of Education would like to see the Bay State boost its graduation numbers from 453,377 two years ago to about 660,000 by the end of the decade, shifting from 54 percent of young people in the Commonwealth holding degrees to a goal of 70 percent.

Sam Butterfield can be reached at sbutterfield@dailycollegian.com.

Vice President Joe Biden held a summit in Washington, D.C. to distribute information about ways to boost graduation rates in America.

Frost Library to host race and religion talk

By Matthew M. Robare
Collegian Staff

Amherst College's Director of Religious Life, Rev. Paul Sorrentino has edited a new book called "A Transforming Vision: Multiethnic Fellowship in College and in the Church," and the Frost Library will host a reading and discussion of the book Tuesday, April 12 at 4 p.m. with Sorrentino and one of the book's contributors, Rev. Tim Jones, pastor of the First Central Baptist Church in Chicopee.

According to a press release, "A Transforming Vision" is about the importance to Christian communities in being made up of people from different ethnicities, and also discusses how the communities could accomplish this diversity. Doorlight Publications, the book's publisher, wrote on the website that "the contributing authors worked together in an intentional multiethnic fellowship at Amherst College, and each of them was transformed by the experience."

Eddy Ekmekji, a pastor with the Inter-Varsity Christian Fellowship at the California State University at Northridge, reviewed "A Transforming Vision" favorably on his blog, "Serving Bread." He wrote "The book offers a concrete vision of how the campus ministry at Amherst College grew in its conviction for multiethnicity and how they went about achieving this vision … authentic multiethnicity requires structural changes."

"I have been a part of a couple of communities who boast multiethnicity as a core value, yet have failed to address the structures that do not make space for a multiethnic vision," continued Ekmekji. "This community looked at how it does worship and created new structures to create space for people to honestly talk about being a multiethnic community."

On his staff page for the Amherst College website, Sorrentino wrote, "As director of religious life, my commitment is to support people of all faiths and beliefs and to help them to find communities, be they on or off campus, where they can be spiritually nurtured within their own tradition. I believe that we respond best to religious plurality by encouraging the full expression of different faiths."

Sorrentino has been director of religious life for 7 years, has advised the Amherst Christian Fellowship for 19 years and has been in campus ministry for 29 years. He holds a Master of Arts degree from the University of Chicago, a Master of Divinity from Bethel Seminary of the East and a Doctor of Divinity from the Princeton Theological Seminary.

Jones is a native of Richmond, Va. and graduated from Amherst College in 2004 with a degree in psychology. He got his M.Div from the Boston University School of Theology in 2009.

THE BRYANT GRADUATE PROGRAMS
The Bryant University Graduate School of Business prepares students for success in their chosen professions. As a graduate, you will join an impressive alumni community that includes industry leaders across the country and around the world.
THE BRYANT MBA ONE-YEAR PROGRAM
Full-time, day program for all majors
- No professional experience necessary
- Distinguish yourself in a competitive job market
- Gain hands-on experience with the Business Practicum
THE BRYANT MBA TWO-YEAR PROGRAM
Part-time, evening program for professionals from any field
- Develop high-level business skills for long-term career success
- Enter and progress through the program with a supportive team
- Build your network while enhancing your resume
THE BRYANT MASTER OF PROFESSIONAL ACCOUNTANCY (MPAC)
Full-time, day program for accounting majors
- Meets the 150 hour requirement for CPA licensure
- Complete in Summer/Fall, Summer/Summer, Fall/Spring or Spring/Summer
- Tax concentration available with Summer/Fall or Summer/Summer plan
THE BRYANT MASTER OF SCIENCE IN TAXATION (MST)
Part-time, evening program for tax professionals
- Build an expertise in all areas of taxation

Adjovi's lecture addresses E. African conflicts

ADJOVI from page 1

Rwanda feeling pressured to address the genocides of the past in hopes that there could be a political discussion about the ramifications and reparations.

"It's good to have a community to sit down and discuss the situation," said Adjovi.

This was a continuing theme for Kenya's government, which, according to Adjovi, is typically thought by developed nations to be a peaceful nation.

"Kenya appears peaceful, but that's just an appearance," said Adjovi. "Governments are not interested in long-term solutions."

Adjovi also told students that "two different avenues" of communities have been working to improve the situations within eastern Africa – East African Community (EAC) and African Court of Human and People's Rights, which are both located in Arusha, Tanzania.

Despite these communities' efforts to construct and enforce clear rights for those of eastern Africa, Adjovi said there is resistance from states to build a common and sustainable set of governing laws, and that several documents, including a bill of rights, have failed to pass and have largely been disregarded.

As a part of an international tour, Adjovi visited UMass as well as Boston College.

With BC, Adjovi sought to continue securing relations with the program that the school currently has with Tanzania.

During his visit to UMass, which was planned with the study abroad programs to help raise awareness of what students can do and expect on their different trips, Adjovi made visits to classes that concentrated on similar themes to his lecture. In the future, Adjovi hopes to visit UMass to deliver his messages again.

"Let me come back to your classes," said Adjovi. "I am African, I am biased and I am a lawyer."

Still, Adjovi was critical of his own role as a lecturer and scholar, speaking about an incident that occurred when he first arrived in Boston.

While on Skype one of the nights, a friend called him and his friend was then interrupted by his own wife.

"She said, 'you scholars say someone won the election … They are too bad to run our country. We are fed up and we want peace,'" said Adjovi. "[She asked] 'Are you living here? Do you suffer?'"

Adjovi ended his lecture on that note, stating that while he may be educated on the conflicts in eastern Africa, he is not experiencing the events himself.

Adjovi was also recently published an op-ed forum called "First Ruling by American Court on Human and People's Right" in both "Jurist," published out of University of Pittsburgh Law School, and "Sentinelle," the weekly newsletter published by the French Society for International Law.

Later on Tuesday night, Adjovi continued his speaking tour, lecturing at Smith College in Northampton, Mass.

Herb Scribner can be reached at hscribner@student.umass.edu.

Arnishia, Tanzania's Arcadia Center's academic director Professor Roland Adjovi, right, spoke at UMass on a tour discussing conflicts in Africa.

University Without Walls program helps working students receive degrees online

UWW from page 1

programs that understand the real challenges faced by working adults," said Ingrid Bracey, the director of the program, in the release.

"This program is convenient for adults who are looking for a degree to help them become more marketable in employment," said DeSilva. "UWW is an outstanding program known for its academic excellence, flexibility, choices, hands-on student support and guidance, and our ability to grant college credit for the learning gained through life and work experience."

UMass was named by "Military Times Edge" as one of the best military-friendly schools in the United States in 2010. Out of 100 schools, the University ranked at number 27. UMass earned four and a half out of five stars for support services and three and a half stars for both financial assistance and academic services.

UMass is also involved with the Yellow Ribbon program, which assists members of the National Guard and Reserve in getting on track before, during and after their deployment, according to the program's official website.

Adults enrolled in University Without Walls have described their positive experiences with the program. Deborah Sprague is a current student who lives in New York and is completing her degree through UWW with a concentration in business studies.

"So many positive things have come out of this experience. First, the instructors are top-notch [and] really [push] us to think deeper and [they provide] information that is timely and relevant in today's world. I particularly have enjoyed taking the 'reflections' course work, which is a requirement. These courses use critical thinking skills as the foundation to learning," Sprague said in an e-mail.

University Without Walls began in 1971 and, according to DeSilva, "the program really understands the unique challenges faced by adult students as they balance work, family, children, community commitments and taking classes."

"College was originally only for traditional age students who came to college right after high school. Now, more and more colleges and universities have programs for adult students to help them complete their degrees on campus and online. UWW is one of many programs at UMass Amherst that is well-suited to adult students," DeSilva said in an e-mail.

According to the release, Business Studies and Health and Human Services are the two most popular concentrations among students. According to the Bureau of Labor Statistics, "The two industry sectors expected to have the largest employment growth are professional and business services and health care and social assistance."

Scribblers Scribes: *A Contest for the Writer in You*

From **MARCH 5-APRIL 4**, the Daily Collegian will be accepting **YOUR poetry & short fiction** for publication consideration in a special literary issue. Prizes might very well include everything from gift cards to movie passes. Judges will be selected from the Comp Lit & English departments, and to guarantee impartiality all entries will have the author's name removed during the judging process. Please, **don't be a punk**. Nothing obscene for the sake of it.

Entries will be judged by members of the Comp Lit department.

Send submissions to:

EDITORIAL@DAILYCOLLEGIAN.COM

The minority experience

Curtis Bloomfield

September 9, 2007 was my first day of classes on a college campus. Excitement and fear ran through my body as I stepped through the doors of the lecture hall of my first class. I entered and took my seat in a room with what had to be over 200 fellow students. I looked around and thought to myself, "Where are my people?"

Today, I find myself asking the exact same question. I have taken a number of courses over my four years here at the University of Massachusetts and there have been plenty of instances where I have been the only African-American in my class. In my case, it was a little difficult for me to branch out to strangers of another race, let alone those from a completely different state from where I grew up.

It was just overwhelming and deeply saddening to see that out of hundreds of students, I was often the only African-American, or one of just a handful.

The pressure of being the only African-American in a class can be very stressful at times, because you don't know how people are going to view you or treat you.

From my point of view, it seemed like everyone else in my courses were easily able to find things they had in common with peers and make friends. I knew college was the best place to network, but it was hard at the time; I was used to having other African-Americans around whom I would be able to relate to. Eventually, I overcame my shy nature, and tried my best to work with people of all different races and backgrounds.

It wasn't like I had not been in the presence of people of different ethnicities and backgrounds before, and I definitely did not have a problem with any them.

It was just overwhelming and deeply saddening to see that out of hundreds of students, I was often the only African-American, or one of just a handful.

Why?

After listening to the education that the others received and the names of the courses they took, I came to one possible reason for the lack of African-American enrollment at UMass. The level of education that many African-Americans get in their communities often is not the same quality as people of other ethnicities. I can recall times when many of my white peers would compare the number of Advanced Placement courses they took before being in college classes. They spoke about classes such as AP calculus and AP physics, classes I did not have the privilege of taking. My high school did have AP courses, but I don't ever remember anyone informing us of the benefits these courses could have for you in the long run. I glanced into an AP calculus class once and noticed my friend was the only black person in the room; everyone else was either white or Asian. Why was it that the advanced class contained a white majority and only one black individual?

America is said to be a country of equal opportunity, but if you open your eyes and take a good look around you will notice that African-Americans and other minorities are still at a significant disadvantage.

I recommend watching the film, "Waiting for Superman." The film explores the students never receive a sufficient education that gives them the necessary skills to make it into a decent four-year college, as well as several other statistics showing the disadvantages that these minorities face. Taking a look around the campus, I feel very privileged to be one of the African-Americans who have had the fortune of making it here. However, it is sad that such a small part of the student body is of a minority background. There needs to be more of an effort to provide quality education to students of all ethnicities.

When something overseas happens, the government runs to aid with millions of dollars that we don't even have, but we can't even solve simple problems such as providing a quality education for all students nationwide. The status quo sets these underprivileged minorities up for failure. How can they say we have equal opportunity under conditions such as these?

The glass ceiling that minorities face has not been completely shattered, and we as a nation need to take the necessary steps to truly make things right on the home-front.

Cheap power not worth lives

Dmitriy Shapiro

The biblical tale of the Tower of Babel, whether one is a believer or not, firmly warns against human hubris in competition against God or nature. There is nothing we can build that will last forever and not deteriorate, and our knowledge in any matter, however advanced, will often fail to foresee potential disasters. The incomprehensibly tragic aftermath of the magnitude 9.0 earthquake in Japan two weeks ago, followed by a ferocious tsunami, re-exposed the dangers of civilian applications of nuclear power that has not been part of the rhetoric supporting alternative energy sources on either side.

Consumer electricity generated by nuclear power plants is being seen as the answer in the world's drive towards sustainability. It seems that, at least in the U.S., both political parties have plans to rebuild and expand the nation's nuclear energy capacity. Not only in North America – nations in Western and Eastern Europe; some in South America and Asia – exalt nuclear power as the energy source appropriate to nations with few fossil fuel deposits such as France and Japan. Opposition to nuclear power usually comprises one of the many views espoused by protesters of the radical left and leftist environmentalist groups. Everyone else seems to see it as the perfect answer to the world's alleged energy crisis.

We are unable to ever do anything that is completely immune to mistakes, and often we are unable foresee potential problems that may arise in time.

Nuclear power creates electricity from nuclear fission – the splitting of fissile material, usually Uranium, to release large amounts of energy – which heats water to create steam for turbines to convert to electricity. This generates power with a volume to energy production efficiency unattainable by the regular burning of fossil fuels. To better illustrate the technological leap attained when atomic fission was given a non-explosive use, is to compare it to the nearest established alternative; the burning of fossil fuels. Fossil fuel use is almost as old as humans discovering how to control and use fire. Coal, today's primary alternative to nuclear energy in the U.S., has been used since before recorded history. But none in the ancient world had the slightest idea of nuclear physics and a caveman would never have stumbled upon and then split an atom with his stone hatchet. The complexity of nuclear fission, I believe, is responsible for our inability to control it in a safe way.

This April marks the quarter century anniversary of the Chernobyl power plant accident. I know this date well, because I was born on the same date and the same year, in the USSR, only hours away from the tragedy. I was actually born in the tiny Soviet Socialist Republic of Azerbaijan, which is ironically known for its fossil fuel production. You might say that I have a natural dislike for nuclear energy, but I assure that I am not biased from this coincidence. The year before Chernobyl, the Soviet Union had just suffered their most deadly nuclear submarine disaster, which took the lives of ten people and effected 49 others. We make mistakes naturally as human beings; therefore I see nuclear energy as something that we currently are unable to safely control, despite what we think.

We are unable to ever do anything that is completely immune to mistakes, and often we are unable foresee potential problems that may arise in time. Likewise, everything we build deteriorates. We always say with something we know is dangerous that the increased level of scrutiny we award it will dispel safety concerns. But how about when we are faced with an economic dilemma? Many of the U.S.'s nuclear power plants are aging. Although federal agencies vow to reinvigorate our nation's nuclear power program, much of today's economic reality necessitates that instead of closing down old facilities, we restore and re-commission them. It is more feasible to revamp old plants, bandaging up their deteriorated state at safety's expense. Much like NASA's space shuttle program that operated their shuttles until disasters showed that despite intense inspection and repairs, they had become too unsafe to meet our nation's space safety standards. Our bureaucrats seem willing to risk the well-being of its citizens and workers by sticking bubble gum in the cracks of nuclear facilities, hoping that they will stay together long enough for their investment in nuclear electricity to pay off.

It is important to clarify that Japan's disaster was not due to human error or lack of proper maintenance. Japan was bravely at the forefront of nuclear power generation. The construction of their power plants accounted for all but the worst of possible natural disasters. But the 9.0 earthquake that was thought nearly impossible happened. Such disasters do not happen nearly as often in the U.S., which in turn means that nuclear power-plants are constructed to a much lower standard of natural disaster tolerance. Using Japan as an example, we gather that we can never predict such things. Our under-preparedness, that might look like wasteful over-preparation if built otherwise, will backfire – and as we usually see in hindsight, it will cause a reassessment.

Terrorism is yet another nearly unavoidable threat. No matter how well guarded nuclear facilities are, there always are ways that crafty groups or individuals who wish to harm our nation could attack nuclear plants, which would facilitate a major disaster.

As we at one time settled people near lung-clogging factories and plants without realizing the harm it caused, and we may be similarly ignorant of externalities brought about through our investment in nuclear power. I am not speaking of the almost negligible effects of radioactive waste that is the main focus of those who protest nuclear energy. Whether or not there are dangers that we haven't discovered yet, the observable disasters paint a grim picture of the current state of nuclear power.

No matter how cheap, clean or environmentally friendly nuclear power currently is believed to be, I think none of these factors is worth trading a single human life in even a rare occurrence. If unforeseen black-lung sounds frightening, nuclear contamination and radiation is much worse. Death, sickness, birth defects and fatigue are some of the byproducts of a nuclear disaster, not to mention ecological damage that in my view negates certain benefits of the cleanliness of a nuclear power plant's emissions. I feel justified to doubt that we don't yet, or maybe ever, have safe enough technology for nuclear power plants to morally justify risking the fallout from a disaster. We all hope that the precedence of human dignity over pecuniary concerns is firmly established in our society from lessons learned from industrialization. I fear that there is now a new and dangerous trend that trades human dignity for environmental concerns. Many who push in this direction mask their true carelessness under the guise of environmentalism and sustainability, doing everything to diminish viable doubts and concerns that are raised in opposition.

Lastly, nuclear power generation stifles competition in the energy sector. The construction of these plants is so expensive, and the risk of danger so high, that they require adherence to government regulations and oversight in all its aspects. Only large utility companies and governments have the means of running and operating them. Private firms can rarely afford to invest in them. If nuclear power becomes the norm, electricity may become the domain of government control or of monopolies and oligarchies, further stifling free market competition in this important segment. It will be detrimental to consumers and our economy as if energy prices where not already high due to regional energy monopolies. Meanwhile, the federal government's investment in these plants only takes away from what they contribute to developing alternative energy sources. At this time, it may also be better to continue encouraging clean coal technology and push for efficiency in fossil fuel plants.

I am not implying that research and development of nuclear technology should be stopped. On the contrary, all research can lead to solutions or other discoveries. I also support its extensive use in the military. But there is a risk that is assumed when one joins the military, of possible dangers from enemies or equipment that justifies its safe use if it can benefit soldiers by giving them tactical advantages and technological superiority. Civilians often have little say in such matters, and therefore should not be exposed to potential dangers they didn't voluntarily agree to.

The historic propensity of the Japanese people to join together and re-build, either to modernize or recover from disaster as we are now seeing in news reports, makes me confident that upon recovery, their success will offer the world a glowing example of the policies and ethics required after such events – that today, having witnessed disasters in New Orleans, Haiti, and elsewhere – the world is badly in need of. While we should fervently aid the people of Japan, we should reflect upon our own vulnerability to nature, error, and decay. We should heed Socrates' quotation of the muses in Plato's "Republic" who say "since everything that comes-to-be must decay, not even one so constituted will last forever. On the contrary, it, too, must face dissolution."

Dmitriy Shapiro is a Collegian columnist. He can be reached at dishapir@student.umass.edu.

Five reasons why summer can't come soon enough:

1) Everyone down here is talking about ice cream.

2) Walking home after midnight is more pleasant

3) No one suspects revenge when they get a spider infestation.

4) You don't have to worry about snow–induced depression.

5) Hiking around Puffer's Pond.

The return of the classic Nick shows we all know and love

Eddie Hand

I cannot even begin to describe the childlike joy that filled my brain when I was linked to an article announcing a new late-night block on Nickelodeon, "Teen Nick." The block will contain nothing but shows from what many consider to be the classic era of Nickelodeon – the 90s.

Not all of it, mind you. From the look of things, it's mostly the shows with live actors like "Kenan and Kel" and "Clarissa Explains It All," at least at first glance. This is mildly unfortunate. My favorites were always the game shows.

To this day, it is still a dream of mine to be a contestant on "Legends of the Hidden Temple." I know it's been off the air for well over a decade and I'm pretty sure the age limit was 13, but I still find myself watching episodes on YouTube when I'm especially bored and thinking to myself "Damn, I totally could have done a better job than those kids."

I used to love visiting my grandparents when I was little because they had cable and we didn't.

My Grandad would tape weeks' worth of that show so that I could bring it home and watch it on VHS. I'd always come visit for a week or so during the summer, and when I was done playing outside with the other kids in the neighborhood, I'd come in and watch for hours, even into the old sitcoms they'd show on "Nick at Night."

To this day, it is still a dream of mine to be on "Legends of the Hidden Temple."

I've seen more episodes of "The Brady Bunch" than I'd care to admit. It didn't matter if it was a sitcom, a cartoon or a game show – if it was on after dinner, I watched it. It was as much a part of those visits as anything else, and even now when I think of my grandparents, I associate them with Nickelodeon and vice-versa.

I don't watch Nick anymore. The shows that I watched as a kid were taken off years ago, from "Kablam!" to "Hey Arnold!" Even "Rugrats," for a very long time Nick's flagship program, has passed and there's a new generation of programs that I will never be able to understand because I didn't grow up watching them. I couldn't understand them if I tried.

My parents didn't 'get' the stuff I watched either; history tends to repeat itself.

There's a lingering public nostalgia for this era of shows – the ones I grew up on.

It sounds cliché, but when I watch those clips on YouTube, I'm transported back to a time when the letters S, T and D used in combination didn't terrify me, but stagehands dressed as Mayan natives made me want to crap my pants. I think a lot of people feel this way. Don't believe me? The next time you're at a party, ask a random person age 18-25 what their favorite TV show growing up was. You'll probably get some folks answering "Power Rangers" or "Pokemon." You might even get "The Magic School Bus."

I'm sure someone might even just stare at you, clearly thinking "Why is this person talking to me?" The majority, however, will name something that was on Nick.

That person will probably be more than happy to reminisce fondly with you, especially if they've had a few drinks. It's the ultimate ice breaker. Ask about "Doug." Ask about "Rocko's Modern Life." You won't consider that this was something you were watching when you were eight and how some of the obscure details have stayed with you even into college.

They say TV rots your brain and promotes violence, but it's also the one thing the majority of us children of the 90s have in common. We watched. We remember. Those shows are as much a part of many of our childhoods as recess, summer camp and our first crush.

The fact that none of the shows being brought back are my favorites is really just sour grapes. It's nice to know that someone realizes how much we adore our animated friends from childhood.

UM's 'Kids' win battle of the bands

By Kaitlyn Bigica
Collegian Staff

On Monday, March 21, 2011, the battle of the bands that decided who was going to play this year's spring concert kicked off at 7:00 p.m. in the Student Union Ballroom.

The first band to perform was The Wolfman Conspiracy, a reggae/funk band with an edge. The band consists of Nate Kielb, Nick Gingras, Kyle Mooney, Dom Mazzolli, Alex Drenga, Kat Rapacki, Colin Nelson, Ryan Emken and Taryn Smith.

"We play shows all around the area," said drummer and vocalist Kielb. "We play shows in Boston, we're breaking into New York and we're opening for Rubblebucket on April 16, 2011 at Pearl Street in Northampton." If you would like to check out The Wolfman Conspiracy, head over to Pearl Street on April 16. It's definitely worth a trip to Northampton to hear this band's edgy sound. Judges score: 7, 8, 8, 8.

The second, one-man band to get on stage was Richie Pace, who performed a song called "Freeze Time." He sat on a stool on stage and played the acoustic guitar while the crowd began to clap their hands and sway to the music. Pace's musical project is called, "A Robot Waiting For Air," and can be found at Arobotwaitingforair.com. Judges score: 9, 6, 7, 8.

After Pace finished his set, a reggae/rock band called Kitchen Jams hit the stage. The band consists of Jake Clough, Sam Foppema, Eli Foynes, Stanley McGriff and Nate "Spray paint." The energy in the room lifted as soon as Kitchen Jams took the stage and the crowd began to dance to the music. At the end of their final song, the entire band grabbed drumsticks and began to play as the crowd went wild. Judges scores: 7, 8, 8, 7.

Pridefalls was the fourth band to battle it out Monday night. Paul Dionne, Steve Becker, Sean Croteau, Tim Cullinan and John Veit are the members of this alternative rock band. "The band started playing together in 2005," said Dionne. "We've played the Webster Theater and Maximum Capacity in Chicopee." Judges scores: 8, 7, 9, 7.

After the fifth band, Force The Fallen finished their set. Brendan Ryan's group took the stage. The other members in the group, Jake Goldman, Sean Nolan and Matt "Crisco" Criscuolo backed up Ryan as the crowd was impressed by the group's unique sound and Ryan's vocals. Although the band looked like they had been playing together for years, even though they had only practiced for the first time the night before the show. "The band got together last night, Brendan is a mutual friend between all of us," said Goldman, a sophomore at UMass. "I threw together a CD of my acoustic songs on a whim and sent it in," said Ryan. Judges scores: 9, 9, 9, 8.

Kids on a Hill got ready to take the stage next. The nine-person group not only filled the stage, but also filled the room with their edgy funk/soul hip-hop sound. Chris Said Kazarian, the lead singer of the group, "We do rock as well, [and] we are a very versatile band. I came from a hip-hop background while our guitarist has more of a jazz-rock background." Other members in the band include Madeleine Maggio, Alec Hutson, Greg Blair, Nick Pope, Ben Falkoff, Ben Silverman, Nora Murphy and Craig Holland. According to Maggio, "The band got together for the 4/20 festival in 2009 and we've been together ever since." Judges scores: 9, 10, 10, 10.

The following performers Lolo & Mooga (Laurie V. Joseph and Michael McKenzie) began their performance with a freestyle rap. Their hip-hop sound got the crowd moving while they rapped about reaching for your dreams and never giving up. "We've been together for two years now, we met through a mutual friends and have made six songs together," said Joseph. "We performed one time before this together in Providence, Rhode Island." Judges scores: 8, 8, 8, 8.

ABDI hit the stage next with an electro-pop sound. Abdi Thomas, Jules Belmont, Keith Blake and Shaquille Harris make up the band, but Thomas himself has been performing and making music for years. "I basically needed to link up with the right band," said Thomas. Battle of the bands is not the first time Thomas's music has been heard. A song he wrote called "Ghostly" recently made it onto Kiss 95 radio station. Judges scores: 8, 9, 9, 9.

The final band was Arrows Over Athens. The group consists of lead singer Michelle Herrick, Randy Burlingne, Preston Bailey and David Marcus. The band has an alternative rock sound and great stage presence. "We have only been a band for a year and a couple months. We've played pretty much all up and down New England," said Herrick. Judges scores: 9, 9, 10, 9.

Once the ten bands had finished playing, the three with the highest rating moved on. Because two of the bands tied, four performers continued. These included Arrows Over Athens, Brendan Ryan, Kids on a Hill and ABDI. The energy in the Ballroom picked up as round two started. Kids on a Hill did their own version of the Nicki Minaj and Kanyne West collaboration "Monster." Maggio took center stage and sang the entire Minaj rap from the song. The crowd went wild as she perfectly rapped the lyrics. After the judges scored each band, the final two groups were Kids on a Hill and Arrows Over Athens.

The audience made the final decision with the winner being Kids on a Hill.

At the end of the Battle of the Bands the University Programming Council announced that the Spring Concert will be held on April 17 at the Mullins Center featuring 3OH!3, B.O.B and Pretty Lights along with Kids on a Hill. Admission for UMass students is $10, for five college students $25, and general admission is $40. Tickets are currently on sale at the Mullin Center box office.

Kaitlyn Bigica can be reached at kbigica@gmail.com.

Craig Holland, Greg Blair and Ben Falkoff are members of Kids on a Hill, the winners of Monday's UPC Battle of the Bands.

University students' guide to Chinatown

JEFF MITCHELL/COLLEGIAN

A highlight of Chinatown's Deluxe Meat Market is its diverse selection of already prepared foods. At this hugely popular portion of the market, customers are able to purchase an incredibly tasty meal for $3.25.

By Jeff Mitchell
Collegian Staff

Leaving the typical sights of uptown New York City to head downtown is a move not many tourists make. Many would rather remain in the Upper/Mid-town area, which holds such famous sights as the Empire State Building and Central Park. If you are feeling a bit adventurous, however, Chinatown is absolutely worthy of a visit.

There is no questioning where you are when you enter Chinatown. While this might throw some out of their comfort zone, most residents are happy to give advice to any lost tourists.

Traveling the streets is an adventure in itself; the roads are narrow, busy and filled with trucks slathered in graffiti and other artwork, and the buildings have a wide assortment of colors. The citizens themselves are in a constant movement; you will have trouble finding anyone simply standing around texting or enjoying a cigarette. The area of Chinatown isn't exactly filled with restaurants, but it does hold a bastion of laundromats, massage parlors, fruit stands, savings banks and markets. Chinatown is nestled next to Little Italy, so do not be surprised if you see the occasional pizza place amidst traditional Chinese restaurants.

The streets of Chinatown are bustling – not with shoppers clenching bags, but with a different kind of rush. Workers scrambling around, hauling boxes of goods from trucks to their stores is a very typical sight; unloading and unpacking is a common task. The streets are also normally devoid of tourists, which is definitely a plus for anyone looking to get something more out of the typical New York City experience. This section of town is, for the most part, bereft of any chain stores. Small family-run businesses dominate, which is without question good for diversity and quality.

A place that offers not only a memorable experience but a delicious variety of food is the Deluxe Meat Market on 79 Elizabeth Street. It will be hard to find this market from the street if you do not know the address (as there are no signs in English), but one of the giveaways is the abundance of skinned, small animals hanging from the store's windows.

As you enter, you are immediately overwhelmed by the ever-expanding nature of the single room which houses all of the markets. The congestion is almost unbearable at first as there are no dividers to separate the sections from one another. It is very easy to get pushed around and lost, as this area operates simultaneously as a meat, fish and sushi market – while still maintaining a section for prepared food.

If you can manage to power through the mob of customers at the lunch counter, you can consider the cornucopia of options that you have available. For the lunch special, you are allowed a selection of eight types of noodles, as well as many different varieties of dumplings, goat, chicken and beef; virtually any kind of familiar and unfamiliar Chinese food you could want. A strong reason Deluxe Meat Market stands out is the price tag. A wholc meal only runs $3.25, perfect for anyone travelling on a low budget. The portions are fair, but a recommendation: If you are with a group of people, everyone should order different dishes and split them, so you can truly appreciate all the various kinds of food.

The food itself is well worth the price. It holds the rich, satisfying texture that Chinese gourmet is known for, but also utilizes vegetables and spices in its dishes that distinguish it from that of any Chinese restaurants in the same price range. This meal is great in that it offers a nice sampler to those who are not already heavily experienced with Chinese food.

Chinatown is a perfect example of the rich clusters of culture that are easily overlooked by tourist brochures, but are well worth the venture. It is within walking distance of Wall Street (as well as Little Italy), and offers new flavorful cuisine and great deals to an adventurous traveler.

Top 8 ways to stay energized with today's stressful lifestyle

By Emily McLaughlin
Collegian Staff

Feeling tired in the morning? Feeling sluggish throughout the day? On many occasions a lack of sleep is the cause for this, but when you are getting the recommended hours of rest at night something else could be to blame. Recharge and get back into the swing of things here at the University of Massachusetts by trying these tips proven to boost energy and increase productivity when you're feeling tired.

Get Energized Tip #1: SLEEP!

Beginning with the most common cause for tiredness, make sure you are getting a good night's rest. An hour before bedtime, shut off all of your digital devices and try not to do any heavy reading. Computer and TV before bed can decrease the quality of sleep, making a person feel less rested in the morning. There is nothing completely wrong with reading before bed, but the light and fast flow of data could disturb a good night's rest.

Get Energized Tip #2: Less Carbs, Carbs, Carbs

Carbohydrates and sugary drinks later in the day can make blood sugar levels crash at night. The morning after, a person wakes up feeling tired and craving more carbs. Fulfilling this craving promotes the continuation of this pattern. Starting the day with whole grains, low-fat dairy and a serving of protein is a great way to boost energy and encourage healthy eating habits for the rest of the day.

Get Energized Tip #3: Get More Iron

Eat leafy greens and lean red meats to increase your iron intake. Deep, green vegetables and lean meats contain high levels of iron, which is essential for forming red blood cells. Red blood cells carry oxygen throughout your bloodstream, so without enough iron, you are starving your body of oxygen it needs to carry out the simplest of tasks. To ensure iron levels are where they should be, take a multivitamin for insurance.

Get Energized Tip #4: Exercising Gives a Boost

Exercising is commonly associated with feeling exhausted, but the opposite is true. Increasing activity, whether it is by going to the gym or by walking around the office, can increase your energy level.

Get Energized Tip #5: Power Nap

Feeling sluggish in the afternoon? Research shows that a quick power nap can increase energy, reduce stress and improve cognitive functioning. Napping also means more patience, less anxiety, better reaction time and overall better health. Expert's advise to keep naps between 15 and 30 minutes, since sleeping longer gets you into deeper stages of sleep, from which it is more difficult to awaken.

Get Energized Tip #6: Drink Water

Even slight dehydration can leave a person feeling fatigued. The solution is as simple as drinking a tall, cool glass of water. Drink a glass first thing in the morning before breakfast to jumpstart the day and after a workout to replenish lost fluids to keep the body going. Also remember that the body often confuses signals of hunger with thirst. When you think you are hungry, drink a glass of water first.

Get Energized Tip #7: Latte, Not Coffee

Need a caffeine boost? Substitute a coffee for a latte. A latte contains the caffeine needed to give a jolt of energy like coffee, but also contains milk with protein to provide a longer-lasting energy boost.

Get Energized Tip #8: Eat Power Foods

Carry a snack throughout the day for those times when you are feeling sluggish – just make sure the right foods are packed. Dried fruits, almonds, bananas, oatmeal and yogurt are great low-calorie snacks that provide a boost.

Emily McLaughlin can be reached at emclaugh@student.umass.edu.

One suggestion for maintaining energy throughout the day involves snacking on power foods, which can include dried fruits, almonds, oatmeal, and bananas.

"If we don't believe in free expression for people we despise, we don't believe in it at all." -Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

The minority experience

Curtis Bloomfield

September 9, 2007 was my first day of classes on a college campus. Excitement and fear ran through my body as I stepped through the doors of the lecture hall of my first class. I entered and took my seat in a room with what had to be over 200 fellow students. I looked around and thought to myself, "Where are my people?"

Today, I find myself asking the exact same question. I have taken a number of courses over my four years here at the University of Massachusetts and there have been plenty of instances where I have been the only African-American in my class. In my case, it was a little difficult for me to branch out to strangers of another race, let alone those from a completely different state from where I grew up.

It was just overwhelming and deeply saddening to see that out of hundreds of students, I was often the only African-American, or one of just a handful.

The pressure of being the only African-American in a class can be very stressful at times, because you don't know how people are going to view you or treat you.

From my point of view, it seemed like everyone else in my courses were easily able to find things they had in common with peers and make friends. I knew college was the best place to network, but it was hard at the time; I was used to having other African-Americans around whom I would be able to relate to. Eventually, I overcame my shy nature, and tried my best to work with people of all different races and backgrounds.

It wasn't like I had not been in the presence of people of different ethnicities and backgrounds before, and I definitely did not have a problem with any them.

It was just overwhelming and deeply saddening to see that out of hundreds of students, I was often the only African-American, or one of just a handful.

Why?

After listening to the education that the others received and the names of the courses they took, I came to one possible reason for the lack of African-American enrollment at UMass. The level of education that many African-Americans get in their communities often is not the same quality as people of other ethnicities. I can recall times when many of my white peers would compare the number of Advanced Placement courses they took before being in college classes. They spoke about classes such as AP calculus and AP physics, classes I did not have the privilege of taking. My high school did have AP courses, but I don't ever remember anyone informing us of the benefits these courses could have for you in the long run. I glanced into an AP calculus class once and noticed my friend was the only black person in the room; everyone else was either white or Asian. Why was it that the advanced class contained a white majority and only one black individual?

America is said to be a country of equal opportunity, but if you open your eyes and take a good look around you will notice that African-Americans and other minorities are still at a significant disadvantage.

I recommend watching the film, "Waiting for Superman." The film explores the students never receive a sufficient education that gives them the necessary skills to make it into a decent four-year college, as well as several other statistics showing the disadvantages that these minorities face. Taking a look around the campus, I feel very privileged to be one of the African-Americans who have had the fortune of making it here. However, it is sad that such a small part of the student body is of a minority background. There needs to be more of an effort to provide quality education to students of all ethnicities.

When something overseas happens, the government runs to aid with millions of dollars that we don't even have, but we can't even solve simple problems such as providing a quality education for all students nationwide. The status quo sets these underprivileged minorities up for failure. How can they say we have equal opportunity under conditions such as these?

The glass ceiling that minorities face has not been completely shattered, and we as a nation need to take the necessary steps to truly make things right on the home-front.

Cheap power not worth lives

Dmitriy Shapiro

The biblical tale of the Tower of Babel, whether one is a believer or not, firmly warns against human hubris in competition against God or nature. There is nothing we can build that will last forever and not deteriorate, and our knowledge in any matter, however advanced, will often fail to foresee potential disasters. The incomprehensibly tragic aftermath of the magnitude 9.0 earthquake in Japan two weeks ago, followed by a ferocious tsunami, re-exposed the dangers of civilian applications of nuclear power that has not been part of the rhetoric supporting alternative energy sources on either side.

Consumer electricity generated by nuclear power plants is being seen as the answer in the world's drive towards sustainability. It seems that, at least in the U.S., both political parties have plans to rebuild and expand the nation's nuclear energy capacity. Not only in North America – nations in Western and Eastern Europe; some in South America and Asia – exalt nuclear power as the energy source appropriate to nations with few fossil fuel deposits such as France and Japan. Opposition to nuclear power usually comprises one of the many views espoused by protesters of the radical left and leftist environmentalist groups. Everyone else seems to see it as the perfect answer to the world's alleged energy crisis.

We are unable to ever do anything that is completely immune to mistakes, and often we are unable foresee potential problems that may arise in time.

Nuclear power creates electricity from nuclear fission – the splitting of fissile material, usually Uranium, to release large amounts of energy – which heats water to create steam for turbines to convert to electricity. This generates power with a volume to energy production efficiency unattainable by the regular burning of fossil fuels. To better illustrate the technological leap attained when atomic fission was given a non-explosive use, is to compare it to the nearest established alternative; the burning of fossil fuels. Fossil fuel use is almost as old as humans discovering how to control and use fire. Coal, today's primary alternative to nuclear energy in the U.S., has been used since before recorded history. But none in the ancient world had the slightest idea of nuclear physics and a caveman would never have stumbled upon and then split an atom with his stone hatchet. The complexity of nuclear fission, I believe, is responsible for our inability to control it in a safe way.

This April marks the quarter century anniversary of the Chernobyl power plant accident. I know this date well, because I was born on the same date and the same year, in the USSR, only hours away from the tragedy. I was actually born in the tiny Soviet Socialist Republic of Azerbaijan, which is ironically known for its fossil fuel production. You might say that I have a natural dislike for nuclear energy, but I assure that I am not biased from this coincidence. The year before Chernobyl, the Soviet Union had just suffered their most deadly nuclear submarine disaster, which took the lives of ten people and effected 49 others. We make mistakes naturally as human beings; therefore I see nuclear energy as something that we currently are unable to safely control, despite what we think.

We are unable to ever do anything that is completely immune to mistakes, and often we are unable foresee potential problems that may arise in time. Likewise, everything we build deteriorates. We always say with something we know is dangerous that the increased level of scrutiny we award it will dispel safety concerns. But how about when we are faced with an economic dilemma? Many of the U.S.'s nuclear power plants are aging. Although federal agencies vow to reinvigorate our nation's nuclear power program, much of today's economic reality necessitates that instead of closing down old facilities, we restore and re-commission them. It is more feasible to revamp old plants, bandaging up their deteriorated state at safety's expense. Much like NASA's space shuttle program that operated their shuttles until disasters showed that despite intense inspection and repairs, they had become too unsafe to meet our nation's space safety standards. Our bureaucrats seem willing to risk the well-being of its citizens and workers by sticking bubble gum in the cracks of nuclear facilities, hoping that they will stay together long enough for their investment in nuclear electricity to pay off.

It is important to clarify that Japan's disaster was not due to human error or lack of proper maintenance. Japan was bravely at the forefront of nuclear power generation. The construction of their power plants accounted for all but the worst of possible natural disasters. But the 9.0 earthquake that was thought nearly impossible happened. Such disasters do not happen nearly as often in the U.S., which in turn means that nuclear power-plants are constructed to a much lower standard of natural disaster tolerance. Using Japan as an example, we gather that we can never predict such things. Our under-preparedness, that might look like wasteful over-preparation if built otherwise, will backfire – and as we usually see in hindsight, it will cause a reassessment.

Terrorism is yet another nearly unavoidable threat. No matter how well guarded nuclear facilities are, there always are ways that crafty groups or individuals who wish to harm our nation could attack nuclear plants, which would facilitate a major disaster.

As we at one time settled people near lung-clogging factories and plants without realizing the harm it caused, and we may be similarly ignorant of externalities brought about through our investment in nuclear power. I am not speaking of the almost negligible effects of radioactive waste that is the main focus of those who protest nuclear energy. Whether or not there are dangers that we haven't discovered yet, the observable disasters paint a grim picture of the current state of nuclear power.

No matter how cheap, clean or environmentally friendly nuclear power currently is believed to be, I think none of these factors is worth trading a single human life in even a rare occurrence. If unforeseen black-lung sounds frightening, nuclear contamination and radiation is much worse. Death, sickness, birth defects and fatigue are some of the byproducts of a nuclear disaster, not to mention ecological damage that in my view negates certain benefits of the cleanliness of a nuclear power plant's emissions. I feel justified to doubt that we don't yet, or maybe ever, have safe enough technology for nuclear power plants to morally justify risking the fallout from a disaster. We all hope that the precedence of human dignity over pecuniary concerns is firmly established in our society from lessons learned from industrialization. I fear that there is now a new and dangerous trend that trades human dignity for environmental concerns. Many who push in this direction mask their true carelessness under the guise of environmentalism and sustainability, doing everything to diminish viable doubts and concerns that are raised in opposition.

Lastly, nuclear power generation stifles competition in the energy sector. The construction of these plants is so expensive, and the risk of danger so high, that they require adherence to government regulations and oversight in all its aspects. Only large utility companies and governments have the means of running and operating them. Private firms can rarely afford to invest in them. If nuclear power becomes the norm, electricity may become the domain of government control or of monopolies and oligarchies, further stifling free market competition in this important segment. It will be detrimental to consumers and our economy – as if energy prices where not already high due to regional energy monopolies. Meanwhile, the federal government's investment in these plants only takes away from what they contribute to developing alternative energy sources. At this time, it may also be better to continue encouraging clean coal technology and push for efficiency in fossil fuel plants.

I am not implying that research and development of nuclear technology should be stopped. On the contrary, all research can lead to solutions or other discoveries. I also support its extensive use in the military. But there is a risk that is assumed when one joins the military, of possible dangers from enemies or equipment that justifies its safe use if it can benefit soldiers by giving them tactical advantages and technological superiority. Civilians often have little say in such matters, and therefore should not be exposed to potential dangers they didn't voluntarily agree to.

The historic propensity of the Japanese people to join together and re-build, either to modernize or recover from disaster as we are now seeing in news reports, makes me confident that upon recovery, their success will offer the world a glowing example of the policies and ethics required after such events – that today, having witnessed disasters in New Orleans, Haiti, and elsewhere – the world is badly in need of. While we should fervently aid the people of Japan, we should reflect upon our own vulnerability to nature, error, and decay. We should heed Socrates' quotation of the muses in Plato's "Republic" who say "since everything that comes-to-be must decay, not even one so constituted will last forever. On the contrary, it, too, must face dissolution."

Dmitriy Shapiro is a Collegian columnist. He can be reached at dishapir@student.umass.edu.

Five reasons why summer can't come soon enough:

1) Everyone down here is talking about ice cream.

2) Walking home after midnight is more pleasant

3) No one suspects revenge when they get a spider infestation.

4) You don't have to worry about snow–induced depression.

5) Hiking around Puffer's Pond.

The return of the classic Nick shows we all know and love

Eddie Hand

I cannot even begin to describe the childlike joy that filled my brain when I was linked to an article announcing a new late-night block on Nickelodeon, "Teen Nick." The block will contain nothing but shows from what many consider to be the classic era of Nickelodeon – the 90s.

Not all of it, mind you. From the look of things, it's mostly the shows with live actors like "Kenan and Kel" and "Clarissa Explains It All," at least at first glance. This is mildly unfortunate. My favorites were always the game shows.

To this day, it is still a dream of mine to be a contestant on "Legends of the Hidden Temple." I know it's been off the air for well over a decade and I'm pretty sure the age limit was 13, but I still find myself watching episodes on YouTube when I'm especially bored and thinking to myself "Damn, I totally could have done a better job than those kids."

I used to love visiting my grandparents when I was little because they had cable and we didn't.

My Grandad would tape weeks' worth of that show so that I could bring it home and watch it on VHS. I'd always come visit for a week or so during the summer, and when I was done playing outside with the other kids in the neighborhood, I'd come in and watch for hours, even into the old sitcoms they'd show on "Nick at Night."

To this day, it is still a dream of mine to be on "Legends of the Hidden Temple."

I've seen more episodes of "The Brady Bunch" than I'd care to admit. It didn't matter if it was a sitcom, a cartoon or a game show – if it was on after dinner, I watched it. It was as much a part of those visits as anything else, and even now when I think of my grandparents, I associate them with Nickelodeon and vice-versa.

I don't watch Nick anymore. The shows that I watched as a kid were taken off years ago, from "Kablam!" to "Hey Arnold!" Even "Rugrats," for a very long time Nick's flagship program, has passed and there's a new generation of programs that I will never be able to understand because I didn't grow up watching them. I couldn't understand them if I tried.

My parents didn't 'get' the stuff I watched either; history tends to repeat itself.

There's a lingering public nostalgia for this era of shows – the ones I grew up on.

It sounds cliché, but when I watch those clips on YouTube, I'm transported back to a time when the letters S, T and D used in combination didn't terrify me, but stagehands dressed as Mayan natives made me want to crap my pants. I think a lot of people feel this way. Don't believe me? The next time you're at a party, ask a random person age 18-25 what their favorite TV show growing up was. You'll probably get some folks answering "Power Rangers" or "Pokemon." You might even get "The Magic School Bus."

I'm sure someone might even just stare at you, clearly thinking "Why is this person talking to me?" The majority, however, will name something that was on Nick.

That person will probably be more than happy to reminisce fondly with you, especially if they've had a few drinks. It's the ultimate ice breaker. Ask about "Doug." Ask about "Rocko's Modern Life." You won't consider that this was something you were watching when you were eight and how some of the obscure details have stayed with you even into college.

They say TV rots your brain and promotes violence, but it's also the one thing the majority of us children of the 90s have in common. We watched. We remember. Those shows are as much a part of many of our childhoods as recess, summer camp and our first crush.

The fact that none of the shows being brought back are my favorites is really just sour grapes. It's nice to know that someone realizes how much we adore our animated friends from childhood.

UM's 'Kids' win battle of the bands

By Kaitlyn Bigica
Collegian Staff

On Monday, March 21, 2011, the battle of the bands that decided who was going to play this year's spring concert kicked off at 7:00 p.m. in the Student Union Ballroom.

The first band to perform was The Wolfman Conspiracy, a reggae/funk band with an edge. The band consists of Nate Kielb, Nick Gingras, Kyle Mooney, Dom Mazzolli, Alex Drenga, Kat Rapacki, Colin Nelson, Ryan Emken and Taryn Smith.

"We play shows all around the area," said drummer and vocalist Kielb. "We play shows in Boston, we're breaking into New York and we're opening for Rubblebucket on April 16, 2011 at Pearl Street in Northampton." If you would like to check out The Wolfman Conspiracy, head over to Pearl Street on April 16. It's definitely worth a trip to Northampton to hear this band's edgy sound. Judges score: 7, 8, 8, 8.

The second, one-man band to get on stage was Richie Pace, who performed a song called "Freeze Time." He sat on a stool on stage and played the acoustic guitar while the crowd began to clap their hands and sway to the music. Pace's musical project is called, "A Robot Waiting For Air," and can be found at Arobotwaitingforair.com. Judges score: 9, 6, 7, 8.

After Pace finished his set, a reggae/rock band called Kitchen Jams hit the stage. The band consists of Jake Clough, Sam Foppema, Eli Foynes, Stanley McGriff and Nate "Spray paint." The energy in the room lifted as soon as Kitchen Jams took the stage and the crowd began to dance to the music. At the end of their final song, the entire band grabbed drumsticks and began to play as the crowd went wild. Judges scores: 7, 8, 8, 7.

Pridefalls was the fourth band to battle it out Monday night. Paul Dionne, Steve Becker, Sean Croteau, Tim Cullinan and John Veit are the members of this alternative rock band. "The band started playing together in 2005," said Dionne. "We've played the Webster Theater and Maximum Capacity in Chicopee." Judges scores: 8, 7, 9, 7.

After the fifth band, Force The Fallen finished their set, Brendan Ryan's group took the stage. The other members in the group, Jake Goldman, Sean Nolan and Matt "Crisco" Criscuolo backed up Ryan as the crowd was impressed by the group's unique sound and Ryan's vocals. Although the band looked like they had been playing together for years, even though they had only practiced for the first time the night before the show. "The band got together last night, Brendan is a mutual friend between all of us," said Goldman, a sophomore at UMass. "I threw together a CD of my acoustic songs on a whim and sent it in," said Ryan. Judges scores: 9, 9, 9, 8.

Kids on a Hill got ready to take the stage next. The nine-person group not only filled the stage, but also filled the room with their edgy funk/soul hip-hop sound. Chris Said Kazarian, the lead singer of the group, "We do rock as well, [and] we are a very versatile band. I came from a hip-hop background while our guitarist has more of a jazz-rock background." Other members in the band include Madeleine Maggio, Alec Hutson, Greg Blair, Nick Pope, Ben Falkoff, Ben Silverman, Nora Murphy and Craig Holland. According to Maggio, "The band got together for the 4/20 festival in 2009 and we've been together ever since." Judges scores: 9, 10, 10, 10.

The following performers Lolo & Mooga (Laurie V. Joseph and Michael McKenzie) began their performance with a freestyle rap. Their hip-hop sound got the crowd moving while they rapped about reaching for your dreams and never giving up. "We've been together for two years now, we met through a mutual friends and have made six songs together," said Joseph. "We performed one time before this together in Providence, Rhode Island." Judges scores: 8, 8, 8, 8.

ABDI hit the stage next with an electro-pop sound. Abdi Thomas, Jules Belmont, Keith Blake and Shaquille Harris make up the band, but Thomas himself has been performing and making music for years. "I basically needed to link up with the right band," said Thomas. Battle of the bands is not the first time Thomas's music has been heard. A song he wrote called "Ghostly" recently made it onto Kiss 95 radio station. Judges scores: 8, 9, 9, 9.

The final band was Arrows Over Athens. The group consists of lead singer Michelle Herrick, Randy Burlingne, Preston Bailey and David Marcus. The band has an alternative rock sound and great stage presence. "We have only been a band for a year and a couple months. We've played pretty much all up and down New England," said Herrick. Judges scores: 9, 9, 10, 9.

Once the ten bands had finished playing, the three with the highest rating moved on. Because two of the bands tied, four performers continued. These included Arrows Over Athens, Brendan Ryan, Kids on a Hill and ABDI. The energy in the Ballroom picked up as round two started. Kids on a Hill did their own version of the Nicki Minaj and Kanyne West collaboration "Monster." Maggio took center stage and sang the entire Minaj rap from the song. The crowd went wild as she perfectly rapped the lyrics. After the judges scored each band, the final two groups were Kids on a Hill and Arrows Over Athens.

The audience made the final decision, with the winner being Kids on a Hill.

At the end of the Battle of the Bands the University Programming Council announced that the Spring Concert will be held on April 17 at the Mullins Center featuring 3OH!3, B.O.B and Pretty Lights along with Kids on a Hill. Admission for UMass students is $10, for five college students $25, and general admission is $40. Tickets are currently on sale at the Mullin Center box office.

Kaitlyn Bigica can be reached at kbigica@gmail.com.

Craig Holland, Greg Blair and Ben Falkoff are members of Kids on a Hill, the winners of Monday's UPC Battle of the Bands.

University students' guide to Chinatown

JEFF MITCHELL/COLLEGIAN

A highlight of Chinatown's Deluxe Meat Market is its diverse selection of already prepared foods. At this hugely popular portion of the market, customers are able to purchase an incredibly tasty meal for $3.25.

By Jeff Mitchell
Collegian Staff

Leaving the typical sights of uptown New York City to head downtown is a move not many tourists make. Many would rather remain in the Upper/Mid-town area, which holds such famous sights as the Empire State Building and Central Park. If you are feeling a bit adventurous, however, Chinatown is absolutely worthy of a visit.

There is no questioning where you are when you enter Chinatown. While this might throw some out of their comfort zone, most residents are happy to give advice to any lost tourists.

Traveling the streets is an adventure in itself, the roads are narrow, busy and filled with trucks slathered in graffiti and other artwork, and the buildings have a wide assortment of colors. The citizens themselves are in a constant movement; you will have trouble finding anyone simply standing around texting or enjoying a cigarette. The area of Chinatown isn't exactly filled with restaurants, but it does hold a bastion of laundromats, massage parlors, fruit stands, savings banks and markets. Chinatown is nestled next to Little Italy, so do not be surprised if you see the occasional pizza place amidst traditional Chinese restaurants.

The streets of Chinatown are bustling – not with shoppers clenching bags, but with a different kind of rush. Workers scrambling around, hauling boxes of goods from trucks to their stores is a very typical sight; unloading and unpacking is a common task. The streets are also normally devoid of tourists, which is definitely a plus for anyone looking to get something more out of the typical New York City experience. This section of town is, for the most part, bereft of any chain stores. Small family-run businesses dominate, which is without question good for diversity and quality.

A place that offers not only a memorable experience but a delicious variety of food is the Deluxe Meat Market on 79 Elizabeth Street. It will be hard to find this market from the street if you do not know the address (as there are no signs in English), but one of the giveaways is the abundance of skinned, small animals hanging from the store's windows.

As you enter, you are immediately overwhelmed by the ever-expanding nature of the single room which houses all of the markets. The congestion is almost unbearable at first as there are no dividers to separate the sections from one another. It is very easy to get pushed around and lost, as this area operates simultaneously as a meat, fish and sushi market – while still maintaining a section for prepared food.

If you can manage to power through the mob of customers at the lunch counter, you can consider the cornucopia of options that you have available. For the lunch special, you are allowed a selection of eight types of noodles, as well as many different varieties of dumplings, goat, chicken and beef; virtually any kind of familiar and unfamiliar Chinese food you could want. A strong reason Deluxe Meat Market stands out is the price tag. A whole meal only runs $3.25, perfect for anyone travelling on a low budget. The portions are fair, but a recommendation: If you are with a group of people, everyone should order different dishes and split them, so you can truly appreciate all the various kinds of food.

The food itself is well worth the price. It holds the rich, satisfying texture that Chinese gourmet is known for, but also utilizes vegetables and spices in its dishes that distinguish it from that of any Chinese restaurants in the same price range. This meal is great in that it offers a nice sampler to those who are not already heavily experienced with Chinese food.

Chinatown is a perfect example of the rich clusters of culture that are easily overlooked by tourist brochures, but are well worth the venture. It is within walking distance of Wall Street (as well as Little Italy), and offers new flavorful cuisine and great deals to an adventurous traveler.

Jeff Mitchell can be reached at jjmitche@student.umass.edu.

Top 8 ways to stay energized with today's stressful lifestyle

By Emily McLaughlin
Collegian Staff

Feeling tired in the morning? Feeling sluggish throughout the day? On many occasions a lack of sleep is the cause for this, but when you are getting the recommended hours of rest at night something else could be to blame. Recharge and get back into the swing of things here at the University of Massachusetts by trying these tips proven to boost energy and increase productivity when you're feeling tired.

Get Energized Tip #1: SLEEP!

Beginning with the most common cause for tiredness, make sure you are getting a good night's rest. An hour before bedtime, shut off all of your digital devices and try not to do any heavy reading. Computer and TV before bed can decrease the quality of sleep, making a person feel less rested in the morning. There is nothing completely wrong with reading before bed, but the light and fast flow of data could disturb a good night's rest.

Get Energized Tip #2: Less Carbs, Carbs, Carbs

Carbohydrates and sugary drinks later in the day can make blood sugar levels crash at night. The morning after, a person wakes up feeling tired and craving more carbs. Fulfilling this craving promotes the continuation of this pattern. Starting the day with whole grains, low-fat dairy and a serving of protein is a great way to boost energy and encourage healthy eating habits for the rest of the day.

Get Energized Tip #3: Get More Iron

Eat leafy greens and lean red meats to increase your iron intake. Deep, green vegetables and lean meats contain high levels of iron, which is essential for forming red blood cells. Red blood cells carry oxygen throughout your bloodstream, so without enough iron, you are starving your body of oxygen it needs to carry out the simplest of tasks. To ensure iron levels are where they should be, take a multivitamin for insurance.

Get Energized Tip #4: Exercising Gives a Boost

Exercising is commonly associated with feeling exhausted, but the opposite is true. Increasing activity, whether it is by going to the gym or by walking around the office, can increase your energy level.

Get Energized Tip #5: Power Nap

Feeling sluggish in the afternoon? Research shows that a quick power nap can increase energy, reduce stress and improve cognitive functioning. Napping also means more patience, less anxiety, better reaction time and overall better health. Expert's advise to keep naps between 15 and 30 minutes, since sleeping longer gets you into deeper stages of sleep, from which it is more difficult to awaken.

Get Energized Tip #6: Drink Water

Even slight dehydration can leave a person feeling fatigued. The solution is as simple as drinking a tall, cool glass of water. Drink a glass first thing in the morning before breakfast to jumpstart the day and after a workout to replenish lost fluids to keep the body going. Also remember that the body often confuses signals of hunger with thirst. When you think you are hungry, drink a glass of water first.

Get Energized Tip #7: Latte, Not Coffee

Need a caffeine boost? Substitute a coffee for a latte. A latte contains the caffeine needed to give a jolt of energy like coffee, but also contains milk with protein to provide a longer-lasting energy boost.

Get Energized Tip #8: Eat Power Foods

Carry a snack throughout the day for those times when you are feeling sluggish – just make sure the right foods are packed. Dried fruits, almonds, bananas, oatmeal and yogurt are great low-calorie snacks that provide a boost.

Emily McLaughlin can be reached at emclaugh@student.umass.edu.

One suggestion for maintaining energy throughout the day involves snacking on power foods, which can include dried fruits, almonds, oatmeal, and bananas.

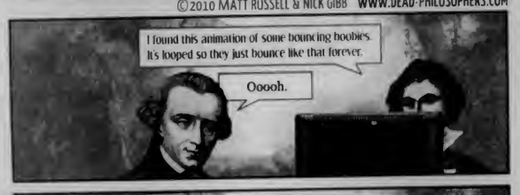
Dead Philosophers In Heaven By Matt Russell & Nick Gibb

THIS WEEK: The Marquis de Sade discovers the internet

©2010 MATT RUSSELL & NICK GIBB WWW.DEAD-PHILOSOPHERS.COM



I found this animation of some bouncing boobies. It's looped so they just bounce like that forever.
Ooooh.
And look, I can make it my desktop background. I can choose between one big pair of boobies, or a hundred little ones like this...
GAAH! TOO MANY BOOBIES!!
Yeah, you're probably right. I'm just sayin' if you wanted that many boobies, you could easily do it.

CRISIS FOR EUROPEAN SOCIAL DEMOCRACY?

A Swedish Perspective

Thursday, March 24, 2011
1:00 p.m.
Campus Center 917

Bodström will discuss the politics—Hallinger being Social Democratic and Lidner partner in Europe, Swedish politics was dominated by the Social Democratic party for 70 years, but their strength has ebbed in recent years. In the Swedish party ranks for new relationship and policies, it shows many challenges with its sister parties in Scandinavia and Western Europe.

Mr. Bodström is an attorney and, as Swedish Minister of Justice, was responsible for reforms in laws regarding sexual crimes. These reforms have attracted international attention in the accusations against Julian Assange. He discloses actions. Bodström is a popular author of five books of crime fiction in Sweden and has been called "Sweden's John Grisham."

It's probably more than you can handle.

Plourde leading way for UM

By Stephen Hewitt
Collegian Staff

The Massachusetts softball team's chances of making a deep postseason run this spring will rely heavily on how far ace pitcher Sara Plourde's arm can take them.

That conclusion was made all too apparent last May. Needing a win against Boston University in the NCAA Amherst Regional to extend their season, the Minutewomen entered the game riding high on the shoulders of Plourde.

The weight of a nation that Plourde was seemingly carrying proved to be too much, however, as she pitched just one inning and gave up four runs before being pulled for senior Bailey Sanders. The Minutewomen would lose 10-4 to the Terriers, and it was revealed that Plourde suffered from a hip injury that limited her for a few weeks before their Tournament exit.

Although Plourde led the nation in strikeouts and UMass to its sixth-straight Atlantic 10 championship, it was clear that she was overworked without pitching depth behind her in the rotation.

Then-senior Bailey Sanders, the only other pitcher to see action last season, started just five games and pitched 38.1 innings with a 2-2 record and 6.03 ERA. Conversely, Plourde started 48 games, which included 36 complete games and 311.1 innings pitched.

This year, however, that has all changed, as two freshman pitchers in Lindsey Webster and Caroline Raymond enter the pitching staff with impressive high school resumes behind them. Their additions into the pitching mix will greatly reduce Plourde's chances of physically breaking down late in the year, leaving her fresher for the postseason while simultaneously developing pitchers for the future.

Webster, a high school star at Bishop Alemay and a native of Northridge, Calif., was a four-year letter winner and was honored as an ESPN Cal-Hi All-State player in 2009 and 2010. As a senior, she threw five no-hitters, including a perfect game and set school records for strikeouts in a game, season and career in her four years.

So far, the transition to the college game has been relatively smooth. She only allowed one earned run and struck out six in a nine-inning 3-1 loss in her collegiate debut against Tulsa on Feb. 18. She is proving game-by-game that the step up to Division 1 softball hasn't affected her as of yet.

"I'm a very outgoing person," said Webster, who has taken a leadership role among a group of seven freshmen this season. "I'm very approachable, and I just expect to fit in naturally and just hopefully be an impact player any way I can."

Webster's skills go beyond the pitching mound as well, as she also makes her presence felt as an outfielder, earning her first start in left field against Alabama-Birmingham on March 4. She leads the team with a .400 batting average in 20 at-bats so far this season, which includes a home run and five RBIs.

Plourde can also have confidence in the relief of another pitcher on the staff in Raymond. The Downington, Pa. native was a four-year starting pitcher at Downington West High School and earned a career record of 45-6, including 29 shutouts, 12 no-hitters and four perfect games.

She was a Pennsylvania Gatorade Player of the Year nomination, a Pennsylvania All-State player as a junior and senior, and also was featured in ESPN Rise, a high school sports magazine that highlights star players from across the country.

Raymond has had limited opportunities so far this spring, but is working hard in practice hours on her mechanics and pitching to make the most out of those opportunities when they come.

"I'm just trying to get better, and get on the field eventually," said Raymond. "[Sara Plourde] is going to throw a lot of innings, but I think it would benefit the team if me and Lindsey could step up and get out there as well."

Webster and Raymond being able to get on the field this year will certainly help relieve Plourde, but will also pay dividends for the future when Plourde graduates.

As a freshman, Plourde took part in similar circumstances as Webster and Raymond are now. Pitching behind then-senior ace Brandice Balschmiter, Plourde saw limited action, earning a record of 6-1 in 11 appearances, which included 67 strikeouts and a 1.83 ERA.

The experience behind who many consider to be a UMass legend set the stage for an historical sophomore campaign for Plourde, when she went 40-8, earning a 1.30 ERA while striking out a nation-best 556 batters.

"She's a great leader," said Raymond. "I look up to her a lot. She works really hard and I think any pitcher would want to have a career like she's having."

"She is a phenomenal person, and she's one of the most humble people I've ever met," said Webster. "She goes out of her way to help me, and as a freshman it means so much to me just from the junior stud pitcher. I admire her work ethic, her compassion for people and really her humility as a player."

The weight of the team may rest more easily on the shoulder of Plourde this season thanks to the additions of Webster and Raymond. Perhaps the responsibility of passing the torch to the future of Minutewomen pitchers has just began its course.

Stephen Hewitt can be reached at shewitt@student.umass.edu.

Youth, speed define Minutewomen

SOFTBALL ROSTER from page 1

ery has been absolutely magnificent. We've had to alter her mechanics, but we'll be off and running with her."

Plourde has proved that she is not only a suitable replacement for Balschmiter, but that after her four years are complete, she could end up better than the former flamethrower. After only one season as an ace, Plourde sits in third place in UMass history in strikeouts (623), and also eclipsed Balschmiter's record for most strikeouts-per-game. She is now first in UMass history with 12.08 strikeouts-per-game. With another year remaining in 2012, all the team's other categories are within reach for the junior if she has another strong season this year.

"She's kind of had to re-invent herself this year, and now her good pitches are coming back [from last season]," said Sortino. "She's feeling good and I'm very happy for her [so far]."

Behind Plourde are freshmen Lindsey Webster and Caroline Raymond. Each has seen time this year, with Webster also leading the team in batting average through her nine games in the lineup.

CATCHER

Carta will do the catching behind the plate for Plourde. A senior from Middletown, Conn., she started all 55 games last season and was named to the A-10 All-Conference team. Carta batted .308 with 13 home runs and drove in 43 runs, which was good enough to lead the team.

Behind the plate, she's used to catching Plourde, and the two have a good relationship. This season, Carta has yet to make an error in over 200 chances and has only recorded one passed ball. However, where she struggles is in throwing out runners. Opposing teams are successful 84 percent of the time they steal on her, having swiped 17 bases in 21 attempts.

FIRST BASE

Boutin is the squad's biggest power threat, and will play first base. She will be relied upon to provide big hits and home runs after last year's slugger, Sarah Reeves, helped the offense hit a collective .292 with 58 home runs and 266 runs scored.

Almost a third of the way through this season, UMass is hitting just .216 with 10 home runs and 67 runs scored. Those numbers are on pace to be less than half of the totals the team achieved in 2010.

Fortunately, Boutin has already shown some of her power, hitting a home run in last weekend's game against Charlotte and gathering 15 hits and 22 total bases in 19 games.

SECOND BASE

Kyllie Magill will be the starter at second base. The junior has played nearly every game since she's been at UMass, and has batted over .300 in each of the past two seasons. She also developed into a good defensive option in the infield last year.

"Defensively I think we look pretty good," said Sortino. "Magill will be anchoring our defense at second base, and she looks really good offensively [as well]."

While Magill has been a consistent performer at the plate through her first 19 games, she has lacked in the field during the early part of this season. Magill is currently fifth on the team in batting average and leads in hits, runs and home runs, but she also leads the squad in errors, with six.

THIRD BASE

Sophomore Teea Rogers and freshman Tiffany Meeks will battle for split time at the hot corner. So far, Rogers has started nearly every game for UMass with Meeks seeing some time as a designated player.

Rogers has started each game and is second on the team in hits with 14. She's notched the team's only triple of the season, but she has also struck out 12 times in 52 at-bats. Meeks has played in 17 of the team's 19 games and is currently batting .207 with two home runs.

"Teea Rogers as a sophomore is giving us probably double the performance this season as she did [last year] defensively," said Sortino. "And [Meeks] is a kid with the biggest bat of anyone. We recruited her for her bat and she's got a lot of pop. Tiff can also go into left or be the [designated player]."

SHORTSTOP

Starting at shortstop will be Storro. The junior been tasked with replacing one of UMass's best infielders in Whitney Williams, but Sortino believes the young infielder could turn out to be even better than Williams in the long run.

"Whitney Williams was a fabulous shortstop [last year]," added Sortino. "But Jordan [Storro] is even better. She's incredible. She's better [moving] to her left, better [moving] to her right, she's long and lanky and she's got a very, very strong arm."

She's hitting just .189 through 19 games, but her value can be measured in defense and speed. She's yet to be caught stealing a base in seven chances, and with only four errors, she is fourth on the team in fielding percentage.

OUTFIELD

The Minutewomen have a wealth of players who can play the outfield and as a result, don't have many set positions. Sortino plans to use multiple players at different positions throughout the season.

Christine Della Vecchia should be in left field for most of the season. The sophomore is highly coveted by Sortino for her fielding skills and the speed she possesses chasing down fly balls in the outfield gaps.

"She makes running down a ball that [you think is going out, easy]," said Sortino. The next thing you know she's got it in her glove. I don't know how she does it. She'll be out there to give us some punch from the left side."

Cyndil Matthew will patrol center field and is turning heads with her bat. In the team's 19 games she's collected 12 hits and is 6-for-6 in steal attempts. Sortino spoke highly of Matthew earlier in the year, saying that her speed and consistency at the plate will help the squad score runs.

"She is absolutely incredible. I think she hit about .790 in the fall, and she's got the speed to give us a little bit of run manufacturing."

Rounding out the outfield starters will be Bettencourt in right field. A captain and returning A-10 Co-Player of the Year, Bettencourt will once again be looked upon to contribute to the team's offensive attack.

So far, she has struggled at the plate, batting just .163 through 17 games and has struck out 13 times. Bettencourt has only notched eight hits in 49 at-bats, but with two home runs and eight RBI, she still possesses the ability to circle the bases.

FRESHMEN

Behind the veterans are seven new freshmen waiting for their chance to contribute. Paige Hansen, Meeks, Candace Waldie, Raymond and Webster have all seen playing time as either defensive replacements late in games or as pinch hitters or pinch runners. Each of them will back up infielders throughout the season, with Webster and Raymond also seeing time on the mound.

Webster surprised Sortino with her bat already, hitting .357 in 28 at-bats so far and each of the newcomers figures to battle for defensive playing time throughout the season. Sortino is confident that the freshmen can all spell a veteran for a game or even a series if needed.

Though the Minutewomen are young this season, it doesn't diminish any of the squad's hopes for success. Sortino's philosophy remains unchanged from year to year, and UMass expects to repeat as A-10 champions in 2011. It just might have to fight a little harder to get there.

Michael Wood can be reached at mcwood@student.umass.edu.

Fredette, infielders shape UM lineup; Multner runs outfield

BASEBALL ROSTER from page 1

innings pitched. Other key returners are juniors Leif Sorenson, Joe Popielarczyk and Ben Hart. As the team's closer, Sorenson appeared in 18 games, while starting one game and posting a 2-1 record. He also recorded five saves, ranking fifth in the A-10 and led the team with a 3.94 ERA in 29.2 innings pitched, while ringing up 14 batters.

Popielarczyk, who attended Northampton High School, made 10 appearances out of the bullpen, finishing the season with a 1-1 record in 19 innings pitched. The right-hander was a strikeout machine, recording 26 in 2010 and finishing the season with a 6.16 ERA. Likewise, Hart made his living out of the bullpen, making nine appearances for 21.1 innings pitched. As a sophomore he had a 6.33 ERA and recorded nine strikeouts.

CATCHING

Behind the plate, UMass has five players on the active roster. Junior Tom Conley carried the workload in 2010, starting 39 games behind the plate. As a sophomore he batted 0.277 with 18 runs scored and 28 RBIs. He predominantly batted in the back of the order, totaling four doubles and five round-trippers. He also gunned down 18 base runners and picked off two on defense.

Redshirt junior Corey Volpicelli saw action in 10 games, making five starts behind the plate. Volpicelli batted well with a .333 batting average, including a double, two RBIs, two runs scored and one steal. Freshmen include Brian Fracasso of West Hartford, Conn., Alex Tuneski of Waterford, Conn., and Justin Sencabaugh of Medford, Mass.

"Volpicelli has improved a lot and I think there will be some good healthy competition between him and Conley," said Stone. "In my opinion depth only makes you stronger."

INFIELD

The infield is the strongest area of the 2011 Minutemen team, with probable starting seniors at second base, third base and shortstop.

Captain Fredette will resume his role at second, as he finished last season with 71 hits, tied for ninth all-time for hits in a single season at UMass, including 11 doubles. Batting primarily in the second spot of the lineup he had a .384 on base percentage and a .519 slugging percentage.

At third base, senior Peter Copa started all 46 games for the Minutemen last season. As one of the top talents on the roster, he batted .329 with 34 RBIs and 38 runs scored. He boasted a team best .572 slugging percentage and was tied for the team lead in homeruns with eight. He also had 10 doubles, four triples, four stolen bases and was second on the team in total bases with 99. He started 32 times at the hot corner, as well as 13 times at first base and predominantly hit sixth in the batting order.

At shortstop, senior Matt Gedman mainly batted in the heart of the order, ending the season with a .313 batting average and a team-best 14 doubles. Gedman also knocked in 34 runs while scoring 36, including six round-trippers. As a junior he was efficient at the plate, striking out just 13 times in 195 at-bats and registered 17 multi-hit games.

First base seems to be open for grabs as two freshmen are the only players listed at the position. Dylan Begin of Essex Junction and Nik Campero of Wallingford, Conn., may get the rare opportunity to see starting time in their first season.

"I think a lot of different people will get the opportunity to contribute," said Stone. "We have some good freshmen players who will likely see playing time and it's nice to have lots of choices."

OUTFIELD

Of the six outfielders on the roster, UMass features one senior, one junior and two sophomores and freshmen. Multner, as the team's captain, will be on the field, most likely in his usual spot in left field. Last season he batted ninth in the order.

Junior Alex Fischer may find a new home as a starter in the outfield. As a sophomore he played 13 games, predominantly in left field. In limited action he batted .267 with four doubles, seven RBIs and eight runs scored, including two stolen bases.

Sophomores Rich Graef and Anthony Serino will hope to see more action in their second year on the squad. As freshmen, Graef played in 13 games while Serino saw playing time in five. Freshmen Adam Picard and Kyle Adie may also compete for valuable playing time, as the outfield is fairly young across the board this season.

"So far I would say Serino and Graef have really emerged as good players but positions are still up for grabs because we haven't really gotten the chance to play for real yet," said Stone.

However, where she struggles is in throwing out runners. Opposing teams are successful 84 percent of the time they steal on her, having swiped 17 bases in 21 attempts.

First Base

Boutin is the squad's biggest power threat, and will play first base. She will be relied upon to provide big hits and home runs after last year's slugger, Sarah Reeves, helped the offense hit a collective .292 with 58 home runs and 266 runs scored.

Almost a third of the way through this season, UMass is hitting just .216 with 10 home runs and 67 runs scored. Those numbers are on pace to be less than half of the totals the team achieved in 2010.

Fortunately, Boutin has already shown some of her power, hitting a home run in last weekend's game against Charlotte and gathering 15 hits and 22 total bases in 19 games.

Second Base

Kyllie Magill will be the starter at second base. The junior has played nearly every game since she's been at UMass, and has batted over .300 in each of the past two seasons. She also developed into a good defensive option in the infield last year.

"Defensively I think we look pretty good," said Sortino. "Magill will be anchoring our defense at second base, and she looks really good offensively [as well]."

While Magill has been a consistent performer at the plate through her first 19 games, she has lacked in the field during the early part of this season. Magill is currently fifth on the team in batting average and leads in hits, runs and home runs, but she also leads the squad in errors, with six.

Third Base

Sophomore Teea Rogers and freshman Tiffany Meeks will battle for split time at the hot corner. So far, Rogers has started nearly every game for UMass with Meeks seeing some time as a designated player.

Rogers has started each game and is second on the team in hits with 14. She's notched the team's only triple of the season, but she has also struck out 12 times in 52 at-bats. Meeks has played in 17 of the team's 19 games, and is currently batting .207 with two home runs.

"Teea Rogers as a sophomore is giving us probably double the performance this season as she did [last year] defensively," said Sortino. "And [Meeks] is a kid with the biggest bat of anyone. We recruited her for her bat and she's got a lot of pop. Tiff can also go into left or be the [designated player]."

Shortstop

Starting at shortstop will be Storro. The junior been tasked with replacing one of UMass's best infielders in Whitney Williams, but Sortino believes the young infielder could turn out to be even better than Williams in the long run.

"Whitney Williams was a fabulous shortstop [last year]," added Sortino. "But Jordan [Storro] is even better. She's incredible. She's better [moving] to her left, better [moving] to her right, she's long and lanky and she's got a very, very strong arm."

She's hitting just .189 through 19 games, but her value can be measured in defense and speed. She's yet to be caught stealing a base in seven chances, and with only four errors, she is fourth on the team in fielding percentage.

Outfield

The Minutewomen have a wealth of players who can play the outfield and as a result, don't have many set positions. Sortino plans to use multiple players at different positions throughout the season.

Christine Della Vecchia should be in left field for most of the season. The sophomore is highly coveted by Sortino for her fielding skills and the speed she possesses chasing down fly balls in the outfield gaps.

"She makes running down a ball that [you think is going out, easy]," said Sortino. The next thing you know she's got it in her glove. I don't know how she does it. She'll be out there to give us some punch from the left side."

Cyndil Matthew will patrol center field and is turning heads with her bat. In the team's 19 games she's collected 12 hits and is 6-for-6 in steal attempts. Sortino spoke highly of Matthew earlier in the year, saying that her speed and consistency at the plate will help the squad score runs.

"She is absolutely incredible. I think she hit about .790 in the fall, and she's got the speed to give us a little bit of run manufacturing."

Rounding out the outfield starters will be Bettencourt in right field. A captain and returning A-10 Co-Player of the Year, Bettencourt will once again be looked upon to contribute to the team's offensive attack.

So far, she has struggled at the plate, batting just .163 through 17 games and has struck out 13 times. Bettencourt has only notched eight hits in 49 at-bats, but with two home runs and eight RBI, she still possesses the ability to circle the bases.

Freshmen

Behind the veterans are seven new freshmen waiting for their chance to contribute. Paige Hansen, Meeks, Candace Waldie, Raymond and Webster have all seen playing time as either defensive replacements late in games or as pinch hitters or pinch runners. Each of them will back up infielders throughout the season, with Webster and Raymond also seeing time on the mound.

Webster surprised Sortino with her bat already, hitting .357 in 28 at-bats so far and each of the newcomers figures to battle for defensive playing time throughout the season. Sortino is confident that the freshmen can all spell a veteran for a game or even a series if needed.

Though the Minutewomen are young this season, it doesn't diminish any of the squad's hopes for success. Sortino's philosophy remains unchanged from year to year, and UMass expects to repeat as A-10 champions in 2011. It just might have to fight a little harder to get there.

Michael Wood can be reached at mcwood@student.umass.edu.

Fredette, infielders shape UM lineup; Multner runs outfield

BASEBALL ROSTER from page 1

innings pitched. Other key returners are juniors Leif Sorenson, Joe Popielarczyk and Ben Hart. As the team's closer, Sorenson appeared in 18 games, while starting one game and posting a 2-1 record. He also recorded five saves, ranking fifth in the A-10 and led the team with a 3.94 ERA in 29.2 innings pitched, while ringing up 14 batters.

Popielarczyk, who attended Northampton High School, made 10 appearances out of the bullpen, finishing the season with a 1-1 record in 19 innings pitched. The right-hander was a strikeout machine, recording 26 in 2010 and finishing the season with a 6.16 ERA. Likewise, Hart made his living out of the bullpen, making nine appearances for 21.1 innings pitched. As a sophomore he had a 6.33 ERA and recorded nine strikeouts.

Catching

Behind the plate, UMass has five players on the active roster. Junior Tom Conley carried the workload in 2010, starting 39 games behind the plate. As a sophomore he batted 0.277 with 18 runs scored and 28 RBIs. He predominantly batted in the back of the order, totaling four doubles and five round-trippers. He also gunned down 18 base runners and picked off two on defense.

Redshirt junior Corey Volpicelli saw action in 10 games, making five starts behind the plate. Volpicelli batted well with a .333 batting average, including a double, two RBIs, two runs scored and one steal. Freshmen include Brian Fracasso of West Hartford, Conn., Alex Tuneski of Waterford, Conn., and Justin Sencabaugh of Medford, Mass.

"Volpicelli has improved a lot and I think there will be some good healthy competition between him and Conley," said Stone. "In my opinion depth only makes you stronger."

Infield

The infield is the strongest area of the 2011 Minutemen team, with probable starting seniors at second base, third base and shortstop.

Captain Fredette will resume his role at second, as he finished last season with 71 hits, tied for ninth all-time for hits in a single season at UMass, including 11 doubles. Batting primarily in the second spot of the lineup he had a .384 on base percentage and a .519 slugging percentage.

At third base, senior Peter Copa started all 46 games for the Minutemen last season. As one of the top talents on the roster, he batted .329 with 34 RBIs and 38 runs scored. He boasted a team best .572 slugging percentage and was tied for the team lead in homeruns with eight. He also had 10 doubles, four triples, four stolen bases and was second on the team in total bases with 99. He started 32 times at the hot corner, as well as 13 times at first base and predominantly hit sixth in the batting order.

At shortstop, senior Matt Gedman mainly batted in the heart of the order, ending the season with a .313 batting average and a team-best 14 doubles. Gedman also knocked in 34 runs while scoring 36, including six round-trippers. As a junior he was efficient at the plate, striking out just 13 times in 195 at-bats and registered 17 multi-hit games.

First base seems to be open for grabs as two freshmen are the only players listed at the position. Dylan Begin of Essex Junction and Nik Campero of Wallingford, Conn., may get the rare opportunity to see starting time in their first season.

"I think a lot of different people will get the opportunity to contribute," said Stone. "We have some good freshmen players who will likely see playing time and it's nice to have lots of choices."

Outfield

Of the six outfielders on the roster, UMass features one senior, one junior and two sophomores and freshmen. Multner, as the team's captain, will be on the field, most likely in his usual spot in left field. Last season he batted ninth in the order.

Junior Alex Fischer may find a new home as a starter in the outfield. As a sophomore he played 13 games, predominantly in left field. In limited action he batted .267 with four doubles, seven RBIs and eight runs scored, including two stolen bases.

Sophomores Rich Graef and Anthony Serino will hope to see more action in their second year on the squad. As freshmen, Graef played in 13 games while Serino saw playing time in five. Freshmen Adam Picard and Kyle Adie may also compete for valuable playing time, as the outfield is fairly young across the board this season.

"So far I would say Serino and Graef have really emerged as good players but positions are still up for grabs because we haven't really gotten the chance to play for real yet," said Stone.

Chem. leak found in Goessman labs

JEFF BERNSTEIN-COLLEGIAN

Amherst Fire and Police departments responded to the chemical spill, along with a hazardous materials removal team.

The Goessman laboratory building was shut down and evacuated after a chemistry department faculty member found a leaking ammonia tank at 10 a.m. yesterday morning, said Daniel Fitzgibbons, associate director of news and media relations at the University of Massachusetts. The building was cleaned and reopened by the end of the day.

The leak was reported to the Department of Environmental Health and Safety, who notified the UMass Fire and Police Departments. They in turn contacted a hazardous materials team. The building was closed between 10 and 10:30 a.m., said Fitzgibbons. Classes were canceled in the morning and afternoon classes have been rescheduled to other locations.

At around 4 p.m., Goessman was all cleared by the hazardous materials team, said Thomas O'Regan, emergency management and business continuity manager. The dean and provost will work to finalize the rescheduling of classes in Goessman.

Housing fair to be held today

Off campus housing complexes, apartments will be featured

By Chris Shores
Collegian Staff

Students still weighing their housing options for next year can find more information at today's Off Campus Housing Fair, held from 10 a.m. to 3 p.m. in the Cape Cod Lounge. Thea Costine, manager of off campus housing referrals, said that the fair is one of a series of events designed to "help students make the transition [from dorm life to off campus housing] correctly."

"Most students live at home with their folks and then they come to campus and they live in the residential halls and eat at the dining commons," Costine said. By their junior or senior year, many then decide to "leave the residential halls and go out into the community and rent."

This year's UMass Off Campus Housing (UMOCH) fair will mark the 20th for the event. Costine said she gauges its success by the number of landlords that continuously return coming back to take place in the event, a collection of people ranging from major apartment complex owners to private owners who rent out a few rooms in their houses. The fair allows students to ask any questions they may have and provides an opportunity for landlords to meet potential tenants, she said.

The UMass Jazz & African American Music students will provide background music during the fair.

Brandywine offers 180 units of one to two bedroom apartments. Upper/lour apartments each include private balconies. It is located at 16-G Brandywine Drive next to Puffton Village and the Townehouses.

Seven complexes will have large circular signs at their tables signifying that they will be participating in the apartment complex bus tour this Saturday from 12 p.m. to 5 p.m. Buses will pick up students from residential areas and tour the complexes. Students who participate in the bus tour are entered in a raffle for an iPod nano and a $50 Target gift card, said Costine.

Costine said that next year's fair will be even larger as UMOCH will invite anyone that plays a part in the renting process, such as storage and appliance companies.

"We need to broaden our focus and bring together all the things people need to find," she said.

Other events on the horizon for UMOCH include a Landlord Tenant 101 session on April 12 from 6:30 to 8:30 p.m. in Campus Center Room 101. An informational session on bed bugs will be held on May 3 from 6:30 to 8:30 p.m. in Campus Center Room 911-915.

Earlier this semester, UMOCH held two sessions for students, Renting 101 and Renting 102. Attendees of the first event learned the definition and usage of legal terms in housing agreements, said Costine. They also learned the rights and responsibilities of both tenants and landlords.

See HOUSING on page 11

New UM initiative to attract community college transfers

The University of Massachusetts has commenced a new initiative aimed at trying to attract more in-state community college transfer students.

The program was announced yesterday at Roxbury Community College (RCC) by Chancellor Robert Holub, Gov. Deval Patrick and RCC President Terrence Gomes. It will offer special advising, scholarships and housing for students who have completed an in-state associate's degree program with a 2.5 GPA or higher and are looking to acquire a bachelor's degree at UMass, according to a University release. Students who meet those requirements are also guaranteed general admission to the University.

Additionally, the release states that the initiative, dubbed the UMass Amherst Community College Connection, will offer students who graduated from community college with at least a 3.0 GPA a 100 percent reduction of tuition. It will also offer students transferring into the College of Engineering and the Isenberg School of Management seminars to help transition into the respective programs.

"The Community College Connection provides students with critical support to bolster their chances at success. I commend the leadership at UMass and our Community Colleges for enthusiastically embracing this wonderful opportunity to collaborate," Patrick said in the release.

"We take seriously our historic mission of access as the Commonwealth's land-grant university, and facilitating the enrollment of community college graduates, who have a proven track record of success, is one way to guarantee access," Holub said in the statement. "We want students here at Roxbury and community colleges across Massachusetts to envision a future at UMass Amherst, the state's flagship public university and one of the nation's premier research institutions."

According to the release, around 500 community college students already transfer to UMass each year. Of those students, the release states, about 70 percent graduate from the school with a bachelor's degree.

The new program — which is expected to bring more transfers in — is slated to begin in the Fall 2011 semester.

Book examines urban planning

By Brian Canova
Collegian Staff

In University of Massachusetts professor Max Page's latest book, he revisits Jane Jacobs' critique of modernist urban planning policies to understand the role it has played — and continues to play — in the construction of cities both in the United States and around the world.

Jacobs published "The Death and Life of Great American Cities" 50 years ago in 1961. With its dominant ideas on modernism and specifically the modern planning of highways, it may have affected the growth of the urban renewal movement.

"There was a feeling that we needed to rip through 18th and 19th century cities in order to build the modern city of highways and high rise towers," said Page, professor of architecture and history.

Page explained that the prevailing notion among urban planners was that these proposed highways which would "rip" through the middle of cities would "kill two birds with one stone." They would get cars into the city while also eliminating the slums and poorer neighborhoods by transplanting them with eight-lane freeways and interstates, he said.

Jacobs stood in opposition to these ideas. Seeing that these were good places to live with decent communities, she argued for their preservation rather than their destruction. Two examples where her ideas were able to influence modern planning away from this sacking of vibrant neighborhoods include Boston's North End and Manhattan's South Houston, each of which have since become large and recognizable cultural centers of either city.

"She turned things upside down basically," Page said.

The effects of Jacobs' writings can be seen most recently in the Big Dig project. The Rose Kennedy Greenway project replaced the elevated freeway system, moving Interstate 93 underground and freeing up a nearly 1.5 mile long plot of land for parks and public places.

But Jacobs' influence has not been limited to only the United States, says Page. "What we're saying is that she has lasting impact around the world. Planners and architects around the world continue to read 'The Death and Life of Great American Cities,'" he said.

Her influence on an international scale is highlighted in the capital cities of Argentina's Buenos Aires, and the United Arab Emirates' Abu Dhabi.

Buenos Aires' young movement to preserve historical and cultural locations is similar to Jane Jacobs' advocacy to have old buildings remain as part of the modern city.

Her potential influence in Abu Dhabi is a bit different. When urban planners from Canada were brought into this city to make the city more pedestrian friendly with sidewalks and a design conducive to travel on foot, architects tapped one of Jacob's most lasting ideas of "mixed use," said Page.

The Rose Kennedy Greenway in Boston illustrates Jane Jacobs' call for nature over infrastructure.

Mixed use, according to Jacobs, was the idea that rather than separate commercial properties, factories, and residential buildings they could each cohabitate the same area. The example of building with a storefront on the first level, and residential living spaces or workshops on the levels above that, illustrates this point.

"It went totally against what planners of the day believed," said Page. "She has a global impact."

Page said that his book offers "a balanced approach to understand her and look both at the continued value of her lessons and honestly look at some of her blind spots and omissions."

Jane Jacobs' novel still relevant, says UM prof

URBAN PLANNING from page 1

Her main blind spot or criticism, according to Page, was the enormous faith she placed in the free market. She was so focused on the safety and economic implications of city planning that she overlooked the value of culture, despite her writing's focus around neighborhoods rich with it, he said.

To illustrate the latter point, Page gave the following example. While Jacobs was living in Lower Manhattan's Greenwich Village and working on "The Death and Life of Great American Cities," she managed to write about the neighborhood with nothing to say about its role as a social and cultural experiment, representing a prominent hub in the beat movement, jazz, rock and roll and gay life.

Page also believes that Jacob's skepticism of suburbs 50 years ago has not quite panned out, given that they are very much a reality today.

"Cities have changed," said Page. "The deeper lessons in the book will be useful as we move into the future, as opposed to the more time specific ones. You can't criticize someone in 1961 for not knowing where the world will be in 2011."

Page – who first read Jacobs as an undeclared college student in a history of architecture course – gives "The Death and Life of Great American Cities" credit for inspiring him on his chosen path to study and later teach history and architecture.

Page explained that the book can be read by anyone – not only students – because of how very clearly and passionately it is written. "The book is so well written, so compellingly well written and unlike so many books about cities," said Page. "We're sure it's going to have another 50 years."

Brian Canova can be reached at bcanova@student.umass.edu.

Minnesota apartments filling up fast

Sarah Nienaber
The Minnesota Daily
College News Network

Students still looking for a place to live next school year may need to get organized soon because apartments in Dinkytown and Stadium Village have been filling up fast — and nobody is quite sure why.

Jared Buschette, leasing agent and resident manager at Bierman Place apartments in Dinkytown, said the apartment complex is "way ahead of last year" when it comes to securing leasing contracts for fall.

He said about three-quarters of the 64 units in the complex are leased out now, and he didn't reach that level of capacity until June this past year.

Different types of apartments see different demand, Buschette said. The four-bedroom apartments in the complex are about 90 percent full, and a waiting list is forming.

Bierman isn't the only place where availability is starting to wane thin.

Northstar at Seibert Field owner Greg Jansma said both his buildings, totaling 51 units, are fuller than he anticipated at this point. He didn't think he would be 50 percent full until mid-February, but he's already at 70 percent.

Jansma isn't sure why apartment buildings are filling so quickly.

"[It's] hard to say," he said. "Ours has been unsolicited interest: residents calling us. They are the ones getting organized especially early."

He finds the underlying theme for renters' early organization is that they had visited friends in the building and had a strong interest to live there themselves.

"It was even a little too early in my eyes," Jansma said. "We had an overwhelming amount of calls just into the school year. Our existing residents hadn't even been in place six weeks and we had a lot of interested people ready to sign leases and pay deposits and move into those units."

Philosophy freshman Madeline Robertson doesn't officially have a place to live for next year but doesn't seem to be too worried about finding one because she isn't picky.

Robertson said she would have had a place to live already, but her original plans backfired. She's "up for anything" at this point and has applied for an apartment complex in Uptown, she said.

Fast-filling complexes aren't just a trend in Dinkytown. Stadium Village has seen its own influx of early lease-signing.

Brian Nalezny, property manager at Stadium View Apartments on Delaware Street Southeast, said they are filling up their 247 apartments faster than usual. He's found that in his decade of experience as a property manager, the market has leased at different times every year.

Nalezny said the rising population of the University of Minnesota, combined with the number of beds actually available, may have caused people to "get it into their heads" that they need to lease as early as possible.

Dinnaken Properties is nearing capacity for next year, general property manager Yvonne Grosulak said. But it's normal for them due to the proximity of the building to campus and the fact that the building doesn't offer all the expensive "bells and whistles" other buildings do. She says her building, with 120 units, seems practical to most students.

Off-campus housing brings large crowds

HANNAH COHEN/COLLEGIAN

Off-campus housing for University of Massachusetts students will likely not be as difficult to obtain as apartments were at CU-Boulder.

Whitney Bryen
Colorado Daily
McClatchy Tribune Newspapers

University of Colorado freshman Spencer Lacy and his four friends will be camping out all night Sunday to make sure they're first in line for Monday's big opening.

But it's not a concert or movie premiere Lacy and his friends are waiting for. It's off-campus housing for the fall.

"We know which places we want so we're going to make sure we're the first ones in the doors Monday morning," Lacy said.

Students at the University of Colorado are already pre-leasing local rentals for the fall semester and this year the competition is tougher then ever.

Local housing officials said pre-leasing begins earlier every year and this year is no exception.

Tom Orlando, director of relocation for Housing Helpers of Colorado, said things are already heating up for the Boulder rental market.

"It's chaos as usual," he said. "There is literally a line outside the door, just to see the properties."

Lacy and his future roommates will be camping in front of Boulder Property Management in hopes of snagging a group house in a great location.

"Everyone said there would be a line starting Sunday night so we're going to try to be first so we can get exactly what we want and be ready for the fall," Lacy said. "It may seem kind of extreme but it's our first year living off campus so we want to get a good place."

Lacy's brother, Mason Lacy, a CU junior, has already signed his lease for the fall nearly seven months early.

"I'm going to Costa Rica on Saturday and I won't be back until June," Mason Lacy said. "By then all the decent housing will be gone so I wanted to make sure it was done before I leave."

CU's Off-Campus Student Services will host the 26th annual housing fair in the University Memorial Center Wednesday from 10 a.m. to 4 p.m.

Michelle Willett, marketing publications coordinator for Off-Campus Student Services, said students are already asking if the housing fair is too late to get a good rental.

"The answer is no, housing will not run out," Willett said. "Landlords have been in the processes of surveying their current tenants to find out if they will be renewing their leases. Several properties will be coming online throughout the next couple months."

Willett said weighing the options and taking some time to prioritize is not a bad thing.

"Students should not feel pressured to sign a lease before they're ready," Willett said.

CU junior Annie Bounanno is no stranger to the housing game, so she and her roommates wasted no time nailing down a house for the fall.

"We signed a few days ago," Bounanno said. "We knew it would be tough finding a good house so we found some friends who are graduating in May and they hooked us up with the landlord."

Bounanno said knowing which house you want is key for students looking for multiple rooms and good location.

"Knocking on doors seems to be the best way to go for houses, especially on the Hill," she said. "We have some friends who signed in November for the fall. Most of these landlords aren't even pre-leasing yet but if you can get to them through the current renters they'll usually let you sign it early."

CU sophomore Bessie Delahunt said she's a little behind the game and hasn't even started looking for a new place yet. But she's not concerned about a time crunch just yet.

"I'm studying abroad next spring so I'd like to find a place in the same location but with a shorter lease or that allows me to sublet," Delahunt said. "I can't do that where I am now."

Delahunt said in a college town like Boulder, there are always a few rentals left to pick from so she's confident she'll find the right one.

Student's spring break brings new perspective

Melissa Mahoney

My spring break began with a seemingly small, yet somewhat daunting venture: how to fit 16 people and nearly twice as much luggage into a passenger van and a car-like SUV. We squashed duffel bags and suitcases until the hatch closed, stuffed sleeping bags into crevasses, flattened backpacks under seats and between feet until finally our late night game of baggage Tetris ended with resounding high scores. Next came the people tucked between pillows and casting off shoes, who were to call these vehicles home for the next 26 hours.

We were traveling to the deep South for a volunteering opportunity through the University of Massachusetts Anthropology Caucus to the small town of Jonestown, Mississippi. After days of traveling down the highways, the town sprouted up from the rich soil suddenly. Nestled between miles and miles of abutting cotton and cornfields, her buildings sagged and almost seemed to sway in the southern breeze like stalks of corn. It was as if we had travelled back in time, or had stumbled upon a small third-world country in the middle of the Mississippi Delta.

According to the most recent data from the U.S. Census Bureau, the median family income (in 2009 inflation-adjusted dollars) was an estimated $18,333 while the national average was $62,363. Additionally, more than half the town's population lives under the poverty line.

The 16 of us had come to lend whatever helping hand we could, and our special focus was on the children of the community. They came to us from broken homes and few resources, where getting into trouble was just about the only fun thing to do – a trend that could one day cause major issues with the law. It was their March vacation from school; we held an enrichment camp in the mornings to keep them learning and off the streets. If the estimates of the Census held true, only about 67.6 percent of the kids would graduate from high school, a statistic that we hoped to address in our time there.

In the local Community Development, Resource, and Activity Center we held rotating classes of reading, simple science, music and arts and crafts, all with individualized attention. We wrote haikus, made tie-dyed t-shirts and even held music lessons that consisted of kid's playing that dreaded fourth grade instrument – the plastic recorder. We talked about food groups and planted flowers around the Center, painted plaster figurines and went on nature walks.

Seeing the kids' delighted faces every morning made sleeping on the floor of the Center at night (some of us without air mattresses) seem not so bad. Combined with the construction work we were doing in the community, having a quiet place to lay down was wonderful enough. When the children left in the early afternoon, we headed out to two sites to provide free labor for repairs that were needed in the community.

And yet, for all the small contributions I made, I believe Jonestown changed me more than I will ever change it. Jonestown taught me about my privilege and my place in society.

In Addie's home, an elderly woman, the kitchen floor had a long skinny hole as tall as a second grader that gave way directly to the dirt some three feet below. Standing carefully on the supportive struts of the frame, we pried up the old linoleum and plywood until the cabinets seemed to be floating on air. As we cut and nailed in new floorboards the sounds of James Brown danced from the living room. Over the course of the week we were able to re-tile and finish the floor while the team at the other site was able to replace a collapsing hallway ceiling.

It was not all work though, as we often made our way to towns over the county seat Clarksdale. There we visited Ground Zero Blues Club, a club partially owned by Morgan Freeman, playing the true blues of Mississippi. It was hard not to feel the history and the pain in those crying guitar licks, or the sense of community that hung softly under the colored lights.

It was the same sense that we got when, in the afternoons sitting on the stoop of the Center, every car that passed would wave or strangers walking mildly by on the street would stop to say hello and chat. The friendliness and graciousness of the people of Jonestown towards a group of teenage northerners is something I will never forget. Because the Center had no showers, neighbors happily took us in so we could clean up. Linda, our coordinator and the head of the Community Development, Resource and Activity Center, cooked all of us a fabulous first dinner of barbecue chicken, candied yams, mustard greens, spaghetti and steamed vegetables despite the fact that it probably strained her personal budget. The children didn't pout or say how bored they were. They were with us every step of the way wanting to learn more and constantly alive with potential.

These are the reasons that I chose to volunteer for spring break instead of relaxing (which, given my schedule, I probably should have). The opportunity to make a difference, even a very small one, is something that I cherish. I may be more tired now than when I left and sick (I must hold a record somewhere for throwing up in three different states on the ride back…) but the fact that I fixed a floor, or helped a child appreciate nature or encouraged them to stay in school and to succeed is something invaluable though intangible.

And yet, for all the small contributions I made, I believe Jonestown changed me more than I will ever change it. Jonestown taught me about my privilege and my place in society, and what I can do to make this world better. But most importantly Jonestown taught me to thank a little more sincerely, to give a little more generously, to live life a little freer and above all to love a lot more passionately.

A meaningful discussion on the song about tomorrow: Friday!

Forty million views too many

Tim Jones

There comes a time when a piece of art, one so astonishing and so breathtaking, revolutionizes the medium of which it came from. I believe it is fair to say we have been blessed with such a gem recently.

Yes, there is not a soul who can deny the miracle of the song known as "Friday."

Rebecca Black's hit single has dominated modern culture with it's unbelievable lyrics, both metaphoric and a testament to the grown man who wrote the song's perception of what an eighth grader's writing skills would be.

Of course, I'm not serious whatsoever. This song is a total abomination. I'm pretty sure my ears bled at one point, or maybe throughout the entire song, but who is the true fool in this debate? Is this an actual attempt to generate a good pop song, or are we the victims of a massive joke, only fueled by our ignorance?

The song's video opens with a generic, cookie-cutter graphic accompanied by her horribly auto-tuned voice. What follows is a montage of green screen backgrounds and pure horror. Questionable at first, if one delves further into the lyrics, they may find that this sweet little eighth grader isn't as innocent as she may seem.

Finally, the party comes, and there is dire need for a recap.

Black monotonously sings, "Gotta have my bowl. Gotta have cereal." Does this girl need to grab a bowl to place her cereal in or are we experiencing a double entendre? Could it be that Ms. Black needs to light up a bowl before having her cereal? Is it misinterpretation or malicious subliminal messages? We can speculate but we may never know.

She then walks outside to her bus stop, awaiting her transportation, but the song takes a sharp turn when she sees her friends. A car full of children, seriously, way too young to be driving, motions for her to join her in the car and the primary dilemma of the song arises.

Black is unable to decide which seat she should take. Now let's review. Two friends are in the front. There isn't a vacant seat in the front. There are two friends in the back seat. I believe this leaves only one seat, the middle one, most likely, open. There we go, her crisis has been averted.

It is here we learn her true intentions. Black is infatuated with, "Partyin', partyin'," and "Fun, fun, fun, fun." She is seriously looking forward to the weekend. I wasn't aware that eighth graders focused so much on partying on a Friday. Parents who advocate this type of behavior are not good parents and 13-year-olds should not be driving to parties on Friday nights. No. Bad parents.

Fast forward and she is sitting on another car, "driving" very fast down a highway. Why isn't she buckled up? Yeah, there's a great role model. Did she go to school? Who knows? This song isn't about stupid boring school. It's about partying, and fun and Friday. I was pretty lost up until the point where she said, "I got this, you got this. Now you know it." I'm so glad she clarified that for me. I wasn't sure I got it, but I'm good now.

She isn't a very good friend either. She clearly acknowledges the friend on her right, who is off in her little uncomfortable world, moving her arms in an attempt to dance. I almost cried for the friend on her left. This girl only wants, love, someone to care about her, some attention. It's the only motivation shea has, and Black practically pushes her aside like the vindictive auto-tuned devil she is.

But once again, she asks, "Which seat can I take?"

She's already in the car. She's already in her seat. Why is she asking which seat she should sit in?

Finally, the party comes, and there is dire need for a recap. Black reminds us, "Yesterday was Thursday. Today it is Friday." I almost completely forgot. I thought it was Thursday. I need to get it together.

And, woah, where did this come from? There is a sudden random cameo from a 40-year old guy who we suspect might be a rapper, in a car talking about driving in the fast lane, partying and having fun on the weekend. Is this guy going to the same party? Someone call Chris Hansen from NBC's former show, "To Catch A Predator," because I don't think this is going to end very well at all.

It looks as if Black gets to her party, has a fun weekend, and everyone loves her, and so ends the terror.

The song has skyrocketed in popularity, only because people are desperate to witness the embarrassment. What if this was the original intention? What if we are being played? This is the song that we love to hate, and perhaps this is how they win.

This song is only the prologue to Armageddon, so I'll end with a little fun fact.

Dec. 21, 2012 is on a Friday.

Friday.

Internet, why did you ruin it all?

Nick O'Malley

I wanted to pile on Rebecca Black. I really did.

I wanted to do another analytical breakdown of the 13-year-old viral "singers" cultural phenomenon of a video "Friday" and be silly. I wanted to talk about the social implications of the question "which seat can I take" and how it reflects the Civil Rights struggle during the Montgomery Bus Strike.

But no. The internet had to go and ruin everything. Also, I'm apparently late on this. The video, at the time of writing, has 39,484,088 views.

There are fewer things more entertaining than making fun of stupid people that got famous for no reason. Paris Hilton being famous for a green sex tape. Kim Kardashian has her butt. And her sex tape. The other Kardashians have Kim's butt and sex tape. Justin Bieber is one of the silliest things to ever happen to pop culture. I eat this stuff up. There's just one thing that's wrong?

Why does the Internet need to be a bottomless chasm from which no sense of humanity can escape?

Why does the Internet need to be a bottomless chasm from which no sense of humanity can escape?

It's one thing that the Internet's anonymous commenters (I'm looking at you, 4chan) have made the girl's life awful, which is a terrible occurrence. At the same time, though, iTunes sales have already made the girl a millionaire at 13-years-old. Do you know how much crap you can buy at Hollister for a million bucks? The girl is going to be fine.

No, the problem isn't with the fact that the girl is going to get ridiculed for about a month before we all move on with our lives, it's the fact that this sort of behavior is expected by the Internet. About a week after the music video went viral, Gawker.com ran a story with the headline "What's 4chan Going to Do to Rebecca Black?" What the hell? Why does something need to be done? I get it that people don't like Justin Bieber and his teeny-bopper ilk. I don't get why people say they want to see him eaten by wolves.

Here are some YouTube comments grabs over the last three minutes alone. At the time of writing, there were 357, 624 comments and over 100 more posted by the time it took to write this paragraph.

NikkiKatzz wrote, "My reality is now and forever broken. I might just go out and snort some cocaine and some crack now … a lot of cocaine and crack."

That's a funny response. Now, let's look at a less appropriate one. Stronesthrowaregods wrote, "Who knows what the fastest way to kill themselves is?"

OK. That's mean. But it's simply an insult to Black's ability to sing. Now, let's see what happens when humanity gets thrown out the window. Gleisyluvayoux3 wrote: "She's a whore :P i hope she gets a eating disorder and dies."

Now, what's surprising (other than a strange lack of egregious typos) is the fact that someone would wish death upon someone for making a song that the commenter chose to listen to.

Why, Gleisyluvayoux3? What has Rebecca Black done to you? Did she show up to school and hit on your big crush? Did she take your spot at the cafeteria table? Why do you wish such vengeance?

Let's be fair here. Rebecca Black isn't a recording artist and the producers, Ark Music Factory, isn't what most people think of as a production company. It's more of a vanity production company that makes music videos for people who are willing to pony up the money for it. You know, capitalism.

The awesome part is that, according to The Daily Beast, Black's parents paid just a cool $2,000 to have the video recorded and produced. This, I think, is the most underlooked facet of this whole Internet phenomenon. There a company that will make you a professional-looking music video for $2,000 and put that thing up on iTunes. That's really freaking awesome.

Yet, despite the fact that the girl's intentions were innocent enough (she just wanted a cool music video, which I now also want) the Internet has to tear up her life, posting horrible things about her and for some reason, getting her class schedule to end up on Gawker.com. How is that even relevant?

There, are you happy now Internet? You've won. You've made me feel bad for Rebecca Black, who I should currently be wasting this space making fun of. Good job. Now show me more pictures of bacon.

'Book of Mormon' musical a Broadway hit

By Kate Evans
Collegian Staff

Ever wondered what life is like as a Mormon? Trey Parker and Matt Stone, otherwise known as the creators of Comedy Central's hit TV series "South Park," are hitting Broadway to show the world just that.

Parker, Stone and Robert Lopez have spent the last seven years dreaming up and producing "The Book of Mormon," a satirical musical following two missionaries promoting their religion in a dangerous part of Uganda.

Parker and Stone's first Broadway play opened Thursday, Feb. 24 at the Eugene O'Neill Theatre in New York City, New York. The two and a half hour show required years of religious research, joke trial and error, and firsthand experience to get where it is today.

On their musical, Parker and Stone said, "We wanted to do a story about these two missionaries who go to a place that is just about as far from where they grew up as possible." The missionaries are then confronted by all sorts of new challenges "that their Mormon religion doesn't really jibe with," as Parker and Stone put it.

The South Park natives were unsure of what the crowd at "The Book of Mormon" might be like, but they have thus far been pleasantly surprised.

Parker and Stone categorized the first few nights' viewers as fans of the raunchy TV series, saying the audience "sounded like a rock concert." As the Broadway crowd began filling more seats and leaving satisfied, Parker and Stone have come to believe they've pleased a mix.

The writer/animator/actor/editor/producer duo has a history of religious exposure. Both grew up in Colorado and got their first taste of the Mormon experience while living there. Since then, Parker and Stone have frequented Salt Lake City to attend the Sundance Film Festival while studying film in college.

"We could never get into any screenings so we'd just always go down to Temple Square and hang out there," said the two.

While in the widely Mormon area, Parker, Stone and Lopez made regular trips to local restaurants to pump wait staff for information. Many of the older male waiters they encountered had been on missions, so the trio pried.

"The technical stuff you can find online, but the real stuff we talked to a lot of different people [to find out]," the Broadway newbies said.

Having also done an episode of South Park titled, "All About Mormons," it is clear that these two picked a topic of interest. Parker and Stone attributed a mass of their knowledge on the religion to "lots of Wikipedia time," as they put it.

Shameless fanatics of the collegiate-banned online encyclopedia, Parker and Stone went on to share, "the Latter-Day Saint Church has its own Wikipedia [page], so they make it very easy for someone who wants to learn a lot about their church."

Another undeniable interest Parker and Stone seem to share is musicals.

"This is something I've wanted to do since I was a kid," said Parker. "Once Matt and I got together we started doing musicals … it seemed like more the idea we were always heading towards."

Parker and Stone also wrote "Team America: World Police," a musical film which follows one man as he embarks on an international fight against terrorists to save America.

The comical best friends declared how quickly a good song can get the audience from one point to the next, saying "musicals are always a great way to tell a story."

When asked how creating an episode of South Park is different from building a Broadway play, Parker and Stone used the analogy, "a five paragraph essay is different than a book."

To produce a 22-minute episode of South Park takes about a week, whereas "The Book of Mormon" took Parker, Stone and their creative army the greater part of a decade. Though the duo said the humor of the play is on the same page as their TV show, it's not easy to compare the two because the musical is a "totally different animal."

Whether whipping up an episode of South Park or slaving over play rewrites, Parker, Stone and Lopez always test out their jokes on one another. Parker and Stone said of the brainstorm sessions, "When you come up with jokes, you're just trying to make each other laugh."

Parker and Stone's overall goal with "The Book of Mormon" was "to make a very traditional musical," described the pair. Traditional to them means, "there's definitely a lot of Rodgers & Hammerstein influence in it," said Parker and Stone.

Many would argue that the creators of South Park wouldn't create a "traditional" musical. Parker and Stone advise against bringing a child to the play without first watching an episode of their TV series, claiming they are "not smut peddlers."

Defending their newfound respect of religion, Parker and Stone claimed "God speaks to us and we speak through the characters." They continued on to say, "If you'd like to argue with the characters, you'd have to take it up with God."

When asked by another student on a conference call if they are planning another Broadway show in the future, Parker and Stone did not seem too enthusiastic.

"Right now we're looking forward to getting one week off," said the pair of a beach vacation.

Parker and Stone's week hiatus is sure to be short-lived as episodes of South Park keep pumping out around their newfound Broadway buzz.

Kate Evans can be reached at kyevans@student.umass.edu.

Trey Parker and Matt Stone, the creative masterminds behind Comedy Central's "South Park," have taken their humor to Broadway. The show, a musical about religion called "The Book of Mormon," has been impressing audiences since it opened last month. Prior to its opening, it had been in the works for nearly a decade.

'Two Escobars' shows villain as a hero

By Herb Scribner
Collegian Staff

Soccer films are seldom, but once in awhile there is a gem among the gravel – a film that shows that soccer is more than just a sport and how it can actually control a nation.

For soccer fans, ESPN's documentary "The Two Escobars" hits home where others wouldn't. Not only does it show a slew of clips of the world's sport, but it also displays the power that soccer has over a nation.

The documentary focuses on Andres Escobar, a Colombian soccer player who allowed an own-goal in a 1994 World Cup game, and Pablo Escobar, a villainous internationally-know drug lord. It shows that the two, as opposite as they may appear, have many similarities – especially in the way they were brought up and some of the ideals they hold on to. While Pablo's ideals lead him to murder for a greater cause, Andres keeps his ideals on the pitch.

The film shifts focus from one Escobar to the other. It highlights many of Pablo's workings with soccer teams in Columbia – he was a supporter of the Columbian club, Nacional, for which the second Escobar played. It then goes back to illustrate Andres and his lifestyle. The movie creates an impressive backdrop of the Columbian soccer nation, and builds the viewer as a fan of Columbia.

This leads to the ultimate tragedy of the film. Interestingly, when the United States soccer team – and it should be assumed that most who watch the film would root for the United States soccer team – defeats Colombia, viewers feel compassion for the Colombians and surprisingly, see the U.S. as a villain.

The documentary benefited from showing clips from the games highlighted within the film. At one point there is a montage of games that the Colombian team won from 1991-1994 which shows just how dominant and impressive it was. It gave the viewer a clear indication of the skill the team had and showed just how popular and dynamic the Colombians were during that era.

Some of the downfalls come from the fact that Pablo is given more time on-screen than Andres. While viewers will get a decent painted picture of what Andres' life is like, they will never truly get enough depth from his story as they do from Pablo's. In effect, the story is less about both Escobars as it is actually about how one Escobar (Pablo) affects the other (Andres).

Andres' murder is the turning point in Colombian soccer; it's the point in which the nation lost its momentum and declined in the rankings.

Seeing Colombia's rise and fall in soccer in less than two hours shows a unique characteristic of soccer in general. Soccer can take a hold of an entire nation. Pablo Escobar, who was controlling the Colombian underground, loved soccer and often times it drove his political motives, as shown in the film. His death, coupled with the team he favored and the national team he supported, led to the death of Andres and, arguably, the death of Colombian soccer.

Soccer is the world's sport, affecting more lives across more countries than any other. The documentary demonstrated how deeply invested people can be something that is just a game, but simultaneously, so much more than that. It also showed how cruel people can be motivated to act because of their feelings about a team or specific game. Viewers will enjoy the film because it is action-packed. When it even begins to hint at stale dialogue or interviews, it kicks right back with vibrant highlights of a soccer match.

Not only will viewers learn of a great tragedy and gain some perspective on the other side of the pitch, but they will also look into the eyes of a man who is often explained to be an evil figure in Pablo Escobar. A story not often told, Escobar's tale is highlighted in the film as he gains sympathy from the viewer to become a hero. "The Two Escobars" teaches viewers to look at the other side of the spectrum; that sometimes things are out of humanity's control.

Herb Scribner can be reached at hscribne@student.umass.edu.

"The Two Escobars" tells the story of two men with a common last name who are famous for different reasons. Pablo Escobar, pictured above, was an infamous drug lord and supporter of Colombian soccer, including the team Andres Escobar played for. Both men were shot to death.

Within Temptation packs a hard punch

Dutch hard rock band Within Temptation will release its newest album, "The Unforgiving," on March 29.

By Lauren Versailles
Collegian Correspondent

Within Temptation's newest album, "The Unforgiving," is unlike anything the band has done before. With four previous albums under their belt, the members of the successful Dutch band decided to take a unique approach to their latest release.

On the band's website, guitarist Robert Westerholt explains, "Our first feeling was that we just couldn't do the same things again. What we've been doing for all these years is trying to create our own sound."

"On our last album, 'The Heart Of Everything,' we achieved our goal," continued Westerholt. "For us, it's the perfect album in that style. So the mission was over and now we had to do something new and free ourselves from any rules."

The band decided to do a concept album that revolves around a comic book they created. Each song is from the point of view of a different character from the comic, and with the release of the album comes a DVD of short films that illustrate the concepts from the music and the comic.

Nothing that comes with this CD, however, can compare to the album itself. The music stands out from anything else the band has done. While some elements from previous albums are present, such as the orchestral strings, the heavy guitars and electronic beats are more prevalent. Lead singer Sharon den Adel's vocals are outstanding as she rips through both hard songs and ballads.

The intro, titled "Why Not Me," is a 34-second clip of Mother Maiden, one of the characters in the concept, professing her love for her role of fighting evil in her life. In the background of her soliloquy are strings that play a creepy tune, thus setting the tone for the rest of the album.

The first actual song, "Shot in the Dark" begins very softly and builds up into an explosion of flawless vocals on den Adel's part. She demands, "What did they aim for when they missed your heart?" The combination of strong lyrics and den Adel's vocals will grab you and leave you wanting more of this album.

Standout tracks include "In The Middle of the Night," which is probably Within Temptation's heaviest song since their first album. Den Adel's rage towards the person who has wronged her subject keeps listeners hoping to never make her angry. "Iron" showcases den Adel's vocals as she rips through lyrics like "You can't hide what lies inside you/It's the only thing you've known/You'll embrace it and never walk away." Other songs that require attention are "Faster," "Sinead" and "Where Is The Edge."

As much as Within Temptation are known for their hard anthems, they are also known for their ballads. Den Adel switches from her lower register into a stunning soprano on "Fire and Ice," "Lost" and "Stairway to the Skies." "Lost" is probably the best ballad on this album; den Adel will give you chills as she laments, "Help me, I'm buried alive!" While the band has been experimenting with different sounds, den Adel is well-known for her soprano register, and she does not fail to deliver songs that will leave listeners breathless.

This is what seems to be the end of an evolution for the band. In "The Unforgiving," the soft and vulnerable elements that were on their first albums are gone. This particular album packs a serious punch, and is highly recommended for even those who have not heard of this band before.

UNC falls to Duke, rebounds against DU

By De'Shawn Townsend
Collegian Correspondent

Eight Blue Devils recorded goals to lead No. 8 Duke to a 14-9 win against No. 19 North Carolina last Thursday. Freshman attack Jordan Wolf led the way for the Blue Devils four goals, which marked his third hat trick in the past five games.

Duke (6-2, 2-0 Atlantic Coast Conference) has won 13 of the last 14 times these two teams have squared off against each other. This meeting also pushed the Blue Devils' win streak to four.

Six Blue Devils scored on the team's first eight goals as 10 players recorded at least one point. Freshman Christian Walsh had a career game by recording three points while freshman Josh Dionne and senior Justin Turri both had two goals.

The two teams both started fast as they exchanged goals in the opening two minutes of the game. The next 20 minutes were dominated by Duke as it registered four goals, two of which were scored by Wolf. The Blue Devils managed to keep the Tar Heels (6-2, 0-1 Atlantic Coast Conference) scoreless during that span.

After a 21-minute scoring drought, the Tar Heels rebounded with a couple of goals to make it a 5-3 game. Josh Dionne scored two of Duke's next three goals, sending his team into the locker room with an 8-3 lead.

UNC outscored Duke 3-2 in the third period but could not overcome the 10-6 deficit headed into the fourth. The Blue Devils outscored the Tar Heels, 4-3, in the final stanza, solidifying the 14-9 victory. The loss marked UNC's first home loss since 2008.

The Tar Heels rebound against Dartmouth

UNC rallied late in the game to come back and defeat Dartmouth,12-7, at Fetzer Field on Tuesday night in Chapel Hill. Junior midfielder Jimmy Dunster scored a career-high four goals while sophomore goalie Steven Rastivo made 12 saves in his first career start.

The comeback makes it the Tar Heels' fifth win in six games, while Dartmouth (3-3, 0-0 Ivy League) loses its second-straight game.

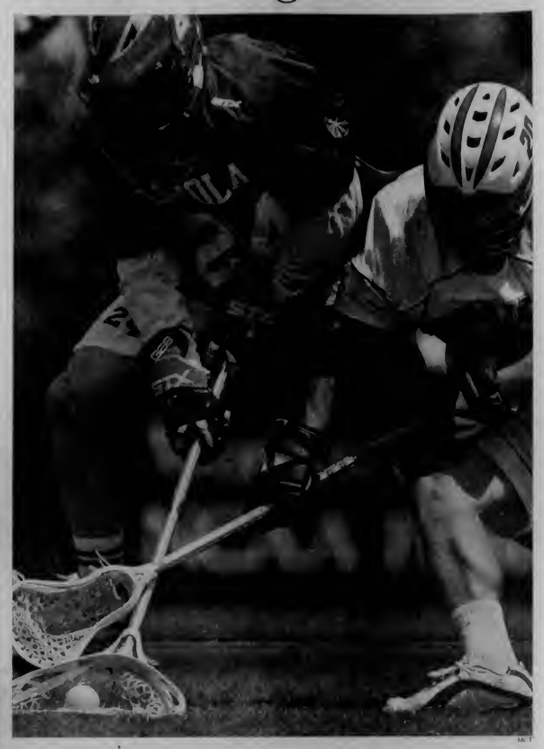
Up 6-5 in the closing minutes of the third quarter, the Tar Heels found a way to weather the storm and go on a five-goal rally that stretched into the fourth quarter. Dunster scored three of those goals. Freshman attack Nicky Galasso matched his career-high with five points, scoring twice and adding three assists.

The Tar Heels received contributions outside of Dunster and Galasso, as well. Sophomore attack Marcus Holman had two goals, freshman attack Pat Foster scored a goal and an assist while Mark McNeill, Billy Bitter and R.G. Keenan also scored goals.

The Big Green tried to fight back, but could not keep up with the surging Tar Heels as they were outscored 8-3 in the second half. Dartmouth was led by senior midfielder Rhett Miller and sophomore attack Nikki Dysenchuk, who both scored two goals.

UNC returns to action on March 26 when it travels to College Park for a 12 p.m. game against Maryland.

De'Shawn Townsend can be reached at dtownsen@student.umass.edu.



A member of the Duke lacrosse team battles for a ground ball against a Loyola opponent. After starting the season 1-2, the Blue Devils have won five-straight to solidify a top spot in the national rankings.

13 Minutewomen score in rout over Marist

UMass	23
Marist	7

By Jackson Alexander
Collegian Staff

After a heartbreaking loss left them with their first defeat of the season, the Massachusetts women's lacrosse team bounced back Tuesday afternoon, trouncing Marist 23-7 in Poughkeepsie, N.Y. The Minutewomen had a 13-goal run between the first and second half that keyed the victory. The 23 goals marked the second-most in school history for a single game and most since 1980.

Thirteen different Minutewomen found the back of the net with Nina Sarcona (four goals, one assist), Jackie Lyons (two goals, three assists), and Katie Ferris (three goals, two assists) leading the way. Jesse O'Donnell had a hat trick and both Courtney McGrath and Sam Rush chipped in a pair of goals.

Goalkeeper Katie Florence stopped four shots en route to her seventh win. "We put a lot of goals in the net today," said head coach Angela McMahon. "It was good to see a lot of different people step up."

The teams went back-and-forth for the first 13 minutes, each team fighting for the lead. With 17:02 remaining in the first half, Lyons scored to break a 4-4 tie. From that point on, the game was never in doubt for UMass as they went on to score seven more goals before the half concluded, making the score 12-4.

The Minutewomen did not let up in the second half, as they scored the first five goals. Marist's Kelly Condon broke UMass' 13-0 goal run by scoring her second goal of the game. That barely deterred the Maroon and White, though, as the Minutewomen went on another 6-0 run to increase their lead, 23-5. Marist tacked on a pair of goals in the last five minutes of the game to solidify the score at 23-7. When all was said and done, the Maroon and White had outscored Marist, 19-1, from Lyons' tie-breaking goal to Melissa Carelli's first collegiate score with 5:41 remaining. During that stretch, Ferris collected all three of her goals, Lyons had two goals and two assists, and Rush had two goals and an assist.

McMahon was impressed with her team's run, and she attributed the success to the players execution of the intangibles.

"I think that came from us winning the draw controls and winning the groundball battles," said McMahon. "That just gave us a lot of momentum at the offensive end."

The Minutewomen collected 25 groundballs and won 23 draw controls, while the Red Foxes picked up 13 groundballs and nine draw controls. UMass set season-highs in a number of different areas including goals (23), assists (10), and caused turnovers (21).

Condon led the Red Foxes offensively with three goals. Ashley Casiano started in the cage and made nine saves before being replaced by Alyssa Littin who stopped four shots.

The Red Foxes only attempted 13 shots in the game, a season-low for them and a season-best for UMass in shots allowed.

McMahon gave her stingy defense credit for shutting down a dangerous Marist attack.

"I think we did a pretty good job on defense, holding them and limiting their shots."

This impressive defensive performance was no anomaly for the Minutewomen, who have allowed opponents just over 20 shots per game through their last five games. In its first three games, UMass allowed an average of 33 shots per game. The Minutewomen will conclude their non-conference schedule on Saturday against No. 2 Northwestern. The game will be played at 7 p.m. under the lights at McGuirk Stadium.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Freshman midfielder Tanner Guarino looks for a pass in UMass' game against Marist. Guarino has contributed four goals in eight games thus far in her rookie campaign.

JEFF BERNSTEIN/COLLEGIAN

Junior midfielder Anthony Toresco looks for a teammate during UMass' 8-7 loss to Penn St. on Saturday.

Rushing sidelined for near future, UM falls in national rankings after losing 2-of-3

By Stephen Sellner
Collegian Staff

Massachusetts men's lacrosse midfielder Greg Rushing has missed the past two games due to mononucleosis and will remain off the field for the near future.

The junior has won 36-of-66 faceoffs for the Minutemen (5-2) this season and was a key contributor to the team's big wins early in the season.

Rushing was instrumental in UMass' 11-9 victory over No. 20 Ohio State, winning 12-of-17 faceoffs and scooping 11 groundballs to help secure the victory. The Fort Collins, Colo. native has controlled this season, which is by far the most on the team with Tim McCormack and Anthony Toresco tied for second with 19.

Toresco has handled the faceoff duties in Rushing's absence, winning 6-of-17 against Providence on March 15 and 11-of-17 against Penn State on Saturday.

Rushing needs to be cleared by the medical staff in order to resume playing, but head coach Greg Cannella said on Saturday in a UMassathletics.com interview that he expects him to be back in approximately one month.

Junior Art Kell and sophomore Will Manny lead the Minutemen with 20 points this season to lead UMass' balanced attack.

Kell has 12 goals and eight assists, while Manny has 7 goals and a team-high 13 assists. Junior Anthony Biscardi is tied with Kell for the team lead in goals (12) while also adding five assists for a total of 17 points, good for third-most on the Minutemen.

Senior Ryan Hantverk and sophomore Colin Fleming round out the top five point totals with 14 and 11 respectively. Hantverk has 10 goals and four assists, while Fleming has chipped in with eight goals and three assists.

UMass largely outshot its opposition this season, 281-185. The Maroon and White totals are exceptionally lopsided in the second half, outshooting their opponents 79-36 and 76-48 in the third and fourth periods respectively.

UMass has also dominated the groundball war. The Minutemen have corralled 217 compared to their opponents' 174, which has afforded their attack extra possessions and more scoring opportunities. That can be seen in the scoring averages, as the Maroon and White have averaged a total of 10.14 goals per contest compared to their opponents' 7.57. Junior goalie McCormack has been phenomenal in net, accumulating 63 saves while surrendering 53 goals. Strong defensive play from junior Tom Celentani, sophomore Jake Smith and the rest of the defensive unit has limited the opposition's number of quality shots against McCormack.

After dropping their first conference game against Penn State on Saturday (8-7), the Minutemen's national ranking dropped four spots to No. 16 according to the Nike Inside Lacrosse poll on Monday. The Syracuse Orangemen (6-0) sit atop the national rankings for the sixth consecutive week after defeating Johns Hopkins, 5-4, on Saturday. Virginia (7-1), Notre Dame (4-0), Duke (6-2) and Maryland (6-1) round out the nation's top five teams.

Colonial Athletic Association foe Hofstra (6-1) sits at No. 6 in the rankings. UM battles the Pride on April 23 at a neutral site in East Hartford, Conn.

Finishing the top 10 are Cornell (5-2), North Carolina (6-2), Army (6-2) and Stony Brook (3-3).

Once ranked at No. 5, UMass has dropped 11 spots in the past two weeks after suffering its first two losses. The Minutemen travel to Harvard on Tuesday and follow with five consecutive CAA tests to close the season, starting with a visit to Saint Joseph's on April 2.

Stephen Sellner can be reached at ssellner@student.umass.edu.

DU struggling early

By Trevor Bray
Collegian Correspondent

Prior to this year's baseball season, the Atlantic 10 Conference released its preseason rankings which featured Charlotte as the predicted A-10 Champions. Xavier was slated to finish second, and Dayton, the 2009 champions, landed the third spot. However, in light of the season, Dayton has struggled to maintain its reputation, with a 9-11 record thus far.

Last weekend, the Flyers faced Siena in a four-game series. Cameron Hobson, Dayton's ace pitcher, shut-out the Saints on Friday in a 13-0 win. Hobson registered 11 strikeouts, and, after facing 23 batters, the game was ended in the seventh inning due to rain. In honor of his performance, Hobson was named the A-10 Conference Pitcher of the Week and is now second in Dayton's career strikeout list with 191. His ERA currently rests at 2.16.

The next three games did not fair so well for the Flyers. In a doubleheader on Saturday, Dayton lacked adequate offense. In both games, Dayton combined for 29 hits, but left 22 runners on base, resulting in 6-3 and 4-1 losses. On Sunday, the Saints rallied for a victory in extra innings. Dayton starter Tim Bury threw eight innings, the first six of which were scoreless. Reliever Trent Haughn suffered the loss by allowing two runs (one earned).

Dayton will travel to California to face Pepperdine this weekend.

49ERS CONTINUE TO IMPRESS

So far, Charlotte has lived up to its high expectations this season. Picked to win the A-10 title, the 49ers currently have the best record in the conference at 16-5.

Charlotte landed its first away win at Wake Forest on Tuesday. The back-and-forth game featured four lead changes and lasted for four hours and 16 minutes, stretching into the 11th inning.

The 49ers got on the board in the second inning, when senior outfielder Cory Tilton singled in catcher Ross Stoedley. The Demon Deacons took the lead with the bases loaded in the bottom of the second. Jack Fischer singled to bring Carlos Lopez home. Zane Yanzick flied to left field allowing designated hitter Jack Carey to score. Fischer advanced to third but was caught when trying to steal home. Wake then scored another in the third, bringing them to a 3-1 lead.

Trailing 4-3 in the seventh, Charlotte scored four runs to take a 7-4 lead. The Demon Deacons rallied in the eighth to tie the game at seven. The game remained knotted until the 11th, when the 49ers tallied five hits and six runs to put the game away.

XAVIER UPSETS LOUISVILLE

The nationally ranked Louisville Cardinals were flightless in last weekend's series against Xavier, losing the series, 2-1. The first game proved to be a slugfest for both teams as they combined for 27 hits. Xavier scored four runs in the first with three hits and a walk. The Musketeers added three more in the third, thanks to first baseman Brian Bruening's two-run single and Selby Chidemo's RBI single. Louisville responded in the bottom of the third, scoring three runs on four hits to make it 7-3. The Cardinals went on to score two runs in the sixth, seventh and ninth innings, but it wasn't enough as they ultimately fell, 11-9. With the win, Xavier extended its winning streak to nine games.

The Musketeers' streak would end the next day, when Louisville shut them out, 3-0. Unlike Friday, the game lacked offense as Cardinals starter Justin Amlung (4-0) and XU's Jon Richard (2-2) battled in a pitchers dual. Amlung ultimately came out on top, throwing seven scoreless innings while striking out seven. Richard also threw seven, allowing three runs on seven hits and two walks. The Musketeers secured the series by taking a 4-1 victory on Sunday. The team showed no mercy to Louisville right-hander Mike Nastold as they scored three runs on two hits in the first inning. Stewart Ijames shortened the Cardinal's gap by hitting a single to bring Drew Haynes to home plate in the seventh. Elwell added one more for Xavier in the top of the ninth by hitting a single to left, bringing in pinch runner Chidemo.

Trevor Bray can be reached at tbray@student.umass.edu

DAYTON ATHLETICS

Dayton junior pitcher Cameron Hobson delivers a pitch in a game earlier this season. Hobson was awarded Atlantic 10 Conference Pitcher of the Week for his complete game shutout victory against Siena last weekend.

Events educate future tenants

HOUSING from page 1

Participants of the "Renting 102" workshop learned effective ways to split costs among housemates.

The UMOCH website provides a list of 24 different apartment complexes in the town of Amherst, which have in total over 2,000 units. According to the list, six complexes have between 75 and 200 units. Brandywine, Mill Valley Estates, Hawkins Meadow, Presidential, Southpoint and Townhouse. Three complexes Colonial Village, Rolling Green and The Boulders have over 200 units. Puffton Village has the most units with 378. East Amherst Village does not list an amount of total units.

The website also lists possible apartment complexes in the neighboring towns of Belchertown, Granby, Greenfield, Hadley, Northampton, South Hadley and Sunderland. The list does not include total number of units, only the number of bedrooms in each apartment.

A third list on the Off Campus Housing site includes a collection of subsidized apartment complexes, ones that are privately owned as opposed to being run by the Amherst of Northampton Housing Authorities. There are 17 complexes listed across the towns of Amherst, Florence and Northampton. Many complexes have specifications for possible tenants.

UMOCH.org also provides additional links and resources for tenants and landlords.

Chris Shores can be reached at cshores@dailycollegian.com.

Amherst's Townehouses, with its 92 rental units, is located off Meadow Street and features two and three bedroom apartments, which accept indoor cats.

Puffton Village is the largest apartment complex in Amherst with 378 units. There are one, two or three bedroom apartments available and they are located directly on the Route 30 bus route.

Off campus housing in Amherst

There are 24 different apartment complexes in the Town of Amherst. A complete Google Map of the apartments can be viewed online at DailyCollegian.com.

SGA remembers former Pres. Nunez at Wednesday meeting

By Sam Hayes
Collegian Staff

The Student Government Association voted unanimously to honor recently-deceased former SGA President David R. Nunez and the work he did for the SGA during Wednesday's senate meeting.

Nunez, survived by his wife, Judith, and two children, died unexpectedly from a heart attack at Beverly Hospital in Beverly, Mass. on March 3, 2011 at the age of 38.

The motion the SGA Senate passed was to "formally recognize David Nunez's capable service as SGA President and ... formally honor the memory of its former chief executive and commemorate through this motion David Nunez's life as a valued community member and student advocate."

The motion to honor the 1994 president was sponsored by current president Brandon Tower.

"We have a responsibility to pay tribute to those that have dedicated service to the SGA," said Tower before the Senate. "We are not so fortunate to [not] have them with us anymore." Tower was contacted about Nunez by another former SGA President, he said.

A cosponsor of the motion, Senator Jarred Rose, discussed why the motion was written.

"Being president, you give time and service to the campus community," he said, "[President Tower and I] thought it was a nice and respectful gesture to honor [Nunez] this way."

At the outset of the meeting, Student Trustee Mike Fox discussed Nunez's importance and lasting impact on the current SGA.

"Something that [the motion] does not fully mention is that David Nunez was one of the key people that composed our bylaws and our current constitution," said Fox. He simply put it that Nunez had the "creativity and imagination to realize that [in 1994] new student government was needed."

Fox not only endorsed the motion, but asked the senators to reflect on what Nunez's efforts meant to the student government.

"Former SGA President Nunez was able to look at what a structure of a SGA needs to be realize what the needs of the campus were and adjust accordingly," he said. "It is worth asking ourselves [if] there are further adjustments we can make in regard to being a student government and representing others."

Nunez also began access to the Student Activities Trust Fund, the main supply of funds the SGA can allocate to Registered Student Organizations (RSOs).

Also during Wednesday's meeting, Fox discussed the likelihood of fee hikes.

He explained that due to maintenance costs and the increase of faculty salaries and due to cost of living increases, fees are likely to rise between five and seven percent.

Massachusetts has allocated about $1 billion for the maintenance costs, he said, but in order to keep a balanced budget, UMass does not often get much of that funding, so the increased costs can fall to student fees, explained Fox. In order to minimize the fee increases, Fox wants the state to pay the faculty increase.

"We are working with faculty and administration to get our senators to have the state pay the cost of living adjustments," said the student trustee. "The argument is simple: Pay our teachers."

SGA technology expert and web designer Sam Azar announced that a new textbook swap website for UMass students only will be officially up on April 1.

The proposed program's page on Facebook describes itself as "made for students by students in an effort to fight costly textbook prices and the University's low cash back for used textbooks."

The domain UMasstextbookswap.com has been registered and is the current location. However, Azar announced that the SGA is working with the Office of Information Technologies to obtain a UMass.edu address.

Sam Hayes can be reached at sdhayes@student.umass.edu.

Merger could improve networks

Seyi Obasa

We've all used cell phones at some point or another, whether it was to make a call, send a mass text to friends on the weekend or check Facebook in class. The Pew Research Center's Internet & American Life Project recently conducted a study with about 3,001 adults. According to the study, 85 percent of Americans over the age of 18 own cell phones.

While all of these cell phone owners may be dispersed among different cell phone carriers, the merger of T-Mobile and AT&T is relevant to all of us. The four major carriers will soon become three as a result of AT&T buying T-Mobile, pending approval from the Federal Communications Commission and the Department of Justice.

According to The New York Times, the $39 billion acquisition of T-Mobile will result in the newly merged entity being the largest cell phone provider in the nation. This would bring together 95.5 million AT&T customers with 33.7 million T-Mobile customers, combining to make up around 42 percent of all wireless subscribers in America.

As both networks operate on relatively similar technology, this combination could help create better overall coverage in the long run.

Little is known as to how this will impact the smartphone market. T-Mobile customers who are eager to get the iPhone after the merger is solidified will be able to jump the gun and upgrade or consider other options.

Although there may only be three main cell phone companies left, critics argue that this scenario may not be as negative as it seems. For one, the precise details of this merger aren't fully known. There is no guarantee that there will be any less competition.

Mergers have a tendency of taking longer than expected for the parties involved, so those that are worrying that their prices may spike up immediately shouldn't be as worried. Users who are currently under contract on one carrier will not have to change their current contract. As a result, the two companies working with similar overall technology coverage and speeds will be able to be expanded quicker and more efficiently.

The new company would deal with a lot less red tape from the federal, local and state governments in building towers and other communication structures.

As both networks operate on relatively similar technology, this combination could help create better overall coverage in the long run.

AT&T, which has already been rolling out their improvements to their network's speed will be able to enhance integration of the 4G infrastructure across the board.

The prevalence of more people using and buying smartphones like the iPhone, BlackBerry and Android-based phones are sure to continually increase. Such phones use up considerably more bandwidth and data than traditional phones.

This can help pave the way for a very rigorous structure for those markets to grow and users to fully benefit.

Some argue that competition in the long run will flourish as a result of the newly improved and integrated infrastructure.

So, what does this ultimately mean for the end user, or the general public? After the merger is fully worked, users may have a wider selection of phone choices to choose from. Coverage and overall call quality should also improve as well. As for me, I am a T-Mobile customer.

For the most part, I'm pretty satisfied with my service as a whole. It's relatively inexpensive and customer service has always been helpful when my family or I contacted them. However, sometimes when I visit my friends' apartments off-campus in various parts of Amherst, my service gets a bit spotty.

But in most city and suburban environments, I usually don't experience many dropped calls, or a loss of reception. It's hard to say whether others experiencing similar to what I sometimes experience are guaranteed to fully benefit from this merger, but there should be some tangible and noticeable improvement along the way.

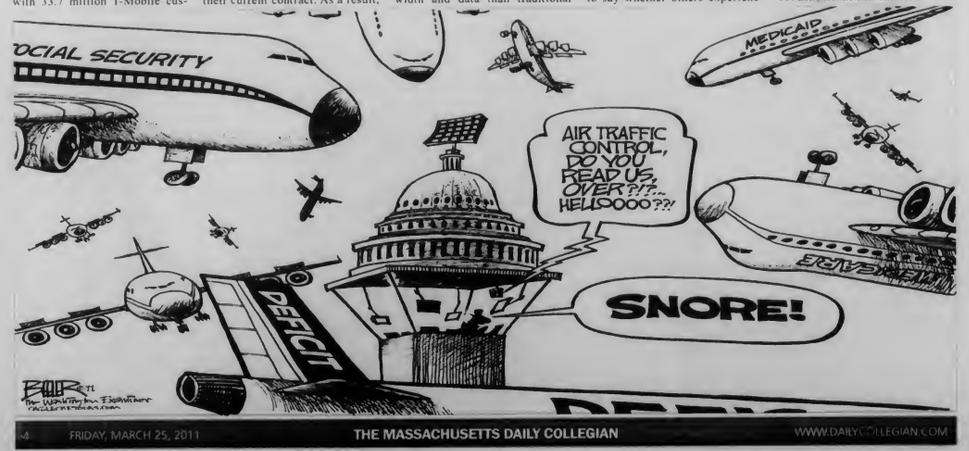
Overall, much can be said of this merger. One can argue that we are moving towards the days of big unfettered monopolies and conglomerates.

If this merger is approved, others may say that our government is allowing and tolerating big business over smaller, more privately owned business.

But such arguments and claims have been around for a long time. Either way, if this means that the average user gets to have improved features, or that Facebook will load faster on their phone, then this might be beneficial.

The merger is said to take many months to fully go into effect, so only time will tell. Perhaps many who want can download their beer apps, or use FaceTime sometime in the near future.

Seyi Obasa is a Collegian columnist. He can be reached at oobasa@student.umass.edu.



POINT-COUNTER-POINT

"I disapprove of what you say, but I will defend to the death your right to say it." - Evelyn Beatrice Hall

All systems go for NASA?

Markets can do the job

Harrison Searles

As the space shuttle Discovery is decommissioned and retired from service, it is time that the government of the United States rethink the role that government has to play in the future of space exploration. The reason for this is that it is necessary to contemplate whether the resources that have been and will be allocated to the space program has been worth the output it has produced. Despite all of the praise that has been heaped on the National Aeronautics and Space Administration (NASA) for the past decades, it is clear that its output is the subject of hype and that it has also been an organization that has been imprudent in its utilization of resources. If there is to be future progress in space exploration, then what needs to happen is not sending highly specialized, billion-dollar missions into space for the curiosity of scientists and welfare for the aerospace industry.

Instead, what must happen is a dramatic decrease in the costs in order for mankind to have any future in space and this is a task of economizing resources that is best left to the free market.

For the past three decades after the end of the Apollo missions in 1972, NASA has existed in a state without a clear objective to accomplish and has instead existed in a nostalgic limbo. Indeed, much of NASA has served as welfare to the post-Apollo aerospace industry as insignificant missions that are sent in and out of Earth's atmosphere with much fanfare. This has had the result of merely keeping the aerospace industry alive, but little innovation has occurred. While the scientific gadgets that are hurdled into space may have become smaller and more advanced, the most important feature of the space program, the costs of getting payload beyond the grasp of Earth's gravity, has yet to reach economical levels. Instead, despite the fact that NASA lives off of the reputation of blazing the trail for future activity in space, ever since the breakthrough of the Saturn rockets, it has yet to make real a more cost-effective means of launching into space.

On the face of it, this may seem like an obtuse and excessively critical view of NASA. Of course, critics of this judgment would bring to the table projects like the International Space Station or the Hubble Space Telescope. While the Hubble Telescope may be of great use to astronomy, astrophysics and cosmology, it has not only been beset by technical issues since its launch, but it is not clear-cut whether its advantages over Earth-bound observatories warrant its costs. The ISS is almost a complete waste of money on a project that is more a post-Cold War make-up hug between the space programs of Russia and the United States than a project that has any utility, or even relevance, to humanity's supposed future in space. In addition, NASA is also heavily politicized, first serving the interests of politicians in Congress and then space exploration. Evidence for this is that even though solid rocket boosters for the space shuttle were the least preferred means of propulsion from an engineering perspective, among other things a solid fuel booster can never be shut down once started unlike other types of fuel, it was chosen because it was produced by a company in Sen. Orrin Hatch's (R-Utah) state.

Without a doubt, the space program has been the beneficiary of both a wave of hype ever since the American government thought it was critical to land a gadget made in America on the moon before a gadget made in the USSR was as well as low expectations from the general public. The public seems content to watch missions be launched into space, or even lost (need I mention the recent loss of a $424-million mission earlier this month), with little accountability for either how they use resources or whether their goals are even worth pursuing. The space program, despite the fact it may be the pet program of many, is not sacrosanct.

Eventually, all talk about NASA and the future role of government in space exploration must come down to a judgment regarding whether a bureaucracy put in place by the government is the best means of attaining the ends desired. Here, there can be only an unequivocal answer: no.

The future of mankind in space requires an institution that is an environment that encourages unforeseen innovation and that depends not on the designs of men, but rather by where spontaneous order brings them. In short, what is needed is a market in which not only are competitors not crowded out by the government, but also in which space-entrepreneurs can try out a vast array of plans based not on the approval of a single board of central planning, but rather on the confidence of investors. A market will be far more sensitive to the demands of the public regarding how the space-industry ought to evolve and rather than simply expecting money for their projects, as do space-bureaucrats, the space-entrepreneur would have to support his enterprise on providing actual services to consumers. Indeed, in the past years private enterprise has already shown its capability to organize missions into space when SpaceX, a company founded by one of the co-founders of PayPal, created the line of Falcon Rockets.

In the end, NASA's mission of preparing the way for further involvement of the human race in space is not best accomplished by a public bureaucracy. Instead, it is time that the government end its involvement in the aerospace industry and let private enterprise be the force that propels humanity into whatever future there may be.

Harrison Searles is a Collegian columnist. He can be reached at hsearles@student.umass.edu.

Exploration is about spirit

Mike Tudoreanu

Humanity dreams of space. Our popular culture is filled with it: "Star Trek," "Star Wars," "Stargate," "Battlestar Galactica" and enough spin-offs and merchandise to fill a large lunar crater. We know we want to go there. It is in our nature to be curious, to explore, to sail over the horizon. But while the dreams are flourishing, the real thing is dying. Since the 1970s, we have never been anywhere as far as the Moon. Instead, astronauts have been hanging around in low Earth orbit, where everyone has gone before. And the number of spacecraft capable of carrying human beings has been dwindling. This year, the last of the American space shuttles will be retired. The sturdy old Soyuz spacecraft, designed and built in the Soviet Union, will be our last remaining link to the stars. Some people are even calling for closing down the entire NASA space program, as part of the whole budget cutting fad. Presumably it's not enough to extinguish the American Dream and young people's hopes to have a better life than their parents have. We must kill the dreams of adventure and discovery too. It is a shameful and stupid idea.

First of all, the money spent on NASA is a drop in the ocean compared to total government spending. For instance the NASA budget for 2011 stands at around $18.7 billion. By comparison, the wars in Iraq and Afghanistan are costing us $159.3 billion in 2011, the total Pentagon budget this year is $548.9 billion, President Barack Obama's tax cut extension will cost $200-500 billion and the bailout of the banks cost $700 billion. In other words, NASA can take us to the final frontier for a fraction of the cost of the Bush tax cuts, or the same amount of money it takes to occupy a few mountains and bomb a few villages in the Afghan countryside. I'd call that a bargain. Even in the 1960s, when the space program received about twice as much funding as today (adjusted for inflation), President Kennedy pointed out that NASA's budget was smaller than the amount of money Americans spent on cigarettes every year.

So there is absolutely no excuse for attacking NASA on spending grounds. But there are some preachers of unrestrained capitalism who attack it on ideological grounds, simply because it is a government agency. They believe that private enterprise can take us into space, and point to such recent developments as the first private sub-orbital flight (in 2004) and the growth of space tourism. I really don't see what's so exciting about the fact that private companies finally managed, in 2004, to do what the government had been doing since the early 1960s.

On the other hand, space tourism is making money, that is true. But it relies on government-created and government-funded technology. The first space tourist was taken into Earth orbit in 2001 by a Soyuz spacecraft. It's not exactly a ringing endorsement of the free market when your business has to rely on Soviet technology, is it? And in any case, tourism is never going to help us push the boundaries of a new frontier. The whole point of exploration (in space or anywhere else) is that you have to go off into the unknown and put your life on the line.

That's not what tourists are after. America was not discovered by people looking for a dream holiday.

The fact is that private companies, market forces and the profit motive cannot take us beyond the confines of Earth. Exploration in general, throughout human history, was always supported first and foremost by governments. Christopher Columbus was funded by the Spanish state. The great Chinese explorer Zheng He was sponsored by the Ming government when he sailed across the Indian Ocean. There are good reasons why it was always this way. Private companies will only agree to do something if they can expect to make a profit from it. But how can you know if discovering a new land is profitable before you've actually discovered it? You don't know what the new land might hold — sometimes you don't even know if the new land exists. It's not like gambling on the stock market, where you can calculate risk projections and expected returns. Private companies (especially banks) are perfectly willing to gamble, as long as they know the odds. But the thing about exploration is that you don't know the odds. You just have to leap into the unknown, and history shows that the first voyage to a new land tends to be extremely unprofitable. After the new land has been discovered and charted, then there may be profit opportunities and private business might join in. But not before.

Space exploration is likely to be even more unprofitable than sailing across the oceans of Earth, for two reasons. First, it requires huge upfront investments (building a spaceship is far more expensive than building a boat), and it's difficult to imagine any way that a private space company could recover those costs. Second, there are no people to trade with — or steal from — at the other end of the voyage. We will have to build everything ourselves once we get there. We may find mineral resources, but the same minerals could also be found on Earth.

So then, if there is no money to be made in space, why go there? Because adventure is what fuels our imagination and our culture. Because if we stop wondering what lies beyond the next hill, if we turn inward, we will wither and die. And also for a much more pragmatic reason: There are a lot of us on Earth, and our population keeps growing. It would be a good idea to find a new place to settle. In the very long term, our Sun will grow and become hostile to life on Earth, so we will have to find a new place to settle. Might as well start now. Whatever the reason, NASA — or another government agency like it — is the only thing capable of taking humanity to the final frontier. That is why we need it.

Mike Tudoreanu is a Collegian columnist. He can be reached at mtudorea@ecs.umass.edu.

Shaving heads, saving lives

By Jackie Chambers
Collegian Correspondent

Khama Ennis Holcombe hasn't gone to get a haircut in over 20 years. On Sunday, she'll put nearly $3,000 on the table to finally get it cut, but she's not doing it to just clean up her split ends. Holcombe's long black hair will be completely shaved away to support the St. Baldrick's Foundation, a charity that raises money for children's cancer research.

While she is by far the highest solo fundraiser to this point, she is one of over 170 people already signed up to have their heads shaved on Sunday, March 27 at Rafters Sports Bar & Restaurant in Amherst.

Barbers and stylists from local shops will come together for the buzz-worthy event. The University of Massachusetts Police Department and Matt's Barber Shop in Amherst are hosting their second annual fundraiser for the Foundation.

St. Baldrick's was founded on March 17, 2000. The head shaving foundation is the world's largest volunteer-driven fundraising program for children's cancer research, aside from the United States government. The Foundation has raised over $105 million in the past 11 years, including over $37 million in 2010 and 2011 alone. More than 179,000 people have shaved their heads for St. Baldrick's from 2000 to 2011.

The event is very similar to a walk-a-thon. Participants can sign up on the foundation's website, www.stbaldricks.org, where sponsors can donate to the Foundation in their name.

Last year, the event earned over $34,000. This year they hope to earn over $50,000, according to Matt Haskins, owner of Matt's Barbershop. The goal posted on the official event page is $35,000, and as of Thursday night, the amount raised was approaching $34,000.

"We expect to gain $12,000 directly at the event," said Haskins. "Nearly 170 volunteers signed up already. We expect over 200 people to get their heads shaved."

Currently there are just over 170 "shavees," as the website calls them. If you'd rather not part ways with your own hair, there are other ways to participate.

"We encourage cash donations as well. For every person getting their head shaved there are at least three spectators," he said.

Haskins said that this year there will be some women shaving their heads as well. It's not uncommon for women to shave their heads for the cause. Since St. Baldrick's was founded in 2000, more than 16,000 women have parted ways with all of their hair. Haskins explained that if a woman's hair is long enough it will be donated for wigs for cancer patients. The two top fundraisers this year so far have been women, lead by Holcombe, garnering a combined total of $4,432 as of Thursday night. The top team so far is the Amherst firefighters and friends with $6,890, closely followed by the UMPD with $6,094.

Last year, while an Amherst firefighter was having his head shaved, his fellow firefighters encouraged him to shave his mustache as well.

STBALDRICKS.ORG

"You can tell this guy had that mustache for a long time," said Haskins.

He said he would do it for no less than $500.

"Everyone was taking money out of their pockets," Haskins said. His mustache was gone in a matter of minutes."

Considering the success of last year's event and the reputation of the Foundation, Haskins is really looking forward to Sunday.

"For a barber, this is the biggest holiday in the entire year," he said.

Registration begins at 11:00 a.m. on Sunday, and the shaving starts at noon. The event will hold an auction and other small activities to entertain everyone.

Jackie Chambers can be reached at jechambe@student.umass.edu.

On March 1, Alan Arkin released his memoir "An Improvised Life." A gray-scale cover photo of Arkin with hands folded, smiling and eyes closed in a button-down shirt has him looking like an elderly, but jovial grandfather, which, in more ways than one, he is.

Younger audiences may recognize Arkin only from his work as Grandpa in "Little Miss Sunshine" (2006), for which he won an Oscar at the 79th Academy Awards in the category of Best Actor in a Supporting Role. He only mentions this role indirectly with one line on page 130, "I recently did a film with 8-year-old Abigail Breslin, who was more of a pro than most of the adults I've worked with." Arkin is not about the awards, but the experiences he has with his coworkers. In real life, he is a grandfather to Molly Arkin, the daughter of one of his three sons.

In his memoir, Arkin skates over typical biographical information. Readers do not find out the exact date of his birth, but they know he lived in a time where his family once used a phonograph to play music and that at the age of five while living in Brooklyn, N.Y. he decided to become an actor. The focus is on the evolution of his career rather than his personal life, so although names are dropped in like his first wife, Jeremy. Arkin talks more about finding work and moving around the country to provide for his young family than what happened when Jeremy left him.

Writing in the first person has Arkin uncovering his discovery of what it means to play other people and write new characters, and how to teach someone to be comfortable in a scene. The book is set up like a play with a prologue, part one, intermission and part two. The table of contents does not reveal that parts one and two are divided into numbered chapters, probably because the pauses are only necessary for a reader's eyes; Arkin's voice is light enough that you can read his work in one day without rushing. Arkin tackles unplanned pregnancy without being political and the audition process without being a hardened veteran with no interest in the next generation. Outlining the bill of fare as if the book were a stage performance tells us how strongly Arkin cares about his roots as a live performer in music, improv and theater.

Arkin was a member of The Tarriers, a folk trio with whom he penned the song "Day-O" otherwise known as "The Banana Boat Song" in 1957. His next big career move was being a founding member of Second City Improv in Chicago, Ill. in 1959. The group that now brings millions of YouTube users laughs with "Sassy Gay Friend" and "Advice from a Cartoon Princess" was built on the genius of Arkin and his fellow original cast. This experience launched him to his next work as Tony Award winning star on Broadway. Again, Arkin does not mention the award, nor when he switches to film does he talk about his j-b in the well-known "Catch-22" (1970) or his Golden Globe for his work in "The Russians are Coming The Russians are Coming," (1966). He instead focuses on what it meant in film that one may rehearse a scene until they get it just right before moving on, whereas in improv one has to make material up on the spot and go with it without re-dos.

The last section of the book reveals how Arkin runs his improv workshops with his current wife Suzanne. He goes through anecdotes of his experiences with participants and how they have helped him see what it means to be an actor and why he does his work. For Arkin, it is not about the paycheck or something to pass the time, it is an urgency that he has needed to get out of him since childhood.

This book is not suspenseful, but a chain of consciousness commentary on what it has taken Arkin over 70 years to realize about himself and his profession. He proves he is a well-read man with interests in people that are considered by others to be misfits or outsiders, referencing books on psychology and theology from Freud to Zen and his relationship with the American Indians near his current home in New Mexico. When he includes the names of fellow actors/writers/directors, his audience may not know who he is talking about, but it does not matter. This pleasure read does not require sitting with an encyclopedia or Google search open, simply an interest in the mind's workings of an icon in the arts now that he has provided us with print material for a higher reading level.

'Databanks' rock

By Sam Butterfield
Collegian Staff

Bradford Cox had quite a year in 2010. Between a spring tour for his side project, Atlas Sound, a summer tour for his primary group, the critically acclaimed rock outfit Deerhunter, the September release of Deerhunter's fourth full-length album "Halcyon Digest," and a follow-up tour through the fall, one would never have suspected that Cox was plying with another 49 tunes all the while, which he shocked the world by releasing last November as a four-part self-released album, "Bedroom Databank Volumes 1 - 4."

Longtime fans and those only recently aware of Cox and Deerhunter's talent are probably aware that both are incredibly prolific artistic ventures; Deerhunter released its second album, "Cryptograms," in January of 2007, following it up with the "Fluorescent Grey EP" four months later, then turning around a double album, "Microcastle/Weird Era Cont." Throughout that time, Cox was tinkering with his first solo album, "Let the Blind Lead Those Who Can See but Cannot Feel," which he put out on Kranky Records in February, 2008. Since then, he released "Logos" in the fall of 2009, while Deerhunter put out the "Rainwater Cassette Exchange EP" that March and dropped "Halcyon Digest" last September.

Where Deerhunter practices a louder, faster and more musically organic brand of contemporary rock, structuring their rhythms around timing and synchronization along with steady drumbeats and genius sampling, Atlas Sound is often about subtlety. Cox uses spider web-thin delivery and tracks almost dripping with layered vocals to create a dreamlike, surreal and ethereal quality to his personal tracks. His first solo work, "Let the Blind Lead," is somewhat abstract, where 2009's "Logos" is more directed, though both draw much of their sound from electric accouterments, synths and Cox's airy, haunting vocals.

"Bedroom Databank" does not deviate from this heavily-electronic recipe, but where it shifts so monumentally from Cox's prior work is in its homage to more timeless material and its consistently slow, folky and twangy pace. While each of the four installments has a distinct flow, the collection flows astoundingly well for something flung together so quickly in Cox's home studio and Atlanta recording pad.

"Volume 1" starts slowly and quietly, with several instrumentals setting the tone for a progression that ultimately weaves its way across genres, sounds and generations. The opening track, "Green Glass Bottles," is more characteristic of Cox's prior work than much of the volume, as it evokes elements of "Let the Blind Lead," in its wispy, thin consistency and resigned, drifting vocal patterns. Slightly later, Cox takes a turn towards the psychedelic with "Wild Love," which employs a wobbling, loopy synth to deliver a sweeter feel. Soon thereafter, he nods to a contemporary, covering his tour-mate from last summer, the up-and-coming Philadelphia rocker Kurt Vile. From there, though, Cox leaps out of the mold which developed his reputation and shifts towards a much grungier, bluesier milieu. "Hotel Orlando" kicks off with a droney, honky-tonk harmonica layered over a shrill synth line, which becomes the song's reprise. Though the tune still carries along a slow, subdued timeline, it marks a major departure, as Cox's vocals are closer to their clearer, sharper cousins on Deerhunter tracks and the song plays like a cover of something you'd have heard in a musty Southern bar sometime so long ago you can't place it. Cox again strays from his familiar turf with the next track, "This Wheel's On Fire," a cover of a 1975 ditty from Bob Dylan and the Band. The track starts with a grungy, ripping guitar before giving way to a steady, twangy guitar line and Cox's heavily distorted, but perfectly-suited, vocals. "This Wheel" really stands out because it is such a marked departure from Cox's past; anyone who had followed him knew he was a fan of shoe-gazers like My Bloody Valentine, or the intricate, layered complexity of Radiohead, but here listeners hear far more of Neil Young than they do the Smiths.

As quickly as he worked his way into rock, twang and blues, however, Cox steps out and returns to his free-form, ambient tracks, as he follows his Dylan cover with an entirely ambient track, "Postcard," which sounds something like playing pinball on a xylophone, to end the first volume.

"Volume Two" is equally diverse. Cox opens with a flowery, lush instrumental, "Pilot Light," composed of airy guitar tracks flowing like dandelions in a spring breeze, and stays with the lighter, 60s-influenced motif on the next track, "Strange Parade," where his vocals are again faded and weepy, as if put through a muffler, juxtaposed against a soft, psychedelic guitar and a light drum beat. He stays with these slightly muted, quintessentially Atlas Sound vocals set against airy acoustic guitar on the next track, "Stationary Blood." The opening tracks to "Volume Two" are again a break for Cox, as they are more reminiscent of 60s and 70s psychedelic-folk like Tyrannosaurus Rex than they are twitchy, edgy tracks familiar to contemporary indie devotees. Consistent with the arc of the "Bedroom Databanks," however, Cox quickly shifts style. The next piece, "La Luna," is more toned down and faded, like Cox's earlier work, though it stays with the lighter guitar lines, albeit slightly droopier ones, and brings in a slow but steady drum beat to keep pace. The fifth tune, "Day Out," is arguably one of the best on the whole collection. Cox crafts a sleepy feel set over heavy snare drums and a flowing guitar and misty vocals, building up and down several times throughout the track to create tension and a mesmerizingly melancholy ambiance juxtaposed with energetic, lively instrumentation. He then takes off his rock shoes once again to mess around with instrumentals, some of which feel hastily crafted, almost as if he needed filler material to round out the depth of the volume. The tracks that follow are evocative of Cox's earlier work on "Let the Blind Lead," as they are mostly electronically-effected, quiet pieces built around his dreamy voice and quieted ambient sounds. "Volume Two" rounds out well with the louder, countrified "Willful," a short tune where Cox cranks up the volume on his amps and reverts to Deerhunter form, and with the 11-minute "Here Come the Trains," on which Cox showcases his versatility, as he manages to shift tempo, form and genre on a bending, wavering rhythm pulling together an enormous diversity of sounds, feelings and structures.

"Volume Three" starts like "Two," with a flowery, soft track, "Mona Lisa (Version 1)," before moving to another instrumental and then the soft, strained "I Can't Take It," another piece reminiscent of "Let the Blind Lead." Another winner is "Indian Bitrate," while "Comet 8" and "Western Shirt" reprise the country-tinged, folkified tones of the earlier pieces.

On the whole, "Bedroom Databank" is astonishingly tight and cogent for a work of its magnitude. Bradford Cox is clearly one of the most talented and prolific artists of a new wave of musicians who have ascended to indie notoriety, and his ability to interweave Brian Eno and Tangerine Dream influenced ambient tracks of incredible intricacy with his own unique brand of distorted rock, now crossed with more traditional country, blues and folk make for a rare, eclectic and wonderful medley. Obviously all the tracks are not worth listening to every time, as the anthology totals 2 hours, 37 minutes. At least try to clear out some time on a weekend afternoon to sit down and listen to as much of "Bedroom Databank" as you can. Simply trying to imagine what goes through Cox's head as he produces his material is worth the effort, and you'll likely leave your bedroom wishing Cox never left his and made volumes five through eight, as well. No worries, though; after Deerhunter finishes its latest U.S. tour, Cox will surely be back with more material. All the "Bedroom Databanks," as well as Cox's musings, some recordings, and information on Deerhunter, Atlas Sound, Deerhunter guitarist Lockett Pundt's side project "Lotus Plaza" and more can be found at Cox and co.'s website, Deerhunterthebband.blogspot.com.

Minutewomen search for win over top-tier Wildcats

By Dan Gigliotti
Collegian Staff

Before the start of the 2011 women's lacrosse season, first-year Massachusetts coach Angela McMahon's goal was to elevate the Minutewomen from formidable Northeast foe to a national force.

Saturday night's game against No. 2 Northwestern has the potential to do that as No. 12 UMass hosts the Wildcats at 7 p.m. in the second-ever night game at McGuirk Stadium.

UMass is off to its best start since 1983 when it began the season 7-1 en route to an appearance in the semifinal round of the NCAA Tournament. Yet, in order to thrust itself into consideration as one of the front-runners of Division 1 women's lacrosse, UMass will need to beat Northwestern, something it has accomplished once in the program's history (1-9 vs. NU).

"It's going to be great, it's going to be a great test for us and I don't know who I was saying this too, but it is basically like an NCAA Tournament game for us and that is how we are going to treat it because that is the type of competition we are going to see later on down the road, if we hopefully make the NCAA Tournament," said McMahon.

As back-to-back A-10 champions and this season's favorite to win the conference again, the Minutewomen have been successful in their conference schedule. They have the second-most all-time wins in conference play (50).

For the first time in over 12 seasons, the Minutewomen have waded through their non-conference schedule with near-perfect success, earning their highest national ranking since 1988.

UMass beat then-No. 18 Boston University 13-12 for the first time since 2007 with a last-second goal by freshman Katie Ferris on Feb. 23, but suffered its first defeat on Garber Field on Saturday to No. 15 Albany, 8-7.

While those are the only two nationally-ranked opponents that the Minutewomen have played thus far, Northwestern has played six of its eight games against the nation's elite and won.

Saturday's night's game will be the Wildcats' sixth against a team ranked No. 12 or higher. Their first five wins came on the road over No. 10 Notre Dame, No. 3 North Carolina, No. 11 Vanderbilt, Navy and No. 7 Georgetown. Last Saturday, they played in Cowboys Stadium in Dallas, Texas, beating No. 16 William & Mary 18-8.

With its most recent game, a 16-11 win over No. 11 Syracuse at home on Tuesday, Northwestern's resume of quality wins trumps that of UMass. Still, win or lose, this game will act as a measuring stick for McMahon and the Minutewomen.

"It's a great opportunity for us to see where we stand, but also be tested and hopefully play to our best," said McMahon. "A lot of times you see teams playing up to opponents when they're in the underdog role, so I'm excited to see that."

The Minutewomen have lost five times to the Wildcats in the last four seasons by a combined score of 99-23.

After losing 18-4 on neutral ground in Yorktown, N.Y. in 2007 and getting routed 18-2 in 2008 on Northwestern's home turf in Evanston, Ill., the Minutewomen hosted the Wildcats under the lights in 2009 in the first-ever night game at McGuirk stadium. Again, they lost handily, 22-5, before being downed in the first round of the NCAA Tournament later that season, 23-6.

Last season, the Minutewomen traveled to Rancho Bernardo High School in San Diego, Calif., losing its season opener 18-6 to then-No 1 Northwestern, winners of five-straight national championships.

Ranked no lower than No. 2 in the national polls in each of the past four matchups, the Wildcats continue to boast the pinnacle every time they face UMass.

The schedule of this annual matchup began with former coach Alexis Venechanos, who was an assistant coach and recruiting coordinator at Northwestern for three seasons before joining the Minutewomen staff in 2006. Northwestern assistant coach Scott Hiller, husband of head coach Kelly Amonte Hiller, was also a four-time All-American for UMass men's lacrosse and ranks sixth in the program's history in points (190 points) and second in goals (135 goals).

In addition, McMahon and current UMass assistant coach Sarah Albrecht both graduated from Northwestern, further strengthening the ties between the two programs. Albrecht helped lead the Wildcats to a national championship in 2005 after the program was dormant until 2002.

"I had a great experience in my college career, but now [I'm happy] being at UMass and part of this special season that we're in right now," said McMahon.

Saturday's game could prove to be a shootout, as both teams are among the nation's best in offensive production.

The Minutewomen rebounded from their first loss of the season on Tuesday by scoring the second-most goals in a game in program history in its 23-7 win at Marist. In what was probably its most dominant game of the season, UMass also caused a school-record 18 turnovers and nearly topped another historical list, winning 23 draw controls,

UMass ranked 14th in the nation in scoring offense (13.86 goals per game) heading into the Marist contest, a number which has certainly increased since the win. Senior Jackie Lyons (30 points, 16 goals, 14 assists) and freshman Katie Ferris (23 points, 20 goals, three assists) are leading the team in point-production.

With 48 points in seven games, Northwestern's Shannon Smith is scoring over one point per game more than the second-ranked point-scorer in the nation (Gina Hoffmire, UC Davis 5.11 points per game).

UMass has practiced under the lights since Wednesday in preparation for Saturday's unusual game, in hopes to become more acclimated with the setting.

"Game lights are really bright and sometimes you can lose the ball in the lights, so we want to get adjusted to that," said McMahon. "Also getting your body adjusted to playing later in the day [is important]."

With the majority of the Minutewomen having experience against the Wildcats in the past, UMass could well be more prepared to challenge Northwestern this weekend.

"This year, as opposed to past year, we have a lot of experience," said McMahon. The upperclassmen have played NU for two or three years now. That's going to help, having the upperclassmen having that experience, knowing their style of play."

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

Scribblers & Scribes: A Contest for the Writer in You

From MARCH 5-APRIL 4, the Daily Collegian will be accepting YOUR poetry & short fiction for publication consideration in a special literary issue. Prizes might very well include everything from gift cards to movie passes. Judges will be selected from the Comp Lit & English departments, and to guarantee impartiality all entries will have the author's name removed during the judging process. Please, don't be a punk. Nothing obscene for the sake of it.

Entries will be judged by members of the Comp Lit department.

Send submissions to:
ARTS@DAILYCOLLEGIAN.COM.

UMass opens up conference schedule

By David Martin
Collegian Staff

With the arrival of the season's first set of conference games, the Massachusetts baseball team will look to take a strong first step in the Atlantic 10 standings on the road against George Washington this weekend.

The Minutemen (4-8) are rolling into Alexandria, Va., hot on the heels of a three-game win streak that has seen both their offense and pitching come up big following a slow start at the beginning of the season.

As they prepare to take on the Colonials (6-15), who are currently suffering a six-game losing streak, UMass coach Mike Stone is confident his team will play to win against its first conference foe of the year.

"We should be very excited to play this weekend," said Stone. "We are going in with a good win streak and we are really starting to come together on the field, so we should be ready to go against GW."

The Colonials, who will also be starting A-10 play this weekend, have been streaking for the majority of their season. Prior to its current string of loses, GW enjoyed a brief four-game win streak after dropping seven-straight contests. In their past six losses, pitching has proved a major area of concern. The Colonials relinquished eight or more runs in every game, including 17-9 and 19-1 losses to Marist.

When asked whether or not GW's recent lack of victories will influence the team's mindset going into the first game on Friday afternoon, said Stone, "We are not concerned with what they have or have not done so far this season. We need to focus on what we can do and make sure we do it."

When looking at what they can do on the field, the Minutemen have proven more than capable of bringing their best on a consistent basis as of late. Their offense, which had been struggling to get more than a handful of runs a game at the season's start, has now seen considerable success at the plate, while their pitching has begun to solidify itself with starters that can go late into games and relievers that can successfully contain any opposing late-inning offense.

"I was expecting [this kind of success] to happen," said Stone. "Our offense is starting to adjust to the bat change, we are getting more at-bats, and more experience at the plate. [On the mound], our guys got their feet wet a little bit and have pitched well, which will give them confidence going into games. I feel better about our pitching than I did three weeks ago.

"The thing is, our spring training starts during our regular season. In the pros, they play 25 games before their season starts and that allows guys to get more comfortable in their roles, while we started reaching that comfort eight or nine games into the season," added Stone.

A couple of reasons as to why the Maroon and White are getting as comfortable as they are can be attributed to the efforts of a few key upperclassmen.

Senior shortstop/third baseman Matt Gedman and junior right hander Glen Misho have been leading the way for the Minutemen in their respective fields. At the plate, Gedman commands a robust .422 batting average and six runs on 19 hits in 10 games, all of which he started. On the mound, Misho leads the hurlers with a 2-1 record, a 3.86 earned run average, 15 strikeouts and a complete game in three starts.

Both players have also earned impressive hardware already this season. Gedman was awarded the UMass Athlete of the Week award this past Monday for his successes at the plate, while Misho earned the Co-Atlantic 10 Pitcher of the Week award on Monday, March 14. In addition, their leadership in doing their jobs has not gone overlooked by Stone.

"When you go out and execute, that's the kind of action leadership that you want to contribute to a team," said Stone. "What you do means more than what you say. Glen's improved to give real quality innings, and Matt can give strong hits, and when you do that consistently, wins can come. Good things are contagious, and their successes have already started to improve the performances of the guys around them."

As the Minutemen head into the weekend series, Stone has just one main thing to ask of his team.

"I want us to play like hell," said Stone. "If we compete, we will have a good weekend."

David Martin can be reached at dmmartin@student.umass.edu.

Softball takes on Temple, Saint Joe's

By Steve Levine
Collegian Staff

The Massachusetts softball team feels like it's close to hitting its stride.

After starting the season 2-10, the Minutewomen (7-12, 1-1 Atlantic 10) have won five of their last seven games as they prepare for two conference series' in Pennsylvania this weekend against Temple and Saint Joseph's.

The nation's top teams were responsible for the Minutewomen's poor start, but the Maroon and White recovered two weeks ago at the USF Under Armour Showcase, where they went 4-1 before splitting its first conference series, 1-1, against Charlotte last weekend.

UMass believes it is on its way to returning to championship form. However, UMass coach Elaine Sortino believes there's a lot of room for improvement, especially with her offense. Sortino, who's in her 32nd season, knows that once a few players show more consistency at the plate, the rest will follow suit.

"We have to hit one through nine," said Sortino. "We just have been out of sorts and I felt like it's not our swings as much as our choices. We took a lot of good pitches and swung at a lot of bad pitches last weekend."

Senior Audrey Boutin and sophomore Teea Rogers are doing their best to spark the rest of the lineup. In UMass' last seven games, Boutin is batting .417 (10-24) with a home run and a team-leading nine RBIs, while Rogers, last season's A-10 All-Rookie Team selection, is hitting .409.

Senior catcher Meghan Carta believes that the lineup is close to clicking, which starts with leadoff hitter Kyllie Magill. Magill, a junior second baseman, is expected to set the tone for the Minutewomen offense, which features plenty of youth and inexperience.

"Kyllie's been leading off for us, and when she starts the game off with a hit, it sets the tone right away and the hits follow so I think that it's definitely contagious," said Carta. "Once we collectively are [calmer collectively], then we'll start producing more runs."

More offense would be a welcome sight for junior ace Sara Plourde, who accounted for all four wins at the USF Under Armour Showcase, notching 54 strikeouts in 26.1 innings while allowing two runs. Last year's national strikeout leader and A-10 Pitcher of the Year is 7-9 thus far with a 1.50 ERA. Despite the impressive statistics, she believes she has yet to reach peak form.

"I feel it coming together a lot more," said Plourde. "This past week we kind of just broke everything down [and] took it back to basics and honestly that's probably one of the best things I could've done."

The Minutewomen will play a doubleheader on Saturday against Temple and again on Sunday against Saint Joseph's. Plourde will get the nod for at least two of those four games.

Temple (10-14, 1-1 A-10) has dropped four out of five, most recently losing a doubleheader against UMBC, 8-5 and 12-4, respectively. The Owls have a team batting average of .289, led by senior starter and outfielder Kristen Marris' team-high .377 average. Marris also receives the majority of starts; she is 4-7 with a 4.14 ERA through 66 innings thus far.

Saint Joseph's (16-10, 1-1 A-10) features two very strong hitters in junior third baseman Monica Aguilar (.441, 3 home runs, 22 RBI) and sophomore outfielder Dana Parks (.437, 11 SB). Junior Erin Gallagher is the ace of the staff, registering an 11-5 record with a 1.60 ERA and 98 strikeouts in 109.2 innings pitched.

"I think they're going be tough," said Sortino of both teams. "I think St. Joe's fundamentally is very solid ... Both teams are outhitting us, I mean most people in the country are [because] we got off to a really tough start, but we also played a really tough schedule with very, very young [players]."

Steve Levine can be reached at slevine@student.umass.edu.

Dem. Massie will give Brown a run for his money in 2012

By Matthew M. Robare
Collegian Staff

The last time Bob Massie ran for office, many current seniors at the University of Massachusetts were 5 years old.

Massie was the Democratic nominee for Lieutenant Governor in 1994, on the ticket with Mark Roosevelt. They lost that election to Republicans William Weld and Paul Cellucci, but Massie still went from being an unknown to winning a state-wide Democratic primary. He thinks he can do it again in 2012 by challenging Scott Brown for the Senate seat once held by Ted Kennedy.

Massie is currently the only Democrat to have declared his candidacy for the nomination, but speculation has been thick for the last few weeks. U.S. Rep. Michael Capuano (D-District 8) visited Ludlow recently, according to Leo Maley, chairman of the Amherst Democratic Town Committee. Maley added that Mayors Setti Warren of Newton and Kimberley Driscoll of Salem have also visited Western Massachusetts and could be gearing up for Senate runs, as well.

"It's a challenge to communicate to voters," Maley said. "You need a clear message. A winning candidate needs to know who they are."

Maley said that although the 1994 loss was a "blowout" Weld and Cellucci were reelected with 71 percent of the vote. "Bob Massie appears to Democrats to be a very straight-up progressive guy."

"My goal as a human being is to work for a better life for everyone," Massie said in a phone interview last week.

He believes his career reflects that. He started his career as an activist during his time as an undergraduate at Princeton University, which he entered when he was 16. There were many issues he was involved in at Princeton including raising awareness about the abuse of textile workers in the South and groups trying to keep women from attending Princeton—but his primary focus was on trying to end Apartheid in South Africa.

"Princeton had millions of dollars invested in South Africa," he said.

Activists like Massie eventually forced Princeton to cut ties to banks making direct loans to South Africa; Hampshire College was the first American school to completely divest from South Africa in 1977. Massie wrote a book about divestment and the relationship between the United States and South Africa called "Loosing the Bonds" in 1998, which won the Lionel Gelber Prize.

In the 1980s, Massie became an Episcopalian minister and obtained a doctorate in business administration from Harvard Business School. After his run for Lieutenant Governor, he became the president of Ceres, an organization that brings together activists and business leaders to address climate change and founded the Global Reporting Initiative in 1998, which sets "Sustainability Reporting Guidelines" that "organizations can use to measure and report their economic, environmental and social performance."

"The basic issue is what kind of world we want to live in," Massie said.

While he wouldn't talk about possible primary opponents in his race for a seat in the Senate, Massie did criticize his presumed Republican opponent.

"I'm running against Scott Brown," he said. "He is a person who does not believe in the role of the government in helping people get back on their feet."

Massie said he believes the role of the government is to create the conditions by which people can succeed as individuals and listed four components for those conditions. "People need a good home, a good school, a good doctor and a good job," he said.

He added that he feels his knowledge from being a historian and economist will help him in the Senate and that his experience in studying US-South African relations and putting together the Global Reporting Initiative gives him the greatest foreign policy experience.

"It will be difficult," Maley said. "Scott Brown is popular and has a lot of money. [He] may present himself as an independent maverick, but at the end of the day, if he's the voice that means a Republican Senate, it doesn't matter who he is. It's about setting a national direction." "There are angry voices in politics right now that are trying to divide us and they're having some success," Massie added. "There's no clear idea about where we should go [as a country]. We need leaders who can help people express what individual goals they have."

Matthew M. Robare can be reached at mrobare@student.umass.edu.

Bob Massie, an historian, activist and former 1994 lieutenant governor candidate, will challenge Scott Brown for his Senate seat next election.

New solar panel site to come to Amherst

The site of an old landfill on Amherst's Old Belchertown Road, pictured above, will soon be the home to a 4.75-megawatt producing solar array.

By Justin Sagito
Collegian Correspondent

A former Amherst landfill that has become an empty grass field since its closing nearly 30 years ago will provide space for a 4.75-megawatt solar array within the next 18 months, according to Town Manager John Musante.

"It will feature row after row of solar panels tilted in the southerly direction to absorb the most amount of energy," Musante said.

Able to offset 6,000 tons of carbon annually, according to Musante, the solar project promises to bring the town renewable energy that could save up to $25 million over the next 30 years.

Solar power systems offer a way of ensuring that energy prices stay consistent, according to Erin Baker, an associate professor of mechanical and industrial engineering at the University of Massachusetts, who researches environmental and energy economics.

"Once you buy and install these systems there is really no risk, the price won't go up," Baker said.

Amherst town planners considered six proposals for the project before awarding it to BlueWave Capital, LLC earlier this month. The panel picked BlueWave, a project development company based out of Boston, for having the best mix of environmental and financial offerings, Musante said.

"I can't think of a better place in the country to engage the entire community—businesses, colleges, property owners and residents—in a cost-saving, carbon-reducing initiative than Amherst," BlueWave

Smith, Holyoke partner for leadership project

By Kara Clifford
Collegian Staff

U.S. Secretary of State Hillary Clinton recently announced a new Women and Public Service Initiative, which will combine the efforts of the U.S. State Department and several leading all-female colleges in hopes of increasing women's participation in public service and political leadership.

Clinton gave a speech March 11 at the Women in the World: Stories and Solutions Summit in New York, where she explained that the initiative will "seek to promote the next generation of women leaders who will invest in their countries and communities, provide leadership for their governments and societies, and help change the way global solutions are developed."

The all-female colleges involved will include Barnard, Bryn Mawr, Wellesley and the Pioneer Valley's own Mount Holyoke and Smith.

The first step in carrying out the initiative will be a conference held this fall at Bryn Mawr College in Pennsylvania. The conference will bring "policy makers, public officials, academics, innovative thinkers together from around the world," Clinton said in a release detailing the inception of the program. Among other matters, the conference will aim to bring attention to the issues the initiative will seek to tackle and gather support and resources.

The main goal of the conference is to develop a public service and political leadership institute for young women. When asked what this might look like, Smith College President Carol Christ responded that "we [at Smith College] anticipate that the program will be a summer institute or executive education-type program for young women who have already graduated from college."

Mount Holyoke President Lynn Pasquerella said in a press release that "public service will never truly be public until women are equitable partners in shaping policies that serve the needs of humanity. We [at Mount Holyoke] are thrilled to be convening a forum with our sister institutions who are committed to liberal learning as a powerful foundation for promoting sustained leadership in public service."

Clinton responded to the notion that sometimes people question whether women are already equitable partners in public service in her speech by saying she is "struck when people question whether it [women's equality] is a challenge that is equivalent to the fight against slavery in the 19th century… it is. I believe that women's roles and rights are at the forefront of everything we should care about and need to be doing in our own lives and certainly in the life of our country."

And many women are seemingly ready to take a bigger role in political leadership. Christ remarked that "this initiative reflects the very strong interest in public service that Smith sees among its students."

Clinton also pointed out in her speech the benefits of involving women in politics. Referencing a 2008 report commissioned by the financial firm Goldman Sachs, Clinton brought to attention "that educating girls and women leads to higher wages, a greater likelihood of working outside the home and therefore having lower fertility, reduced maternal and child mortality, better health and education outcomes."

The initiative will not be limited to the United States. Clinton emphasized the necessity of making the initiative global, namely that "narrowing the gap in employment between men and women

Although UMass and the town of Amherst received less snowfall than some New England communities, temperatures here were down this winter by about two degrees compared to average years.

Amherst, New England see snowier winter than average

In case temperatures lingering in the 30s, the remnants of once-colossal snow banks and the recent memory of snow days were not enough, new analysis from the Climate System Research Center at the University of Massachusetts has found that New England experienced one snowy winter this year.

In a release last week, the center's manager Michael Rawlins announced that this winter was the fifth-snowiest on record across New England, with many areas receiving a particularly brisk, snow-filled several weeks during January and February, when a majority of the region's snow fell. According to the release, areas including Boston, Worcester and Amherst saw more than half of all total snow fall between Jan. 7 and Feb. 3. Hartford, Conn., Rawlins noted in the release, was subsumed by some 84 inches since the beginning of December alone.

Hartford, the anchor of a metropolitan area including Springfield and other local cities, witnessed the snowiest month in its history this January, as 54 inches fell that month alone at Bradley International Airport in Windsor Locks, Conn., according to National Weather Service Data reported by Rawlins.

Boston was not hit quite as hard as Connecticut's capital, but Beantown too had 79 inches fall, making for the eighth-largest total snowfall in Boston's history. Total winter precipitation in Boston was about 20 percent higher than its long-term average, Rawlins noted. Worcester, the Bay State's second-largest municipality, was hit perhaps the hardest. Some 85 inches fell on the city, with Worcester's total accumulation ultimately breaking into the 10-harshest winters there. Amherst escaped relatively unscathed, compared to some of its neighbors, 57.4 inches fell on the college community this winter.

In addition to the uptick in wintery white stuff, Massachusetts and New England were especially cold this winter, too. According to Rawlins' figures, Boston's mean air temperature between December and February was 30.3 degrees, down five percent from historical levels. Away from the coast, Worcester tends to be colder, but even that city was frostier than usual. Worcester's mean air temperature was 24.6 degrees this winter, 1.6 degrees cooler than typical temperatures there.

At Bradley, passengers stepping off of planes may have felt blustery upon arrival, as temperatures there were down

Winter brings heavier snows than average

MARIIA UMINSKI/COLLEGIAN

December through February brought more snow and colder temperatures to Massachusetts than typical years, according to UM figures.

WINTER from page 1

2.4 degrees from their usual level of 28.4 throughout the winter. Despite receiving less snowfall than some of its neighbors, Amherst won out for chilliness. Temperatures averaged 23.1 degrees this winter here, down two degrees from yearly averages.

Although this winter was particularly cold, Rawlins' numbers indicate that some days may have been especially icy, while on an average day temperatures may have been closer to familiar levels, or that the warm fall the region experienced may have tilted averages for the warmer. Heating degree days up to March 12 are essentially at their historical averages. Heating degree days illustrate the cumulative difference between mean daily temperature and 65 degrees, beginning with July 1. As of March 12, Massachusetts' degree-day total was 4,983, with the Commonwealth's average as of this point at 4,980.

Although these heating degree numbers indicate the Pioneer Valley and New England at large may be on their way to a crisp spring, Rawlins' statistics show that the region may be heating up slower than most years. At Boston and Worcester's weather stations, heating degree-day totals are less than one percent from their average. At many stations, the release continued, minimum air temperatures on given days have been well below their yearly averages, meaning it has been colder at certain points than typically, while daily highs have been more in line with historical figures.

Concerns, suggestions raised at forum on UM master plan

BY WILLIAM PERKINS
COLLEGIAN STAFF

The University of Massachusetts is in the process of creating a long-term plan that will attempt to ensure a positive future for the campus.

That was the sentiment that Dennis Swinford, the director of campus planning at UMass, expressed at an open forum on a campus master plan last Wednesday.

"We are creating a long-term campus master plan for this process," Swinford, who was appointed to his post last September, said at the onset of the roughly three-hour-long forum. "We don't want to do today something that will limit our process in the future."

As part of the process of creating a master plan – which is a detailed sketch of what the physical campus will look like in the years to come – Swinford is working with a team of officials, including individuals from architectural and engineering firms, to determine what should be included in the scheme.

While nothing is seemingly set in stone yet for the plan, Swinford gave attendees of the forum – which was the third such meeting on developing a master plan – a presentation on areas and places on campus that are currently being looked at to improve or update over the next several years.

"Right now, we're looking at the whole campus," said Swinford, who detailed some of the areas being considered in a slideshow.

Swinford's presentation included a listing of buildings on campus that the planners are suggesting should be replaced or renovated in the next several years. It also broke down how much space in square feet is currently being occupied by structures on campus and included a map detailing how streets and other items around the main campus can be further developed.

Additionally, Swinford provided outlines of past master and development plans of the campus, and noted that one goal of the current plan is to preserve and improve open spaces on the property.

"One of the biggest systems that makes a campus a campus is the open space system," he said.

"It's this notion of creating campus, not just building buildings, but building a campus," Swinford added.

A number of students, faculty and community members raised concerns and offered suggestions on the master plan during the meeting.

Randy Phillis, an associate professor of biology and the president of the UMass branch of the Massachusetts Society of Professors, the faculty union, was one of the most vocal participants in the discussion. Among his concerns was that the process of constructing or renovating structures could have a negative effect on people's work.

"This is an extraordinary burden in real time for people that are going through the transitional phase," Phillis said at one point during the forum. He added that he advocates for a "careful planning" process.

Some of the other concerns raised by forum participants were about possible plans to improve parking, the future of North Pleasant Street and ongoing construction research near Tobin Hall, which some felt was hindering research exercises from taking place inside the building. Concerns were also raised about the upcoming construction of the Commonwealth Honors College complex. That project has already been given the go-ahead and is not necessarily a large part of the current master plan process.

One student, who left the meeting before he could be identified by the Massachusetts Daily Collegian, also suggested that the master plan include a way to better connect the University with the greater Amherst community. He added that there should be a way for people to be able to quickly "sweep into UMass," and see the library, the campus pond and a show at the Fine Arts Center.

At the conclusion of the forum, Swinford noted that the planning process is still ongoing, and suggested that many members of the community continue to participate in it.

"I think it's important that we begin to create … planning on campus," he said. "By your participation, you're supporting us."

Another open forum on the master plan will take place on Wednesday, April 20, from 6 to 8 p.m. in the Campus Center Reading Room. Swinford is hoping to have a draft of the master plan by the beginning of the fall 2011 semester.

William Perkins can be reached at wperkins@student.umass.edu.

INITIATIVE from page 1

in emerging economies could raise incomes as much as 14 percent by 2020, and 20 percent by 2030."

Also, Clinton discussed the historic stagnation of women's rights in the Arab world but noted that there are hopes for improvement under emerging democracies in the Middle East. Clinton said that "we have seen women on the front lines of progress in Egypt and Tunisia."

Pasquerella echoed Clinton's emphasis on the importance of recent events for women's rights.

"At this particular moment in global discussions of democracy and representation, it is fitting that we should convene a long-term forum for the development of women in public service," she said in the press release.

Clinton also brought up potential dangers that lie in the governmental transition process in Middle Eastern countries, noting that "all of these gains [for women] are fragile and reversible."

For example, Clinton said that "in Tunisia, only two women have been appointed to the transitional government… And there is even talk of rolling back the country's historic Personal Status Code that has protected women's rights for half a century."

"In Egypt, the women who marched for freedom in Tahrir Square are now shut out of the committees and the councils deciding the shape of Egypt's new democracy," she continued. "And when women marched on Tuesday to celebrate International Women's Day in their new democracy, they were met by harassment and abuse."

Clinton added: "I am often asked, 'Why on earth do I believe that women and girls are a national security issue?' Well, I believe it because I know that where girls and women are oppressed, where their rights are ignored or violated, we are likely to see societies that are not only unstable, but hostile to our own interests."

Dormant landfill will house new solar panels

Solar panels like these will soon be coming to a defunct landfill on Old Belchertown Road in Amherst as part of the town's plan to harness more sustainable sources of energy.

SOLAR from page 1

founder and managing partner John DeVillars said of the project in a town-issued press release. "We are psyched to partner with a town that shares this vision and is committed to making it a reality."

"We have built a best-in-class team that very much looks forward to partnering with the town to establish a national model for community-wide solar development and use," DeVillars added in the release.

Photovoltaic cells will sit above the closed landfill – which has been capped for almost 30 years and was deemed safe for construction by federal regulators – on Old Belchertown Road. Metal beams that support the panels will not puncture the landfill's plastic cap, which ensures hazardous materials stay underground, according to Musante.

"We believe the settling that usually occurs has already happened," Musante said, referring to the safety of building on a former landfill.

According to the town-issued press release, the location of the array has the potential to generate property tax payments in the hundreds of thousands of dollars per year over the life of the system.

The financing effort for the project is being led by Smart Energy Capital, which focuses "exclusively on the North American solar photovoltaic industry," according to its website.

Musante said the town is seeking to move more of its energy needs to green power in the near future.

"Amherst has a goal of having all the town buildings and schools powered by sustainable energy," Musante said.

In addition to providing energy for Amherst buildings and schools on municipal properties, BlueWave's proposal includes a commitment to making solar energy sources more affordable and accessible to the town's business and homeowners.

Norm Simonson, a resident of Amherst, said he would put a solar panel on his property "in an instant" if given assistance from the company.

"I am a very strong supporter of the solar approach, and I think it is a step in the right direction," Simonson said.

Negotiations over pricing and a potential timeframe between Amherst officials and BlueWave are set to end in the coming weeks, with the project's completion expected in 12 to 18 months.

EDITORIAL OPINION

MONDAY, MARCH 28, 2011

"I went to a fancy french restaurant called Deja Vu.' The headwaiter said, 'Don't I know you?'" - Red Schmidt

EDITORIAL@DAILYCOLLEGIAN.COM

Surprise: Duke Nukem offends

It is said that all publicity is good publicity. This seems to be true for Gearbox Software, creators of the controversial shooting game "Duke Nukem Forever" - especially when the bad publicity will only appeal to their target demographic. "Duke Nukem Forever" is a sequel to "Duke Nukem 3D" - a smash hit that codified many of the tropes now commonly found in all shooter video games. It was the first to introduce such staples as destructible objects and non-linear levels. It also was one of the first games to feature environments users could interact with; they could turn lights on and off to sneak up on enemies or prevent them from sneaking up on them, pee into urinals and tip strippers to take their tops off. Building on the popularity of the game, its creators announced the sequel – "Duke Nukem Forever" – in 1997. Now, 14 years after the initial announcement, it is finally slated for release in June.

Yaroslav Mikhaylov

The entire "Duke Nukem" series is well-known, at least among its fans, for the bawdy and juvenile sense of humor of its main character: the eponymous Duke. So when Gearbox revealed to the Official Xbox Magazine that instead of Capture the Flag, "Duke Nukem Forever" players would be getting a "Capture the Babe" mode, fans of the franchise were amused. Which of the following two items holds more interest to a typical gamer or, for that matter, a typical male: a flag or a scantily-clad woman?

Feminist groups were outraged. Fuelling their indignation was the fact that, according to the Official Xbox Magazine, "[t]he 'Babe' will sometimes freak out while you're carrying her (somewhat understandable, we'd say), at which point you have to hit a button to gently give her a reassuring slap." In comments to the video game review site PC Gamer, Gearbox Software spokesperson Randy Pitchford was quick to clarify after the article was posted that the "reassuring slap" was directed towards the butt of the 'Babe,' rather than her face, reinforcing the sentiment expressed by the "Official Xbox Magazine" that the slap was "more goofy than offensive." Nonetheless, many still find it distasteful.

A contributor to the FeministFatale blog identifying herself as Rachel O. responded to the clarification by stating that "…slapping a woman who is scared and trying to break free, on the ass, instead of the face doesn't make it better. It means the word 'sexual' should be added to the assault."

Yes, you read that correct: the previous "Duke Nukem" game is about saving women from alien abduction.

However, there is something to keep in mind here: this is a video game. There are video games that have addressed serious social issues or told compelling narratives with deep characters, but "Duke Nukem Forever" isn't one of them. It's a game where a hybrid of Arnold Schwarzenegger and Bruce Campbell kills hordes of aliens, seduces strippers and generally kicks ass and chews bubblegum - unless, of course, he's all out of bubblegum. It is the sort of game that, from start to finish, does not take itself seriously. I mean, the main character starts throwing his own feces in the first minutes of the game; it's one giant, juvenile, albeit rather sexist, joke.

Regardless, "Duke Nukem Forever" pales in comparison to other popular video games. The "Grand Theft Auto" series primarily involves traveling around a realistic city in realistic stolen cars and offers gamers the option to kill virtual sex-workers to get their virtual money back. Another popular franchise, "Call of Duty" involves using real weapons to kill very realistic people repeatedly in very realistic locales.

Compared to those franchises, "Duke Nukem Forever" is clearly not grounded in reality. In fact, the most realistic thing in the demo I played was a urinal into which Duke pees. The entire game – from the environments, enemies, dialogue and weapons to Duke himself – carry about as much gravity as "Family Guy" or "South Park," both of which have featured far more risqué humor. Impressionable minds are far more likely to imitate the behaviors of the characters in "Grand Theft Auto" or "Modern Warfare" than those of "Duke Nukem," unless of course the world is invaded by woman-snatching aliens tomorrow. Yes, you read that correct: the previous "Duke Nukem" game is about saving women from alien abduction.

In that context, a game mode featuring a woman being carried around caveman style with an occasional spank on the butt seems a bit more silly than misogynistic. This is not a game promoting hyper-manliness, but rather a game poking fun at it. So condemning this game for a goofy butt-smack and barely enough nudity to make it onto Cinemax is simply unfounded, especially if games that award points for complicated murders are left unmentioned.

Travel abroad psycho-analysis

The intense experience of studying abroad leaves many people in love with the country where they studied. The emotional rollercoaster of the study abroad experience, the people one connects with, the fantastic sites and vital self-development all conspire to leave someone with nothing but the fondest memories. Granted, a good deal of the positive emotion is justified; a study abroad experience is an essential educational moment that helps with important elements of self-discovery. However, until recently, I realized that my view of where I studied abroad had been clouding my thoughts of the future.

Mike Fox

I studied abroad in Buenos Aires, Argentina in the fall of 2009 and I went through the well-known emotional cycle familiar to many who have studied abroad. When I first arrived, everything was fresh and exciting in my mind. However, difficulties in cultural adaptation combined with a bit of homesickness combined to make me feel frustrated and disappointed with my stay. Then, as I integrated into the culture and became adept at the challenges of daily life, a new satisfaction and confidence led me to leave the country on a high note. This whole progression seems to be common to many who study abroad.

A study abroad experience is an essential educational moment that helps with essential self discovery.

Something not often discussed is the affection that one often develops for the country in which they study. Superficially, students fill their rooms with memorabilia and the country becomes the focal point of many conversations after they return. However this all points to the fact that the country has become a part of their identity.

I am no different. I have carried my lessons from Argentina – a passion for Argentine culture and a slight Argentine accent in my Spanish – since I returned. Most importantly though, Buenos Aires became, in my mind, an ideal city, somewhere that I was able to indulge in passions, experience great emotional upheavals and overall, live life to what I saw as its fullest potential – a kind of idealized version of the real world that all my work would inevitably lead me back to.

Since August, I have worked with a friend and fellow study abroad student of mine to organize an alternative spring break trip where we would bring 12 members of the UMass community to the city that touched us so much.

Strikingly, the first few hours back in Buenos Aires at the beginning of this past spring break didn't feel exceptional for me. The weirdest part about being back was that it didn't feel weird to be back. While I anticipated being thrilled to see certain street corners and eat at familiar cafes, I simply accepted the places as if I had never left. Frankly, things didn't seem too special. My favorite bar in the city, somewhere that had seemed so trendy and unique, just seemed run down. It wasn't as crowded as it used to be, some chairs showed signs of age, and opening the door was a struggle.

Even the volunteer work was disenchanting this time around. When I volunteered the last time I was in the country I learned to recognize that even the smallest contribution could inspire hope in the face of crippling, slum conditions. I've carried this philosophy with me over the past year and a half, and it was what inspired me to organize the spring break trip.

However, this time while I worked, I only became more depressed about the inevitability of some Argentine people's suffering. When I returned the last time from Argentina, I set out to study economics so as to better understand how I could improve living conditions in the communities I had worked with – this only led me to become more frustrated with the system that put them down. Now, as I watched those around me experience similar revelations to those I had during my first trip, I was saddened that I couldn't recapture what it was I had once known.

At the end of the trip, I was frustrated. Buenos Aires felt demystified, and its warts stood out more prominently than before. I anticipated a series of epiphanies, but I found food that didn't taste as fresh as the first time I had it, winding streets that didn't hold any more mysteries, and volunteer work that felt futile.

But this was the wrong way to perceive my experiences.

It was a good thing that Buenos Aires seemed less exciting. I am now able to accept it as a real city, not some mythical place. The people in it don't symbolize an ideal part of my life anymore, but people who I have vital and human relationships with. The causes that I fight for seem more difficult, but I can accept their reality more readily. Most importantly, Buenos Aires doesn't stand as a separate part of my life anymore, but a normal part of who I am. I'm ready for the next adventure and ready to accept that the adventure isn't just in the travelling, but what one accomplishes when one goes.

Mike Fox is a Collegian columnist. He can be reached at mgfox@student.umass.edu.

It's déjà vu all over again

I've been reading a lot of Dave Barry lately. I always look for his books at used bookstores and library sales. Not only are they funny, they're informative. Right now I'm reading "Bad Habits," a collection of his columns published in 1985 (some of which I think appeared in other collections) I picked up at the Old Book Store in Northampton. It's a great store and I highly recommend it.

Matthew M. Robare

Anyways, a lot of the columns were about then-current events in the mid-80s, and from what I've read, they were a lot like today's current events. Republicans were masquerading as supporters of spending cuts and less government interference while simultaneously increasing its size and expenditures; the federal budget deficit was dominating the news and everyone was convinced education in this country was worthless.

True, there were a lot of differences between 2011 and 1985, such as the Clinton and Bush wars, a $3.00 difference in gas prices, 9/11 and the Internet. The president was an old Republican instead of a youngish Democrat, and the Democrats had controlled Congress for the previous 40 years, but the similarities are striking.

In fact, reading Dave Barry I sometimes get the feeling that history is just repeating itself again. Or rather, as John Peterson, my Advanced Placement United States History teacher, would say, "History doesn't repeat, but it rhymes."

His theory was that every so often – I think it's about every 20 to 30 years – there would be broad similarities in the issues and solutions of the day. Some philosophers think that those similarities can be explained by thinking of history as a force – sort of like an existential version of The Force from "Star Wars" – that controls certain people's destinies. If only philosophy had more similarities with Star Wars it might be more popular. Philosophers would also be better remembered if they had telekinetic powers. In fact, many of us would live in constant fear of them.

Regardless, the early 20th century philosopher George Santayana once said something that British Prime Minister Winston Churchill later stole: "Those who cannot remember the past are doomed to repeat it."

A lot of history teachers I've known really love that sentiment – it certainly is a great argument for more funding for history classes. I think Percy Bysshe Shelley was aiming for the same thought when he wrote in "Ozymandias:" "Look on my works ye mighty and despair."

Philosophers would also be better remembered if they had telekinetic powers. In fact, many of us would live in constant fear of them.

The ancient kings like Ozymandias, also known as Ramses II, were always building monuments and having inscriptions made that talked about how powerful they were and how they were the greatest, but they never learned that there would be times when their monuments were stripped or torn down for housing, or that the language their inscriptions were made in would be forgotten.

It's ironic that a politician popularized the Santayana quote. I think that one of the reasons history rhymes is because politicians would rather pretend to solve problems than actually solve them. Actually solving problems could cause change, could catapult politics into the unknown. The scientists who built the first computer probably couldn't have dreamt of laptops or wi-fi or smartphones, but the very first senators and representatives in 1789 would see that there have been no real changes at all in our political system.

The leadership of this country could have done something about education back in the 80s, but instead, the big debate was over school prayer; they could have done something about the budget, but they spent billions on a bunch of useless weapons systems. Honestly, our political establishment is like Nero, fiddling while Rome burns, and they keep trying to convince us that Rome isn't burning with bread and circuses. They take loud stands over unimportant issues that should and could probably be settled at the state level while important things like the Patriot Act and the Patient Protection and Affordable Care Act are allowed to become complex bills so large they have their own gravitational pulls.

I guess all we can hope for is that the lions, freed from their cages by the fire, will eat our representatives – now that's entertainment.

"If you don't stand for something, you'll fall for anything." - Wiseman, Sucker Punch

ARTS@DAILYCOLLEGIAN.COM

'Punch' a mindless visual marvel

By Ian Opolski
Collegian Correspondent

It's a hard life out there for ladies in action films. In such a male-dominated genre, it is rare that a woman ever really gets to take charge and just kill things. This dynamic is reversed in "Sucker Punch," where five girls grab machine guns and induce a full-scale slaughter.

The film, whose characters seem like a direct response to the simpering, man-crazy heroines of romantic comedies, is a cross between the fantastically nonsensical plotline of "Alice in Wonderland" and the gory female combat story of "Kill Bill."

"Sucker Punch" follows 20-year-old Baby Doll (Emily Browning), who has been locked away in an insane asylum by her greedy stepfather. Forced into erotic dancing by the hospital's staff and threatened with a lobotomy within five days, Baby Doll begins to retreat into an alternate fantasy world where she can take control over her own life. While in this alternate reality, she forms a plan to escape the asylum. She and her four friends must gather five items which will allow them to bypass the hospital staff and run to freedom, but they have to do it before Baby Doll's five days run out.

The film is the latest from writer and director Zack Snyder, who also directed "300" and "Watchmen." "Sucker Punch" has the same astonishing visuals as Snyder's previous films, easily the movie's biggest selling point. However, once the action is established, the film's storyline becomes a formula: Baby Doll needs an item, she retreats into her fantasy world, she obtains the item and then returns to reality.

The repetition actually serves the film very well, because it allows for increasingly more complicated and awe-inspiring combat scenes. Baby Doll fights, at turns, ghostly samurai, zombie Nazis and a dragon. None of it makes much literal sense, and at times it is difficult even to imagine that these combat scenes are supposed to be a metaphorical reflection of the real world. But none of that really matters. The glossy look of "Sucker Punch" is so visually entertaining that the audience will be willing to overlook flaws in the narrative.

Equally engaging is the film's soundtrack, which plays a crucial role in building tension and heightening the power of the action sequences even further. Impressively, Browning herself contributed two songs to the soundtrack and is featured on a third. Her rendition of "Sweet Dreams (Are Made Of This)" functions nicely in the film's wordless opening sequence, while "Asleep" is a quiet, lovely contrast to the harder, edgier music featured in the rest of the movie. Other notable tracks include Bjork's "Army of Me" and a mash-up of Queen's "We Will Rock You."

Because the film's visual and auditory effects are so dominant, the actors' performances become almost an afterthought. Though Baby Doll experiences a rollercoaster of emotional and physical turmoil, Browning chooses not to alter her face for the entirety of the film. Instead, she fixes on one expression - a wide-eyed and weepy stare that expresses an emotion somewhere between sadness and constipation.

The performances of Baby Doll's companions are all equally one-note. Vanessa Hudgens busts out of her "High School Musical" reputation as Blondie, but her character and those of the other girls are not developed enough to make them much more than set pieces.

The small exception is Abbie Cornish, who plays Sweet Pea. Cornish manages to bring extra rawness and vulnerability to her character while still seeming to be the toughest of all five girls. In this regard, Cornish stands out, but only marginally.

The quality of acting is irrelevant, however, because that's not what the film is concerned with; any five pretty girls could have played these parts. The emphasis is on watching the girls wear skimpy outfits and go on a CGI-fueled killing spree. On that front, "Sucker Punch" absolutely delivers.

Don't go into "Sucker Punch" expecting a riveting storyline or Oscar-worthy performances. Instead, go to see a gory feast of CGI, pretty girls and a lot of violence. With that in mind, you will be able to sit back and enjoy.

Ian Opolski can be reached at iopolski@student.umass.edu.

Emily Browning stars as Baby Doll in Zack Snyder's new action film, "Sucker Punch." Browning leads a largely female cast in the visually stunning movie, which unfortunately features a repetitive plot and lackluster acting.

Apps: An Apple in the kitchen

By Steve Cavendish
Chicago Tribune (MCT)

Congratulations on that iPad purchase. Now that you've finished playing Angry Birds, it's time to take that thing into the kitchen and let it do something useful for you.

Here are three indispensable apps that turn your iPad into a supreme source of culinary knowledge:

How to Cook Everything

Maybe it's insane to talk about something being cheap if you have already paid $500 or more for an iPad, but New York Times food columnist Mark Bittman's iPad version of "How To Cook Everything" is an obscene value at $9.99. Featuring more than 2,000 recipes from his acclaimed cookbook, which carries a list price of $35, the app takes the same simple-is-better approach.

Just like the printed version, it contains large, concisely written sections on techniques, equipment and ingredients. Want to know what four pans are essential for the oven? The three knives that are most essential? How long you can store a persimmon? All of these are covered with an intuitive design that lets users navigate quickly between sections.

But all of this is in print. What makes it a great app?

For starters, the recipes can instantly export to a shopping list for you. Thinking about cooking a meal but can't decide? You can flip through the recipes and build a favorites' list that is always accessible and editable at the bottom of the page. It has built-in social networking functionality for Twitter and Facebook if you want to share what you're cooking with friends.

Perhaps the most useful feature, however, is the on-screen timer that can be set during cooking. A button moves the iPad into a "constant on" mode that prevents the screen from dimming, something particularly handy when your hands are covered in food. If you only buy one kitchen app, this is the one.

Bread Baking Basics

This app is derived from Michael Ruhlman's excellent book "Ratio," in which he lays out a case for learning the underlying fundamentals of cooking rather than being chained to a specific recipe.

"The fact is, there are hundreds of thousands of recipes out there, but few of them help you to be a better cook in any substantial way," he writes. "In fact, they may hurt you as a cook by keeping you chained to recipes. Getting your hands on a ratio is like being given a key to unlock those chains. Ratios free you."

And in this way, Bread Baking Basics ($1.99) is 180 degrees different than almost every other cooking app. It provides users with an outline for making different types of bread without going into the infinite ways it can be customized. That's for you to decide.

After a well-done reference section discussing the basic techniques and ingredients, Ruhlman gives users a three-step process for selecting a type of bread (white, whole wheat, sourdough, etc.) a style (boule, loaf, baguette, pizza dough, etc.) and type of cooking device (sheet pan, Dutch oven, loaf pan, etc.). All of the units are customizable, so ingredients can be measured in ounces, pounds, cups, grams or kilos.

A step-by-step pictorial walks users through the process from measuring to finished loaf. The app is, essentially, a giant, illustrated calculator.

The genius is in how it demystifies bread-making and practically dares users to make their own bread on a regular basis.

Epicurious

It probably would be enough for this app to just provide access to the back catalog of Bon Appetit and Gourmet magazine recipes and not do much more. But toss in an excellent user interface and the fact that it's free, and it should be an automatic download for food lovers.

Like other cooking apps, it lets you build shopping lists, organize ingredients and share via e-mail, Twitter, Facebook and more. It also lets you mark favorites or, for a $1.99 upgrade, build a complete recipe box.

One of its best features is a set of curated lists by theme that acts as a great idea generator for cooks. Stumped for a dinner idea? Flip through the "Winter Dinners" and there are recipes for ribollita, potato gratin and salmon salad with fennel, orange and mint. But where Epicurious is a superior source is that it offers a base of more than 30,000 recipes and then layers in a review system that gives users an idea of how well they've worked.

For example, if you search for "chocolate cake," you'll not only find 539 recipes, but you'll also find that 120 people have given feedback on a chocolate crunch layer cake. Begin flipping through those reviews and you'll see that someone tweaked it with a little mint while another offered suggestions on which types of pans work best.

The app takes advantage of years of feedback on Epicurious.com to give users both breadth and depth. It's an unmatched catalog of recipes augmented by a virtual test kitchen of thousands of cooks.

Apps like "How to Cook Everything" and "Epicurious" allow iPad users to access hundreds of recipes and how-to guides to assist in creating that perfect meal. "Epicurious" even features user reviews of recipes, like this salmon salad, which offer suggestions or feedback.

'Unfinished'

Israeli documentary includes lost footage filmed by Nazis

By Kevin Romani
Collegian Correspondent

Last Wednesday night, a crowd gathered at the Isenberg School of Management's Flavin Family Auditorium for a special screening of "A Film Unfinished." The Israeli-produced documentary included lost footage filmed by the Nazis in the Warsaw, Poland ghetto from 1942.

"A Film Unfinished" was screened with director Yael Hersonski in attendance. For years, an unfinished documentary depicting events from the Warsaw ghetto was believed to be an accurate representation of life in the ghetto.

Years later, however, additional footage of goings-on there were discovered which changed the meaning of the visuals. Camera operators were seen setting up shots and directing Jews relegated to the ghetto on how to act and appear while they were filmed. It was clear this film was not a documentary, and that it was nothing more than propaganda the Nazis planned on using before the project was scrapped for whatever reason.

In a question-and-answer session that followed, Hersonski stated, "Both the truth and the lie can exist in this definition of history. The way the Nazi propaganda machine functioned is part of history."

Hersonski's film brought a fresh perspective to the documentary genre. She filmed survivors of the Holocaust who lived in the Warsaw ghetto at the time the footage was taken as they viewed the faux documentary. The genuine horror visible on these survivors' faces as they relived the atrocities of the Holocaust provided haunting imagery that will not be soon forgotten.

Hersonski also included beautiful shot compositions of film reels, typewriters and an acted-out interview. These brief narrative moments were an original way for the audience to have a chance to breathe after the emotionally heavy footage from Warsaw.

"A Film Unfinished" is just one example of the fine lineup of screenings provided by the Massachusetts Multicultural Film festival. These films allow the viewer to get a sense of the world of global cinema, in contrast to many of Hollywood's productions. The festival is being run by the University of Massachusetts' Interdepartmental Program in Film Studies. Every semester, the Massachusetts Multicultural Film Festival is open as both a one-credit course to students and for viewing by the general public. According to the festival's website, this spring's theme is "migrations," as it "highlights interconnections among cinema, migration, war and memory in the context of contemporary cultural and ethno-national landscapes."

The films screened as part of the festival are both narrative and documentary and come from all over the world. In total, 10 films are screened during the festival, all on Wednesday nights and most in the Flavin Family Auditorium.

The Multicultural Film Festival provides audiences with the opportunity to see something different from that they have grown accustomed to. Although some of the films showcased may never reach mass audiences, the filmmakers behind these smaller productions are not looking to attract massive crowds. Instead, they are making their films on topics they find important and want their pictures to be seen by those looking for thought-provoking cinema.

In addition, every film offers either an introduction before it is screened to offer insight or a question-and-answer session afterward from the film's director. This gives viewers a rare opportunity to hear first-hand from filmmakers what went into a given production.

There is no question these films are not for everyone. They are undeniably slow, sometimes confusing and quiet. This should not suggest that the films are not well made, as they are strong technical and artistic productions. For those looking for something a little different, this festival is the place to be.

Kevin Romani can be reached at kromani@student.umass.edu.

Lack of draw control costs Minutewomen

By Jackson Alexander
Collegian Staff

Week after week, Massachusetts women's lacrosse coach Angela McMahon implores her team to first and foremost control draws, a message received until last weekend's game against Northwestern, when the Wildcats completely dominated that area of the game.

On Saturday night, No. 2 Northwestern took down the Massachusetts women's lacrosse team, 17-7. The obvious difference in the game was the draw control battle, which the Wildcats won, 24-2.

In the first half, Northwestern had 14 draw controls to UMass' two, and the dominance carried over to the second half, as the Wildcats held a 13-0 advantage over the Minutewomen.

The 24 draw controls were the second-highest total of the season for Northwestern. Conversely, the Minutewomen's two draw controls were a season-low. The Wildcats dictated the pace from the outset, as they controlled the opening draw before racing into UMass territory, where Kelly Rich scored the first goal just 18 seconds into the contest.

Both teams rotated different players in to take faceoffs. The strategy worked for Northwestern, which had 10 different players win at least one draw control. UMass instituted the same strategy, but was far from successful, as Ali Houlis and Dayna Defliese managed just one draw control win each.

"We tried a bunch of different things, and [it] just didn't work out," said McMahon. "But at the same time, the ball was bobbling around a little bit [and] we didn't get those ground balls and we had those opportunities in the circle."

The Minutewomen have prided themselves on being a team that often wins the battle of the draw controls. Before the Northwestern game, UMass was controlling 59 percent of their faceoffs.

"We've had a lot of success on [faceoffs] on our end in our previous games, but they are the best team in the country when it comes to draw controls," said McMahon.

McMahon was spot on with that statistic. The Wildcats lead the nation in draw controls per game, with 17.78. Their 24 faceoff wins on Saturday night vaulted them past University of California, Davis for first place in the nation.

Northwestern used the large advantage in draw controls to slow down its offense and use up clock once it had a sizable lead. The Wildcats possessed the ball for the majority of the second half, and whenever it appeared UMass was making a run, the Wildcats used long, clock-killing possessions to lock up the victory.

Despite seeing constant pressure from a potent Northwestern offense that features the attacking combination of Shannon Smith and Erin Fitzgerald, the Minutewomen played a solid defensive game.

"Considering how much time they had the ball for and how much ball possession they had, I thought we did a great job defensively of making some really good holds and actually getting some turnovers, as well," said McMahon.

Senior defender Nazy Kerr agreed with McMahon and was proud of the defensive effort.

"The score doesn't accurately reflect how far we've come and how many strides we've made and how well we did on defense today," said Kerr.

Controlling the draws and possessing the ball for the majority of the game led to Northwestern winning other statistical comparisons. The Wildcats outshot the Minutewomen, 33-18, and UMass attempted 17 clears, a result of constant offensive pressure put on by NU.

Massachusetts has now lost two of their last three, and in both losses the opposition took the battle of the draw controls. McMahon hopes her team will improve in that area during practice this week before their upcoming game against Temple on April 1.

Jackson Alexander at jtalexan@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Freshman attack Katie Ferris looks to score during the Minutewomen's last game gaainst Northwestern. Ferris tallied a goal and an assist in the losing effort and she leads the team in goals (21) and shots (46) and is second in points (25).

UMass receives two strong starts while offense comes together during series win

BASEBALL from page 8

JEFF BERNSTEIN/COLLEGIAN

Senior Eric Fredette rounds third in a game last year. Fredette has started all 15 games this season, posting a .281 average.

in the game," said Sorenson in a UMassAthletics.com interview. "Hopefully [we keep] swinging it and throwing it well and I think we'll be alright."

Junior starter Robert Machado delivered eight innings on the rubber, striking out five to pick up his second win of the season while allowing eight hits and one walk. Gedman went 2-for-3 with two home runs and three RBIs. Oswald went 2-for-3 for the Colonials, driving in all three runs.

On Friday, an 8-4 victory started the Minutemen with a win in their A-10 opener for the first time since 2007. UMass jumped out to a 2-0 lead in the top of the second, as Conley had a sacrifice fly to score Peter Copa and freshman Dylan Begin drove in Multner with an RBI single.

The Minutemen scored five in the third to increase their lead to 7-0. Senior Eric Fredette started the sequence with a one-out single. Copa and Multner then both drew walks, loading the bases for Tom Conley, who hit a two-out, two-run single into shallow right. Begin and Messier drove in three more runs to complete their half of the frame. Junior Glen Misho got the start for UMass, picking up his third straight win. He allowed four runs on ten hits while striking out five. Sorenson closed out the game with 2.2 innings of scoreless work.

"It was a good win for us in our first A-10 game, so we were excited about coming in here and getting a win," said Conley in a UMassAthletics.com interview. "Glen pitched a hell of a game and the bats were ready early."

UMass returns to action on March 29, as it takes on Holy Cross in Worcester, Mass. at 3 p.m.

Michael Counos can be reached at mcounos@student.umass.edu.

Scribblers & Scribes: A Contest for the Writer in You

From **MARCH 5-APRIL 4**, the Daily Collegian will be accepting **YOUR poetry & short fiction** for publication consideration in a special literary issue. **Prizes** might very well include everything from gift cards to movie passes. Judges will be selected from the Comp Lit & English departments, and to guarantee impartiality all entries will have the author's name removed during the judging process. Please, **don't be a punk**. Nothing obscene for the sake of it.

Entries will be judged by members of the Comp Lit department.

Send submissions to:
ARTS@DAILYCOLLEGIAN.COM.

Minutewomen split pair of doubleheaders

By Pete Vasquez
Collegian Staff

UMass	1, 12
Temple	7, 2
UMass	6, 2
St. Joe's	4, 5

The Massachusetts softball team continued its inconsistent start to the season after splitting a pair of doubleheader matchups last weekend against Temple and Saint Joseph's. Saturday's doubleheader split versus Temple (10-14, 2-2 Atlantic 10) featured a total of 22 runs, with each game being very lopsided. The Minutewomen (9-14, 3-3 A-10) lost the first game, 7-1, before taking the second contest, 12-2, in five innings.

In the late afternoon game, sophomore Teea Rogers and freshman Tiffany Meeks each hit grand slams, as UMass scored six runs in the fourth inning, followed by four more in the fifth, erasing what was previously a 2-2 tie after three frames.

Rogers' slam was the first home run of her collegiate career, while Meeks' marked her fourth four-bagger of her rookie year.

"It felt really good, it's about time," said Rogers. "Our offense had a hard time in the first game, so we knew we had a lot coming in the second game. In that inning, we started off hot and just kept it going. We were a lot more aggressive. We didn't let pitches go by, we were hitting everything that was on the plate."

The aggressive change in philosophy could also be seen in Meeks' approach at the dish in the second game.

"Game one I saw a lot of good pitches," said Meeks, "I let a few go by. This game I just really wanted to attack the ball and get some hits."

Freshman Caroline Raymond claimed her first win in her first ever start as a Minutewoman with five solid innings of work. She gave up two runs while collecting four strikeouts.

"[Raymond] pitched an amazing game," said Rogers. "She kept her cool and did everything that was asked of her."

Raymond's only other action on the mound prior to Saturday was a combined total of three innings of relief.

Junior Sara Plourde suffered the loss in the earlier 7-1 defeat to Temple. She surrendered six earned runs courtesy of five hits and seven walks while striking out 13.

Sunday's two-game set against Saint Joseph's in Villanova, Pa., saw the Minutewomen follow a 6-4 win early in the day with a 5-2 loss shortly afterwards.

Freshman Caroline Raymond took the loss in the Sunday finale, allowing five runs (two earned) in six innings. The Hawks tallied seven hits and a walk, handing Raymond her first loss of the year. St. Joe's began the scoring early with two runs in the first. The Minutewomen came right back to knot the score at two thanks to run-scoring singles by Rogers and junior Kyllie Magill. The score remained 2-2 until the Hawks scored three times in the seventh to secure the victory.

In the first game of the doubleheader, Plourde got her seventh win of the season en route to a 6-4 Minutewomen victory. The staff ace went eight innings, giving up four runs on four hits and four walks while striking out 12. It was Plourde's 14th complete game of the season in 18 starts. Her earned run average now sits at 1.78, while her strikeout total has climbed to 193 in 117.2 innings.

The six runs were all scored in the final two innings, as UMass came back from a 2-0 deficit after six frames.

Freshman Lindsey Webster powered a two-run home run in the seventh to even the score, and Plourde added a run-scoring single.

Sophomore Cyndil Matthew laced a two-run double in the eighth inning as the Minutewomen put together a two-out rally keyed by an error to keep the inning alive.

Magill, the team's leadoff hitter, had three hits with a run scored and one RBI. Six more hits this weekend give her a team-leading 27 hits.

UMass returns to action March 30, when it hosts Dartmouth for a doubleheader beginning at 2 p.m.

Pete Vasquez can be reached at pvasquez@student.umass.edu.

Senior attack Jackie Lyons controls the ball in UMass' game against Northwestern last weekend. Lyons was held to one assist and two shots.

Women's lax loses to No. 2 NU

By Dan Gigliotti
Collegian Staff

UMass	7
Northwestern	17

The No. 12 Massachusetts women's lacrosse team had its best performance in five seasons against Northwestern on Saturday night in a 17-7 loss.

In the second-ever women's lacrosse night game at McGuirk Alumni Stadium, the Minutewomen held No. 2 Northwestern to its fewest goal total in six meetings between the two squads since 2007. UMass (7-2) also scored more goals than it had in each of those meetings.

The Wildcats (8-0) are winners of five of the last six national championships, which made the result an encouraging sign for the Minutewomen, despite the final score.

"As a senior, this is a very special experience for me, because this is the last time I may get to play this team," said defender Nazy Kerr. "The score doesn't accurately reflect how far we've come and how many strides we've made and how well we were [able to play] on defense today."

Northwestern dominated possession throughout the game, beginning with draw controls, of which they took 24 of 26. This dominance allowed the Wildcats to run out to an early lead and reel off 33 shots to the Minutewomen's 18.

"Considering how much time they had the ball for and how much ball possession they had, I think we did a great job defensively of making some really good holds and actually getting some turnovers, as well," said UMass coach Angela McMahon.

"They just came out quick and I think we were a little timid at first," said junior Minutewomen goaltender Katie Florence. "We had a little bit of a slow start, and I think that hurt us."

Florence, who made eight saves in over 51 minutes, was tested early, as Northwestern won the opening draw control and scored 18 seconds later. It was the first of five consecutive goals the Wildcats would score before five minutes of clock expired, three of them coming from Erin Fitzgerald, who finished with five goals.

Junior Jesse O'Donnell ended the Wildcat run with a free position shot at 13:56, her first of two goals, making the score 5-1. Northwestern's Fitzgerald responded 43 seconds later with her fourth goal of the game, before back-to-back goals by UMass' Katie Ferris and Danielle Pelletier narrowed the score to 6-3 with 5:59 to play in the first half.

Ali Cassera scored with 5:22 left in the half, beginning a 7-0 Wildcat run that extended into the second half.

UMass missed an opportunity to score before the half when Dayna Defliese's shot went wide after moving the ball for over a minute in the attacking zone. Lacey Vigmostad caused a Danielle Pelletier turnover with 36 seconds left to give the Wildcats possession. Then, a Kelsey Palmer foul led to a free position goal by Amanda Macaluso with 13 seconds remaining in the first half.

Shannon Smith, Northwestern's leading scorer and the nation's leader in points per game (6.86), was held without a goal in the first half, but she contributed with three assists. Instead, with the second-leading offense in the nation (16.71 points per game), the Wildcats showed their depth with 10 different point-scorers on the night and six tacking on multiple points.

"At all times, they have seven people on attack who can score, and tonight it was Erin Fitzgerald who stepped up big time," McMahon said. "They're all great shooters; they have a great eye for the goal. We tried to limit Shannon [Smith], but any one of them can step up and have a big game, which a few of them did."

Taylor Thornton's goal at the 27:25 mark in the second half continued the Northwestern scoring streak, which ended four goals later with another Amanda Macaluso (three goals) tally at 24:37.

Freshman Tanner Guarino got on the board for the Minutewomen with 21:55 remaining, taking a Ferris feed from inside the arc and putting a shot past Brianne LoManto, who finished with six saves. Following a Northwestern turnover, Haley Smith navigated through the Wildcat defense on the break and fired a shot past LoManto to cut the score to 13-5 with 19:30 left.

Northwestern's Smith put the game out of reach late in the second half with two unassisted goals to make the score 16-6. The two teams then traded goals in the final two minutes, finalizing the score at 17-7.

With the loss, the Minutewomen concluded their non-conference schedule with two blemishes, the other coming against No. 15 Albany on March 19. Despite the loss, McMahon was pleased with her team's effort and believes there was no better time to play the Wildcats than right before their Atlantic 10 schedule begins.

"I think it was a great test for us and it was a great time to play them," McMahon said. "I think it showed what we're capable of on defense, and now we set the bar for us defensively in terms of what we expect to see out of the team in the A-10 Tournament."

UMass next hosts Temple on Friday at McGuirk Alumni Stadium at 3 p.m.

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

UMass opens conference play, takes 2-1 series win over GW

By Michael Counos
Collegian Staff

UMass	8, 6, 5
GW	4, 3, 10

A strong offensive outburst led the Massachusetts baseball team to a 2-1 Atlantic 10 series win against George Washington this weekend.

The Minutemen began the season struggling in the runs category, but have been swinging the bat well in their last two road trips. UMass (6-9, 2-1 A-10) picked up an 8-4 win on Friday before splitting its doubleheader on Saturday.

In their final game of the weekend, the Minutemen saw their five-game winning streak snapped with a 10-5 loss at Barcroft Park in Arlington, Va. The game was originally scheduled for Sunday, but unfavorable weather moved the game to Saturday afternoon. The Colonials (7-17, 1-2 A-10) took an early 2-0 lead in the first inning thanks to consecutive RBI singles from Stephen Oswald and Tyler McCarthy. McCarthy proved to be the difference in the game, going 4-for-5 with five RBIs. UMass tied it at two in the top of the second with an Anthony Serino sacrifice fly and freshman Josh Messier's single up the middle that drove in senior Kyle Multner.

UMass trailed, 6-5, at the conclusion of the fifth, but the Colonials tacked on insurance runs in the sixth, seventh and eighth innings. Sophomore Dennis Torres was charged with the loss after letting up four runs in 1.2 innings of work. Messier, Multner and Matt Gedman fared well at the plate, going 3-for-4, 2-for-4 and 3-for-4, respectively.

UMass performed better in their first game of the doubleheader, using four home runs to win, 6-3. With the game tied at three in the ninth inning, Multner led off with a single before junior Tom Conley crushed a 1-2 pitch over the left field wall. Serino followed with a home run to give UMass a three-run lead going into the bottom of the frame. Leif Sorenson came in to close the game for the Minutemen, sending the Colonials down in order for his third save of the season.

"It was nice to see the bats coming in early, that really helped with the intensity and got everyone

Author examines baseball's complicated race relations

COURTESY ILLINOIS.EDU

Adrian Burgos Jr., author of multiple books on baseball history, visited the UMass campus last week to talk about his book.

By Chris Shores
Collegian Staff

Jackie Robinson broke baseball's color line in April 1947 by becoming the first African-American to play professional ball. But the story of race in early 20th century baseball is more complicated when it comes to players from Latin America, according to Adrian Burgos Jr., author of "Playing America's Game: Baseball, Latinos, and the Color Line."

Burgos – an associate professor of history and Latina/Latino studies at the University of Illinois – was at the University of Massachusetts last Friday to talk about his most recent book, "Cuban Star: How One Negro-League Owner Changed the Face of Baseball." Before his evening talk, he spoke with a UMass class studying the history of baseball about how "we can understand the place of Latinos in U.S. society by looking at baseball."

Burgos said that Latinos have always had an "invisible presence" in the game. Even before Robinson joined the league, owners were willing to have these players join their teams – if they looked white enough, said Burgos.

Burgos recalled the entrance of Major League Baseball's first Cuban players in the World Series era, Armando Marsans and Rafael Almeida, in 1911. In order to ease fans' fears of Cubans playing on their team, Burgos said that the Cincinnati Enquirer published the following: "Ladies and Gentlemen, we have in our midst two descendants of a noble Spanish race, both of no ignoble African blood to place a blot or spot in their escutcheons. Permit me to introduce two of the purest bars of Castilian soap that ever floated to these shores, Senors Alameda [Sic] and Marsans."

Burgos said that in terms of skin color, Marsans and Almeida could

Amherst voters to head to polls today

Voters will decide the winners in two contested races in Amherst today.

The winners of two contested seats on town-wide boards will be decided today as voters across Amherst go to the polls.

Incumbent Aaron Hayden – who also serves on the town's Select Board – is being challenged by Vincent O'Connor for the Redevelopment Authority seat, while incumbents Patricia Holland and Christopher Hoffmann are facing off against Michael Wolff for the two Jones Library Trustee seats.

Incumbents Stephanie O'Keeffe and Diana Stein are running unopposed for two seats on the Select Board. Katherine Appy and Judy Brooks are running in uncontested races for posts on the school committee and housing authority, respectively. And Harrison Gregg is running unopposed for town moderator, as is John Coull for the post of the town's Oliver Smith Will elector.

There are, however, a slew of contested races for membership on Town Meeting across several of the town's 10 precincts.

But despite the overall low number of contested races in the election, Susan Audette, the assistant to the town clerk, didn't want to estimate if the turnout would be low, as well.

"We never predict the amount of people who will come out to vote Audette said in a phone interview yesterday. "Overall, it's been kind of quiet."

Polls will be open from 7 a.m. to 8 p.m. today. Voters can find a full list of polling locations on the town's website.

Four arrested over weekend for alleged Puffton break-ins

The Amherst Police Department's efforts to crack down on home invasions and robberies made progress this past Saturday, March 26, when officers arrested four young men for allegedly breaking into a local apartment complex.

At approximately 3:25 a.m. that day, APD units responded to Puffton Village Apartments for a 911 call of breaking and entering, according to a press release issued Monday by Amherst Police Lt. Ronald Young. Upon arrival, police launched an immediate investigation to gather evidence and witnesses, which culminated in the discovery of several apartments that showed obvious signs of attempted forced entry. In addition, officers found that at least one of these had been successfully entered, according to the release.

The release states that officers apprehended four young men leaving the area in a 1998 Toyota Camry. Witnesses were then able to positively identify them as suspects.

The arrested are listed in the release as:

Justin Satterfield, 19, of 380 Riverglade Drive, Amherst, and Jack M. Ryan-Ackerman, 18, of 151 Rolling Ridge Road, apartment 45, Amherst, were each charged with breaking and entering in the nighttime, two counts of attempted burglary, and possession of burglarious tools.

Daniel J. Dickinson, 22, of 266 E. Hadley Road, apartment 45, Amherst, was arrested on a charge of breaking and entering in the nighttime.

Tobias K. Luz, 20, of 34 Pomeroy Court, Amherst, was arrested on charges of operating under the influence of alcohol and breaking and entering in the nighttime.

The release states that none of the four men are affiliated with any of the Five Colleges. It also notes that all of them "were held at the Hampshire County House of Corrections in Northampton in lieu of $2,500 cash bail." Each man was also slated to be arraigned at the Eastern Hampshire District Court in Belchertown on Monday.

Additionally, the release states that an investigation is currently underway to determine if Satterfield, Dickinson, Luz and Ryan-Ackerman are possibly connected to other burglaries. Anyone with further information is urged to contact the APD.

AMHERST POLICE

Four men were arrested on Saturday for their alleged involvement in a series of break-ins in Puffton Village.

NICK MALLETT/COLLEGIAN

The Puffton Village Apartments complex on Amherst's North Pleasant Street was the site of several alleged break-ins on Saturday. Police will investigate whether these break-ins are related to other recent incidents.

Teams meet in Massachusetts clash

MAXWELL SPARKS/COLLEGIAN

The UMass Men's lacrosse team will begin a three-game road trip starting with a match against the 5-1 Harvard Crimson Tuesday afternoon. Harvard just lost to Dartmouth, ending a four-game win streak.

By Stephen Sellner
Collegian Staff

The No. 16 Massachusetts men's lacrosse team begins its difficult three-game road stint with a matchup against Harvard on Tuesday afternoon.

The Crimson (5-2, 1-1 Ivy League) feature an aggressive and energetic style of play, making them a very dangerous opponent.

"They're playing the game, in my opinion, the way it should be played," said UMass coach Greg Cannella.

Leading Harvard's electric attack are senior Dean Gibbons and junior Jeff Cohen. Gibbons leads the team in points with 26 (15 goals, 11 assists) while Cohen stands first in goal-scoring with 18. Cannella has been very impressed with the duo's play throughout their careers, calling them "potentially two of the better scorers in the Northeast."

The firepower does not end there, as returning players Kevin Vaughan, Jeff Molinari and Daniel DiMaria allow Harvard to get up and down the field quickly and efficiently.

Crimson coach Chris Wojcik has implemented the up-tempo style of play in his first season at the helm, which has allowed his team to play to its strengths.

"Honestly, I'm happy and pleased to see that he's letting [his team] play this style," said Cannella, who coached against Wojcik when the Harvard coach played for the Crimson in the mid-1990s. "It takes a little bit of nerve as a young coach…to let your players go."

The Crimson are young on the defensive end, with junior Paul Pate and sophomore Jason Gonos as the only returning starters. Freshmen Eric Slingerland and Brian O'Toole round out their young defensive midfield. O'Toole attended the same high school, Long Beach, as UMass goalkeeper Tim McCormack.

Sophomore Harry Krieger stands in net for Harvard in his first season as the full-time starter. The Timonium, Md. native has started all seven games and has allowed an average of 9.68 goals per contest.

"They have everything that you need to be successful as a team," said Cannella.

Harvard had its four-game winning streak snapped on Saturday in a 9-8 loss at the hands of Dartmouth.

Obama says Libyan effort a success

By Margaret Talev & David Lightman
McClatchy Newspapers (MCT)

WASHINGTON – President Barack Obama on Monday declared the U.S.-led military intervention in Libya a success, saying it averted a massacre by longtime leader Moammar Gadhafi and that NATO's takeover of the multilateral mission this week means the U.S. can quickly shift to a support role with less risk and cost.

"Tonight, I can report that we have stopped Gadhafi's deadly advance," Obama said in a speech at National Defense University in Washington. The address was designed to respond to criticism that he hasn't explained the goals for U.S. involvement sufficiently. "The United States of America has done what we said we would do."

In the 27-minute speech, Obama made two parallel cases: first, that doing nothing would have run counter to U.S. ideals and national interests, and second, that to have acted alone or expanded the military mission to topple Gadhafi would have been too costly and repeated the mistakes of the Iraq War.

Obama said that America had a moral imperative in preventing Gadhafi from inflicting "a massacre" on his own people.

Comparing Libya's largest rebel-held city to the U.S. city that will host the 2012 Democratic National Convention, Obama said that "if we waited one more day, Benghazi, a city nearly the size of Charlotte, could suffer a massacre that would have reverberated across the region and stained the conscience of the world.

"It was not in our national interest to let that happen," he said. "I refused to let that happen."

He said there also was a strategic U.S. interest in blocking the Libyan leader. Otherwise the fragile democracy movements in Tunisia, Egypt and across the Arab world would be endangered, as tyrants would draw the lesson that "violence is the best strategy to cling to power."

"It is true that America cannot use our military wherever repression occurs," Obama said. "But that cannot be an argument for never acting on behalf of what's right."

Still, the president didn't explain why that logic doesn't require intervention against tyrannical repression recently employed in Syria, Bahrain and Yemen, except to say that there were unique circumstances in Libya.

"In this particular country – Libya," Obama said, "we had a unique ability to stop that violence: An international mandate for action, a broad coalition to join us, the support of Arab countries, and a plea for help from the Libyan people themselves. We also had the ability to stop Gadhafi's forces in their tracks without putting American troops on the ground."

The timing and staging for the president's remarks – 7:30 p.m. on a Monday evening, off-campus from the White House – seemed designed to deflate any impression that the Libyan intervention represents a bold new turn in U.S. foreign policy. Obama took care to define the Libyan mission as limited, with the U.S. role only contributing – and shrinking – to a singular multilateral mission led by others.

In an address to the nation Monday night, President Barack Obama declared U.S.-led interventions in Libya a success.

This photograph from Bin Jawwad, Libya on Monday shows native rebels beginning to pullback to Ras Lanuf. President Obama addressed the U.S.'s efforts in Libya last night, saying that the U.S. will shift to a supporting role.

Obama aimed to clarify his goals for two specific audiences: average Americans, and insider elites including Congress, the military and foreign governments. Obama's speech came on the eve of an international conference in London to discuss Libya's future.

About a half hour before Obama spoke, White House press secretary Jay Carney issued a statement saying that the president and leaders of France, Germany and Great Britain had spoken by videoconference and agreed that Gadhafi "should leave power" and that "the Libyan people should have the political space to determine their own future."

A poll released Monday by the nonpartisan Pew Research Center underscored the U.S. public's lack of clarity about the mission – fully 50 percent of Americans said U.S. and allied goals aren't sufficiently clear. But more Americans favor U.S. involvement in Libyan airstrikes than oppose it, 47 percent to 36 percent, according to the survey, conducted March 24-27.

Perhaps equally telling, however, is that most Americans aren't all that focused on Libya. In a month overloaded with the Japanese natural disasters and nuclear crisis, multiple Middle East revolutions and the March Madness college-basketball playoffs, only 15 percent said Libya was the news event they're following closest.

"There's no sense the public is turning away from it in a big way," said Pew associate director Carroll Doherty. "They're just expressing doubts about the goals and aims of it."

Congress and media commentators, however, are more critical, and were a primary audience that Obama was trying to calm. He has drawn criticism from lawmakers on both sides of the aisle who feel he didn't consult them sufficiently before joining the intervention, and from media commentators of every ideological stripe who have found his mission rationale confusing and unsettling.

The president's speech began a battery of administration efforts to defuse such questions. Defense Secretary Robert Gates, Secretary of State Hillary Clinton and other officials are to give a classified briefing Wednesday to lawmakers. And at least three congressional committees are scheduled to hold public hearings on Libya on Thursday.

Sen. John McCain, R-Ariz., the top Republican on the Senate Armed Services Committee, reacted with a mix of praise and criticism to Obama's remarks.

"I welcome the president's clarity that the U.S. goal is for Gadhafi to leave power," McCain said in a statement. "But an equal amount of clarity is still required on how we will accomplish that goal."

Some Republicans were just critical. Rep. Tom Price of Georgia, the chairman of the House Republican Policy Committee, said NATO's new lead role offers "no assurance that American military men and women as well as American resources will not continue to play a very large part in the days to come."

Rep. Bruce Braley, R-Iowa, was disappointed that Obama didn't spell out what the Libya mission is costing taxpayers. "We've got two wars in Iraq and Afghanistan – and Americans deserve to hear from our president what this third conflict is going to cost us."

Several Democrats lauded Obama's speech. Senate Majority Leader Harry Reid, D-Nev., stood firmly behind the president.

But in the House of Representatives, where many liberal Democrats are uncomfortable with the intervention, House Minority Leader Nancy Pelosi, D-Calif., chose her words carefully. She said she salutes the U.S. military but emphasized that "U.S. actions in Libya will be strengthened by continued consultation with Congress."

Man arrested in fireworks case

At 1:02 a.m. on Wednesday, March 23, Trevor Weatherbee, of 441 Neck Road, Lancaster, Mass., was arrested on various charges. Around that time, the University of Massachusetts Police Department received a number of emergency calls from students claiming that someone was shooting fireworks in the direction of Field dormitory in Orchard Hill. At least one caller stated that the suspect had fired one of the projectiles directly at her, although she had managed to avoid it. When officers arrived, they initiated a search and finally identified an individual matching his description at approximately 1:27 a.m. Subsequently, Weatherbee was taken into custody on charges of disorderly conduct, disturbing the peace and unlawful possession of fireworks.

-Collegian News Staff

Trevor Weatherbee, 23, of Lancaster, Mass., was arrested last week on charges stemming from his alleged involvement in an incident in which fireworks were fired off near an Orchard Hill dormitory.

Baseball author speaks to UM class

BASEBALL from page 1

blend in with the rest of the team. But the same could not be said for Orestes "Minnie" Minoso, the "first black Latino" who, according to Burgos, "didn't have the luxury of whiteness to fall back on."

People were constantly throwing pitches at Minoso and testing him, Burgos noted. They wanted to see if "this 'hot blooded Latin' would erupt," said Burgos. "He faced a combination of cultural and racial challenges as a black Latino."

The Latino's place in the game was never clear, said Burgos. He noted that Roberto Clemente, the first Latin American to be named to the Baseball Hall of Fame, once said that he felt doubly discriminated in the United States for being black and for being from Puerto Rico.

Even today, Burgos noted, the confusion still exists. He began his lecture by quoting MLB outfielder Torii Hunter, who said in March 2011 that Latino players were not black, but rather "impostors."

"People see dark faces out there, and the perception is that they're African-American. They're not us. They're impostors," said Hunter. "Even people I know come up and say: 'Hey, what color is Vladimir Guerrero? Is he a black player?' I say, 'Come on, he's Dominican. He's not black.'"

Burgos acknowledged that Latino players are accepted in today's game, but said that a discrepancy still exists between the signing bonuses of these players and those graduating from American colleges.

"The goal [of many MLB organizations] is to find good talent cheaply," said Burgos.

Teams would try to find players and sign them as 16-year-olds before they had reached their peak potential and value, he said. He cited the Los Angeles Dodgers' 1988 acquisition of a 16-year-old from the Dominican Republic for $50,000 to illustrate his point. That same year, he noted, Andy Benes, a 21-year-old from the University of Evansville was selected first in the MLB draft and signed by the San Diego Padres for $68,000.

Benes went on to pitch for 14 seasons, finishing his career with a record of 155-139 and an earned run average of 3.97. But the teenage pitcher from the Dominican Republic, Burgos said, was none other than Pedro Martinez – a three-time Cy Young award winner, who's pitched in eight MLB All-Star games.

The pattern has continued years later, said Burgos. The average Latino signing bonus is $20,000, he said. Last year, the Washington Nationals signed Bryce Harper, the top overall pick in the MLB draft, to a five-year contract of $9.9 million, when he was only 17-years-old.

Burgos received his doctorate in U.S. history from the University of Michigan in 2001. He joined the University of Illinois at Urbana-Champaign faculty in the fall of that same year.

It was announced last week that Burgos will join a 12-person committee that will examine the origins of baseball. The committee is to be headed by baseball historian John Thorn and will also include filmmaker Ken Burns, author Doris Kearns Goodwin and journalist George F. Will.

Chris Shores can be reached at cshores@dailycollegian.com.

Latino players including Pedro Martinez are initially signed cheaply, said Burgos.

Scribblers & Scribes: *A Contest for the Writer in You*

From **MARCH 5-APRIL 4**, the Daily Collegian will be accepting **YOUR poetry & short fiction** for publication consideration in a special literary issue. **Prizes** might very well include everything from gift cards to movie passes. Judges will be selected from the Comp Lit & English departments, and to guarantee impartiality all entries will have the author's name removed during the judging process. Please, **don't be a punk.** Nothing obscene for the sake of it.

Entries will be judged by members of the Comp Lit department.

Send submissions to:

EDITORIAL OPINION

TUESDAY, MARCH 29, 2011

"If we don't believe in free expression for people we despise, we don't believe in it at all." - Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

Don't let the moral guardians get you down

Matthew M. Robare

If the politicians had their way, no one in this country would ever advance past a mental age of six. It does not seem to me that they are able to comprehend the fact that people who are not politicians can make their own decisions.

The other day I came across an article in The Wall Street Journal, "Pabst's Horse of a Different Color: Colt 45 Enters Controversial Ring" about a new beverage called "Blast by Colt 45" modeled on Tilt, Four Loko and similar highly-alcoholic, fruit-flavored drinks. Basically, the traditional Colt 45 malt liquor, which I praised highly last semester, has seen falling sales since 2002, so Pabst is hoping that entering a new market with Snoop Dogg as the spokesman, will help them recover the lost ground.

Tom Stevens, a Vermont state representative from Waterbury, Vt., was mentioned in the article as a co-sponsor of a bill banning flavored malt beverages in containers of more than 12 ounces. I called him up to talk about it.

"I think they're dangerous drinks," he said. "They're not sipping drinks. Twenty four ounces equals four beers; by the breathalyzer that means you should drink it in about four hours."

He said that the flavored malt liquors – he called them "alcopops" – were "meant for underage drinkers."

I can see his point. It's a very rational one. Back when Four Loko still had caffeine we all knew people who wanted them because of the "black out in a can" thing and not because one can of Four Loko was the equivalent of however many beers the national media was saying for the price of a can of Arizona Iced Tea in the Blue Wall.

But we can't disregard responsibility. The whole purpose of education, of growing up is to achieve a level of responsibility where we won't be dependent on our parents. My dad taught me a lot about beer before I turned 21 – how to appraise it, how to drink it, how to pour it – and so I don't chug, I don't buy "light" beer and I let my Guinness settle before I drink it.

The whole purpose of education, of growing up is to achieve a level of responsibility where we won't be dependent on our parents.

Forewarned is forearmed, but that doesn't mean I haven't downed half of a $22 bottle of Jose Cuervo in a night, or mixed beer, MD 20/20, Jagermeister and something labeled as "cherry-flavored apple wine product" last September. It does mean that I stopped when I felt ill, or in the case of the tequila, actually threw up. I know my limits and pushing them is part of that process of discovery.

"When you're 21 or 22 you're a legal drinker," Stevens said, "and you're allowed to be as responsible or as irresponsible as you like. Alcopops are geared for and used by underage drinkers."

That may be true, but if the problem is underage drinking the legality of what kinds of flavors manufacturers can put in their drinks don't matter. Underage drinkers of the recent past got on with regular beers and liquors just like people drank Red Bull and vodka or Jaegerbombs before Four Loko.

People have always cared about the taste of their drinks. A well-mixed cocktail, in my experience, combines flavors that might be harsh on their own in a way that mitigates and improves them.

Highballs are cocktails where one or more spirits has been mixed with a soda. The most famous one is probably the rum and coke, but there are a lot of them and they're popular because they tend to be highly alcoholic and taste good.

These days vodka is the world's most popular spirit and I'm pretty sure it's because it's so mixable. There is really nothing you can't mix with vodka and enjoy – juices, sodas, other spirits – and when you mix them with vodka the resulting concoctions taste very good and are very alcoholic. While I suspect the bourbon and rum makers would love it if states started banning vodka because of its flexibility, nobody else would.

"People who want something [because they've been] influenced by the advertising are going to find a way to get it," Stevens said. "The drinks themselves are the problem."

But are they really the problem? Is there even a problem? Most of the people affected by laws like the one Stevens has co-sponsored are living on their own for the first time with the least supervision they have ever known.

There is something profoundly liberating in not having parents telling you when you should go to bed or reminding you to do homework.

Choice is the greatest and most dangerous thing of all and I don't think that anyone ever learns how to make good choices without ever making bad choices, especially when the bad choice tastes as good as watermelon-flavored vodka.

It would seem that the whole thing is an impasse: the advertising isn't an issue, the only way to stop underage drinking is to eliminate drinking ages entirely and people will mix their drinks in whatever ways appeal to their tastes the most. We might as well be free to drink what we please. I did learn my lesson about tequila and no longer drink it in large quantities.

Remembering Liz Taylor

If you disagree, don't challenge a columnist to a duel, write a letter to the editor.

She wasn't simply an actress, nor was she just a sex symbol. She wasn't only some friend of Michael Jackson who had been married a ton of times. And she wasn't only the namesake of Charlotte York's dog on "Sex and the City."

Elizabeth Taylor was an icon, and not many would contest that. Not only was she an onscreen sensation since the age of 12, when she landed a role in "National Velvet," but she probably got a lot more attention for her off-screen life. In fact, I feel guilty even writing this because I have only seen a few of her movies yet I know all about her love affair with Richard Burton which would make even the most cynical, unromantic person feel simultaneously touched and heartbroken. He wrote to her in a letter:

Lauren Vincent

She wasn't trying to be a spokesperson for feminism yet by doing so she was.

"I find it very difficult to allow my whole life to rest on the existence of another creature. I find it equally difficult, because of my innate arrogance, to believe in the idea of love. There is no such thing, I say to myself. There is lust, of course, and usage, and jealousy, and desire and spent powers, but no such thing as the idiocy of love. Who invented that concept? I have wracked my shabby brains and can find no answer."

She was an alcoholic and she was married eight times. She and Burton were condemned by the Vatican for "erotic vagrancy." It sounds like it was all very glamorous debauchery, but of course, it was at the time probably just as outrageous and unbecoming as Britney Spears' and Lindsay Lohan's breakdowns.

She not only married but she divorced seven times (third husband Mike Todd died in a plane crash), yet she held her head high and kept looking for the love she deserved. Camille Paglia called her a "pre-feminist" in a Salon interview based on her embracing of the sexual command over her male counterparts. I don't exactly agree with that reasoning, but I do believe that Elizabeth Taylor felt herself every bit as equal to those male counterparts and she did what she wanted regardless of the conventions of her gender at the time. She wasn't trying to be a spokesperson for feminism, yet by doing so, she was.

In any case, Mother Courage, as she called herself, recovered from addictions and tumultuous marriages and relationships. Being a woman who had been ignoring society's head shaking for most of her life, she turned her efforts to raising awareness and funds for AIDS, a cause that was controversial at the time. Obviously Taylor didn't do it for her own reputation or for herself. She didn't do what was popular, she did what she felt was right at the time.

Taylor founded the American Foundation for AIDS Research, or AmFAR, the first national organization for AIDS research. She used her influence with the 'A-list' of Hollywood and she helped to transform AIDS from the shameful perception it faced in society. She advocated for safe sex and taking personal responsibility in prevention of the disease.

The Elizabeth Taylor AIDS Foundation, which she established in 1991, states in its mission statement that it has raised funds for HIV/AIDS service organizations throughout the world, providing critically needed support services and prevention education.

She stood by her friend Michael Jackson when he was faced charges of child molestation. She didn't shy away from their close friendship to save face.

She did some terrible things - cheating on her husbands with men who were married themselves, for example. Eddie Fisher was married to her friend Debbie Reynolds when the two began their romance. She was an extravagant spender and embraced materialism. But obviously she wasn't striving to be perfect and the disregard she had for being so was exactly what made her the humanitarian she was. Carrie Fisher, the daughter of Fisher and Reynolds, said that if her father had to divorce her mother, she was glad it was for Elizabeth Taylor, and she and Reynolds were friends again at the time of her death.

She was hated and she was loved and it didn't matter to her either way. In this she was inspiring, and therefore she was mostly loved. If there is one thing that the loss of Elizabeth Taylor can teach us is to throw off the concern for how society thinks of us, which is sometimes the best thing we can do for society. The world is a darker place without the woman she was. That girl had life in her, all right.

Lauren Vincent is a Collegian columnist. She can be reached at lvincent@student.umass.edu.

St. Baldrick's proves bald is beautiful

By Jackie Chambers
Collegian Correspondent

Over 350 people showed up at Rafters Sports Bar and Grill in Amherst, Mass. on Sunday to support the Saint Baldrick's Foundation, a charity that raises money for children's cancer research.

Hair was falling everywhere, completely covering the pavement. Many of those in attendance were from local area fire and police departments. People were showing pictures on cameras and phones from their family and friends' shaving experience.

Over 220 people had their heads shaved at the event. Participants or "shavees" proudly displaying a pin on their shirts that read, "Ask me why I am bald."

Twelve-year-old Olivia Warren and her mother, Bernadette Bean stood out among the crowd, displaying their new look.

"Olivia drove us to come here and participate," said Bean.

Warren raised $1,836 and was the second highest participating shavee.

"I learned about this last year from a friend. She said this was a good cause," Warren said.

Before shaving, she had her hair to her shoulders. She will be donating it to Pantene 's Beautiful Lengths, which makes wigs for cancer patients.

Warren is confident in her new shaved head and her smile says it all.

She not only shaved her head, but has also taken the initiative to reach out to caner patients. "She has touched base with a couple children fighting cancer," said Bean.

With $5,070 raised, first place participant Khama Ennis Holcombe was one of the first shavees. Her results revealed a brand new look for Holcombe. Jill Burdick, another woman who shaved her head for the cause, said, "I feel great."

Warren and Bean both hadn't looked in the mirror and explained that their heads felt "very cold." Bean said she believed the other female shavees, including Holcombe, really inspired her daughter.

On the other hand, Bean was nervous about her new hairstyle.

"I work in a professional setting and am nervous," said Bean. "I work in the health care industry so I think it will be okay."

Throughout the event, announcements were made regarding the ongoing fundraising and information on how much more money people needed to donate for more shaving to occur. Luke Hartnett, a fire captain from Erving, asked for a $500 donation to shave his beard.

"I've had it for six months and I haven't touched or cleaned it up once," he said. "I look like Curly from the Three Stooges."

At the time, Hartnett had already raised $127 when screaming and yelling about his beard filled the air.

However, his family and friends shouldn't get used to a bald chin on Hartnett.

"I am going to end up growing it back," he said.

For barbers and hair dressers, the fundraiser was a dream come true, shaving heads without having to worry about styling, layers, or even cuts – just a straight buzz.

"This is very exciting," said Dionne Sendrowski, a hair stylist. "I don't know how many heads I shaved. I lost count after 30." She explained that the best part of her job is being able to experience the before-and-after effect.

As of Sunday night the event raised over $46,000, far exceeding the goal of $35,000. The Amherst fire department and friends raised the most, bringing in a grand total of $10,860 for the foundation. The University of Massachusetts Police Department followed close behind, raising $7,745.

"I want people to ask me why I am bald," said Burdick.

Jackie Chambers can be reached at jechambe@student.umass.edu.

Olivia Warren (pictured) participated in the Saint Baldrick's Foundation's latest fundraiser at Rafters in Amherst last Sunday. The event raised over $46,000 for children's cancer research.

Irish films for everyone

By Kate MacDonald
Collegian Staff

Almost every year, St. Patrick's Day falls during the week of Spring Break. While some Irish-Americans are watching out for leprechauns and eating corned beef and cabbage, many college kids are stumbling around on beautiful foreign beaches.

If you're among the fortunate ones that spent their St. Patty's Day in a tropical paradise, you probably missed out on some classic Irish flicks. Fret not, there's still a way to indulge in Irish heritage during the month of March. Just check out these timeless movies having to do with Ireland.

"The Commitments"

While many Irish films are full of setbacks and tragedies, "The Commitments" is about the formation of Jimmy Rabitte's great band and bringing soul music to Ireland. A funny movie with a great soundtrack, "The Commitments" is a must-see.

"The Devil's Own"

In one of his earlier films, Brad Pitt stars as Frankie McGuire, an IRA who adopts a false identity to go to America to buy missiles for a terrorist attack. He ends up rooming with a cop (Harrison Ford) and his family. As Frankie's story starts to unravel, the cop must protect thousands of innocent people from Frankie's potential attack. Though it takes place in the U.S., the story begins on the Emerald Isle and chronicles the IRA struggle in Northern Ireland.

"Far and Away"

Starring then-married couple Tom Cruise and Nicole Kidman, the young Irish couple aspires to come to America to become wealthy landowners. As is the classic Irish way, they face hardships in the Irish city of Boston (her family, his temporary career) but try to persevere and keep the dream alive. It's a good portrayal of the Irish struggle in America.

"The Snapper"

"The Snapper" is truly a good example of actual Irish life. Not preoccupied with telling a historical tale, the very funny film is about an Irish Catholic girl who finds herself pregnant (she then refers to the fetus as "the snapper"). Not the best situation for a girl from a large Catholic family living in a Catholic town. A good representation of Irish society, "The Snapper" is entertaining and witty.

"In the Name of the Father"

Ireland is infamous for its troubles in the North and this film brings it to light. Based on a true story, after a 1974 pub bombing, four men were coerced into falsely confessing. They find an unlikely ally in a British lawyer who must, against many obstacles, fight for their freedom. Emma Thompson and Daniel Day-Lewis give award worthy performances.

"Michael Collins"

Michael Collins is a legendary Irish war hero who fought and died in the Irish Revolution. His fiancee (played by Julia Roberts) wants to hear stories of the patriot (Liam Neeson) after his death. The film is necessary for those who want to learn about the most pertinent aspects of the successful Irish Revolution against the British, still a huge aspect of Irish culture.

"Waking Ned Devine"

Reminiscent of "Weekend at Bernie's," a small Irish village must band together to pretend its oldest resident is still alive. Ned died of shock after winning the lottery, and the townsfolk must put aside their own family troubles to fool government inspectors so they can all share the millions. Hilarity ensues.

"Angela's Ashes"

Based on Frank McCourt's book, the movie is about the immigration of the McCourt family back to Limerick. It's a deep and tragic film chronicling the troubles of many Irish families.

"The Luck of the Irish"

This classic Disney made-for-TV movie resounds in the memories of teens and twenty-somethings all over the nation. Kyle Johnson (Ryan Merriman), a high schooler who doesn't care about his ethnicity, discovers that he descends from a long line of leprechauns when the evil Seamus McTiernan steals his family's luck.

"The Quiet Man"

"The Quiet Man" is a must-have on any list of great Irish movies. A 1952 classic starring huge celebrities John Wayne and Maureen O'Hara, the film is about an Irish-American boxer who returns to Ireland and falls for his enemy's sister. Nominated for seven Academy Awards including "Best Picture," the film took home two.

Honorable mentions include "The Crying Game," "In America," "Dancing at Lughnasa" and "Gangs of New York."

While most great Irish movies feature thick brogues and actors that are fairly unknown in the United States, the movies on this list are certainly nothing to scoff at. And, while there's an extremely large Irish-American contingent in the U.S., these films, thanks to intense action scenes, romance, comedy and sweeping vista shots of the gorgeous Irish countryside, would most certainly appeal to just about everyone.

Kate MacDonald can be reached at kaitlynm@student.umass.edu

Saint Patrick's Day might be over, but that's no reason to stop celebrating. Tom Cruise and Nicole Kidman star in "Far and Away," one of the Irish-themed films that can't be missed.

Potter and the Nocturnals take on Heartbreak Hotel

By Amy Larson
Collegian Correspondent

Only one thing was for sure after Grace Potter and the Nocturnals closed out their run of primarily sold out shows last Saturday night at Lupo's Heartbreak Hotel in Providence, R.I. Grace Potter definitely has some of that "Medicine" she sings about.

Potter is the long-legged, prodigal mistress of rock 'n roll who, accompanied by four acid rockers, is impossible to forget.

Rolling Stone Magazine called them one of the best new bands of 2010, but the only thing that is new about them is their sound on their June 2010 release, "Grace Potter and The Nocturnals." The Vermont-based group released their first full-length album in 2005. In the past year, they performed at Bonnaroo Music Festival and live on VH1, as well as all over the late night television scene.

When Grace Potter and The Nocturnals took the stage at Lupo's, they impressed visually before they even got the chance to stun the crowd musically.

Dressed to the nines, the men sported tight dress pants and an assortment of vests and blazers, making them cool enough to rock but snazzy enough to share the stage with their gorgeous female band members.

Bassist Cat Popper grooved with effortless sex appeal in skin-tight black pants and a sleeveless black, sequined top while teetering on four inch heels. Front-woman and organist Potter shimmered in an ensemble that featured sparkles from her eye shadow all the way down to her strappy, sky-high dress heels.

Then Potter began to sing. At the sound of her voice, all awareness of time and space were lost as the audience fell mesmerized to its virtue. Potter's pipes delivered a handful of notes that most did not even know existed.

Her melodies stole the hearts of the masses in the way of a darling pop singer and locked them away when she unveiled her soulful sound on the bluesy tunes. With these multifaceted vocal capabilities, she demonstrated that she was comfortably at the highest rung of singers. Potter's voice never faltered, instead leading the Nocturnals through an irrepressible set.

The Nocturnals, a foursome of individually skilled musicians, became one addictive amplification through a shared infatuation with psychedelic rock.

Every member was a powerhouse of unrelenting rock 'n' roll. They appeared and sounded like they owned the stage and had for decades.

Each member worked in constant connection with one another as if they were pieces of one musical mind. The audience bore witness to a seamless and rare dynamic that was only possible because of the entities who created it.

Early on in the set, the group plunged into the mysterious "Oasis" off of their 2010 self-titled release. Revealing great stamina they executed a perfectly steady and slow increase of speed and sound when they reached the bridge. For what felt like days the tension hung heavy among the high ceilings, begging to be released.

As the Nocturnals strummed and drummed harder and faster, Potter sang monosyllables like a siren. With this accompaniment she proved that her voice is a powerful instrument. When the song reached resolution the audience erupted. They were officially along for the dusty, dauntless Mustang convertible ride that was the GPN set that night.

Smoothing the cool bass formations was Popper, a supermodel-esque brunette who never stopped driving the soul of their jams. Popper shone brightly on "Oasis" and the mind-bending cover of Jefferson Airplane's "White Rabbit," the latter of which she introduced with an ominous, pulsating line.

Though she only joined the group in 2009, it was evident that Popper's addition greatly contributed to the band's now refined vibe.

Alongside Popper were the intricate guitar stylings of Benny Yurco, also a 2009 addition to the Nocturnals. His fingers rapidly danced across his acoustic guitar, generating as much energy as when he picked up his electric to shred, a memorable feat.

The New Jersey native elicited minutes of continuous cheers when he stood alone on stage to perform an extended acoustic intro to their cover of Heart's "Crazy On You." The solo was so complex, it crafted the auditory illusion that several guitarists were performing.

Yurco was also featured during a throwback blues cover tune where he, Potter and lead guitarist, Scotty Tournet, all strapped on acoustic guitars. The crowd savored every unified moment the trio played together. They basked as Potter bore her "old soul," telling a sentimental story of Memphis, Tenn. in her best country voice.

Maxing out the decibel capacity at Lupo's was the unstoppable Scotty Tournet on lead guitar. One of the original three band members, he jammed like his and his bandmates' lives depended on it. During each bridge solo, he looked like he might run out of frets on the guitar as his fingers flew all the way up the neck and back again. His chemistry with Potter in particular was hard to miss.

Tournet and Potter vibed strongly off of each other when she donned her famous white Gibson Flying V for "Paris (Ooh La La)." The amplitude from this song threatened to rattle the antique chandeliers from the walls of Lupo's. Potter and the Nocturnals got the entire crowd involved in singing the chorus, having just as much of a riot as the ticket holders did.

Driving the velocity home was the other original band member, drummer Matt Burr. Burr and Potter found each other at St. Lawrence University. When . On the set, Burr rocks a perpetual smile and a tireless playing style. With pin-straight, shoulder-length blond hair and classic rock-inspired technique, Burr looks and sounds like he stepped right out of the 70s.

Potter and the Nocturnals spewed sexuality from their amplifiers while maintaining an edgy wildness that stems from their Vermont roots. Their tunes were often reminiscent of gritty southern blues, but were executed in an alluring, psychedelic manner.

This group, headed by the Jim Morrison-esque belting, undeniably alluring Potter, sets itself far apart from the everyday rock combo.

But the vital ingredient, and the reason why they're now untouchable isn't the "three cups bottled lightening" of which Potter sings. It is the golden haired, golden-hearted gem that shines from the inside out. It's Potter.

Amy Larson can be reached at alarson@student.umass.edu

Freshman Val Paolucci scored her first career goal and game-winner in Saint Joseph's 8-7 victory over Saint Mary's on Saturday.

Paolucci scores game-winner

MATT STRONG
COLLEGIAN STAFF

Freshman Val Paolucci had the best game of her young career on Saturday, scoring both her first career goal, and the game winner. Paolucci's second goal put Saint Joseph's up 8-7 as tight defense by the Hawks held Saint Mary's scoreless for the remainder of the game.

The first four goals of the match were alternating scores, including an unassisted goal by junior Grace Dinn. Saint Mary's changed the pace with back-to-back goals, taking a 4-2 lead. The Hawks came storming back with three unanswered goals before a scoreless stretch of 9:29 to end the first half. Junior Meghan McDevitt added her second assist of the half on the go-ahead goal.

The Gaels scored two-straight goals out of the gate in the second half. Paolucci recorded her first goal of the contest shortly after, tying the score at six apiece. Sophomore and Seattle, Wash. native Jillian Chong recorded her third goal of the match for the Gaels, which provided Saint Mary's with its last lead of the game.

McDevitt added a game-tying goal with 7:10 remaining in the second half to even the score at seven. Paolucci's game winner followed McDevitt's goal less than two minutes later.

Saint Joseph's (4-5) will host La Salle (4-5) in its conference opener Friday at 1 p.m.

JOHNS HOPKINS TOPS GWU

Junior attacker Colleen McCaffrey chalked up a hat trick for the second-straight game to rally Johns Hopkins towards an 11-10 victory on Sunday. McCaffrey's hat trick included back-to-back goals in the first half, giving the Blue Jays a lead they wouldn't relinquish.

The Blue Jays bombarded George Washington's net, holding a significant 28-19 shot advantage throughout the contest.

Senior Brooke Foussadier matched McCaffrey's three-point total, contributing two goals and an assist. Foussadier notched a goal with 16:22 remaining in the contest to cap a 6-1 run for Johns Hopkins.

The Colonials rallied late with a goal from sophomore Nicole Lacey, igniting an equally successful 5-1 run. Five straight face-offs in favor of the Colonials fueled the comeback. George Washington cut the lead to one, bringing the score to 11-10. Junior Alyssa Kildare won a crucial face-off with 56 seconds left to hold off the Colonial's comeback and ensure the victory.

Blue Jays goalkeeper Cosette Larash and Colonials net minder Liz Hoffman notched five saves apiece as Hoffman received the loss.

With the victory, the Blue Jays move to a two-game win streak while simultaneously snapping a streak of the same length by George Washington, dropping to 3-7 on the season.

The Colonials will look to bounce back at home against St. Bonaventure Friday at 4 p.m.

COMEBACK FALLS SHORT

Canisius College made a bit of history Sunday afternoon. The 8-7 victory over Duquesne was its first win against the Dukes in school history. Additionally, Canisius won its fifth-straight contest, tying a school record.

Despite a one-goal deficit at the half and a lengthy scoring drought to start the second, Duquesne was able to pull within a goal of the Griffs at 7-6 with just under three minutes left in regulation. Following a Canisius goal off a draw, the Dukes again pulled within one, this time with just 25 seconds remaining. Megan Oosting came out of the face-off with the ball, allowing the Griffs to run out the clock for their sixth victory of the season.

In his interview with Canisius media relations, Canisius coach Scott Teeter attributed the victory to tight defense and ability to finish off tough looks on offense. Senior goalkeeper Allison Daley held down Canisius on the defensive side of the ball, recording a season-high 15 saves. Daley's strong net presence contributed to the Griff's ability to focus on their attack.

Taylor Gray and Oosting led the scoring for Canisius, notching four points apiece. Gray scored her third hat trick in the young season while Oosting dished out a season-high three assists.

After an 8-10 record last season, the Griffs are off to a strong start this season at 6-3, sitting behind Iona (3-7) as the second best team in the Metro Atlantic Athletic Conference, due to conference play, which Canisius will begin on Sunday. With the loss, Duquesne falls to 6-3, just a game behind UMass (7-2) in overall record.

Matt Strong can be reached at mstrong@student.umass.edu.

UMass seeks rebound in road tilt vs. Harvard

M. LAX from page 1

Cohen led the charge with four goals, while sophomore Ryan Stevens added a hat trick and Gibbons distributed four assists.

The Minutemen have not played since their 8-7 loss to Penn State at home on March 19, suffering the loss in large part due to the tremendous play of freshman goalkeeper Austin Kaut. UMass had plenty of scoring opportunities, rifling 38 shots in the contest, but Kaut accumulated 25 saves.

Cannella does not want his offense to be discouraged after their last outing, but instead, to keep on shooting and stick with what they have done all year long.

"You don't [want to] hammer it too much where the guys go out on the field and all they do is…think about [shooting]," he said. "You'd rather have those guys prepare themselves and feel at ease when they go out on the field so they don't have to think about shooting."

Cannella explained that his team has not done anything different with the extra preparation time, but has worked on trying to get in better scoring position with their shots.

He also believes getting off to a fast start will be key for his team's mindset.

"You just hope the guys can see some success earlier in the game and hopefully roll with it," said Cannella.

UMass dropped a close one in last year's matchup between the two teams on March 13 at Garber Field. The Minutemen trailed 14-9 with less than six minutes remaining in the fourth quarter before stringing together four unanswered goals to cut the deficit to one. It would be too little too late, however, as Harvard held on for the 14-13 victory.

Cohen and Gibbons each netted a pair of goals for the Crimson, while Will Manny, Art Kell and Anthony Biscardi recorded hat tricks.

The game is scheduled to begin at 7 p.m.

Stephen Sellner can be reached at ssellner@student.umass.edu.

Senior Ryan Hanfverk sprints past a defender in a game earlier this year. The midfielder, along with being a co-captain this season, is third on the Minutemen in goals scored with 10 and fourth in points with 14.

Boney moves to 3rd on UM list

TENNIS from page 8

Boney-Hodgson (8-1) and Podlofsky-Carpenter (8-1) won their respective matches.

Dixon decided to shake up the top of the doubles lineups back in late February, pairing Motyl and Swiszcz together, along with Boney and Hodgson. Since the decision, the Minutewomen have been able to continue their impressive spring performance at home, keeping their unbeaten home streak intact, which now stands at 5-0.

In singles, all six points went to UMass, as Motyl (6-3, 6-4), Comas (6-1, 6-0), Boney (7-5, 6-0), Podlofsky (6-1, 6-0), Swiszcz (6-1, 6-0) and Carpenter (6-1, 6-0) all came out with wins.

The Maroon and White will head to the state capital to take on Boston University on Friday, a top-50 program Dixon says that her team has looked forward to playing all season long.

"They're a tough team…but the kids have written down [that one] of their goals [has been] to beat BU," Dixon said. "They feel like they can and I'm right with them."

Scott Cournoyer can be reached at scournoy@student.umass.edu

Senior Candynce Boney moved past Maude Lecluse to third all-time in doubles victories in UMass history with 61.

Minutemen back in action following 10 days off field

CANNELLA from page 8

"I think if you prepare yourself the right way, [then] you put yourself in the right position to succeed early," he said.

Preparing for the first half has been in the mind of the captains and the veterans of the squad, according to Cannella. After the PSU game, both captains and veterans came to the coaches and asked for some changes in practice to help with the lack of success early on in games.

"We take their suggestions and it changes the way we play at practice," said Cannella. "If you're going to do things in games, you need to practice them. By getting off to a better start in practice, maybe that'll help us out on Tuesday."

Tuesday's affair against Harvard will be a true test for the first half offense, as the Crimson ended the first quarter of their past two contests with a 2-1 scoring advantage.

10-DAY REST

Tuesday's game against the Crimson (5-2, 1-1 Ivy League) comes after a 10-day break for the Minutemen, which showed a change in their practice schedule. It is the first and final time UMass will have a 10-day absence from competition this season.

While typically the team practices Monday through Friday, with a game on Saturday, they had a different routine for this week, according to Cannella. However, Cannella said that he wasn't sure if the 10-day break would have effect on his players.

"You see how you have a chance to reflect on some things, we need to work on some things especially with what we're doing," said Cannella. "Focus on some things defensively, some things on offense, getting back to where we were are, but those are the proofs of the pudding."

Minutemen overcome early-game problems

By Herb Scribner
Collegian Staff

When the Massachusetts men's lacrosse team fell to Penn State last Saturday, it was in a game that featured a hard-nosed effort by the Minutemen to hold off the Nittany Lions for the majority of the game.

The defense felt absent however, as PSU scored three early goals in the first quarter, a run that hurt UMass (5-2, 0-1 Colonial Athletic Association) later on in the game as it tried to mount a comeback.

This has been a continuing issue for the Minutemen in 2011, as they haven't had the best of luck opening games against their opponents. Through its first seven games, UMass has been outscored in the first quarter, 17-15, while leading or being tied with opponents in all the other quarters.

"That's certainly an issue," said UMass coach Greg Cannella. "I think maybe our guys are playing tentative early in the game and maybe they need something to get them in the game. I don't know what it is, you know, a big hit, a big groundball, an early goal; whatever it is, they need a spark."

UMass couldn't get it done in the first half against Penn State in general, as it was outscored, 4-2, by the intermission, despite its 18 shots aimed at the Nittany Lions.

The Minutemen responded right out of the halftime break with a 3-1 advantage in the third. This is right on par with a tendency UMass has this season in scoring second half goals, as the team outscores its opponents, 25-7, in the third quarter.

Cannella said that he doesn't try to change much of the mentality during the halftime break and that it's really the players that decide to shift the focus.

"Maybe it's just 'enough is enough' kind of a thing and 'let's do this,'" said Cannella. "Or maybe we need to settle down or turn it up."

Cannella attributed the improved play in the second half to the increased focus of the players following intermission.

See CANNELLA on page 6

MAXWELL SPARO/COLLEGIAN

Junior Anthony Biscardi takes a shot in a game earlier this season. The midfielder is tied for first on UMass with Art Kell with 12 goals, despite not starting in one of the seven games this year.

UM's Kaitlyn Carpenter and Jessica Podlofsky teamed up to defeat St. Bonaventure's Manuela Marin-Salcedo and Riley Archer, 8-1, at No. 3 doubles.

Minutewomen claim wins in back-to-back contests

By Scott Cournoyer
Collegian Staff

With three matches against Atlantic 10 opponents now in the books, it's safe to say that the University of Massachusetts tennis team, if not the perennial favorite to win this year's conference crown, is a serious threat among the pool of contenders to claim the top spot.

The Minutewomen (11-8, 3-0 A-10) are now on a three-match winning streak, defeating St. Bonaventure and Fairfield on back-to-back days over the weekend.

"I think we're just getting better and better," UMass coach Judy Dixon said after the match against Fairfield on Sunday. "And the best thing is that I know that we're getting better as we go and we're looking forward to the A-10s like crazy."

UMass was able to take a combined 13 out of 14 possible points over both matches, including six against the Stags (4-6).

A point of emphasis by Dixon all season long since the start has been to have a consistently strong outing in doubles play match in and match out. Since returning home from their Florida trip nearly two weeks ago, UMass has cruised in doubles, including on Sunday when the pairings of Yuliana Motyl and Chantal Swiszcz (8-2), Candynce Boney and Tanisha Hodgson (8-1) and Jessica Podlofsky and Kaitlyn Carpenter (8-1) all claimed victory.

"I think the team is doing really well," said Swiszcz after the match. "We [have] a really good chance at winning the A-10s, so if we keep up how we're playing, I think we've got it."

Boney, a senior out of Las Vegas, Nev., moved up the ladder in the record books with her play over the weekend. With victories in both singles and doubles Sunday, Boney moved into fourth place all-time in the program's history, passing former UMass star Maude Lecluyse with 61 doubles wins. Boney also moved herself into a tie for fourth place all-time with Susan Hyams in singles victories.

Among the other winners in singles were Julia Comas (6-0, 6-0), Podlofsky (6-0, 6-1), Swiszcz (6-0, 6-3) and Carpenter (6-1, 6-1). The lone winner for Fairfield came in the No. 1 singles match when Sharissa Ryan defeated Motyl, 6-3, 6-3 in straight sets.

UM defeats Bonnies

Prior to the match against Fairfield, the Minutewomen took on St. Bonaventure Saturday, shutting out the A-10 opponent, 7-0.

UMass was able to claim victory in doubles play, as Motyl-Swiszcz (8-0),

See TENNIS on page 6

Following tough loss, Pride defeat Red Storm, Dragons

By Ben Lambert
Collegian Staff

Showing the fortitude necessary to carry it through the long season, No. 8 Hofstra defeated Saint John's, 8-5, on March 22 and rushed past Drexel, 11-6, on March 26.

It would have been easy for the Pride to wallow in self-pity after their 7-6 loss to the Delaware on March 19.

Hofstra entered the game ranked fourth in the nation, and had run through their non-conference schedule with a 5-0 record, but the scrappy Blue Hens knocked them off the top spot.

However, thanks to a strong team effort, the Pride quickly righted the ship. First, Jay Card, Jamie Lincoln and Stephen Bentz combined to rack up five goals and six assists to help push the team over St. John's, raising their unbeaten streak in non-conference play to six games.

Then, sophomore Ian Braddish earned a team-high three points on two assists and a goal to lead Hofstra over Drexel. He wasn't alone as the Dragons' net was peppered from all angles, as Lincoln, Card, sophomore Aaron Jones and freshman Torin Varn earned two goals apiece.

Junior goaltender Andrew Gvozden played well in both games, racking up 11 and six saves in each game, respectively.

Delaware survives scare

Delaware, returning to the field for the first time since their upset victory over Hofstra, brought down by Towson, 8-7.

Eric Smith and Sean Finegan each had two goals apiece to lead Delaware. Grant Kaleikau, the dominant player in last week's upset victory over Hofstra, added a goal and two assists as well.

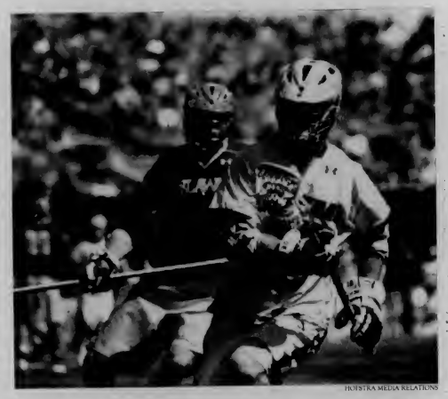
For the Tigers, Pat Britton, Matt Hughes and Tim Stratton each scored a pair of goals, and Carl Iacona added one of his own.

This contest was but the latest in a string of tough games between these two teams. None of the last eight games between these teams have been decided by more than three goals, and three of the last 20 have had called with more than a four-goal margin.

In last year's edition of the league's penultimate game, Delaware earned a hard-fought 12-9 victory in Towson's home Johnny Unitas Stadium.

With the win, Delaware currently holds a conference record of 2-0, and 6-3 overall. Towson, on the other hand, falls to 0-1 in CAA play and 2-5 overall.

Ben Lambert can be reached at wlambert@student.umass.edu.



HOFSTRA MEDIA RELATIONS

Hofstra topped Saint John's and Drexel, 8–5 and 11–6, respectively, in its last two games. Goalkeeper Andrew Gvozden made 17 total saves in the two victories for the Pride.

JEFF BERNSTEIN/COLLEGIAN

After going 5–1 in its last six contests, UMass heads to Worcester to take on Holy Cross tonight. So far this season, the Minutemen have played all of their games on the road or on neutral turf.

UM hot on the road

UMass carries strong play into Holy Cross

By David Martin
Collegian Staff

Coming strong off of a 2-1 weekend series against George Washington, the Massachusetts baseball team looks to continue its winning trends in Worcester against Holy Cross on Tuesday afternoon.

The Minutemen (6-9, 2-1 Atlantic 10) have a lot of momentum going into the matchup against the Crusaders (10-10-1).

UMass has gone 5-1 in its recent six-game stretch, in which it has outscored its opponents by a combined score of 45-30.

Holy Cross, on the other hand, is 3-2-1 in its last six games, despite being outscored by a combined 27-16 by opposing teams. The Crusaders' lone tie, a 16-inning bout on the road against Connecticut, ended at 2-2 and started off the stretch.

The Maroon and White have been highlighted by effective pitching, strong fielding and timely hitting. Without having played a single game on their home field yet, the all-around solid team play has been critical to their success.

All 15 of the Minutemen's games this season have either been away or on neutral turf. UMass holds a 2-3 record when playing away as compared to a 4-6 record in neutral contests. The Minutemen's first home game of the year does not come until April 6 against Connecticut, a long 21 games deep into the season.

Comparatively, Holy Cross boasts a 3-1 home record and a 4-0 neutral record this year, while owning a bleak 4-9-1 road record.

Nevertheless, the Crusaders will certainly prove to be a tough opponent as the Minutemen look to promote the trend of improving their spot in the A-10 standings.

David Martin can be reached at dmmartin@student.umass.edu.

UMPD blood drive nearly quadruples avg. pint intake

AMANDA PANOS/COLLEGIAN

A University of Massachusetts student lays flat-backed and grimaces slightly as an American Red Cross worker adjusts the bag holding a pint of the student's blood. Held in the Campus Center, the UMass Police Department sponsored blood drive raised nearly 200 pints of blood.

Nearly 200 pints of blood were netted yesterday at a drive sponsored by the University of Massachusetts Police Department.

"That's a really good day," said Nancy Russ, the recruitment manager for the Pioneer Valley Chapter of the American Red Cross, which helped to organize the event.

An average drive, Russ said, usually draws in about 40-to-45 pints of blood.

The event, which was put on by the community outreach branch of the UMPD, strived to try to help combat blood shortages.

"There's a shortage" of blood, said Officer James Roberts of the UMPD outreach branch.

Roberts added that yesterday's drive was the second such annual event put on by the department.

"It beat the other one," he said, noting that the department put on another drive last September, and will do the same this year.

Additionally, Roberts said, the drive and other UMPD outreach efforts help to show students that the police staff focuses on other ventures than just ordering arrests or issuing citations.

"The chief is gung-ho for this type of activity," Roberts said, noting that events akin to yesterday's reassure the campus community that members of the police department are approachable for a variety of reasons.

While yesterday's blood-intake goal was set at 250 pints, Russ said the 200 mark was still exemplary. She added that the Red Cross is always in need of blood donations.

"There's always a need for blood," Russ said, noting that just in New England, the Red Cross needs to take in 2,000-to-3,000 pints of blood per day to keep up with demand.

Additionally, she said, college students tend to be generous when it comes to donating blood.

"They are very enthusiastic," Russ said. "UMass is one ... of the best sponsors we have."

Anyone interested in participating in other area blood drives, Russ said, can find a complete listing of them on the Red Cross's website, www.RedCross.org.

An incumbent wins, while another falls

The majority of voters in Amherst yesterday chose to keep one incumbent, while they narrowly chose not to re-elect the other incumbent in the town's two contested town-wide races.

According to election results provided by Town Clerk Sandra Burgess last night, incumbent Amherst Redevelopment Authority member Aaron Hayden managed to fend off a challenge from Vincent O'Connor for a seat on that board, netting 880 votes to O'Connor's 509.

However, in the race for two seats on the town's Jones Library Board of Trustees, Michael Wolff managed to edge out incumbent Patricia Holland, picking up 665 votes to Holland's 660. Incumbent Christopher Holland also retained his seat on that board, garnering 832 votes.

In the other uncontested town-wide races, incumbents Stephanie O'Keeffe and Diana Stein were both re-elected to three-year terms on the Select Board, picking up 1,090 and 1,066 votes, respectively.

Katherine Appy was elected to a three-year term on the School Committee, after garnering 1,133 votes.

Judy Brooks picked up 1,021 votes, launching her to a five-year term on the town's Housing Authority.

Additionally, Harrison Gregg was elected to a one-year term as town moderator, while John Coull was voted to serve as the town's elector of the Oliver Smith will, with 1,137 and 1,017 votes, respectively.

Voters in each of the town's 10 precincts yesterday also determined who will serve as their representatives at Town Meetings.

Voters in Amherst yesterday chose to reelect one incumbent, while they narrowly chose not reelect the other incumbent in the town's two races.

Amherst police dept. ups patrolling efforts

By Thomas Barnes
Collegian Staff

The University of Massachusetts Police Department and the Amherst Police Department will be adopting a two-pronged approach to curb dangerous drinking occurrences and noisy disorderly partying.

Both law enforcement agencies will be educating students about the Town of Amherst's noise and alcohol violation bylaws, as well as making students aware of efforts to increase area patrolling.

According to the Daily Hampshire Gazette's article by Scott Merzbach published on March 26, "beginning this past Friday night and extending into May ... additional Amherst police officers will be deployed for weekend shifts." A release sent by the APD stated that "increased staffing and enforcement is to properly address and deter destructive behavior that is so problematic in the later part of spring."

UMPD and APD have dubbed this effort the "Increase in Education and Enforcement Initiative," and both groups hope to see that this initiative reduces the numbers of violations through educational efforts while better enforcing consequences for destructive behavior.

According to a release, Amherst Police Sector Officers will not only be distributing flyers outlining the town's noise and alcohol bylaws, but also will be going door-to-door in off-campus housing areas to speak with students in-person about these laws. The release also stated that UMPD's Community Policing Unit will be "engaging students to discuss expected behavior, both on and off campus."

"Personally, I am against the new noise complaint law, I feel like it's a way for the city and town to make more money off of students," said Rich Carvill, Southwest resident assistant and UMass communications major. "However, I do appreciate that the police is actually making the public aware about the noise violation code.

"Before, what I felt the police were doing is enforcing this law that not many people were aware of – something pretty unfair," continued Carvill. "I'm glad that they are doing it,

UMPD, APD reach out to students

Ashley Lenehan / Collegian

The UMass Police Department, housed in Dickinson Hall, located in the center of campus, will be partnering with the Amherst Police Department to educate students on the town's alcohol and noise bylaws.

UMPD from page 1

but I feel like they're doing it too late."

According to the release, instances of open alcohol container violations have decreased from Sept. to March in 2010, compared to levels from Sept. to March in 2009 by 16 percent. This could be attributed to the presence of fines making students more reluctant to get caught in violation. However, the release also said police find it "concerning" that during the same time periods, there has been a 35 percent increase in noise complaints from Amherst community members. Surrounded by the homes of Amherst community members, off-campus housing is often the subject of noise complaints, and therefore, one of the prime areas police are concerned with speaking to students within.

"I do not feel that this new initiative will have an immediate impact," said Carvill. "But maybe in the long run it could make a difference."

"As far as on-campus patrolling goes, police only can come into dorm hallways if they are called for a particular purpose, so going dorm-to-dorm isn't an option as going door-to-door off-campus is," continued Carvill. "It really is going to be in the position of RAs to help keep alcohol and noise violations within the dorms down, but those don't fall under troubles with the town's bylaws."

As reported in the Gazette, "since Sept. 1, the town has collected $33,135 in fines related to violations of the noise, nuisance house, keg and open-container violations."

Alyssa Creamer contributed to this article. Thomas Barnes can be reached at tbarnes@student.umass.edu.

Student confesses to JQA rape

The University of Massachusetts Police Department has made an arrest in connection with the alleged rape that occurred Friday, March 11 in John Quincy Adams, a high-rise residential dormitory in Southwest.

UMPD Deputy Chief of Police Patrick Archbald confirmed in a phone interview that Victor Rodriguez, 21, of 116 Woodycrest Avenue, Southbridge, Mass., was arrested on charges of rape and breaking and entering into a building during the nighttime to commit a felony the same day of the crime. Rodriguez is a full-time student at UMass who was residing in JQA at the time of the rape.

Mid-Friday morning, the UMass community received emergency texts and emails stating that a sexual assault had occurred on campus and detectives were looking for the perpetrator. Based on witness testimony, officers were able to develop a profile of the suspect — the description listed the perpetrator as being male, Hispanic or "partially black," about 5-feet, 6-inches tall, with thick, curly black hair tied back in a ponytail, and wearing gym clothes and a headband.

"Based on that description, we started to get a number of responses back via text and email from people who thought they might know who the suspect was," said Archbald.

Rodriguez began to emerge as a suspect as a result of the investigation into these tips. Detectives met with him for a "one-on-one interview," which culminated in his confession to the crime. Subsequently, Rodriguez was arrested for the rape and breaking and entering charges and transported to the Hampshire County House of Corrections, where he spent the weekend. Bail was set at $50,000, and he was indicted the following Monday morning. He has since been trespassed from University property.

— *Collegian News Staff*

Victor Rodriguez was identified as the suspect in an alleged sexual assault in JQA after emergency e-mails and text messages alerted the campus.

UCLA student drops out, received threats

By Larry Gordon & Rick Rojas
Los Angeles Times

LOS ANGELES — UCLA announced Friday that it would not discipline or further investigate the student who released a controversial online video in which she complained about Asian students' behavior and mimicked an Asian language.

But later in the day, the student, Alexandra Wallace, announced that she was withdrawing from the University of California, Los Angeles because of death threats and because she had been "ostracized from an entire community." In a statement released to the Daily Bruin, UCLA's student newspaper, she apologized for offending Asians and called the video a mistake.

Wallace's three-minute video had triggered a national discussion about racial stereotyping and what authority, if any, colleges have over students' speech and opinions.

Before the young woman's withdrawal statement, free-speech experts had praised UCLA's decision not to discipline her and said other universities increasingly face such incidents in the Internet age.

Administrators' decision to drop the probe came with a scolding for Wallace. "While we were appalled and offended by the sentiments expressed in the video, we have uncovered no facts to lead us to believe the student code of conduct was violated," UCLA spokesman Phil Hampton said.

UCLA's conduct code prohibits students from making threats and bans racial or sexual harassment so severe or pervasive that it impairs another's participation in campus life. The video by Wallace, a third-year political science major, did not do that, Hampton said. He declined to comment on her withdrawal.

In her video, posted a few days after the Japanese earthquake, she complained about "hordes" of Asians enrolling at UCLA and said they had interrupted her library studies with cell phone calls about the tragedy in Japan.

Wallace could not be reached for an interview Friday. In her statement to the Bruin, she expressed deep regret. "Especially in the wake of the ongoing disaster in Japan, I would do anything to take back my insensitive words. I could write apology letters all day and night, but I know they wouldn't erase the video from your memory, nor would they act to reverse my inappropriate action."

Hampton said UCLA police were investigating the threats against Wallace and that she had been given a secure way to take her final exams this week.

Adam Kissel of the Foundation for Individual Rights in Education, a free speech group, said UCLA had the right to open an investigation but should have dropped it more quickly. "What UCLA probably should have done is take three minutes to watch the video and take another other three minutes to conclude the speech was protected," he said.

Students always have said nasty things about each other but the Internet now allows everyone to see that, Kissel noted. So "out of misplaced desire to protect students from perhaps crass conversation," schools are overreacting and violating free speech, he said.

UCLA law professor and First Amendment expert Eugene Volokh said the campus was wise to back off. "This woman expressed her opinion, an offensive opinion to be sure," but did not advocate violence or harass anyone, he said.

Earlier, several students said they were disappointed the campus did not plan to take action against Wallace.

Layhannara Tep, a Cambodian American who is director of the Asian Pacific Coalition student group, said Wallace should have been asked to take an ethnic studies or history class that would expose her to other cultures. Tep and others criticized UCLA for not requiring all students to take at least one such class.

Two other Los Angeles area universities have grappled recently with similar issues.

At California State, Long Beach, a student newspaper article ridiculed a recent American-Indian cultural festival. Campus president F. King Alexander said Thursday that the writer's opinion, while allowed under free speech, does not have university support.

At the University of Southern California, a crude Internet message advising young men how to take advantage of women has circulated among fraternities and beyond, triggering outrage. The message originated outside USC, but the university's chapter of Kappa Sigma, the fraternity to which it was sent, has been suspended during an investigation, officials said Friday.

Feeling old over Facebook

Nick Bush

I can remember the moment I first felt old. It came this past holiday season, as I was home visiting my mother.

"You should call your cousin," she said. "He gave me his cell number. It's his birthday, and I'm sure he'd love it if you to sent him a text, or post on his Facebook wall."

The last time I had seen my cousin – before his family moved to another part of the country seven years ago – he was 5-years-old. I would occasionally travel across town to babysit him, and we would play wiffle ball in his yard and watch SpongeBob SquarePants. The idea that this rambunctious little tyke now had a cell phone – let alone a Facebook page – blew my mind, and made me feel for the first time that I was no longer part of America's youngest generation, whom are now being shaped by the ever-advancing technology of our interconnected world.

An integral part of any childhood is stress-free time, which should logically include independence from the demanding needs of our modern era.

Kids are acquiring cell phones and other technology, and the pressures that follow, at an earlier age than ever before. While not necessarily healthy for children, this is certainly good news for phone companies, who surely dream of a day when every baby says their first words to Mommy and Daddy via an iPhone given to them at birth. Phone manufacturer Firefly Mobile has even introduced a line of phones specifically designed for young children, although the company offers still parents a number of controls not found on standard phones.

I didn't have a cell phone until the age of 15. I can imagine that owning one a few years earlier would have had a big effect on my development, one way or another. I spent the majority of my summer as a 12-year-old at my grandparents' house. I did a lot of reading, with a large chunk of time also devoted to cloud watching while my grandfather gardened in the backyard.

I found a four-leaf clover or two, but not without hours of diligent searching. My grandparents' house had a single, cobwebbed rotary phone, which was nestled in a china cabinet, next to a candy bowl. At the time, 56k dial-up Internet was still a growing trend, and Facebook was just a glimmer in Mark Zuckerberg's eye.

In my opinion, the freedom of this summer would have been destroyed by technology. An integral part of any childhood is stress-free time, which should logically include independence from the demanding needs of our modern era. Being connected to the entire world at all hours means sacrificing a great deal of your attention and energy. Thrusting a child into this mess is only going to add external anxiety during a very formative period.

I'll admit that, as an only child, I may personally be prone to introversion. However, I feel strongly that all children need free time to truly develop their imaginations and personal identities.

Like every child of the 90s, I watched a good deal of television, which certainly offers its own range of negative effects.

However, I think the constant distractions of Facebook and cell phones may be worse, in part because they require continuous attention. How can you be free to stare at the clouds when you are staring all day at your phone?

Anthropologist and digital philosopher Amber Case believes that humans have been drastically changed by the amount of time we spend looking at computer screens and using cell phones.

She also seems to be troubled by the effect modern technology could have on today's generation of kids.

"Now what we are looking at is an extension of the mental self," said Case in a December speech at the TEDWomen conference in Washington, D.C. "You have a second [connected] self, and you suddenly have to maintain this second self. The same way that you wake up, shower and get dressed, you have to learn to do this for your digital self. The problem is that a lot of adolescents have to go through two adolescences – they have to go through their primary one that's already awkward, and then they have to go through their second self's adolescence, and that's even more awkward because there is a history of everything they do online."

Case agrees that growing up in our digitally interwoven world could destroy more than just kids' attention spans – it could even destroy their senses of self.

"What I'm really worried about is that kids aren't taking time for mental reflection anymore; they're not just sitting there," said Case.

"When you have no external input is the time when there is a creation of self, when you can do your long-term planning, when you can figure out who you really are."

While my cousin and his new generation of connected kids may struggle to know themselves or pay attention in class, they will certainly be well-versed in making friends quickly and impersonally.

There will never be a shortage of people for him to talk to – even if they don't know what they want to talk about. Old geezers like me will just have to get used to it. I'm sure that my cousin will never find as many four-leaf clovers as I did that summer. With so many digital obligations, how could he find the time?

Nick Bush is a Collegian columnist. He can be reached at editor@dailycollegian.com.

Earth Hour not worth the power

Harrison Searles

For one hour last Saturday, March 26, from 8:30 p.m. to 9:30 p.m., buildings across the world went dark as individuals across the world celebrated Earth Hour in order to raise awareness of climate change.

Whether it was the India Gate in New Delhi, the Sydney Opera House or the Coliseum in Rome, lights everywhere were extinguished as the clock struck 8:30 p.m.

Organized by the World Wildlife Fund, Earth Hour is a way for all to supposedly vote for greater attention given to global climate change by having a noticeable effect on the night sky and therefore inspiring others to contemplate one man's effect upon the environment.

However, beneath the veneer of respectability that environmentalist causes have gained over the years, the entire campaign of Earth Hour is one that cannot be reconciled with a modern civilization. It is simply impossible for one to tacitly imply that the technology and wealth that are the defining features of that society are somehow an aberration, whose suppression, if just for a passing hour, is somehow laudable, only to return at 9:30 as a part of enjoyable every day life. At its ideological core, Earth Hour is torn between the preference of what technology makes possible and the Luddite belief that technology is evil in that it destroys the environment.

Of course, the vast majority of those who participated in Earth Hour would not agree that their aim can be compared to the Luddite peasants who roamed the countryside, looking to smash the machines that threatened their ancestral way of life. Such advocates would claim that it is not aimed against the use of power per se, but rather as an act of symbolism. The point of the hour, they would claim, is not a protest against electricity and other such technology.

Rather, it's their unsustainability.

Accordingly, what they are protesting is not the existence of light bulbs or televisions but the fact that they are powered by nonrenewable sources of energy like coal or oil and that they have been used without thought to the consequences upon the modern world.

Nevertheless, when pushed to stark conclusions, this argument unravels.

This is due to the tacit assumption hidden deep within Earth Hour's program. The choice to turn off the lights for an hour, as the means of protest are not as arbitrary choice as, say, wearing a certain color for a certain day. Instead, turning off the lights is chosen because of the environmental effects that modern civilization has had on the planet. As a result of this, Earth Hour implies, especially in how they have advertised the event, that there is something virtuous about renouncing light, electricity and the many goods that we have taken for granted in modern civilization. This, however, raises one question: If it is virtuous to forsake these goods for one hour, then isn't there something immoral about them that makes this a virtuous act?

The point of the hour, they would claim, is not a protest against electricity and other such technology but rather their unsustainability.

Here is where the environmentalist agenda of the Earth Hour can be revealed for what it really is beneath the mask: an attack on modern civilization and the living standards of modernity.

Organizations like the World Wildlife Fund, which sponsors Earth Hour, have launched against such issues as the use of fossil fuels. They simply cannot be reconciled with modern civilization. The two are contradictory because it is impossible to cut out the pounding heart of the Industrial Revolution and expect its fruit, the dramatically improved living-standards that individuals now enjoy, to still blossom.

On the contrary, if one were to abolish the burning of fossil fuels, man would not only return to the grinding poverty that has accentuated his entire existence, but this would also result in the most stark mass extinction of human life, whose existence made possible only by the production-possibilities of capitalism.

Of course, there is a vast gulf between turning off one's lights and advocating the termination of all carbon-based energy and the subsequent dissolution of modern society.

However, there is certainly a contradiction in the actions of an individual who turns off his lights at 10:30 p.m., but then turns them back on again at 11:30 p.m. It is easy to take an hour off from the goods that help define our high standard of living. Earth Hour even encourages the naïve view that giving up fossil fuels could be easy and even fun, seeing as how Earth Hour is often spent stargazing or at a restaurant offering candlelight-only dinners.

Even during Earth Hour, if there was a human need that dictated the use of electricity, one does not see the World Wildlife Fund encouraging hospitals to join in their protests.

Then, the façade is dropped and the lights are turned back on. The participant in Earth Hour is safe knowing that if a real threat to him were to occur then he could drop the act, recognize how much he actually wants what the use of fossil fuels in history has made possible and return to addressing reality rather than playing in the land of make-believe.

As Ayn Rand once wisely said, "You can avoid reality but you cannot avoid the consequences of avoiding reality." Earth Hour, like many other environmentalist programs, enjoys the position of being able to avoid the realities that challenge human society without having to inflict their consequences upon it.

They exist in a world that enjoys the very fruits of that which they protest and, since their policies have never been taken up in full, no one has had to suffer from the fact that they deny the fact that fossil fuels mean life to millions, if not billions, of individuals across the world. Even though it may be just a symbol, Earth Hour is an apt symbol for its representation as the lights of cities go out. It represents that fact that its tenets, once put into action without internal contradiction, would extinguish the lights that are very much the symbol of this civilization – the product of over 100 years of human achievement and genius.

However, this time, the lights would not just be out for a single hour nor would there be the ability to turn them back on once needed.

Harrison Searles is a Collegian columnist. He can be reached at hsearles@student.umass.edu.

Five Reasons Why they're charging for Spring Concert this year

1) Those pizzas ordered after the Bob Dylan concert still need to be paid for.

2) They want to test the idea that it's called "freestyle" because no one will pay for it.

3) You can't have students interfering with the die-hard 3OH!3 fans.

4) It was all a mistake–there's an Amherst, CO, too.

5) Three performers plus a student band make for very few people to billett.

Ed/Op

Job hunting

Matthew M. Robare

I remember that there used to be such a thing as "senioritis." It was a malady affecting graduating seniors in high schools and colleges across the country, leading them to barely be able to complete their work.

Like many diseases of the world, I have never caught senioritis. I did have bronchitis the winter of my junior year, but that actually allowed me to get more work done because the professor barred me from the classroom.

Senior year has always been the time I've been most overworked. I have one class right now, a four-credit Judaic Studies general education class that meets twice weekly on Tuesday and Thursday afternoons.

My own job hunt hasn't been going too well. They're elusive creatures, as they must be wooed and stalked as much as hunted. Luck is also an important part of it, some of my friends had successful hunts very early on while others have made hundreds of attempts since the fall without catching a single whisker.

Tracking jobs has gotten easier than it was in the past. When I was younger the usual signs were "Help Wanted" signs. They might not necessarily have alerted one to the nature of the job, but they certainly let you know that they were there. Some jobs still leave these sorts of signs.

Classified ads were also useful; trackers who knew the nature and location of some jobs put notices about them in the newspaper to alert hunters.

Many feral jobs are found today in large cities where gentrification and anti-sprawl policies are encouraging people to return to inner cities to hunt them.

Unfortunately, despite my theoretically free schedule, I never have any time to do the homework assigned for the class.

You see, the sad truth about being a graduating senior from the University of Massachusetts, or any other institution of higher learning, is that this last year in the relatively safe cocoon of ivory towers and academia must be given over to the last trace of our primitive ancestors' roots on the savannah of what would one day be called Kenya: the Job Hunt.

Back then there were only two jobs: hunter and gatherer. Both were on the subsistence level and, despite automatically receiving a position upon reaching adulthood, there were no benefits whatsoever, since doctors hadn't been invented and Florida had yet to be discovered. Thus, there was no health care and no retirement.

Hunting in those days meant separating a large game animal from the herd and driving it, or sometimes the entire herd, over a convenient cliff. Some peoples hunted this way right up until the time they first got hold of firearms.

Thanks to selective breeding and evolution, domesticated jobs have developed into a huge number of varieties. There are even still some wild jobs in some parts of the world. Here in the United States most of the jobs that we call "wild" are actually feral. Feral jobs escaped from domestication during economic recessions and learned to survive without human assistance. Many feral jobs can be found today in large cities, where gentrification and anti-sprawl policies are encouraging people to return to inner cities to hunt them.

These days those sorts of signs are left on sites like Craigslist, but the trackers are more coy – some notices won't even say the name of the business at which the job has made its territory.

Since I'm a journalist, I've been looking mostly for feral jobs. There aren't very many domesticated ones for reporters. Some big news organizations, like the major daily newspapers, the national magazines and television news networks have domesticated jobs, but very few recent graduates get those kinds of opportunities.

The most important tools for capturing feral jobs are the resume and the cover letter. I've written a lot of different versions of each and I'm proud to say that my resume looks fairly decent now; it should make good bait if I find fresh job signs soon. I used to fret over my resume; it never looked good enough until recently. Writing a good cover letter has always been a hellish experience for me. It takes patience and creativity in the right amounts to make a good one, or else it won't be strong enough to hold a job when it does go for the resume.

As frustrating as it is, I remain vigilant and hopeful. My ancestors have always been able to catch jobs and with more patience and a little luck, I know I can too. Maybe I need to expand my hunting area, or maybe I need to herd a bunch over a cliff.

Sssssh! Hold still – I think there's one behind you. It's a real beauty, too.

Panda Bear dishes out new singles

By Chris Gross
Collegian Correspondent

"Tomboy," the upcoming record release from Panda Bear (due out April 19) has been generating quite the buzz in the indie music scene.

Ever since Panda Bear released his 2007 album, the critically worshiped "Person Pitch," fans have been waiting in anticipation of what was coming next. Thanks to Animal Collective's widely praised and commercially successful 2009 release "Merriweather Post Pavilion," there have been more fans than ever. As Panda Bear was the lead vocalist on two of the three singles preceding "Merriweather" ("My Girls" and "Brother Sport") it's no wonder why fans have such high expectations for "Tomboy."

Panda's approach to releasing and promoting "Tomboy" is similar to the one he took with "Person Pitch." He released the first half of the record over time by releasing four singles prior to the album's release. Since the album releases in only a few weeks, the singles have all been released at this point. So far there have been singles released for the songs "Tomboy," "You Can Count on Me," "Last Night at the Jetty" and "Surfer's Hymn," all with B-sides.

The "Tomboy" single is split with the B-side "Slow Motion." The vocals are clearly the most prominent layer in all of the songs. On the song "Tomboy," Panda Bear shrieks lyrics such as "take my life" and "no matter what it takes take my life so high keep my life alive" that are immediately catchy. When the delayed harmonizing vocals aren't there, "Tomboy" is all about the distorted guitar riding the beat that's broken up with whip cracks and samples of vomiting. "Slow Motion" is a much more beat-focused affair. A loop reminiscent of something you might hear on a J Dilla album is dropped throughout the entire track, giving the song a vibe that ends up being a mixture of chill and serious.

"You Can Count on Me" might be the strongest of the singles. The beat is more triumphant than that of the others. I think "We Will Rock You" by Queen. Judging from the album cover, which depicts an infant sitting on a man's shoulders, this song could be referring to Panda's son, who was born around a year ago. In contrast to the somberness of "You Can Count on Me," the B-side "Alsatian Dam" is a complete banger. The song bursts into its beat almost immediately with the guitars backing the powerful melody sung by Panda Bear. The beat progresses and evolves over time, as do the catchy lyrics. The song closes with the lines "Say can't I make a bad mistake, say what it is I want to say to you, say what?" over and over and over. If you can hear this song just one time you might hear yourself beginning to sing along in a similar way to how you did with the refrain "I don't mean to seem like I care about material things" from "My Girls."

The third single, "Last Night at the Jetty," is comprised of the title track and B-side "Drone." "Jetty" kicks in with a pounding beat that, depending on your speaker quality, sounds either like cannons going off or someone dribbling a basketball in an empty stadium. There are super-phased out guitars and handclaps on every fourth beat. The song breaks in the middle for some epic bass sampling over Panda's harmonized, looping vocals. "Drone," on the other hand, is a slow song without any beat. There is also a synth that is held throughout the track and only changes one tone at a time in conjunction with Panda's singing.

"Surfer's Hymn" is the most recent single to be released. The single is divided between the title track and a remix by electro musician Actress. "Surfer's Hymn" is probably the most familiar-sounding track in Panda's catalog. The synths sound similar to the one's found on "Merriweather Post Pavilion" and the song itself has much more of a "Person Pitch" vibe than any of the other songs. There aren't any guitars, but the beat is in full force from the start. The B-side remix is nice, but cuts out very early.

While it is nice to hear new songs from anything Animal Collective-related, it is a little strange that these songs don't feel quite up to par. The lyrics seem to be the most important factor in every track, yet they are muddled by effects. In nearly every track, something feels like it is missing in one way or another.

Perhaps Panda Bear has felt this as well, for when "Tomboy" is released these tracks will sound completely different. Sonic Boom of the band Spacemen 3, and the producer of last year's MGMT sleeper hit "Congratulations" has taken the role of not only producing but also doing additional recording for Panda's songs. In a few weeks we'll get to see if those gaps are filled.

Chris Gross can be reached at cgross@student.umass.edu

Panda Bear, seen here in a relatively old picture, will be releasing his latest album "Tomboy" soon. Music fans would be well-advised to pick up the singles he has been releasing in anticipation of it.

Peggy Shaw's show a 'MUST' to attend

Peggy Shaw's original one-woman play "MUST the inside story" will be playing this April 5 and 6 in Bartlett 65.

By Alissa Mesibov
Collegian Staff

On April 5 and 6, internationally acclaimed performance artist Peggy Shaw is coming to the University of Massachusetts to perform her one-woman play, "MUST the inside story."

This autobiographical piece explores Shaw's medical experiences, which includes giving birth to a child en route to the Woodstock Music and Art Fair, seeing her mother undergo electric shock therapy, living with loss and eventually becoming who she is today: a 65-year-old lesbian grandmother and a driving force behind current lesbian and feminist theater, according to the Five College Performance Studies' website.

The play is described as "a journey across the landscape of her [Shaw's] own body," by the same website. Shaw draws from multiple classics, featuring imagery from "Gulliver's Travels," "Hildegarde von Bingen." and "The Elephant Man."

Shaw is a co-founder of both the WOW Cafe Theatre and the Split Britches Theatre Company. She has starred in three other solo pieces, all of which focus on the subject of masculinity. Shaw is a three-time Village Voice OBIE Award winner.

This performance is one of four collaborations between Shaw and the Clod Performing Ensemble out of the United Kingdom. The piece is co-written by Shaw and the Clod Ensemble's co-founder and artistic director, Suzy Willson. "MUST" is part of the Clod Ensemble's Performing Medicine project.

"MUST" received rave reviews from The London Guardian, Time Out Magazine, the Edinburgh Festival Magazine and The Times of London, which wrote that "MUST" is "truculent and funny, swaggering and sensitive. [Shaw is] extraordinary."

It is presented as an after-festival event (the Edinburgh International Theatre Festival) and is sponsored by the UMass Arts Council, the UMass English department, the Amherst English department, as well as several other Five College area programs. Shaw is one of two festival performers to visit the Five Colleges this school year, following Cynthia Hopkins' October performance at Amherst College.

The UMass English and Theater departments reunite in August for their annual Edinburgh Fringe Festival course. This is open to any college student, not just UMass. The students spend approximately two weeks in Scotland for the world's largest and oldest theater festival. For more information, visit 2000plays.com.

"MUST the inside story" will play in Bartlett 65 on April 5 and 6 at 8 p.m. Tickets are $5 and can be purchased by phone at (413) 545-2511 or by visiting the UMass Fine Arts Center box office.

Alissa Mesibov can be reached at amesibov@student.umass.edu

Building a case for the best of 'Yes'terday's prog rock

Bringing listeners back to the 'Genesis' of the complex genre

By Mark Schiffer
Collegian Staff

Several years ago, the Danish indie-rock band Mew instigated a small progressive-rock revival, which, for a brief period of time, managed to unify both well-rounded fans of music with devotees of virtuoso-oriented bands like The Mars Volta.

The unfortunate fading of this trend has led to current music fans lumping together what is actually a solid amount of well-written and well-composed music with bands like Rush.

As a genre, progressive rock was one of the many reasons punk came into existence. The excesses – and yes, even the best stuff had excesses – had to come undone. Which was all well and good. But at the end of the day, it's difficult to deny that. For example, in their prime, Yes was a truly wonderful band and the best material of Genesis almost reaches the level of The Beatles.

Probably one of the most unjustly maligned bands this genre has spawned would have to be Yes.

Let us get one point out of the way. Listening to Yes will not get you laid. Indeed, the moment Jon Anderson's vocals emerge from the speakers in all their heavenly glory, the genitalia of the person you are currently courting will most likely shrivel up with fright.

Having said that, it goes almost without saying that, for at least several years, Yes produced what quite frankly was some of the best rock music of the 1970s. What separated them from the worst excesses of their era which could be said to have been contained in the music of Rush and Kansas – was a solid grasp on songwriting, something many of their progressive brethren could scarcely dream of possessing.

Contained within their side-long suites and endless live albums is a literal treasure trove of pop-music melodies. While the soloing commonly associated with the genre is present, Yes never really lost sight of the songwriting.

When asked what their favorite Yes album is, many people will say either "Fragile" or "The Yes Album." Maybe "Close to the Edge," if they want you to think of them as a Fan. Maybe "Tales From Topographic Oceans," if they love acid. All of these are wonderful albums, which act as perfect introductions to the band.

Personally, I recommend "Going for the One." The surf-guitar of the title track lets the listener know that what they are listening to is a band that not only knows how to play their instruments, but also how to engage their audience.

Another extraordinarily overdiscounted progressive rock band is Genesis, due to the awful reputation the band developed when Phil Collins took Peter Gabriel's position as frontman. Although the material produced after Peter Gabriel left is emblematic of the worst aspects of the music industry in the 1980s, every pre-1976 album has its shining moments, some of which happen to last for the entire course of their respective albums.

"Selling England by the Pound" would most likely be the best starting point for the hesitant listener. From the opening questioning plea "Can you tell me where my country lies?" listeners know that they are listening to a band with a sense of humor about themselves.

Genesis, seen here in their original Peter Gabriel-fronted lineup, made what undoubtedly could be described as some of the best progressive rock of all time.

Although it has been described as both over-indulgent and "Tales From Topographic Oceans" is undoubtedly a classic of

That very aspect [illegible] that many people [illegible] acknowledge about [illegible] rock and what [illegible] lead to its downfall: [illegible] eval theatrics and [illegible] ing uttered by [illegible] early years is [illegible] 10, being done [illegible] good for. The [illegible] have incredibly [illegible] and at times [illegible] influence on modern [illegible] Radiohead.

This goes [illegible] two-lp concept [illegible] Lies Down on [illegible] uses surreal imagery [illegible] tling instrumental [illegible] to story of a Hispan [illegible] named Rael and his [illegible] in the sewers of NYC. [illegible] nothing quite like [illegible] like "The Carpet Crawlers" [illegible] the distinction of [illegible] bly underrated song [illegible] inal melodies.

By no means [illegible] to be a definitive [illegible] There's so much [illegible] There's the avant-[illegible] Crimson, the metal-[illegible] based guitar rock of [illegible] and the art-school [illegible] Gentle Giant. [illegible] Undoubtedly, for the [illegible] of today, there is much [illegible] gained by digging [illegible] progressive rock.

UMass expects solid defense from Big Green

SOFTBALL from page 8

developing team in the Big Green.

Dartmouth (5-8, 0-0 Ivy League) has just two seniors and four juniors to go along with nine underclassmen.

The team's primary two starters are junior Hillary Barker and sophomore Evan Gray. Barker is 3-2 in 39 innings pitched with a 3.41 earned run average. Gray is 2-4 in 35.2 innings with a 4.32 ERA.

The pair carries a pitching staff that has grown into one of the Ivy League's best. Dartmouth is fifth in ERA, but leads the league conference with the fewest walks and home runs allowed and is second in fewest hits allowed.

The last time UMass and Dartmouth played was on April 1, 2009 at UMass, when the Minutewomen won 5-0 in six innings. Not having played Dartmouth in a few years, Sortino and her team are not too knowledgeable about Barker and Gray.

One thing UMass can expect to see is solid defense, as the Big Green has committed the second fewest errors in the conference at 19.

However, crossing the plate does not come as easy. Dartmouth is not in the top five teams when it comes to runs scored, runs batted in or hits, despite having the second highest on-base percentage.

Senior Audrey Kolodziej, who comes to Amherst with a .341 batting average, has played in every game for the Big Green and leads the team with 15 hits.

Dartmouth has hit just seven home runs this season, with sophomores Katie Adams and Noelle Ramirez responsible for five of them, collectively.

The Big Green is currently last in the North Division of the Ivy League. Only Columbia, in the South Division, has a lower winning percentage this season.

UMass sits in the eighth spot of the A-10 out of 11 teams, but is separated from first place Fordham by only two losses.

Pete Vasquez can be reached at pvasquez@student.umass.edu.

Junior Sara Plourde throws a pitch last season. Although Plourde is a dynamite pitcher for the Maroon and White, other options such as Webster and Raymond have also been making noise in spot starts.

A member of the Minutemen attempts to hit the ball in a game last season. Offense was the missing ingredient in UMass loss to Holy Cross.

UM offense struggles

BASEBALL from page 8

work for the freshman Plunkett. The Essex Junction, Vt. native struck out two in his second appearance on the mound for UMass this season, his other coming against the University of Maryland-Baltimore Country back on March 20.

The Minutemen's offense didn't exactly light up the scoreboard as they have in recent games, an uncharacteristic outcome for a squad who averaged 7.5 runs per game over its last six contests, going into Tuesday.

The two earned runs for UMass came off the bats of senior Peter Copa and freshman Kyle Adie.

Despite leaving six additional men on base, Copa proved to be the meat of the order, going 2-for-4 with a run batted in and one scored.

Adie, who continues to impress at a young age with his discipline in the box and characteristic speed, went 1-for-3 with an RBI and a walk.

Slotting in as the designated hitter, senior Matt Gedman doubled in the contest and later came around to score. Senior co-captain Kyle Multner and sophomore Anthony Serino also recorded hits for the Maroon and White.

The Minutemen will return to action Thursday as the travel to Connecticut to take on Hartford in a makeup game from March 23.

Scott Cournoyer can be reached at scournoy@student.umass.edu.

The Minutemen celebrate after a play last season. Next for UMass is Hartford on Thursday, as it continues its road schedule.

The Minutewomen celebrate in a game last year at the Softball Complex. As UMass returns to its home field for the first time this season, it expects a tough defense awaiting it from Dartmouth.

Plourde not the only weapon as Webster, Raymond impress

PLOURDE from page 8

PLOURDE ISN'T EVERYTHING

While junior starting pitcher Sara Plourde is the clear-cut ace of the Minutewomen staff, opponents should not forget about UMass' other primary pitchers, freshmen Lindsey Webster and Caroline Raymond.

Webster has been on the wrong end of some tough luck, as she is 0-3 in four appearances (two starts) to go along with a 3.85 ERA and 22 strikeouts in 20 innings.

Raymond has made six appearances (two starts), compiling a 4.00 ERA with eight strikeouts in 14 innings. Raymond went the distance in both of her starts, the first coming against Temple on March 26, when she earned her first collegiate win, allowing two runs in five innings to go along with four strikeouts.

"It's really coming along," Sortino said of Webster and Raymond's progress. "I thought Caroline threw very well over the weekend. Lindsay hasn't been out there in a while but she's going to get her time."

The Minutewomen are glad to have two talented freshmen that can make starts when Plourde needs rest. Still, Plourde remains the unquestioned ace who will dictate much of UMass' success. She was the Atlantic 10 Pitcher of the Year last year as well as the national strikeout leader. In 19 starts, Plourde is 8-10 with 15 complete games, sporting a 1.89 ERA to go along with 205 strikeouts in 125.2 innings.

Statistics aside, Plourde and Sortino agree that Plourde has yet to reach top form this season, but she's been improving as of late.

"I think we figured out some pretty good things for Plourde," Sortino said. "Some people are going to be surprised tomorrow because we were able to figure some things out over the weekend when we looked at some game tape. She had her best workout of the year [yesterday]; she looks like she's in fast forward coming off the mound."

Steve Levine can be reached at slevine@student.umass.edu.

No. 4 Johns Hopkins upsets No. 2 Virginia

Top 25 Lacrosse

BY MATT STRONG
COLLEGIAN STAFF

No. 4 Johns Hopkins showcased its ability to ride a rollercoaster of momentum Saturday afternoon as the Blue Jays held off a persistent No. 2 Virginia side in a 12-11 victory.

John Hopkins jumped out to an early lead and held an 8-3 advantage through the third quarter. Although the Blue Jays would eventually relinquish their lead to Virginia, their persistent offense propelled them to victory.

Despite a five-goal deficit, Virginia battled back. Cavalier's freshman and San Francisco-native Rob Emery added a goal with nine minutes, 17 seconds remaining to top off a 7-1 run which put Virginia up, 10-9.

Blue Jays sophomore Lee Coppersmith rifled a shot on goal for his first career hat trick and a game-tying score. Subsequently, junior Steele Stanwick added a goal 62 seconds later, again giving Virginia the lead.

A creative move from Johns Hopkins freshman Rob Guida was enough to confuse the Virginia defense and allow Guida to rip a shot from 10 yards out, which knotted the score again. Senior Chris Boland completed his hat trick with a one-timer off a feed from Guida with 1:39 remaining in the fourth quarter to give Johns Hopkins the 12-11 advantage.

The Cavaliers won the ensuing face-off and controlled the ball in the offensive zone. Johns Hopkins goaltender Pierce Bassett stopped the only shot of Virginia's last possession, halting its attack and ensuring the victory.

CORNELL MOVES UP

With its overtime victory at home versus Pennsylvania on Saturday, Cornell moved into sole possession of first place in the Ivy League conference and into an equally impressive No. 3 national ranking.

Senior David Lau dished out the game-winning assist on a swift cut to the net by junior Roy Lang, who scored the decisive goal for the Big Red.

Also worth mentioning is the second half's scoring frenzy which saw the teams combine for 16 goals, including 15 straight goals before a save was made by either goalkeeper.

The Big Red's All-American attack Rob Pannell notched two goals and two assists, accompanied by four point efforts from Lau and Chris Langton.

Sophomore Jason Noble led Cornell on the field, winning five ground balls and 8-of-10 face-off opportunities. Noble's key contribution was the overtime face-off, which led to Lang's game-winning score.

Cornell held a significant 39-28 ground ball advantage and stepped up on the face-off with a game-winning 6-of-8 face-offs in the final quarter and overtime despite earlier struggles.

Big Red goaltender AJ Fiore stopped seven shots on goal, but also sailed in the cage, as he stopped a combined four shots in the second half. Quakers freshman goalkeeper Brian Feeney also notched seven saves.

Additionally, Penn saw solid offensive production from Al Kohart (four goals) and Corey Winkoff (one goal and three assists).

WOLF PROPELS DUKE

Freshman attackman Jordan Wolf already has an impressive accolade to add to his collegiate lacrosse resume. Wolf led No. 6 Duke to a decisive 14-12 victory over Georgetown with his seven-point (four goals, three assists) effort on Saturday afternoon.

With the win, Duke extended its win streak to six games while it remains unbeaten at its home turf of Koskinen Stadium this season. The game was highlighted by the impressive offensive performance of underclassmen, who did the majority of the scoring for both sides.

Freshman Christian Walsh and sophomore Josh Offit each recorded a hat trick for the Blue Devils. Sophomore Davey Emala led the attack for Georgetown, notching five points, including a first half hat trick and an assist.

Duke made a valiant comeback effort overcoming a five-goal Georgetown advantage. The team improved on its second-half play, citing it as a struggle on the young season.

The win for Duke was its first this season that came after trailing at halftime. Playing catch up for most of the contest, the Blue Devils took their first lead with just 7:40 remaining in the fourth quarter.

Duke's 5-0 run included a defensive stand on the Hoyas' attack, holding them scoreless for a span of 22:49 in the second half.

Sophomore goalie Dan Wigrizer rounded out a team effort for the Blue Devils with 11 saves, his fifth game with double-digit saves.

Matt Strong can be reached at mstrong@student.umass.edu

Scribblers & Scribes: *A Contest for the Writer in You*

From **MARCH 5-APRIL 4**, the Daily Collegian will be accepting **YOUR poetry & short fiction** for publication consideration in a special literary issue. **Prizes** might very well include everything from gift cards to movie passes. Judges will be selected from the Comp Lit & English departments, and to guarantee impartiality all entries will have the author's name removed during the judging process. Please, **don't be a punk**. Nothing obscene for the sake of it.

Entries will be judged by members of the Comp Lit department.

Send submissions to:
ARTS@DAILYCOLLEGIAN.COM.

****IMPORTANT ANNOUNCEMENT****
REGISTRATION FOR SPRING 2011

The Writing Program Placement Test
will be offered on:

Thursday, March 31, @ 6:00 pm in Bartlett 310

You must take this exam to qualify for enrollment in EnglWrit 112 (College Writing).

This test may be taken only once.

Students do not need to register for the test.

Minutemen outlasted by Crimson

By Jay Asser
Collegian Staff

UMass	9
Harvard	11

Despite building a sizeable first-half lead, the Massachusetts men's lacrosse team succumbed to a comeback by Harvard, falling 11-9 in Cambridge, Mass. on Tuesday night.

The Crimson (6-2) handed the No. 14 Minutemen (5-3, 0-1 Colonial Athletic Association) their second-straight loss, marking the first occasion this season in which UMass has dropped back-to-back contests. The loss was also the first for the Minutemen at Harvard since 1983. UMass had reeled off 13-straight road wins before the loss.

"I didn't think we had great composure all evening," said UMass coach Greg Cannella. "In the beginning of the game, I think in the first quarter, we had 12 or 13 shots in the first quarter and scored three goals with point-blank opportunities and when you're on the road against a really good team like Harvard, you have to score."

After opening up an 8-4 lead midway through the third quarter, the Minutemen allowed the Crimson to score the final four goals of the period to tie the contest at eight apiece and take momentum into the fourth and final quarter. The third-quarter surge saw four different Harvard players score in Dean Gibbons, Terry White, Jeff Cohen and Ryan Stevens.

In the fourth period, Gibbons continued the assault, scoring two of the Crimson's goals in the quarter, including the game-winner with two minutes, 28 seconds remaining in the game to put Harvard up for good at 10-9. Daniel Epp added an insurance score with 42 seconds remaining to seal the victory for the Crimson.

"It seemed like every time we made a mistake. To their credit, they capitalized on it and that's what happened during that run," said Cannella.

The comeback by Harvard saw five-straight goals to bridge the third and fourth quarters as the Crimson outscored UMass, 7-1, in the final 20:10 of the game. In the final period, Harvard outshot UMass, 16-5, after tallying a total of 21 shots in the first three quarters. Along with Gibbons, Cohen also recorded a hat trick, while White added a pair of goals.

Seven different scorers helped the Minutemen build the 8-4 lead, with sophomore Will Manny's goal giving UMass its largest lead with 5:39 left in the third quarter.

Junior Art Kell was the lone multi-goal scorer for the Minutemen, scoring twice on eight shots, while also notching an assist. The seven other goals were put in by Manny, Anthony Biscardi, Mike Fetterly, Ryan Hantverk, Colin Fleming, Steve D'Amario and Kyle Smith.

Harvard net minder Harry Krieger made 19 saves to earn the win, outplaying counterpart Tim McCormack, who made 17 saves for UMass.

Though McCormack took the loss, Cannella was pleased that the junior, along with the entire defense, kept UMass in the game when the offense went stagnant.

"I think as a team, we've shot poorly over the last four games in that stretch and we're going to have to find a way out of that because our defense played great tonight throughout the game," said Cannella. "We weren't able to win faceoffs, so the defense had to play extra well. They did a nice job and again, you have to put it on the offense a little bit."

Offense has been a good indicator of success for the Minutemen this season. In its three losses, UMass has failed to score in double digits, but in games where they have scored over 10 goals, however, the Minutemen are 3-0.

UMass will look to break its skid and get back in the win column when it travels to Philadelphia, Penn., for its first-ever meeting with CAA foe Saint Joseph's on Saturday afternoon.

Jay Asser can be reached at jasser@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Senior Casey Rahn heads up field against Penn State last Saturday. Rahn and the rest of the Minutemen defense could not maintain Harvard in the second half as the Crimson outscored UMass 8–4 in the final two periods to win the game.

UMass returns to Softball Complex today

Sortino excited to be back on home ground

By Pete Vasquez
Collegian Staff

The Massachusetts softball team will break in the Softball Complex for the first time this season as Dartmouth comes to town for the Minutewomen's official home opener on Wednesday.

Doubleheader action is in store, with the first game beginning at 2 p.m. and the second one scheduled two hours later.

"We've had one practice and it was fantastic to finally be outside on a field where you belong, taking groundballs and fly balls and not being in the gym," said UMass softball coach Elaine Sortino. "We really loved it."

UMass (9-14, 3-3 Atlantic 10) is coming off two straight doubleheaders, splitting each of those against Temple and Saint Joseph's.

Despite recently swapping wins and losses, the Minutewomen have gone a respectable 7-4 in their last 11 games. This came after eight straight losses that stretched through three different states and both coasts of the country.

The early travels have left the players glad to finally be playing on their own field and off the road for the first time in 23 games.

"It will be a good test for us," said Sortino. "The thing you take into factor is that when it's your home opener, everybody gets the jitters again. You get a little tight. I think once we get through the first inning it will be a good thing to just be playing."

While the younger UMass players continue to grow, the Minutewomen will take on an equally

Sophomore Cyndil Matthew waits patiently on base during a game last season. The Minutewomen are back at the Softball Complex for their contest against Dartmouth later today.

Bettencourt a void in lineup after big injury

By Steve Levine
Collegian Staff

There's no question that without Katie Bettencourt, the Massachusetts softball team has a void in its lineup.

Bettencourt, a junior right fielder and reigning Atlantic 10 Co-Player of the Year, has missed the last six games with an injury suffered on March 13 against St. John's. Bettencourt was 2-for-4 in the game with a run scored before she sustained an internal injury to her liver sliding headfirst into second base. She is out indefinitely.

UMass head coach Elaine Sortino knows that, while Bettencourt's production will be missed, there is a silver lining.

"[Missing her] is big considering how many kids we graduated last year," said Sortino. "But the upside of this is that the young kids have stepped in, stepped it up and continued to get better. Every day we get better and I just think that's going to make for a great future."

Bettencourt started all 53 games for the Minutewomen last year, batting .333 (51-for-153) with seven home runs, 31 RBIs and 34 runs scored. She hit her first career grand slam this season in UMass' 10-0 season opening victory against Penn State.

No matter how long Bettencourt remains on the shelf, Sortino is confident that the remaining outfielders will step up in her absence.

"We're still at the beginning of what is a lot of season left and I really believe that when the bell lap comes, they're going to be ready to sprint," said Sortino.

With UMass' two home-opening games slated to begin today at 2 p.m. against conference-foe Dartmouth, the bell lap may have already rung.

Loss to Holy Cross on Weds. 2nd-straight for Stone & Co.

By Scott Cournoyer
Collegian Staff

UMass	4
Holy Cross	14

After rattling off five wins in a row, including the first two games of its Atlantic 10 opening series against George Washington last weekend, the Massachusetts baseball team has cooled off a bit, losing back-to-back games now after being defeated by Holy Cross, 14-4, on Tuesday.

Starting pitching, which has been a significant component of the team's recent formula of success over the last couple of weeks after UMass (6-10, 2-1 A-10) started the season 1-8, was nowhere to be found on the mound for the Minutemen against the Crusaders (11-10-1).

The Maroon and White threw freshman Ryan Lubreski out on the mound for his first start of the year. The New Jersey-native did not go nearly as far into the game compared to his last start, lasting 2.2 innings, surrendering four earned runs off seven hits and two walks.

The pressure was on early for the newcomer, as Holy Cross tallied three consecutive hits to open the bottom of the first inning, which eventually translated into two runs to give the Crusaders the early lead.

After Lubreski, reliever junior Joe Popielarczyk gave up five runs (two earned) on five hits over 2.1 innings of work, sophomore Aaron Zaleznik had his shot to come out of the bullpen for his first appearance since recording an inning of work against Navy on March 14. Zaleznik did not fair well as he gave up five runs on two hits and four walks. Two of the runs in the bottom of the seventh were surrendered when the junior issued three walks, as well as two wild pitches.

Junior Ben Hart, the veteran returning pitcher for UMass, and freshman Aaron Plunkett combined for the Minutemen's final two innings of work, allowing one hit between the two of them, striking out a total of four in the process.

Although it was brief, it was an impressive inning of

UMass expands support groups program

By Chris Shores
Collegian Staff

As a tour guide and resident assistant at the University of Massachusetts, Connor Boushell sees first hand the excitement and high expectations both high school students and even freshmen and sophomores have for the start of their college experiences. He also has experienced the disappointment of these expectations not being met.

"College is billed as the best four years of your life," said Boushell. "But not every moment of college is fun and glory. When [you] aren't having the best four years of your life, you're like, 'What's wrong with me?' And [you] start to get depressed."

Many college students at UMass and across the country can empathize with Boushell and have dealt with stress and anxiety in some form while at college. A recent poll by the Higher Education Research Institute found that 51.9 percent of last fall's incoming college students classified their emotional health as being "above average" or in the "highest 10 percent." The statistic was 3.4 percent points higher in 2009.

To counter this downward trend and aid students dealing with a variety of mental health and social issues, the Center for Counseling and Psychological Health – a division of the UMass Health Services – has expanded its support and therapy group program this year.

Julia Moss, a CCPH staff psychologist and University employee since 2009, has become the coordinator of the group therapy program and has sought to increase and diversify the groups that are offered.

"I got some feedback [from UHS] about what they saw the needs of the University community as, and so we decided to pilot some new groups," said Moss.

The three new groups this year are one tailored towards aiding those with attention problems, a general therapy group for undergraduate women and a group for graduating seniors, she said. Many groups have been in place prior to this year including a men's group, groups dealing with anxiety, mindfulness and stress and a group for those who have lost a loved one.

Sociology professor Richard Tessler said that having a group of people that one could depend on – whether it is in the form of an organized support group or simply a group of friends – was "the key to mental health."

"It's especially important on a large campus like this where you can be very alone," said Tessler. "Any kind of group membership is potentially a good thing in terms of feeling belonging, feeling that your life matters, having a comparison reference point and having opportunities to get to know other people."

Tessler explained that the benefit of group therapy lies in the individuals' common needs to feel listened to and accepted.

"One of the things that people in group therapy sessions are looking for is to feel understood, perhaps especially by their peers," he said. "Even if there is no advice giving [or] no fix … if a person feels listened to, understood [and] cared about, it really goes a long way."

Tessler added that the groups could also reduce a feeling of isolation in the individual.

"As a group, any individual is not just talking about their own issues but also listening to what other people have to say about theirs," he explained. "Even if nobody else has exactly the same problem or is facing exactly the same issue, it reduces the feeling of being alone.

"Sometimes people think that there is something wrong with them, that they have this problem that nobody else in the world does," he continued. "Through the support groups, they quickly learn otherwise."

Through therapy, the individuals may appreciate the connection they have made with their peers and also be able to give help to others in the group as well, said Tessler. This can be "empowering" to the individual and help them feel better about their own situation in the process.

Susan Whitbourne, a psychology professor and director of national scholarship advisement, also stressed the importance of group participants being able to help one another. In some situations, she said, peers may even be better suited to help than therapists.

"Peers can benefit from hearing about the experience of other peers," said Whitbourne. "Therapists – though well-trained to deal with a lot of psychological issues may not have a particular expertise in that specific area. So by having students talk to other students, they can support each other and share their own reflections on their experiences."

Another advantage of the groups, according to Whitbourne, is the time and resources they save the mental health institution. She referenced a New York Times article that revealed a growing trend of psychiatrists who spend their time only giving out medication and not doing talk therapy.

"It was really a shock. We've known about this but seeing it on the front page of the Times, it just blew this whole thing open," she said. "You could be seeing a psychiatrist, thinking you're going to get therapy, but you're really going to get your medication and that's it.

"I know that a lot of times, even student mental health services are really strapped for amount of time that individuals can get therapy," she continued. "By having an adjunct of group therapy with individual therapy, you then are getting a bigger benefit."

Boushell felt the effects of this first-hand in the

The Center for Counseling and Psychological Health is located in Hills House North. CCPH expanded their support and therapy groups program this semester, adding three new group options.

New night-time parking enforcement established to counter illegal parking

By Justin Saglio
Collegian Staff

Beginning in early March, students accustomed to parking after ticketing hours in certain areas of the University of Massachusetts campus returned to their vehicles bewildered to see yellow citation envelopes under their windshield wipers.

Amid an increased volume of illegal parking in certain areas of campus, UMass employees began patrolling late into the night, adding a two-man shift that allows Parking Services to ticket from 5 p.m. until midnight, said UMass Police Department chief Johnny Whitehead.

Before the increased ticketing effort from campus employees began, night-time parking enforcement was the responsibility of the UMass police department, Whitehead explained. Officers would check to ensure fire and emergency lanes were kept clear.

"The police department [have] asked for years to get University parking employees to work evening hours," he said. "It tied us up during our busiest time on our busiest days."

In order to reduce the need for police officers to enforce parking at night, UMPD officials looked to the Parking and Transportation Advisory Board to see what solutions were available, said Whitehead. The board serves the campus by "reviewing, evaluating and recommending policies and proposals related to parking and transportation on the Amherst Campus," the committee website says.

Tickets issued to vehicles in areas not designated for parking, including the area outside the W.E.B. DuBois library, added to the $700,000 in ticketing fees collected by parking services annually, said Robert Hendry, a Parking Services coordinator.

"Parking violations outside the library were a problem this year in particular," Whitehead said. "Emergency vehicles can't get to the library if cars are in fire lanes."

In order to avoid being ticketed while using the library, Whitehead recommended using the campus parking garage. Students can have their ticket stamped to rebate the first hour in the garage, he said.

Hendry described the night parking enforcement program as a pilot and said, that "there is nothing set in stone to say it will last forever."

Whitehead agreed, saying the verdict is still out about whether the program will succeed in making the campus safer for emergency vehicles.

"We will see if [the parking situation] has gotten any better during finals," he said. "That's the test."

One student who isn't thrilled with the new policy is Matthew Sypek, a junior music education major at UMass. Sypek said he was ticketed behind the Fine Arts Center after a University Orchestra Concert on March 6, around 9 p.m. Sypek said he didn't believe his car was hindering emergency vehicles.

"It wasn't blocking anything," he said. "I think it's a waste of money."

Sypek's fine and other students will go toward the UMass Parking Services Scholarship Fund, said Hendry.

"It is the largest source of non-discretionary funding offered to financial aid," he said. "It can go to anyone. The money is not tied to a specific demographic."

Justin Saglio can be reached at justinsaglio@gmail.com.

CHELSEA WHITTON/COLLEGIAN

Students who park illegally after hours may be subject to fines because of a new night-time enforcement policy, which allows Parking Services to distribute tickets between 5 p.m. and midnight.

Holocaust institute celebrates opening

An opening ceremony was held last Monday afternoon for the Institute for Holocaust, Genocide and Memory Studies, located on 758 North Pleasant St. in Amherst.

On display during the event was the permanent exhibit "A Reason to Remember," donated by the Jewish Federation of Western Massachusetts. The exhibition tells the story of five families who lived in the village of Roth, Germany during the late 1930s and early 1940s. Images, letters and other memorabilia follow the families from their lives before Nazi regime into the Holocaust.

"A Reason to Remember" serves as a teaching tool, something that is at the foundation of the institute's purpose, said the institute's director James E. Young in a UMass.edu press release.

"[The institute] will be a locus for research and teaching on the Holocaust, as well as on the memory and representation of this and other acts of genocide," said Young.

Two UMass students Kara Shuman and David Appel serve as interns with the institute and were on hand to assist with the opening ceremony.

"It's great to be an intern, especially here," said Shuman in a video interview with DailyCollegian.com. "You learn the details – every small detail that you wouldn't even think of – that goes into opening up an institute."

In addition to the exhibition, the institute's new home is also a donation. According to the press release, the site was purchased by the local donor and is rented to the institute for $1 a month.

Other donations include monetary funds, 10 oil paintings of the Holocaust and World War II and 700 Holocaust related books.

Group therapy an 'amazing opportunity,' says Moss

CHRIS SHORES/COLLEGIAN

The University Health Services has offered mental health support groups programs before, but this year the options have been expanded.

SUPPORT GROUPS from page 1

fall of 2009 when he said he tried unsuccessfully to arrange a therapy session with UMass mental health services. After abandoning pride and working up the courage to call, Boushell said he spoke with a nurse and was given a series of questions in the form of an on-phone triage.

According to Boushell, the nurse told him he needed therapy but because the semester's end was five weeks away, she didn't find it advisable to schedule an appointment.

"I was like, 'What? You just said I was all messed up,'" said Boushell. "I pushed her and pushed her and pushed her and she said, 'O.K. we'll try to set something up. We'll call you tomorrow.' They never called."

Boushell said he tried two more times but was unsuccessful. His father then found a therapist in the town of Amherst, who Boushell contacted. They now have weekly meetings. For Boushell, the individual one-on-one method is his ideal form of therapy.

"I'm honest to the point of recklessness, but most people aren't," he said. "And there are still things I don't tell the therapist. In group therapy you need to be even more of a communicator."

In contrast, Moss believes that the group therapy holds significant benefits for the individuals over one-on-one therapy. In particular, she said, it allows participants the opportunity to understand and work on their interpersonal issues in a way that she feels is not possible in a client-therapist setting.

"A group becomes kind of a microcosm of people's lives," said Moss. "If people struggle, if they have a hard time asking for what they want and getting their needs met, that will emerge in a group. People have the opportunity to deal with that, the ways in which it is hard to step in and ask for things in a group.

"[The group dynamic] is very different than if someone is in a client role [where it is] easier for people to know it's their time," she continued. "When you're in a group, people struggle with those kind of issues."

The groups are run by professionals including several mental health specialists and meet weekly for an hour and a half, Moss said. The attendance in the groups varies from four to 10 students. She also noted that group enrollment was successful for many of the groups this year because of increased marketing by CCPH in the forms of fliers, table tents and more. Because of a need for an upper cap on attendance, there was at least one group where significant interest forced CCPH to close the group and turn away some interested students, she said.

Moss said she hopes to avoid this in the future by adding multiple times for specific groups based on interest. She also will consider new topics for the groups.

"I think that group is an amazing opportunity and [something that] anyone can benefit from," she said. "I've done a lot of different kinds of groups in the past so we could do more groups for recovery or substance abuse, eating disorder or death of a parent. I'm hoping to expand it and constantly [be] sensitive to the needs of the community and interests of people."

Group registration for this year has closed but more information about the program and other CCPH services can be found at http://www.umass.edu/uhs/counseling/.

Chris Shores can be reached at cshores@dailycollegian.com.

South Dakota violating women's rights

Chelsea Whitton

The so-called "War on Women" in recent weeks may be facing a new battle. South Dakota state legislatures have approved a law that will demand that any women considering abortion be counseled in the favor of carrying to term, and will need to wait three days after meeting with doctors and counselors in order to give time to reconsider before aborting.

The legislation, signed by Republican Governor Dennis Daugaard, and proposed in January by Phil Jensen, a Republican legislator from Rapid City, passed rapidly through the Republican-led state legislature where, according to the New York Times, "Republicans outnumber Democrats by more than three-to-one."

The new law will be effective July 1, 2011 only in South Dakota, will most likely face challenge in Supreme Court, according to NPR, and I hope it does.

The law will make exceptions to medical emergency abortions, but will not legalize immediate procedures for rape or incest. This presents a large dilemma. Since when are rape or incest cases not an emergency? Sure, women, who have had unwanted sexual encounters with a family member, or are raped, may well be in need of guidance and counseling to work through the trauma. This forces them to undergo the pre-procedural anti-abortion, faith-based meetings that are unwarranted.

Abortion made legal under Roe vs. Wade in the United States Supreme Court ruling in 1973, did not mandate that there be a three-day period where women are faced to dwell on circumstances they have found themselves in and in some cases not by choice in any regard.

As a person of faith, with a very moderate pro-choice standpoint, I should clarify that my issue with the mandated counseling isn't the fact that women are being encouraged to be counseled. I believe that counseling on a life-changing issue such as having a baby or not having a baby is of critical importance, especially in the case of rape, where a woman may feel the need to confide in professional opinion. While thinking things over may be a great option for women, the fact that it is required under law creates an issue.

Whether Republican or Democrat, it is easy to see both sides of the issue, as there is a great amount of federal funding going towards family planning under Title X Family Planning Program put in place in 1970, but on the other side, there are stringent restrictions on women's reproductive rights set to be in place if Republicans decide to completely axe Title X funding.

However, when Republicans start to make claims they will tax non-subsidized abortion procedures this is also problematic. Often times women going forth with abortions are doing so because of no other choice due to financial restrictions or health problems. Even the drives through rural South Dakota for the numerous pre-procedure meetings are a restriction for women who already have children or full-time jobs.

I realize it is hard to make a decision on whether or not to support abortions. I personally hope that the option for abortion procedures isn't used as a backup plan, but I do believe abortion needs to be an option for women under law.

"What makes the new South Dakota law different is that the mandated counseling will come from people whose central qualification is that they are opposed to abortion," reported the New York Times in the March 22 article, "Women Seeking Abortions in South Dakota to Get Anti-Abortion Advice."

In a case such as this, looking at it from pro-choice or pro-life perspective isn't relevant, The issue lies in realizing that the law puts into effect a contradiction to the First Amendment granting separation of church and state.

The Anti-Defamation League states that, the First Amendment, "free from government control – and without government assistance – religious values, literature, traditions and holidays permeate the lives of our citizens and, in their diverse ways, form an integral part of our national culture. By maintaining the wall separating church and state, we can guarantee the continued vitality of religion in American life."

The promise of separation of church and state has indeed permeated our educational system and our religious institutions, but seemingly not our family-planning organizations – which is unconstitutional.

Sarah Stoesz, CEO and president of Planned Parenthood Minnesota, North Dakota, South Dakota, called the bill an "egregious violation of the Constitution," according to a Reuters report.

In addition, Reuters reported that Planned Parenthood said it would sue South Dakota if Gov. Dennis Daugaard signed the abortion bill. Those Planned Parenthoods as of today haven't made any available statements at this time as to what they plan on doing.

The South Dakota law isn't the only law placing women's rights in a contentious place in national politics. In a New York Times editorial, published on Feb. 25, the editorial staff argue, "The egregious cuts in the House resolution include the elimination of support for Title X, the federal family planning program for low-income women that provides birth control, breast and cervical cancer screenings and testing for H.I.V. and other sexually transmitted diseases. In the absence of Title X's preventive care, some women would die. The Guttmacher Institute, a leading authority on reproductive health, says a rise in unintended pregnancies would result in some 400,000 more abortions a year."

It may prove true that a chop in funding may work against the GOP's motives.

In South Dakota, according to npr.org, there are 58 abortions for every 1,000 births, one of the lowest rates in the U.S. There are three clinics which perform abortions – Sioux Falls Clinic, Mountain Country Women's Clinic and Blue Mountain Clinic, according to Abortion.com. Last year the state performed around 800 abortions.

Simply stated, as a woman, the largest issue out there is the fact that most of this legislation is being passed by old white men. Since when are old white-haired men (other than doctors) allowed to suggest and mandate what exactly women should do involving reproductive health?

"I think everyone agrees with the goal of reducing abortion by encouraging consideration of other alternatives," the Republican governor said in a March 22 statement. "I hope that women who are considering an abortion will use this three-day period to make good choices."

According to a press release from the Governor of South Dakota's office Gov. Daugaard signed House Bill 1217 on March 22 as an Act to, "establish certain legislative findings pertaining to the decision of a pregnant mother considering termination of her relationship with her child by an abortion, to establish certain procedures to better insure that such decisions are voluntary, uncoerced, and informed, and to revise certain causes of action for professional negligence relating to performance of an abortion."

Resulting in a blend of irony the word "uncoerced" undermines exactly what the new legislation plans to do. Coerced is exactly how women will determine whether or not to keep the fetus, rather than making individual decisions, not swayed by a government promoting a stance on public policy that's tied to a religious affiliation.

Not everyone in state legislature agrees with the new law. Peggy Gibson, a Democratic state representative for South Dakota who voted against the law, said in the New York Times article mentioned above that the law is a "government intrusion into people's medical decisions."

According to the Governor's Office press release, "Gov. Daugaard conferred on the legislation with South Dakota Attorney General Marty Jackley, whose office is responsible for defending the law against any challenge in court."

In the March 22 press release Dauugard said, "I think everyone agrees with the goal of reducing abortion by encouraging consideration of other alternatives."

In a state that carries through with approximately 800 abortions, one of the lowest rates in the county, the encouragement of considering other options is also problematic. The word encouragement is a misrepresentation of what the new law aims to do. The law aims to persuade women through multiple methods to not carry through with an abortion, whether willingly conceived or in rape cases, in tandem with the states aim to lower abortion procedures.

What hasn't been answered in the media and in U.S. politics is, what are we overlooking when it comes to the issue of abortion in the United States? Are we looking at the statistics of unemployment and inflation that make it hard for instance for a single women to raise a child, that perhaps she wasn't planning on having, possibly only created by force-able means? Are we looking at how we fund education in support of women's reproductive education and protection? It is the truth that instead of taxing abortions and mandating unconstitutional laws on women's bodies and decision-making processes, that we instead place stricter laws on domestic violence, possibly harsher punishments for rape and properly educate young women about sexual health. It is then possible that Republicans wouldn't have to try and chop their budget by hurting those who need assistance the most.

Simply stated, as a woman, the largest issue out there is the fact that most of this legislation is being passed by old white men. Since when are old white-haired men (other than doctors) allowed to suggest and mandate what exactly women should do involving reproductive health? Unless you are the father of a baby, who might face abortion if decided, I do not believe men in politics should not have a go when proposing reproductive laws.

And if you are a U.S. Representative, and you in fact have not experienced passing a watermelon through your lemon hole, you have no right to change constitutional laws in an effort to make them fit your deficit hacking in the wrong places – private, reproductive places.

Chelsea Whitton is a Collegian columnist and can be reached at cwhitton@student.umass.edu.

stink, school costs too much, some guy in the Collegian just said something weird, marijuana should be legalized, people keep complaining about health care, there are ladybugs in my room, my RA's a jerk, there's nowhere to park, the buses are never on time, every time I go to the library it's crowded, one of these days a car's going to hit me when I cross the street, one of these days a bike rider is just going to fling himself at my car, athletes just got caught with cocaine, there are too many people in the DC, I want my trays back, people keep puking in my hallway, my window won't open, those kids outside never shut up, housing services won't let me keep my python, Spark and SPIRE never work right, there's construction everywhere that never gets completed, it burns when I pee, my roommate keeps setting

Feel like ranting?

Tantalizing tofu and veggies delight

Ashley O'Neil

This past September, after I was teetering on the edge of making the decision to be a full-on vegetarian, I finally decided to just go for it. I've been a supporter for quite some time of animal rights. I don't wear fur, and knowing about the treatment of some unfortunate cows and cluckers has always been a bit of a turnoff. Trust me, when you see how that oinker was made to oink no more, you would reconsider bacon as much as the next veggie lover.

Over the past six months or so, ever since I made the transition over to the land of tree huggers and granola crunchers, reactions from others have been a little bit less than understanding. "You're a vegetarian! How do you do it?" (as though I'm abstaining from sex). I could never do that, I'm a complete carnivore. That sounds awful, don't you miss meat?" (as though I'm a recovering alcoholic with friends that still drink and somehow I'm the enemy lurking on their partying with disapproval).

Now, don't get me wrong. Sometimes I do miss meat. I used to enjoy steak once in a while, and curry tastes great with chicken. I even find myself still clinging to tuna fish sandwiches, because somehow my brain refuses to see fish in the same category as sad baby cows. You could say I'm a pescatarian, the alternative to being a strict veggie and still obtaining some of my nutrients from a sushi roll here and there. But do I constantly regret my decision and find myself starving for iron, protein and anything that actually tastes good? Well, surprisingly no.

In fact, you could say that abstaining from meat was one of the best culinary decisions I've made in years. As someone who loves to cook more than kittens love catnip, I found the ultimate high in exploring a whole new world of taste bud possibilities. My search for fun and interesting recipes and restaurant menu choices has surprisingly doubled in results than when I was simply throwing a slab of meat in the center of a plate and thinking, "This is the focus of my meal, and everything else can just be its friend."

Going out to eat used to be a painful experience for vegctarians, but this is no longer the case because many more people are choosing this lifestyle.

One thing I said I would never try in my life, and that I couldn't bear to think about eating, is tofu – an almost crumbly, somewhat tasteless and rubbery substance made out of soy beans processed and molded into a block.

So when did I give in? When I was at the local campus café we know and love, Blue Wall, and I decided the noodle bowl looked too good to pass up.

In fact, you could say that abstaining from meat was one of the best culinary decisions I've made in years. As someone who loves to cook more than kittens love catnip, I found the ultimate high in exploring a whole new world of taste bud possibilities.

I had recently seen on Food Network that tofu was virtuously tasteless, but it completely takes in the flavors of whatever spices and food you throw in with it.

I knew that if I really was going to get serious about staying a vegetarian, I had to keep finding sources of protein and the noodle bowl with curry broth seemed to be the way to go. As I took up my fork I dove right in. It was like a curry fantasy had burst in my mouth. The texture of the cooked tofu wasn't bad. In fact, the flavor had completely taken over the tofu and I was absolutely in love.

I spent the next two weeks buying blocks of it from Trader Joe's and seeing how I could incorporate it into salads and stir fries. The possibilities are quite endless, and buying it is relatively cheap; one eight-ounce block is less than two bucks at the health food store.

Too nervous to make the leap and attempt to cook it yourself? Go grab a noodle bowl or search the dining hall salad bar to get a preview of this mystery food.

Today, people are trying to make healthy choices outside of their own kitchen and flock to the restaurants to do so. Foodies tend to order new and exciting options off of restaurant menus. The New York Times recently published an article about all the amazingly delicious and fun veggie burgers that New York restaurants are making in their own kitchens from scratch. They are no longer the cardboard frozen hockey pucks made from buckwheat that my '60s hippie Nana used to pour water on to hydrate and choke down. Veggie burgers can be made from tasty legumes like lentils, black beans and chickpeas. These teamed up with yummy sauces and veggie-friendly ingredients are as savory as an Angus patty and a lot healthier for the digestive system.

For all you pizza lovers out there, Antonio's always has multiple options to choose from, and all delicious for the vegetarian diet. The avocado quesadilla is my favorite, with creamy crunchiness sprinkled into one masterpiece. Or, if you like new scenery, imagine going to Northampton where the hippies roam free, and seeing the sort of culinary delights they come up with. The falafel sandwich at Yellow Sofa Café immediately comes to my hungry mind.

So the next time you're thinking about making a temporary or long-lasting diet, I say just try it. Try it for a week, a month or only for a night when making a trip to Judie's where there are quite a few options (one of which being the yummiest veggie potato skins I've ever eaten; you won't miss the bacon with this one!). You just might find out that you will not have less of a tasty diet and that your love for stranger food combinations will only increase.

Fifth 'Glee' soundtrack a hit

Although "Glee" is only in its second season, the cast members have already released seven albums of the songs they have sang in the show in addition to two original songs. "Glee: The Music, Volume 5" debuted at number three on the Billboard 200 charts.

By Kate MacDonald
Collegian Staff

Some would think that the music from the television powerhouse known as "Glee" is getting a little old. The show, not yet at the end of its second season, released its fifth official soundtrack on March 8, its seventh release overall (excluding special editions). Seems a little monotonous, right? "Glee" nonbelievers would be completely wrong.

With every new musical release, "Glee" brings something new to the table. "Glee: The Music, Volume 5" is no different, and it might be the best soundtrack yet to the hit show.

"Glee: The Music, Volume 5" not only features 14 popular songs covered by the cast of the show, but also presents two well-written original songs, the first time this has been attempted by the program.

The soundtrack is kicked off by one of the best songs on the disc. Track one is filled by a mashup of Michael Jackson's "Thriller" and the Yeah Yeah Yeah's "Heads Will Roll," two songs that wouldn't traditionally go well together, but definitely work in this version. Kevin McHale's vocals work really well in the famous MJ song.

It seems like McHale has the perfect voice to cover classic Michael Jackson hits. While no one can do it like the King of Pop, McHale, easily one of the best male vocalists in the cast, does him justice. He also tries out "P.Y.T. (Pretty Young Thing)," which, again, fits his range well.

"Thriller/Heads Will Roll" is the only song on "Glee: The Music, Volume 5" that doesn't sound almost exactly like the original. The remaining tracks are arranged like their predecessors, so much so that the respective actor singing on the track begins to sound like the original singer of the song.

A great example of this would be Lea Michele (as the obnoxious Rachel Berry) crooning Katy Perry's "Firework." Her strong vocals are quite impressive. The same could be said for Cory Monteith's (as Finn Hudson) oldies tune "She's Not There." Monteith isn't known for his strong vocals, and finds his only solo in this song, but it's a success.

There has been a lot of buzz about Hollywood A-lister Gwyneth Paltrow's presence on "Glee." She proved her worth as an actor on the show and as a singer on the soundtrack as she's featured on three songs: Joan Jett's suggestive rock tune "Do You Wanna Touch Me (Oh Yeah)," Prince's "Kiss" with Matthew Morrison and Fleetwood Mac's epic hit "Landslide," arranged like The Dixie Chicks' country cover.

On each of the three tracks, Paltrow does not disappoint. "Landslide" is probably the best of the ventures, and her voice blends well with the background singers cast members Naya Rivera and Heather Morris.

The "Glee" kids also make Justin Bieber bits somewhat cool. A new addition to the players, Chord Overstreet, takes on The Biebs' preteen hits "Baby" and "Somebody to Love," helped by McHale and Mark Salling on the latter track. "Baby" is the really impressive song and might just be better than the original.

Each of the 16 songs has been released as singles on the Internet, and the two original songs have done particularly well. "Get it Right," an emotional power ballad, was written specifically for Michele, so it's safe to say her voice fits the song and works extremely well in it. The tune has been received well and is currently 16th on Billboard's Hot 100 list, while other original "Loser Like Me" is number six.

Actors first and singers second, the cast of "Glee" has certainly succeeded in both fields. The album debuted at number three on the Billboard 200. Currently, "Glee: The Music, Volume 5" is ranked as the fourth best album in the U.S., though this dip may only be temporary. It's clear that the cast of "Glee" is definitely still on the rise.

Toubab Krewe brings innovation to Noho

By Brian Canova
Collegian Staff

Toubab Krewe, from Ashville, N.C., comes to the Iron Horse in Northampton on Friday night expected to bring a unique and original instrumental blend of West African traditions taken straight from Mali, with jam and southern rock sounds.

Boasting dream-like jams, Toubab weaves together off-the-wall riffs that effortlessly work electric guitars and standard drum sets in with Malian horsehair fiddles, 21 and 12-string African harp-lutes, a djembe – a skin-covered wooden drum – alongside a handful of other West African instruments to be found on stage.

Having grown together as musicians in the six years since their first studio release, Toubab proves time and time again over the course of their continuous tour of live performances that they are capable of seamlessly bringing together myriad influences in their worldly music and making it work.

Touring worldwide, Toubab has made a name for themselves at international venues and festivals, including the legendary Festival in the Desert in Mali, one of the most remote festivals in the world. Toubab has also booked gigs at U.S. festivals such as Bonaroo, Wakarusa and Rothbury. They also regularly take the stage at the famous hometown Asheville, N.C. venue, The Orange Peel.

The group, which has made many visits to Guinea, Mali and the Ivory Coast cites, draws influence on their music from African greats Ali Farka Toure, Orchestra Baobab and Salif Keita, which they picked up on their visits, according to their website. Toubab takes these influences and builds something innovative, inspired and contemporary without abandoning these traditions. At this collision of West African traditional music and American rock, Toubab's hypnotic melodies and hasty beats excite the soul and hypnotize the mind.

Toubab is comprised of five members. Teal Brown (drum set), Drew Heller (electric guitar, sitar), Justin Perkins (kora, kamele ngoni, electric guitar), David Pransky (electric bass guitar) and Luke Quaranta (percussion). Heller, Perkins and Brown grew up together. The band's hometown, playing in jam circles together as early as middle school where they began to toy with West African drumming. Forming the percussion ensemble "Common Ground," Quaranta hooked up with Teal at college joining "Common Ground" in Asheville and the band embarked on their first odyssey to the African continent in a trip to Conakry, Guinea. Pransky, who was originally linked to the band through his sister who danced for "Common Ground," was the last to join after making the instrumental switch from mandolin to bass guitar, completing Toubab Krewe.

Toubab Krewe plays at the Iron Horse in Northampton at 10 p.m. on Friday, April 1. Tickets are $12 in advance and $15 at the door.

Brian Canova can be reached at bcanova@student.umass.edu.

North Carolina natives Toubab Krewe combine traditional West African sounds with southern rock to create a unique sound.

Take yourself to Margaritaville with 10 simple cocktail recipes

By Ashley Berger
Collegian Staff

Spring break might be over, but that doesn't mean the drinking has to stop. What better welcoming for longer days and warmer nights than with partying with margaritas? Grab a lot of tequila and lime juice and follow these relatively easy recipes for some shaken and stirred intoxicated fun!

Jimmy Buffet's Perfect Margarita

Who better to get wasted away again in Margaritaville with than the man himself, Jimmy Buffett? Mix two ounces of gold tequila, a half ounce of blanco tequila, one and one quarter ounce of lime juice and some orange Curacao. Shake all ingredients together. Add salt to the rim of the glass and garnish with a lime. Put on Mr. Buffet's famous tune, sip and enjoy.

Jalapeño Margarita

For those who like things extra spicy, kick it up a notch by adding one special vegetable. This recipe suggests that it is created in a large quantity, so make sure you grab a few friends as well. Add a slice of jalapeño, some celery leaves and six ounces of lime juice in a blender and mix. Pour into a pitcher and mix with 16 ounces of tequila and eight ounces of orange liqueur for a monster margarita that will knock you on the floor.

Low Calorie Margarita

If you're watching your weight but still want to enjoy a refreshing cocktail, try this margarita. This recipe also instructs to make a substantial amount so recruit some fun-loving gym buddies to help you drink this concoction. Blend a tub of crystal light lemon-lime drink mix, two cups of water, eight ounces of tequila, six ounces of Grand Marnier, four ounces of President Mexican Brandy and lime juice and don't feel guilty about drinking this liquid refreshment.

Chocolate Margarita

Have a sweet tooth, but still love tequila? Here is the perfect way to mix the two. Marry one and a half parts tequila, one ounce of Godiva liquor, two tablespoons of chocolate syrup, three quarters of an ounce of cream, two ounces of orange juice and some lime juice. Rim an ice-filled glass with cocoa and pour in the mixture.

Italian Margarita

Did you come straight from the canals of Venice? Do you love the Jersey Shore? Grab some guidos to help you enjoy this slushy mix. Blend six ounces of frozen lemonade concentrate, six ounces of tequila, two ounces of amaretto, one ounce of triple sec, some water and ice cubes and cook some spaghetti and tan friends.

Pink and Fruity Margarita

Feeling totally girly? Need your daily dose of fruit? A punch-like margarita, this one tastes similar to juice and goes down very easily. Grab four girlfriends and enjoy this feminine potion. Mix one cup of sweet and sour mix, one cup of cranberry juice, five ounces of tequila, three ounces of triple sec and two ounces of Grand Marnier. Evenly distribute into four glasses and garnish with limes and cherries for a great girly evening.

Beer Margarita

If you're not one for straight tequila in your drinks, try adding beer to this classic recipe. Grab a couple of drinking buddies and create this concoction. Blend six ounces white tequila, 12 ounces of your favorite type of beer (light beer generally tastes the best) and six ounces of frozen limeade concentrate. Serve with a lime.

Sangria Margarita

If you don't like to mix beer with your tequila, try mixing the famous wine based drink with it. Blend eight ounces of tequila, 12 ounces of margarita mix, two ounces of lime juice and three ounces of triple sec. Add two-thirds part this mixture with one part sangria for an exceptionally fruity yet potent drink.

Superior Margarita

Looking to try a drink that is better than all the rest? Look no further! Shake together two ounces of 100 percent blue agave tequila, one and a half ounces of Rose's sweetened lime juice, three quarter of an ounce of Cointreau and some sweet and sour mix. Salt the rim of the serving glass and enjoy.

Key West Margarita

If you can't make it all the way to Buffet's Margaritaville, this blend will get you down as far as the gulf of Florida. Slowly blend one and a half ounces of tequila, one ounce of melon liqueur, one ounce of Pina Colada mix, a half ounce of lime juice, a half ounce of orange juice, some grenadine and some ice. This final margarita will leave you wasted away, and due to the touch of Pina Colada, absolutely caught in the rain.

Anthropology major Amanda Otto wears bright, eye-catching outfits she describes as "global," mixing patterns, colors and styles. She also focuses on accessories and remains money conscious in her fashion.

Fashion stop: Amanda Otto

By Chelsea Whitton
Collegian Staff

Amanda Otto, a University of Massachusetts junior Anthropology major, describes her fashion as "global." Her style at dinner in Franklin Dining Commons last night was bright thanks to her white light-weight jacket, perfect for unpredictable spring weather.

Her shirt, bright green with a paisley print of orange, pinks and blues, complemented the white, and gave a spring-like feel to her top-half ensemble. Her dark, fitted jeans were paired with boots, which she said were from Payless ShoeSource. You would never know they were this season's deal, as they were detailed with braided leather-like material, and appeared to have great quality. Her earrings were by Silver Forrest.

Otto's attention to detail, down to ear accessories, is what pulled her outfit together perfectly, taking small splashes of jewel-toned color and mixing it with soft pastels to complete the budget-savvy and eye-catching look that starts off this season with a whole lot of spring in any girl's step.

Chelsea Whitton can be reached at cwhitton@student.umass.edu

Behind Plourde, UM gets two vs. Big Green

SOFTBALL from page 8

[illegible] hands. I felt like she was throwing a little harder than we were thinking, and I [illegible] why our barrels were dragging."

I think that was more pop-ups to the infield [illegible] again. I can't think of a UMass [illegible] that's popped up like that," said Sortino. "The hits were anything but late in the second game."

Abby Nagill started the scoring in the second inning when with two runners in scoring position [illegible] home and put the Minutewomen up, 2-0.

After a double play presumably ended a bases-loaded threat in the fourth inning, Webster came [illegible] at the plate with runners on first and second and [illegible] and crushed a three-run home run over the [illegible] fence to give UMass a 5-0 advantage.

The scoring didn't end there, as Mayne drove in Audrey Boutin, who was 4-for-4 in the game, in the fifth inning for her second RBI single of the day to put the Minutewomen up, 6-0.

On the mound, Plourde was given a rest, as Sortino gave freshman pitcher Caroline Raymond the nod to start Game 2.

After pitching five perfect innings, including three strikeouts, Raymond let back-to-back batters reach in the sixth inning that ultimately scored to bring the score to 6-2, forcing Sortino to call on Plourde to return to the mound to finish the game.

The ace picked up where she left off in Game 1, pitching two shutout innings and striking out four to complete the 6-2 victory, her first save of the season and also helped Raymond to her second victory of the year.

"I think Sara Plourde threw one of her best games of the year," said Sortino. "That was really one of her best outings."

The Minutewomen will return to action on Sunday afternoon when they continue their five-game homestand against A-10-foe Saint Louis in a doubleheader. The first game is scheduled to begin at 12 p.m. at the UMass Softball Complex.

Stephen Hewitt can be reached at shewitta@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Freshman Lindsey Webster celebrates with teammates after hitting a three-run home run in a 6-2 victory in Game 2 over the Big Green Thursday. UMsas won both games in their home opener.

Bats come alive in second game

HOME RUNS from page 8

Complex saw over 170 balls hit over its fences in the last four seasons. That's why watching this year's squad struggle to plate runs is distinctly different from last season. The absence of home runs is something that's more an exception than a norm.

Early struggles at the plate this year and lack of a true home run hitter have caused a power outage and a significant hole in the UMass offense, specifically run production.

At the halfway point of the regular season, the Minutewomen have hit 14 home runs. With 48 games on the schedule, the team is on pace to notch 28 round-trippers, which would be their lowest mark since 2002 (20).

Sortino's teams aren't like a typical collegiate softball team. She preaches a strong and confident offense along with solid defense and pitching. UMass players don't slap-hit as much as other programs, they swing away. Usually, it's resulted in a powerful and feared offensive barrage. Unfortunately, as Webster's home run on Wednesday symbolizes, that component is missing this season. The Maroon and White have had to wait around for the offensive struggles to subside and find other ways to win games.

"I think it's a lot about hitting and our team's finally doing a lot more of that," said Webster. "I'm excited to see us progress."

Without the power from years past, the team doesn't have any other choice but to keep swinging away.

No-hit performance for Plourde

Ace pitcher goes the distance in double-header for UMass

By Stephen Hewitt
Collegian Staff

UMass	1
Dartmouth	0
UMass	6
Dartmouth	2

Ace pitcher Sara Plourde threw her first no-hitter of the season and seventh of her career to lead the Massachusetts softball team to a 1-0 victory in Game 1 of its home opening doubleheader on Wednesday afternoon against Dartmouth before winning a 6-2 decision in the second game of the day.

In Game 1, Plourde seemed very comfortable on her home mound and was her dominant self, as she went the distance and struck out 16 batters to compliment her no-hitter and ninth victory of the season.

"It's a big sense of comfort," said Plourde on being back at the UMass Softball Complex. "This is our field, this is where we are every single day, so it was a big sense of comfort and I liked it a lot better."

The Minutewomen (11-14, 3-3 Atlantic 10) found their only run in the bottom half of the second inning. After Tiffany Meeks walked and then advanced to second on a Lindsey Webster bunt, Stephanie Mayne drove in Meeks on a single to put UMass up, 1-0.

Although the Minutewomen offense mustered one run on four hits, it was more than enough for Plourde, who's only blemish on the day was allowing three walks to the Big Green.

"Our team is usually pretty good on putting some runs on the board and hitting, and they played really good defense today too which takes a lot of pressure off the pitcher," said Plourde.

After a slow start in Game 1 in the hitting department, the Maroon and White really warmed up in Game 2, collecting 12 hits en route to the 6-2 victory that completed the series sweep on the day.

"I really honestly felt like we were late," said UMass coach Elaine Sortino on the slow offensive start in Game 1. "I thought we were late deliv-

Sara Plourde delivers a pitch against Dartmouth on Thursday. Plourde threw her seventh career no-hitter and struck out 16 batters.

Without long ball, Sortino & Co. generating runs differently

By Michael Wood
Collegian Staff

Massachusetts freshman outfielder Lindsey Webster hit the first home run at the UMass Softball Complex this season, a 200-foot shot to left-center field in the Minutewomen's 6-2 victory over Dartmouth in the second game of a double-header Thursday.

There was no doubt the ball was gone when it left Webster's bat. She took a low and outside pitch from Dartmouth's Hilary Barker and deposited it in the left-field.

"[The home run] really felt good," said Webster. "As a team, we've really been working on our hitting everyday at practice. I was feeling good. It's our first home series so I was really excited to play and I was looking to put a good swing on a pitch. It's my first spring game [at UMass] so it's really exciting."

As Webster rounded the bases for her team-leading third home run and met her teammates at home plate for congratulations, several fans may have felt the absence of the long-ball from the UMass offense this season.

"Obviously we haven't had the easiest of times," said UMass coach Elaine Sortino.

"We've been really struggling [at the plate] … It's really been hard to figure that out in the last two months. It's been such a roller-coaster ride."

Year-after-year, UMass boasts a potent offensive attack that includes a large number of home runs. That's something that's not only rare in softball, but sometimes even discouraged. Often times, coaches teach their players to step up in the batter's box as they swing and try to slap the ball to opposite field and beat out the infielder's throw for an easy single. That's not the case for UMass.

"[A good offense] really means a lot," said Sortino. "It takes the pressure off the pitcher and it takes the pressure off the defense. When you know you can score multiple runs, it's a very, very important thing. If you don't have run capability, that makes everybody just a little bit tighter and it keeps feeding off itself and it's not a good thing."

In 2010, the Minutewomen hit 58 home runs. The year before, they hit 70. With power-hitters like Sara Reeves, Michelle Libby, Carly Normandin and Samantha Salato in Sortino's lineups, the Softball

Owls fly into Amherst early for A-10 opener

By Jackson Alexander
Collegian Staff

The No. 13 Massachusetts women's lacrosse team will kick off Atlantic 10 conference play Thursday when it takes on Temple at 1 p.m. at McGuirk Stadium. Originally, the teams were scheduled to play at 3 p.m. on Friday, but a massive snowstorm is projected to rip through Amherst on Friday afternoon.

The Minutewomen (7-2) are coming off of a 5-2 season in the A-10 last year that put them in third place overall after the regular season. In the playoffs, they rallied to knock off the top two seeds and take their second-straight A-10 title.

UMass coach and first-year coach Angela McMahon knows that the conference is improving and winning a third-straight title will be no easy task.

"The league is getting more and more competitive, some different teams are stepping up and doing well," said McMahon.

However, the Owls are not one of those teams

Temple struggled mightily with its non-conference schedule this season, with its 2-7 record ranking last in the A-10.

That being said, the Owls hope to turn things around. After losing six-straight and starting the year 1-7, Temple got its second victory of the season, a 12-11 win against Lafayette.

The Owls best source of offense comes from Charlotte Swavola, who leads her team with 22 points (16 goals, six assists). Temple also receives offense from Stephany Parcell (15 points), Missy Schweitzer (14 points), Karly Cohen (13 points) and Kelsey Zenuk (10 points).

Tess Bishop, the goalkeeper during all seven Owl losses, comes into the game with a .321 save percentage and a 13.19 goals allowed average.

Meanwhile, Jackie Lyons (16 goals, 15 assists), Katie Ferris (21 goals, four assists) and Jesse O'Donnell (14 goals, three assists) lead UMass offensively.

Junior goalie Katie Florence has had another successful season in the cage. She's collected all seven of her team's victories this season and her .491 save percentage and 9.77 goals allowed average are both career bests.

The Minutewomen trounced Temple in their only meeting last season, 16-7. Lyons led the way, scoring five goals and O'Donnell added a hat trick for the Minutewomen.

UMass is looking to bounce back after a lopsided loss to No. 2 Northwestern, 17-7, last Saturday under the lights at McGuirk Stadium.

Despite suffering the tough defeat, McMahon, who played for the Wildcats, has been pleased with her team's play.

"I think as a team, we've done a really good job of getting better consistently through each game and improving," said McMahon. "Our offensive units are really gelling well."

However, she was quick to point out that this team is far from perfect.

"We need to get back to doing well on the draw controls," said McMahon.

Against Northwestern, the Huskies dominated the Minutewomen on draw controls, winning 24 of the 26 decisions. An uncharacteristic performance considering UMass had owned 59 percent of its face-offs before the Northwestern game.

This weekend could reveal whether UMass' fast start was legitimate, or just a result of an easy non-conference schedule. After their matchup with Temple, the Minutewomen will hit the road to face La Salle, a team they narrowly defeated in a semi-final matchup during last year's A-10 Championships.

"We just have to make sure that we take care of our business on our end and bring it every single game, no let downs," said McMahon.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Senior Jackie Lyons scores a goal against UNH in a game earlier this season. Lyons and the rest of the Minutewomen begin their A-10 conference slate Thursday against Temple at home.

MARIA LISNIKA/COLLEGIAN

Senior Cerie Mosgrove looks to box out a Duquesne player in a game earlier this year at the Mullins Center. Mosgrove will compete in the women's 3-point shooting contest at the Final Four, Thursday.

Mosgrove heads to Final Four

By Michael Counos
Collegian Staff

Senior captain Cerie Mosgrove's nickname, the "Sniper," will be put to the test Thursday evening when she competes at the 23rd annual State Farm College Slam Dunk & 3-point championship in Houston, Texas. While the Massachusetts women's basketball team failed to make the NCAA tournament, Mosgrove will take her talents to the Final Four, participating in the women's 3-point shooting contest.

Mosgrove led the country with a 49.7 percent from beyond the arc, shooting 78-for-157 in 2011. These numbers built on her junior campaign, in which she hit just under 30 percent of her 3-point attempts and started 12-of-30 games. Under UMass coach Sharon Dawley, Mosgrove started all 30 games this season.

"Obviously I've worked on other aspects of my game, but the 3 has always been my strength," said Mosgrove in a UMassathletics.com interview.

Mosgrove etched her name in the UMass history books as well, setting records for 3-pointers made and 3-point percentage in a single season. She also ranks third all-time in 3-pointers made with 171 and career 3-point percentage with 39 percent. This season, Mosgrove also finished second on her team in scoring and rebounding.

"It's definitely a feeling of pride, I'm really excited for the program and I think it gets that much more exposure and looks good," said Mosgrove.

The contest is set to take place on Thursday at Hofheinz Pavilion in Houston, Texas. Mosgrove is one of eight women competing in the contest, which will air on ESPN2 starting at 9 p.m.

Michael Counos can be reached at mcounos@student.umass.edu.

After losses to GWU and HC, UMass takes on Hawks Thurs.

By Eric Mansfield
Collegian Staff

The Massachusetts baseball team ended its spring break road trip with a three-game win streak. The Minutemen will look to get back on the winning track, after losing its last two games to George Washington and Holy Cross, when they take on Hartford on Thursday.

The Hawks (1-16-1) have had a rough beginning to their season. Of its 16 losses, Hartford has given up at least 10 runs in 12 games and have managed to score more than three runs on four occassions.

Hartford has also been shut out in three of its last five games. Among the 11 players on the roster who have played in at least 11 games, only redshirt junior Simon Kudernatsch has managed to hit over .300 with an average (.303). Kudernatsch also leads the team in RBI's with 11. The team's ERA stands at 9.93 and its opponent's batting average is .225.

Early on this season, one of the Minutemen's problems was getting runs across the plate. In its first seven games, UMass only plated more than three runs once. In each of their last seven games; however, the Minutemen have not scored fewer than four runs.

One of the key contributors to the rise in offensive production has been senior Matt Gedman, who leads the team in batting average (.410). Gedman is tied for second on the team in home runs with Kyle Multner at two, as Peter Copa leads the team with four. Gedman stands alone at second in RBI's with 11, trailing only Copa's 12. This production helped earn Gedman UMass Athlete of the Week last week.

While the offense has started to pick up, a lot of the production has fallen on the shoulders of Copa, Gedman and two other seniors, Kyle Multner and Eric Fredette. Those four players fall within the top five in all the major offensive categories. On a regular basis, the four seniors bat in the middle of the lineup in order to get more offensive production. With such a freshmen laden team, though, there can be some cause for concern.

Facing Hartford's low-scoring offense may be just what the Minutemen pitching staff needs come Thursday. Seven of UMass' losses have come while giving up seven runs or more. The team's ERA stands at 5.83 and opponents are hitting .321 against them. The staff has been led so far by junior Glen Misho, whose record is 3-1 with a 4.28 ERA and one complete game.

Eric Mansfield can be reached at eamansfi@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

A member of the Minutemen swings at a pitch in a game last season. After dropping consecutive games against the Crusaders and Colonials, UMass takes on the Hawks in Hartford on Thursday.

Student realizes he has not attended class in 2 months

By N. John O'Finnegan
Morning Wood Staff

After eating a burrito at the Blue Wall, UMass student Mitch Harrison realized that he has not attended his sociology course since late January.

While rummaging through his backpack for his water bottle of white rum to pour into his stolen cup of Coke, the junior from Milford, Mass. found his syllabus for his sociology course, which, reports have indicated, Harrison hasn't attended since Thursday, Jan. 22.

"I mean, I skipped it a couple times once I realized it wasn't that difficult, but then it just kind of slipped my mind. For two months," said Harrison, a former 3.6 GPA student who has fallen to a 2.5. "I'm screwed, aren't I?"

Efforts to contact the course's professor about making up the two exams, three small assignments and one term paper that he missed were met with a raucous of laughter when the professor showed it to her colleagues in the sociology department, located in Thompson Hall.

"Oh jeez. I've seen some dumbasses in my day, but this one? This is a classic," said Professor Sarah McDonald, who's currently in her sixth year of teaching at the University. "Ha! Look at this one… He says he's willing to do extra credit to make up for it."

Harrison, who missed the "W" drop deadline by more than two weeks, is weighing his options for how he's going to pull his stupid ass out of this one. The former Milford High School third-string point guard has refrained from telling his parents about the situation, saying that "they'd be wicked pissed off" about it.

When contacted, Mr. and Mrs. Harrison — who were on vacation in Orlando, Fla. — told The Morning Wood that "no, we haven't heard about Mitchell missing class. He better bet his sweet ass that he gets his act together or he's losing his car for good this time."

According to reports, Harrison's car is a green 1998 Chevy Cavalier that he repeatedly refers to as "The Shag Wagon," despite the fact that he has never hooked up with a girl inside the car. Additionally, world-renowned wagon expert and UMass professor Harold McManus told The Morning Wood that a Chevy Cavalier "isn't even a goddamn wagon. What an idiot."

Harrison was last seen calling his buddy Murph to see if he could pay him $14 or "like, four beers," to do his make up work for him, arguing, "come on man, you're in ComCol and take smart classes and shit."

Upon Murph's refusal, Harrison appeared to be accepting his fate.

"Ok. I give up. I'm busting into my emergency Four Loko stash."

N. John O' Finnegan can be reached inside his ivory tower on Tuesdays from 1 p.m. to 2 p.m.

UM campus pond strikes oil

Now that UMass has struck oil, we can afford as much FourLoco as our hearts desire.

Black gold, Texas tea to help school overcome budget cuts

By Marty McFly
Morning Wood Staff

Around 4:20 p.m. yesterday afternoon multiple students reported seeing a geyser of crude oil majestically shoot out of the campus pond. The geyser reportedly reached heights of more than 1,000 feet above the ground, and lasted for over five hours before Physical Services got the spout under control. While many bemoaned the fact that the library is now covered in oil, and several ducks were notably pulverized by the incident, some passersby actually claimed that the Student Union actually looked better covered in deep petro-sludge.

In an early morning email to the campus community, Chancellor Robert Holub said "We've struck a miracle, oil that is, black gold, Texas tea." He went on to explain how profits from the new oil well being constructed over the campus pond will close the budget deficit, fund the cost of living increase, save the humanities programs, and fund a new percussion department under the guidance of newly-resurrected musician Tito Puente.

Several activist groups on campus, however, hold reservations over the newest strategy to come out of Whitmore. A statement from the Faculty Union mentioned "Extreme reservations about the administration's willingness to sell our resources to the private community." It continued to disparage the fact that "the University is seeking an outside source of profit rather than rely on our own capabilities as a university to refine and sell the oil ourselves" and that the event further "privatized the University."

The venture faces other obstacles, including local industrialist Charles Montgomery Burns' attempt to horizontally deplete the reservoir, possible invasion from the United States government over concerns about the international oil supply, and thousands of dead seals and polar bears.

Marty McFly can be reached on his hoverboard at some point in the past, present, or future.

Local freshmen really suck at planning, throwing dorm party

By Squirtle
Morning Wood Pokemon

Gracie Williams, a resident assistant on the third floor of Van Meter knows exactly what's going on.

"I know that they're going to be drinking tonight, or at least trying to," Williams said. "They're doing a terrible job. I might not end up busting them, just because I feel so bad."

Down the hall from Williams, in full earshot of most people on the floor, three University of Massachusetts freshmen are attempting to throw a dorm party this weekend – and according to sources, they are doing an awful job.

The three suspected freshmen, Rick Tremont of Gardner, Mass., Patriek Milbury of Cheapcigarettes, N.H. and Donny Hilliard of Nome, Alaska have allegedly been attempting to obtain alcohol and invite dormmates for more than 48 hours, all while hoping to avoid detection from the Van Meter RAs. According to several sources in the dorm, the three freshmen buddies are failing on all fronts.

"Yeah, they've been talking about that stupid party for a couple days. I'm not going," said freshman Gina Sareeen, who lives two doors down from the proposed party. "I put myself down as a maybe on Facebook. But, I really don't want to. I'm probably going to a frat party on Friday."

Tremont and Milbury, who live in room 313, are reportedly planning the party with Hilliard, who lives in a single dorm down the hall. So far, their attempts at obtaining alcohol have been complete disasters.

According to neighbor Ozzy Hill, the group attempted to obtain a "half-full water bottle of Rubinoff" for $15 from a student that claimed to be over 21-years-old. Shortly afterwards, the three discovered that the water bottle was in fact filled with Sprite, and that the student was actually an 18-year-old named "Steve."

"I've seen them before. How the hell did they believe that was vodka?" said Steve.

Sources believe that the fact that none of the three have ever tried alcohol played a large role in their failure. Attempts to buy a handle of Smirnoff from floormate Jenna Friedrich resulted in a nervous laugh from the freshman, who quickly changed the subject to Tremont's "cool shirt" before leaving.

"I mean, those three are nice, but I just have other plans," said Friedrich. "Also, what the hell is a clock?"

Tremont, Milbury and Hilliard, who have yet to actually break the student code of conduct, have drawn the reluctant attention of the dorm's RAs.

"They haven't done anything illegal," fourth floor RA Catie Jennings said, "but we know they're trying … I'm not worried, though. I'm pretty sure their party will turn out about as fun as a church bake sale."

Jennings added that, she wasn't saying that those three were weird, only that no one really hangs out with them, particularly because they still play Guitar Hero.

"What the hell is this, 2008?" said Jennings.

The three friends, though, have not given up in their quest to sponsor a social event for the first time since Tremont's (awesome) birthday party at Chuck E. Cheese in sixth grade.

"I know it's not going to be easy. But that party at Chuck E. Cheese was really fun," Tremont told The Morning Wood, as he continued to look for alcohol in the dorm. "Plus, it all worked out for the guys in 'Superbad.'"

Squirtle can be reached in his pokeball, but only if his cell phone is on.

Town residents want their holes to be filled

By Richard Long
Morning Wood Staff

As Amherst residents recover from an especially frigid winter, many are complaining that their needs are being left unfulfilled.

The constant beatings provided by automobiles colluded with this year's rapid spring thaw to loosen the roads, leaving them and the citizens of Amherst in need of more special attention than ever. However, a limp town response has left residents wondering if the town is serious about filling their holes.

"It's just ridiculous," said Rebecca T. Cornhat of 69 Baller St., Amherst. "I mean my hole isn't even that big, it would be so easy for the town to fill it right to the brim in a matter of minutes."

Karl Z. Peterson, a local farmer, had similar sentiments.

"Well now I don't do too much driving myself, but to hear about all the problems my wife is having with the holes and that the town won't give her, or anybody else, the little fix they need … Well now that's just darn right disrespectful. Everyone deserves to have their holes filled." Peterson continued saying, "Why I remember a day when I would go out and fill what hole belonged to me, but those days are long gone. I'm lucky now if I have the energy to fill the little holes in my field with seed."

"The fact is, we've been filling holes for over 12 hours everyday," said Todd Muolchic, site manager for Squad D of Amherst Asphalt Repair and Service Squad, one of seven private contractors the town has hired to deal with the large quantity of unfilled holes. "We're working our machines as hard as we can, and probing deeper into the situation," Muolchic assured the Morning Wood.

Over the past few weeks town officials have urged patience on the part of residents, and have pledged that all holes will be filled by June. In a March 25 press conference Rep. Harry Orafaee, head of Committee for Organized Contraction Consultation, showed support for the residential concerns and attempted to explain the causes of the town's dysfunction. "This spring will be hard on all of us," said Rep. Orafaee. With state and town revenues the way they are, we just don't have the neeessary endowment to fill these holes as quickly as we need to." Orafaee continued to guarantee swift action as impassioned cries rang out from a crowd of hundreds demonstrators outside his office chanting that the town "Fill our holes!"

Many residents are considering alternative ways of filling their enormous holes.

Do you have gaping holes that you're longing to get filled? I can certainly take care of that for you.

"I was talking to a friend up in Rochester, and she said that the town filled all the holes as soon as everything melted," said local housewife Cynthia Nidomania. "She even said they were filling holes all throughout winter. I moved here for my kids, but I told them, 'If the town doesn't take care of the hole outside our house, we may need to start looking elsewhere.'"

"Their father certainly isn't taking care of it," she added.

UMass passes away at the age of 148

By Harvey Schlangberg
Morning Wood Food Health Editor

The University of Massachusetts, once the Bay State's flagship public university, met its maker on Thursday. According to doctors, the cause of death was an overdose of the alcoholic energy drink FourLoko. UMass was perhaps best known for its lively personality and sometimes boisterous nature, although in its later years the school was gripped by financial struggles and difficulty with credit.

"UMass was a good school, and we'll all remember the warm times we shared with it and our fond memories of hanging out with it on Orchard Hill, hitting the bars with it on a weekend night, and skipping class with it to play in the snow," said the school's recent caregiver, Robert Holub, who has been tending to the school since 2008.

Born out of Abraham Lincoln's land-grant program, the University made its home in the Pioneer Valley in 1863, originally choosing the name Massachusetts Agricultural College. The school took the name by which it would come to be known as in 1947.

"The shift to becoming known as UMass was a monumental one for the school; it really marked the point where our little university decided what it wanted to do with its life and really showed the school was beginning to take academia seriously," said Joseph Flavin, formerly the Feinberg Professor of History at the University.

As it aged, however, UMass developed a reputation for its sociability, with some of its friends quietly worrying about its partying habits.

"UMass knew how to live, that's for sure," said Holub. "I remember being at McMurphy's with UMass one night a few years back, and we were just talking and talking; we talked about how we loved each other, loved the area, and UMass just said, 'You know, Robby, I'm not gonna last forever, but it's been a hell of a run.' We both laughed, but I knew UMass was serious, and that was tragic."

Nineteen-year-old Kayla O'Brien, a resident of Amherst's John Quincy Adams building and a friend of UMass, echoed Holub's sentiment that UMass could be known for its rambunctious nature.

"This one time UMass and I were at a party in Puffton, and this one guy was all up in UMass' face calling him a dick and dissing him about his Affliction shirt, and UMass totally knocked him out, it was crazy," said O'Brien. "I mean, it's so sad and all about UMass dying, but at least it went out doing what it loved."

In keeping with its outgoing nature and its penchant for mishaps, UMass was also plagued by financial struggles in its more recent years. This year alone, the school racked up a debt of some $50 million to the Commonwealth, and the University did not seem prepared to make good on its debts at any point in the near future.

"UMass was always looking to burn a smoke off me out front of JA, all the time hitting people up for a beer, 'Oh, can I hit that,' it would ask all the time; UMass was such a mooch," said UMass' friend Steve Connors.

The school is survived by its 21,000 undergraduate students, its 6,000 graduate students, its staff of some 1,200 administrators and faculty and its extensive army of buildings and facilities. According to its loved ones, the school did not believe in keeping a will, and plans have not been established yet for what will be done with the surviving property. However, rumors have surfaced that the campus will become part of the Discovery Channel's upcoming "When Nature Strikes Back" series. Funeral announcements were not made public as of Thursday.

With cute pups, U.S. will triumph over evil

Roger Dodger

GLOBAL PERSPECTIVES

Evil. It's all around us, lurking, causing mayhem, and doing evil things. We as Americans have a duty to chase evil down and kill it forever. We've done this before; World War I, World War II, SpanAm, Civil. Yep, America has a pretty sweet track record of battling evil. Hell, we brought down the Soviet Union for God's sake. How'd we do it? With a little thing I like to call DDG: Determination, Democracy, Greatness. You see when America gets to using DDG, nothing can stop her. Not even Stalin.

Of course, times are changing. New evils have popped up. Al Qaeda is out there somewhere – possibly everywhere – waiting to kill us. Osama Bin Laden is in his cave at this very moment plotting another attack. Our men and women of the military are suited up in deserts, equipped with nothing but the most advanced weaponry and pure DDG pumping through their veins, waiting patiently for evil to strike so that we may be able to strike back faster and harder.

Yet, I was eating oatmeal with raisins this morning thinking, "Obama is really giving it his all rooting out all this evil in the world, but it just seems like this time pure DDG isn't cuttin' it. We need something more. Something stronger. Something better. Something that will ensure that evil will never again reign supreme on this earth."

Then it hit me. It was so obvious. We need DDG and P: Determination, Democracy, Greatness – and Puppies.

Everyone loves puppies. And if evil came into contact with an adorable puppy (perhaps a baby Rottweiler and/or Dachshund?) it would melt away into oblivion.

Picture this: An exclusive five-person military unit: one mustached guy, one white guy, one woman from Arkansas, one black woman, and one bi-racial man. They're called the Delta Bravo Task Force. They wear all-black bulletproof vests. They're dropped into the middle of the mountains of Pakistan one night around 22:00 Delta Bravo Squadron Eagle Time.

The black woman, Sandy, is the leader of the unit. Everyone calls her Roger. Through the Pakistani forest they creep around with their guns, careful not to step on any loud twigs. The moon is full, and they can smell Pakistani food cooking somewhere in the distance. As they walk together, boots plowing into earth wet from a cold rain, Diana, the woman from Arkansas, notices something shiny in the moist dirt. She picks it up. "What is it?" Sandy asks.

Then it hit me. It was so obvious. We need DDG and P: Determination, Democracy, Greatness and Puppies.

"Roger, it's a clue. We must be close."

They continue on. Notice Pablo, the bi-racial man, is carrying with him an anti-tank gun as well as a large black duffel bag which is also bullet-proof and also has holes cut into it. Peter, the black man, begins to write coordinates into his government-issue covert ops iPad, when just then a noise crackles in the darkness.

"What's that?" Sandy asks.

Leon, the white man, raises his ear towards the stars. "Laughter," he says, "Osama's laughter."

Sure enough, as they get closer to the sounds, they can make out Osama's shape in the darkness. A silhouette, tall, bearded, and skinny like an emotionally broken high school girl, sitting with his men, cooking a traditional dish.

Osama notices Delta Bravo Task Force coming and calls out to his men in Arabic, "Infidels! Quick, shoot them."

Everyone lunges for cover. Bullets are flying. Sandy does a summersault before crouching behind a bush and calling out, "Pablo, now."

With extreme tenderness and care, Pablo opens up the black duffel bag and out come seventeen of the cutest puppies you can imagine. Some are Rottweilers, others are Dachshunds, and there is one Border Collie (which is the smartest of the group) and they're all yipping and yapping, and one is crying because it's hungry and so Leon quickly throws it a Special K meal bar specially designed for puppies' delicate digestive systems. The puppies begin running towards Osama who hasn't yet noticed them since his eyes have been focused on shooting the Delta Bravo Task Force. Just then, Porridge, an adorable Poodle Border Collie mix (otherwise called a Boodle), begins to lovingly nip at the bottom of Osama's frock. Osama looks down at Porridge and is instantly smitten by her cute puppy smile and loving little nips. He drops his weapon to pet her. Suddenly his men, realizing they too are surrounded by a horde of delightful puppies, also begin dropping their weapons, making there way over to the nearest pup to rub its little puppy tummy.

Realizing she hasn't much time, Sandy takes out a shiny whistle that she keeps in a secret pocket in her sock and blows. The whistle makes a noise that no one can hear except the puppies (and Leon because his special power is super-hearing.) The puppies run towards Pablo who carefully and lovingly places each one back into the duffel bag, taking extra precautions to ensure none of them hurt their fragile puppy heads. Diana, realizing that Osama and his men are so stunned by their brief encounter with irresistible cuteness they will have little time to reach for their weapons, perches herself on a cliff and shoots everyone in the cave with her AK-47 Tank/Cave Destroyer in a 30-minute blood bath, guts flying, blood splattering, and severed heads rolling around the cave floor dirt.

Delta Bravo Task Force returns home. They are each given the American equivalent of the award Luke Skywalker and Han Solo got at the end of "Star Wars." The puppies are adopted in sets of two by loving families.

In conclusion America, if you want to win this war against evil, you need to use DDG&P. It sounds simple because it is simple. That's all. God bless and USA #1.

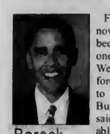
Save the planet, ride a horse or two



Barack Obama

Folks, listen. For years now my administration has been trying to deal with one momentous problem. We depend too much on foreign oil; we are addicted to it, as former President Bush (the genius) once said. No country has been able to tackle the issue of oil running out in the near future, [1] and sustainable alternatives seem out of reach for us Americans.

We consume 25 percent of the world's oil. I had already planned to combat our demands for oil by placing sure-to-be-successful high-speed rail systems throughout our country, and to have Americans transform their reliance on cars to trains. But sort of like the bailout, economic recovery, and revamping of the educational system and healthcare system, folks, I'm not throwing in the towel on promoting research for alternative fuels. As usual I'm averting to something else, and creating agenda-generated news to take real issues off the minds of you nagging Americans.

That's right, we will be shifting to a government mandated horse-based economy.

This country has seen some of the toughest of its days, and now, I feel the only way to move forward is to go back. But let me be clear, I'm not talking about going back to the 1900s. No, instead, this country will be remodeling its transportation system after another time period, back when cowboys rode horses with the American dream of freedom, land and prosperity beating in their hearts.

We will revisit a time when young men delivered mail in freshly American-manufactured leather bags on the backs of animals.

The American Frontier was not just pioneered by people, but also by horses (and the occasional person that looks like a horse, of course).

We have a new battle to face when looking at our modern American Frontier; this time it won't be blazing trails and finding food for survival. In essence we will be simplifying our daily consumer demands while changing the way our economy operates, making a more sustainable economic environment through horse power.

That's right, we will be shifting to a government mandated horse-based economy. Its sort of like Oprah's "You get a car" campaign, but this new handout comes with not a new car smell, but the smell of carrots, apples and organic manure wafting through the newly clean air of America.

This is why I am formerly announcing the dismissal of the $53 billion high-speed railway system planned to be in place by 2035, which is only 15 years before we are expected to have nearly used up oil resources and, my friends this is cutting it too close.

By 2015 I hope to have in place, 200 million working horses, ponies and donkeys in America, mending the gap between suburban sprawl and urban renewal. There will be trade incentives for Americans. A trade-in of a car from the year 1995 or newer will get you in return enough horse power to support your family.

Children ages nine and up will be eligible for their own horses. A family of four with two parents and two children above the ages of nine would receive four horses in exchange for their car. All cars will be recycled into silos for horse feed storage and also for recycled roofs for the many new horse barn and manufacturing facilities to be built as a result of the new program.

The horse-based economy will save Americans billions of dollars on fuel use and will create as projected 80 million jobs, as horse trainers, architects for sustainable horse housing farms, horse veterinary care, carriage manufacturing, steel work, iron work, education and leather manufacturing, as well as adding jobs to the agricultural field.

As a result of the new horse-based economy, Americans will breathe cleaner air, will have cleaner water, will have a stronger education system, will learn what it means to make things – saddles, iron, steel, buildings, farms. Americans will learn to rely on organic local produce again, and by force if necessary.

Ultimately, the four-legged creatures will give America the horse power it so desperately needs. The horse breeding program will be run by the American government and there will be a special emphasis on the breeding of Clydesdales, Thoroughbreds and Quarter Horses, the strong holds of any horse arsenal.

Clydesdales will be responsible for the transport of building materials from town to town and large amounts of resources on wagons. Thoroughbreds will replace mail carrying trucks as they are fast and efficient with a competitive spirit.

Quarter horses will mainly be used for domestic settings, as they are the gentler of the species. Instead of having a four-wheeled machine generate the power of 350 horses while also contributing to high carbon dioxide levels, why not let an oxygen-breathing, machine of just one horse power bring you around town for those errands?

I realize this is going to be a hard transition, but we are Americans and we set the standard for the times and no one says we can't go back in time.

To quote my inaugural speech from 2009, "Starting today, we must pick ourselves up, dust ourselves off, and begin again the work of remaking America, horse by horse"

Barack Obama is President of the United States. He can be reached at swisheverytime@whitehouse.gov.

Doom can be averted

I don't have much time. I've come back from the year 2069 to warn you all of the terrible danger you're in. If you don't act NOW, it will be too late for the world, for humanity.

I'm already cutting it close by arriving now, after the Accident, but there's still time. You see, all this radiation and plutonium and shit coming from Fukushima over in Japan – it's worse than you know.

It's worse than they're telling you and it could be worse than they know, for all I know.

What I do know is that in a few weeks – and this why it's imperative you act NOW – it will start raining in Washington, D.C. with contaminated water and Rev. Al Sharpton and Sen. Al Franken (D-Minn.) will be affected the most by it.

Our scientists are still not sure why and we may never know, but over the next few weeks their DNA will begin to mutate. Finally, in the middle of May, they'll be sitting next to each other and they will start to merge into one organism.

Al Sharpenfrank will be born out of that union and the world will be plunged into the Great Darkness. Blood will rain from the skies and all peoples will be seized in the iron grip of tyranny. His powers will be great and his evil unbounded.

I've been reading your media and I gather you all think Kim Jong-Il is pretty crazy. Well, he's nothing compared to Al Sharpenfrank.

He is insane and evil, he eats babies for breakfast and his favorite song is "Friday" by Rebecca Black. He can fly, shoot laser beams out his eyes and kill you with his brain. He knows when you've been sleeping, he knows when you've been nice.

But there will be resistance.

I'm one of those fighters. We've been striking from a hidden base, but we can not hope to challenge Al Sharpenfrank's stranglehold on the souls of the people. We are the damned; we have no hope left except you, people of the past.

You must do something. You're our only hopes. If you stay the course, you're dead.

I WANT MY CHANGE

Dear Editor,

Last week I was this party, right, and I asked my friend who's over 21 to buy me a bottle of vodka because I'm like, only a freshman, so I give him like a $20, right and he brings me a bottle of Five O'clock Vodka that I know cost like $7 and he won't give me my change. "Shipping and handling" my ass.

What a dick.

Clarence Burdock, '14

UNCLE JOE GETS HIS DAY IN THE SUN

Dear Editor,

Fam swag it, I been writings these here letters since I got back from the damn war. Hghh. But you high and mitey damn college students who don' have ta worry 'bout goddamn Robert damn McNamara sending youse to Nam to see your best friend's head explode in front of you and his entrails and blood and fluids and lunch and the damn contents of his bowels pour into your fam swag it lap.

I hate that comswaggling Robert McNamara with every fiber of my flannel shirt and long underwear. He cost me three years of life in that damn farm swag it jungle, with the bugs and the heat and the Viet Cong and all of the fam swag it restrooms were out of order.

Well, old Joe was too tough for Robert McNamara. I survived the war and got back here. I even survived having a TV installed in my chest and ripped out by some fam swag punkass little green alien. All I need to survive is my whisky and my cigarettes and no Robert McNamara pantywaist is gonna' take 'em from me.

Uncle Joe,
Amherst

LOOKING FOR BATMAN

Dear Editor,

If the Batman does not ultimately ask himself by noon tomorrow, I'll blow up the hostages.

The Joker,
Gotham

STOP DISCRIMINATING AGAINST HIPSTERS

Dear Editor,

We mons of the world just like to chill and listen to cool bands you've never heard of, mon. Why don't you get that, mon? There's nothing wrong with enjoying good weed and good music, mon.

Yes, we produce critiques of contemporary American consumerist culture, mon and we love using irony in an ironic way, but we just get the hate, mon. Yes, haters are going to hate, but do they have to totally remind us of when we were emo, mon?

Tower says goodbye to SGA at last meeting

EVAN SAPOSNIK/COLLEGIAN

Outgoing Student Government Association President Brandon Tower bid adieu to his colleagues Wednesday night.

By Ashley Berger
Collegian Staff

As the dust from the elections settles, the reign of Brandon Tower as president of the Student Government Association (SGA) comes to an end as well. In Wednesday's SGA meeting, the SGA Senate bid farewell to the president and members of his cabinet.

Sen. Zach Broughton opened the meeting addressing some of the issues and projects that the Tower administration accomplished over the past year. Some of the highlights, Broughton said, were the implementation of the textbook swap, lowering the BASICs fine, the future paving of the trail between Orchard Hill and Sylvan, expansion of the rights of sexual violence victims and the strong stance against a fee increase.

The meeting, which was seemingly bittersweet overall, also invoked somewhat of a playful tone. Sens. Ellen Moorhouse and Dan Stratford sang an a cappella version of Billy Joel's "Piano Man," replacing "piano" with "Tower." And Tower, in his final address to the Senate, offered his gratitude to all of those who spoke well of him.

"I don't know how to say thank you to all of you," he said. "I couldn't have done any of this without all of you guys. I owe you each so much."

Tower began his speech by noting that moments in history serve as markers that discern the "before" and the "after," and that usually people look to those large-scale incidents as momentous. But, Tower said, these events happen on a lesser scale too.

"Momentous occasions occur within individuals," he said. "But that's what's so jarring about these momentous instances. While you as a person don't change much, the world around you does."

"On the eve of such a personal occasion, I find myself reflecting on my time at UMass and with the SGA," he continued. "It's occurred to me that the life I've lived in SGA has been a paradox, and that while serving as president my actions were so public while I personally have been so private."

Tower explained his connection and affinity for the SGA and everyone involved. He expressed his gratitude for the students of UMass, his cabinet members, the senators and the advisor.

Tower ended his speech by wishing everyone the best of luck and said he is looking forward to a promising future. After he spoke, almost everyone in attendance of the meeting gave him a standing ovation.

Secretary of Outreach Andrew Prowten then seemingly attempted to out-do Tower in the artistry of his speech.

"Something that Brandon got me to do for the first time in my life was astonish myself," he said. "We must make a future out of astonishing ourselves. We must keep moving forward."

In keeping with the apparent light-heartedness of the evening, Secretary of University Policy Dave Robertson said, "I got a virus downloading Rebecca Black's new album so I don't have a speech, so (expletive redacted) it."

While Robertson will not be returning to the SGA for his senior year, he advised the group to "keep fighting." "Look to the Senate as a learning experience," he said.

Lydia Washington, who advises the SGA, also took to the podium to bid adieu to Tower and other outgoing members.

"I love working with students who challenge me," she said. "I appreciate your hard work and efforts. I am proud of you all and all of the great things that you have accomplished. I'm blessed and happy that I got the chance to work with you guys."

Washington continued to read a quote that she felt was best suited for Tower.

"'Leadership is a challenge to be something more than average,'" she recited, quoting the author Jim Rohn. Following the meeting, Tower said, "It was overwhelming. To be able to share the moment with the rest of the cabinet, who are really like family to me, was an amazing experience."

As Tower heads to Suffolk Law School in the fall, he made one final expression of his gratitude to the body.

"I'm going to miss most coming to the office and spending time with the people from SGA," he said. "We talked a lot about how close we all became this year, and that's not just rhetoric. It made every day exciting. I'm really going to miss that."

Ashley Berger can be reached at a berger@student.umass.edu.

Voters irked by Washington

By David Lightman
McClatchy Newspapers

WASHINGTON — Once again, the public is getting increasingly disgusted with Washington.

It sees a failure to adopt remedies for even the most basic, pressing issues of the day, as Congress struggles to craft a federal budget. And incumbents are getting worried about the political implications.

"It's hurting some of us," said Sen. Orrin Hatch, R-Utah, who's up for re-election next year. "They blame everybody."

A new Pew Research Center poll shows that about half of Americans think the debate over spending and deficits has been "generally rude and disrespectful."

There's even bipartisan agreement – 48 percent of Republicans and Democrats have that view, as well as 57 percent of independents. President Barack Obama signed legislation Friday to provide funding to keep the government open until April 8, the sixth such temporary extension in the six-month-old fiscal year.

Pew surveyed 1,525 adults from March 8-14. The poll's findings suggest the political losers so far have been Republicans, who rode a wave of voter irritation to win control of the House of Representatives last fall.

After the election, 35 percent said Republicans had a better approach to the deficit, expected to reach a record $1.65 trillion this year. This month, that number has plunged to 21 percent.

People don't think Obama has better ideas, either – 20 percent found his approach better, down from November's 24 percent. Total sample margin of error is plus or minus 3 percentage points.

The most restless constituency has involved supporters of the conservative tea party movement. After the November election, when backers helped elect dozens of congressional Republicans, three of four movement supporters liked GOP budget plans. This month that figure dropped to 52 percent.

"People are growing impatient," said Carroll Doherty, Pew associate director.

Political veterans are scrambling to educate their constituents about the deliberate pace of Washington.

"People should understand we do things in baby steps," said Tea Party Express co-founder Sal Russo, of Sacramento, Calif. "We have to remind people that while we just had a historic election, the reality is, we're woefully short of 60 votes in the Senate." Democrats control 53 of the Senate's 100 seats.

But Russo's fighting a world where the public can get instant, nonstop, unfiltered access to Congress and commentary.

Republicans had benefited from that openness during the two-year fight over overhauling the nation's health care system. Procedural delays forced major votes to occur after midnight, and in one case, at dawn on Christmas Eve.

GOP opponents used what looked like procedural chaos to portray Democrats as unable to run Congress effectively. Now, though, it's Republicans who are in charge of the House, and they're feeling the heat.

The public doesn't understand all the nuances of the legislative process, so what they see "reinforces the perception that Washington can't get anything done," said Nathan Gonzales, political editor of the Rothenberg Report, which follows congressional races.

House Republicans, who have a 241-192 majority, have found it relatively easy to win approval of their major initiatives: repealing the health care law, cutting $61 billion from current-year spending, blocking federal funding for public broadcasting and so on.

The stumbling block has been the Senate. Health care repeal and the $61 billion in spending cuts died there, and the effort to defund NPR is also expected to go nowhere.

One way to explain the process, Hatch said, is to stress the value of experience.

He talks about how, in January 2009, veteran pilot Chesley "Sully" Sullenberger steered a disabled US Airways plane into the Hudson River in New York City. The passengers and crew all survived.

"Experience matters," said Hatch, "and when you explain that, it makes people stop and think."

Neither side has edge on deficit

A new Pew poll shows fewer Americans think Republicans have a better approach to the budget deficit, but President Barack Obama doesn't fare well either.

What may help incumbents more are two developments.

One is that, unlike the health care fight, the budget battle isn't dominating headlines. Since the start of 2011, three stories have gotten the most attention: the Jan. 8 shooting of Democratic Rep. Gabrielle Giffords of Arizona, the Middle East turmoil, and Japan's earthquake and tsunami.

"Washington's fights have not broken through as a top story," said Doherty of Pew.

Even if they do, the 2012 elections are a long way off. Health care legislation won final approval a year ago, during the primary season.

But if the economy rebounds strongly this year, or a grand budget compromise is reached, process chaos could be long forgotten. In that case, Gonzales said, "results will matter most."

But if the economy is sluggish, or the budget fight drags on and on, the fractured process could matter a lot.

"If the government shuts down," said Gonzales, "no one really knows what the political fallout will be."

UM aiding Afghan education

The Center for International Education (CIE) at the University of Massachusetts' School of Education has been awarded a one-year, $9.9 million grant to make higher education in Afghanistan more accessible.

According to a release, the grant is from the U.S. Agency for International Development, and the "project is part of an overall program to rehabilitate and strengthen the education system throughout Afghanistan." UMass was asked to "assume primary responsibility for overseeing the entire project."

UMass' CIE has worked closely as one of the partners in the consortium with the Ministry of Higher Education (MoHE) and other faculty members in education to offer four-year teacher education programs for workers in Afghanistan, stated the release. The release also said UMass, along with other institutions of higher education, will work with the higher education ministry and 18 Afghan universities to focus on improving their ability to train secondary school teachers.

"CIE has a 40-year history of highly effective work with developing nations," said Christine McCormick, dean of the School of Education in a release. "We are very proud that the center has been selected to work with Afghan institutions to build educational capacity in the essential areas of training teachers and improving access to quality education." The CIE has spent over the last five years working in Afghanistan under the guidance of the Academy for Educational Development.

According to the release, the same UMass officials that have been working in Afghanistan for five ye will lead efforts made in this initiative.

CIE Director David Evans and Joseph B. Berger, chair of the department of educational policy, research and administration in the School of Education will head the project; the project coordinator is graduate student Mindy Eichhorn, stated the release.

According to the release, Evans and Berger appreciate the UMass administration's support.

"The University has stepped up to the plate to make this happen," Evans said. Berger added, "The level of support has been remarkable."

Why Amherst residents don't like UMass students

Nick O'Malley

Dear University of Massachusetts student,

The town of Amherst doesn't like you very much, and there aren't too many reasons why it should like you at all.

This shouldn't come as a surprise. Just take a look at the town's collection of bylaws that are stacked up to account for college students living off campus – what I call the 'damn kids' bylaws. The most recent example of such legislation is the recent rise in citations and police presence for noise and drinking for students living off-campus. Just look at the 229 percent increase in nuisance house offenses during the past year.

Besides the nuisance house bylaw, the other blatant bylaw is the "Four Unrelated Bylaw" that prevents large groups of students from living together. According to the Amherst bylaws, a single housing unit (an apartment) must be occupied by a family, or "a group of unrelated individuals, not to exceed four, residing cooperatively in one dwelling unit."

In this particular case, the bylaw is usually not enforced as long as there isn't a blatant issue. Unless, of course, you're ratted out by your neighbors, like five female students were back in spring of 2009. While this is a pretty extreme example, the incident two years ago is indicative of the attitudes that exist toward students in the college community in that they're pretty damn negative.

To be fair, though, let's look at the other side of this.

Put yourself in the position of a 40-year-old resident of Amherst with a spouse and maybe a kid or two (scary, I know). Every fall and spring, this horde of loud, boisterous, privileged college students show up, clog up traffic, keep you up with their loud music and urinate on your lawn.

Now, you get the option to vote for a bylaw that would help keep it quieter when you're trying to sleep, raise taxes for the town and, most importantly, get those damn kids to simmer down. Why would you not vote for that?

Amherst can't survive without UMass at this point. Economically speaking, they're joined at the hip. But they'll be damned if they can't complain about it.

UMass Amherst is the symbol of the town of Amherst. That giant brick library isn't going away anytime soon. Despite being a separate entity, the town of Amherst gets lumped in with a nationally known college that still goes by "ZooMass." Unfortunately, the residents of Amherst are getting some of that label, even if they never set foot on campus.

The town of Amherst is a small, liberal community that has its own issues to deal with. The people that vote don't buy kegs. The people that vote don't play music and party until 4 a.m. They certainly don't drink Four Loko, but for that one, though, you'll have to complain to the State House.

The residents of Amherst are focused on things like supporting their families, getting their kids through elementary school, sustaining the police and fire departments and taxes. They don't care if your buddy Sean can't chip in for rent for crashing in the living room, or whether or not you get busted for your wicked bomb Jersey Shore party.

It's not easy to sympathize with people who think they have it tough with midterms, frienemy drama or having to wake up for an 8 a.m. class when you yourself have to be at work at 7 a.m. and pay taxes to Uncle Sam. Oh, and another student broke a bottle on the driveway – so much for the kids playing basketball safely.

Believe it or not, even in apartment complexes like the Townehouses of Amherst or the Puffton Village, non-students actually live there, like the very nice lady who returned my lost phone from the parking lot near Townehouse Building Two three years ago.

In the end, the contrast between the town and school is always going to be harsh one. People say that UMass is like its own city, and to a great extent, it is. This of course, presents a strange situation when that pseudo-city is parked right in the middle of a rural town. Heck, you can see the farms from campus.

Amherst can't survive without UMass at this point. Economically speaking, they're joined at the hip. But they'll be damned if they can't complain about it. On the other hand, students who want to be part of the club scene and stay up all night probably should've gone to school in the city. Not to mention they actually have clubs there (and reliable taxis, too).

What we can draw from this relationship is that, once students move off campus, they're in the town's territory and jurisdiction. Unless, of course, students register to vote in Amherst. That'll be the day.

We should give Libya a wide berth

Did you know that a civil war just recently started in Côte d'Ivoire?

No?

I can't blame you: The media has largely ignored it. Just like they mostly ignore the ongoing civil war in the Democratic Republic of the Congo, and only occasionally remember to mention Darfur or the 20-year-long reign of chaos in Somalia (which comes complete with a powerful Islamist insurrection).

Mike Tudoreanu

Yet the conflict in Libya has taken center stage, and the U.S. military began bombing the country just weeks after the government of Muammar Gaddafi started its brutal crackdown on peaceful protesters and those protesters turned into an armed rebellion. Other tyrants have been happily doing this sort of thing for decades with no more than a slap on the wrist from the U.S. Granted, a lot of those tyrants are supported by the U.S., but so was Gaddafi in recent years (after 2004).

So why is the U.S. government suddenly so interested in the fate of the Libyan people, when it can't seem to be bothered to do something about the rampant piracy, public executions, and generally very nasty situation in Somalia, for example? Call me cynical, but I think it might have something to do with the fact that Gaddafi is sitting on top of an ocean of oil.

In Iraq, the Pentagon riddled the country with military bases and American corporations took control of the oil industry, as well as much of Iraq's economy. In Afghanistan, the United States is propping up a puppet dictator, Hamid Karzai, who rules with the help of drug lords. We can expect something similar for Libya if the rebels are put in power by U.S. military forces rather than their own strength. The U.S. will say to them, "We gave you power; that means we own you." The oil industry will probably be sold off to western corporations immediatcly, with others to come later.

Some of the rebels will object to this, no doubt, but what could they do to resist with NATO's bombs hovering over their country?

We must also remember that the Libyan rebels are an extremely diverse group, with nothing in common except the fact that they hate Gaddafi. Some of them want Libya to be a progressive republic, a few may be socialists, others may want to see the old monarchy restored, and some would like an Islamic state.

There can be no victory for the Libyan people as long as the U.S. military is running the show. That is why we must oppose the intervention

I am by no means the first person to make this argument. Jon Stewart presented it far better than I could ever hope to, when he had a segment on his show about "America's Freedom Packages." It is blatantly obvious that the United States is acting hypocritically and inconsistently, picking and choosing which dictators to support with money and guns and which dictators to overthrow. The hope that Obama would bring about a new era in American foreign policy has been trampled to dust.

As a friend of mine pointed out a few days ago, Obama has now launched more cruise missiles than all previous Nobel Peace laureates combined (Henry Kissinger still holds the record for greatest use of Agent Orange, though). Still, a lot of people support the intervention in Libya anyway. After all, goes their argument, regardless of what the US military did or didn't do in other places, isn't it at least doing the right thing in this case? It certainly looks like the U.S. and NATO intervention is helping freedom-loving rebels against a bloodthirsty dictator. What could be wrong with that?

Such arguments are mistaken, because they assume that the American military support for the Libyan rebels comes to them free of charge. Nothing could be further from the truth. The history of U.S. military actions over the past sixty years shows that American "help" always comes with strings attached. I do not believe for a second that the U.S. government has any intention to help the Libyans take their country back and then walk away and wish them good luck.

Then there are also quite a lot of opportunists – many of them ex-Gaddafi supporters – who only joined the rebellion because they saw which way the wind was blowing. Such people would not care very much about the nature of the future Libya, as long as they get to be in charge. If Gaddafi is overthrown by a NATO intervention from above, instead of a successful popular uprising from below, it is precisely those opportunists who are likely to form the next government. They would gladly go along with anything the U.S. demands, and if the people of Libya complain too much, they might even install a new dictator.

There can be no victory for the Libyan people as long as the U.S. military is running the show. That is why we must oppose the intervention – because intervention means that the U.S. will be pulling the strings. Without U.S .and NATO interference, the Libyan people at least stand a chance of taking real control of their own country. It's far from a sure thing, but at least they stand a chance.

Mike Tudoreanu is a Collegian columnist. He can be reached at mtudorea@econs.umass.edu.

The circle of (extraterrestrial) life

I want to attempt to quickly re-mystify the already debunked. As my friend said to me, "crop circles are so 1996," which is why I feel we should bring them back up again.

Life has many unknown components that prove amazing to us human beings, including crop circles. There are things we feel inclined to understand, work with and find the origins of.

Chelsea Whitton

There are crocodiles and alligators – seemingly prehistoric man-eaters who we still feel perpetuated to work with despite their rows of freshly sharpened teeth. There are cloud nebulas we see only from NASA equipment stills that tell us, we will never actually see the spectacular light show millions of light years away – but there is activity beyond us and we want to know about it.

There are indeed black holes sucking up entire galaxies, as the Milky Way prays a black hole dare not lurk near. Then there is the forever and always unanswered question addressing the entire black hole which we reportedly were thrown-up out of, back when we all started to form brains as intelligent as mine from dust particles (I stick with the God story). Of course there is also the question of whether or not Steven Hawking is even human. Folks, we'll never know.

But what I do want to know, because apparently I missed the fifth grade stage where you learn aliens don't exist, is about the existence of crop circles.

I'm not sure if it's normal at 21-years-old to believe and hope that crop circles are indeed created by aliens, or that the Roswell Area 51 lab photos of alien bodies are real. But if you are unlike me and you stick to a more realistic explanation of the mowed down corn and wheat fields of unsuspecting farmers, then there are other equally-fun alternatives.

For instance, in 2009, "National Geographic" reported that crop circles in Australia were in fact caused by stoned wallabies. Yes, you read correctly; Wallabies high off of opium hopping around the fields resulted in destroying crops and forming crop circles, because we all know that high wallabies certainly have the cognition to do so.

However, I want more concrete answers about crop circles' existence, evidence a bit stronger than high Wallabies. I also dread hearing that they are created by bored farmers with janitorial brooms, wooden planks and rope with an eye for outdoor design and superb skills when it comes to math involving 3.14529654....

Indeed, with my dismissal of human influence on crop circles, why are aliens communicating to us in beautifully-designed circles in the middle of nowhere?

Why not do it in Central Park, cutting out trees or something – or why not just take over one of our minds, like a semi-famous, book-writing musician for example.

Oh wait, Sammy Hagar already had that covered when he recently told the L.A. Times he had been tapped into by aliens in California decades ago. Nevermind, then. The aliens are clearly on top of their infiltrate-the-human-mind plot.

Okay, but this doesn't explain how the aliens make the circles and why. The movie "Signs" attempted to outline exactly what happens when aliens hit earth – but all we saw is that they walk through Mexican kids' birthday parties and make Mel Gibson look like less of an ass. Any human explanation for crop circles, including human crafting of them, is dismissible.

If you're one of those ropes and planks supporters when it comes down to the science of making crop circles, well, you're taking the fun out of it. I mean, who wouldn't want to believe that in the deep, dark, windless moments of night, aliens – many of them – take their time and infinite intelligence to create beautiful signs and displays and they are interested in not only our intelligence system, but in contacting us. It just happens to be in rural areas, where we never see them execute their mysterious designs. That's all there is to it.

In 2009, "National Geographic" reported that crop circles in Australia were in fact caused by stoned wallabies.

Pokemon back in black White wins the fight

By Nick O'Malley
Collegian Staff

Under all of its layers of Pikachu mascots, card games and television shows of a boy that hasn't aged at all in 14 years, the Pokemon franchise has consistently remained a well-designed, finely-balanced role-playing game.

With the advent of wi-fi multiplayer battles, the franchise has now produced one of the best and most popular metagames in the market. That's not saying much, though, since its only tangible competition comes in MMORPG form.

However, such discussion, no matter how well-deserved, about the game's battle mechanics and metagame in a diluted market is ignoring the No. 1 reason that 22-year-old college seniors still play a game that popular culture will continue to ridicule them for playing.

"Pokemon" is video game crack.

All other things aside, "Pokemon Black" is another installment of the franchise that millions will continue to purchase as long as it continues to churn out 100-plus new characters every time it bumps up a generation.

Fortunately, "Pokemon Black" and "Pokemon White" do more than that. The latest installments, now in Generation V of the franchise, don't try to change the formula too much. Instead, B/W makes a solid amount of key, substantial changes while still maintaining that same infrastructure that has brought the series this far.

The intrinsic question, though, as it is with every "Pokemon" game is still: "Why should I buy this version over any of the others?" This is especially important for people that already own a version of the game.

While my counterpart focuses on the plot points and gameplay features that round out the game, here we're going to look at the key changes that make B/W different from the rest of the franchise.

A new, unique 150

Every new generation of "Pokemon" games has flaunted a new set of new Pokemon to draw in new players. However, what a lot of the games boil down to is ending up with a lot of familiar Pokemon in your party that you know are good and roll through the games with the same Alakazam and Gyarados you've been using since you were 9-years-old.

B/W, though are the first games completely devoted to a new set of Pokemon, meaning that no Pokemon from previous versions will appear until the Pokedex's national mode is activated once the main storyline has been completed. This is an enormous factor in a number of areas, the first being that caves no longer involve fighting 15 Zubats and Geodudes in a row.

The lack of older Pokemon means that there's a limited pool of Pokemon that you'll encounter throughout the main story mode, meaning that more Pokemon will be featured more often. What this means is that there are fewer "trash" Pokemon that you catch and hide in Box 1 for all of eternity.

Even the normal-type dog and dark-type cat encountered 15 feet away from the protagonist's house are seen later on in the game. The latter is even used by one of the Elite Four.

Another feature of the new Pokemon is a better type balance, with the rarer Bug, Steel and Dark types getting more legitimate representatives. As opposed to other versions, especially "Pokemon Sapphire" and "Pokemon Ruby," there are fewer normal Rattata and Spearow types and more of the "holy crap what the hell is this" types. Entering the game, I had my eye on the trash bag, candle, ice cream, dark hydra and giant construction worker Pokemon. The candle and construction worker ones have panned out wonderfully.

TMs are reusable

A major change in item uses comes in the form of technical machines (TMs) which can now be used as many times as you want, like hidden machines (HMs). This ends the days of hoarding TMs you get early on to save for Pokemon you'll get later.

Due to these changes, TMs now play a much larger role in the game. Rather than relying on an individual Pokemon's moveset, players can focus more on type setups for their teams and statistics. The reusability factor also means that moves can be swapped in and out for certain battles.

Drastic shift in story

This is something that my counterpart will go into further detail about, but the fact that there has been a seismic shift in the plot from the rival and gym leaders to the Team Rocket equivalent (the vaguely Crusades/PETA-themed Team Plasma) of the game. The story ventures from kiddy plot to JRPG plot at times, but it makes for a completely different plot experience and it's really a fresh change for the games.

Whether or not you should buy this game really comes down to whether you're looking for something new in Pokemon or something refreshing. If you haven't played since the Red/Blue/Yellow era and want something similar, you should shoot for "Pokemon SoulSilver" or "Pokemon HeartGold." If you want something new, B/W is the freshest re-visioning of the game that the franchise has ever seen.

Nick O'Malley can be reached at nomalley@student.umass.edu.

By Andrew Sheridan
Collegian Staff

As someone who has followed the Pokemon series with a nerdy loyalty over the span of its life, I have been concerned for some time that the franchise has been resting on its laurels. It is always a gamble to tamper with a winning formula, but after 13 years and 16 handheld games, their cookie-cutter layout had grown stale. Racing your rival to beat eight gym leaders and become the league champion, fighting off a greedy gang of poke-thieves along the way, and running into Zubats in every last cave was getting old. It needed more than a few new species thrown on the heap to breathe new life into it.

Enter Black & White. The names refer not only to the franchise overhaul they represent, but also the questions of moral ambiguity that permeate the game. For the first time ever the entire concept of forcing Pokemon to fight for our amusement is called into question. Is the main character a friend and ally of his poke-partners, or simply an elemental-themed Michael Vick?

This question lies at the heart of the game. It shifts the focus away from fighting gym leaders and puts it on Team Plasma, a morally questionable group who seek to free these creatures from the clutches of self-serving humans. The NPCs feel more like co-habitants of the world than set pieces standing in your way, and the characters who could be described as "rivals" have their own problems to deal with besides one-upping you.

Shortly after breathing a sigh of relief for not having to come up with an insulting, vulgar name for yet another rival, I got a visit from the hometown professor, there to present me with my first Pokemon. No, they haven't come up with a better Pokemon delivery system, but hey, this time it's a woman! It's always good to have more active female characters, and this one has daddy issues, making things even more interesting.

Once the plot elements have fallen into place, it's time to get down to the real meat of the game: combat. As Nick already mentioned, until you beat the main story you cannot encounter any Pokemon from previous games, and this new 150 and change are a definite new breed. Not only are many of the type combinations and abilities new, but the statistics layout of the Pokemon have changed as well.

To start, there is now a clearer gap between the fast and the slow.

Whereas a high speed used to be a given among powerful Pokemon (unless they were rock or steel-type), that is no longer the case. Brawlers such as the psychic Pokemon Reuniclus have speeds so low that in order to use them in their lineup a player has to take speed into account. Low speed can be used as a strategic advantage, but only by players who are paying attention. This and other trends in stats seem to be aimed at people who enjoy the strategy aspect of the games and want more options.

Trying to get off of the beaten path, the designers have come up with some seriously creative creatures. Examples include Eelektross, an electric eel with no weaknesses, and Darmanitan, a fire-type beast that transforms into a psychic statue at low levels of heath. You can also find Pokemon based on anteaters, chandeliers, kami spirits and even ice cream cones.

There is of course the occasional throwaway, such as useless rodent Pokemon in the fields and rock Pokemon haunting the caves, but as a whole the level of inventiveness is high.

As for the version-specific features, the main selling point for White Version is the White Forest, a heavily wooded area accessible only after defeating the Pokemon league. Black has Black City, a comparable area with buildings and trainers, but no wild Pokemon.

The layout and population of the forest will change depending on how many days it takes the player to reach the forest, so those who are tempted to mess with the DS's internal calendar should be wary. Doing so could leave your forest barren of life. Playing the game normally, however, and connecting to other games using the wireless feature, results in a forest that is plush with tall grass and water features. These are home to an unprecedented 30 version-exclusive Pokemon species, all from previous generation.

Other White-only species include the bald eagle Pokemon Braviary, the mitosis-based Solosis family and the storm god Thundurus.

When improved layout and interface are taken into account, Pokemon Black & White represent a fresh start for the series. Taking everything that fans love about turn-based cockfighting and changing up most of the stale elements, the franchise that took the 90s by storm feels new and interesting. Nintendo has succeeded where George Lucas and Coca Cola failed; they took a classic, and made it new.

Andrew Sheridan can be reached at asher1@student.umass.edu.

Top 5 movies about lists

By Sam Dang
Collegian Correspondent

This is a list of the best five films that involve lists. Whether it's integral to the plot or just a prop, nothing was overlooked when trying to compile this definitive list of films that use lists.

5. Home Alone (1990)

The first of one of the greatest film franchises of all time. It's a psychological tale of child abandonment and vigilante justice. Taut performances all around, worthy of a Federico Fellini film. There's a shopping list in the film (Kevin does the grocery shopping for his family). It is very important to the plot as it helps show that Kevin McCallister (Macaulay Culkin) is maturing in a world of adults.

4. Kill Bill (2003)

Quentin Tarantino's ode to Kung Fu and exploitation films. Of course, it tops the list. At the 93:21 minute mark, we see a graceful shot of a Sharpie marker crossing off "O-Ren" as the camera pans up to the handwritten list of names, at the top: Bill. It's a gorgeous and graceful shot of the list.

3. The Bucket List (2008)

"The Blindside" was essentially a shot-for-shot remake of "The Bucket List." However, they are both the most inspirational films of all time. Jack Nicholson and Morgan Freeman writing a list of things to do before they die seems depressing. And that's true. However, their list is outrageously funny. At one point they ride motorcycles on The Great Wall of China! How wacky is that? Just when I think Hollywood ran out of ideas, Freeman and Nicholson metaphorically hold Hollywood upside down by its ankles and shake it until all its lunch money falls out. All of this is made possible by a list and biting social humor rivaled only by Mark Twain.

2. Schindler's List (1993)

Many people say that I missed the point of this black and white film (seriously, Hollywood, you can afford color film). I never even saw the movie, but it has the word "list" in the title. As a student, I have a lot on my plate. I could sit down and watch all these movies or I could watch a marathon of Criss Angel Mindfreak on A&E. If I could sneak up behind Steven Spielberg at night, I'd scream, "WHEN ARE YOU MAKING JURASSIC PARK FOUR?!" But that would have nothing to do with "Schindler's List," would it?

1. The Santa Clause 3: The Escape Clause

Mind the puns, but this film is a polarizing and chilling tale of the burdens of good will and martyrdom. Tim Allen, the most versatile actor in the world, is perfect in his tour-de-force performance as Scott Calvin/Santa Claus. The Christ-like and stoic Allen engages in an epic battle to retain his job while juggling the foibles of modern family life. The film is a revealing look into the theories of good and evil as we get a look at "Naughty or Nice" lists. The "Naughty or Nice" list leaves the audience questioning the moral intricacies of social behavior and how far we can go until we become, "the naughty." The film took all of my preconceived notions of good behavior and reinvented them. Third in the franchise, but it's perhaps the best installment. I say, keep them coming!

Sam Dang can be reached at samdang@student.umass.edu.

Green's "Mars Needs Moms" the greatest film of all time?

By Sam Dang
Collegian Correspondent

At first, the new movie "Mars Needs Moms" seemed effortlessly brilliant. It's a film where Martians kidnap Earth mothers to help raise their Martian children, after all.

I purposely waited 18 days to avoid the rush and crowds. I mean, missing my midterm was worth seeing a potential blockbuster film. My excitement was palpable. I had a feeling that this could be the next Harry Potter: a multi-billion dollar franchise and pop culture phenomenon.

Needless to say, I happily paid the service charge in reserve tickets from Cinemark for a Wednesday, 11:00 a.m. screening. The film had all the makings of an American movie classic. And trust me, I use that phrase a lot. The trailers for the film used Three Dog Night's "Mamma Told Me Not to Come," a song about a young man's shocking experience in a wild and drunken party. Is this applicable to a children's film about aliens and mothers? Maybe not, but the title of the film uses the word "mom," so the song is apt in that regard.

I was excited despite the negative press. I was mostly excited about how the filmmakers used motion capture technology to use Seth Green's facial expression, but didn't record his voice for his character. Yes, they advertise Seth Green, but replaced his voice.

Also, the film cost $150 million ("Inception" cost around this much) and has only made $33 million so far. Now, I'm quite upset over the horrible (but accurate) accusations toward the film's quality. But I chose not to let this bother my viewing experience.

I finally saw the film in its 3-D glory. Our protagonist Milo (Seth Green, but voiced by Seth Dusky) has the worst luck after his fight with his mother. He realizes how much he needs her once Martians kidnap her away.

It's a beautifully shot film that raises the issues of parenthood, responsibility and parental love. Too bad I was on the floor writhing and my mouth foaming at every scene.

I believe I spent 88 minutes of my life in this theater cringing.

Sure, the friendship between Milo and the alien, Ki, was adorable, but I felt dehumanized and lost all sense of self-value. However, it delivered on many levels. For one, it was on Mars. Secondly, there were Moms. Thirdly, the children in the theater were entertained enough to not notice my spastic movements and groaning.

Inappropriate behavior (and my ejection from the theater) aside, I have to say it's not my fault I tore chumps of my hair and repeatedly screamed, "When will this nightmare end?!" Perhaps producer Robert Zemeckis ("The Polar Express," "A Christmas Carol") needs to focus on character and plot rather than mind dazzling special effects that go nowhere. But hey, I'm probably just biased because Martians kidnapped my mother, or so my father says before dropping the subject. In the end, I guess Mars just needs the right audience.

Despite Hawks winless streak, Minutemen preparing for test

See M LAX on page 8

Though the Hawks are youthful, the defense holds veteran seniors that will look to halt the Minutemen offense, including Rob Sanacori, Shawn Mowry, Pat Harner and Keith Belson.

"Defensively is where they have most of their critical mass," said Cannella. "They've held teams down defensively – teams that on paper are better than us on offense."

While the contest might give the Minutemen a break after taking on top-ranked teams such as No. 20 and No. 9 Army, they will have to be mindful of sophomore Kyle Williams, who leads the Hawks with 11 goals on the season.

"He presents match-up problems for you [because] he's a big and athletic kid," said Cannella. "It's going to be in his hands a bunch, and he's going to be in different spots because of his invert game."

Williams helps an ailing Hawks offense that has been outscored 23-7 in games in the first quarter alone, which is a period that the Minutemen have struggled in earlier games this season.

The sophomore attackman doesn't stand alone on the offensive side of the ball, as Scott Cullinan, son of SJU coach Pat Cullinan, and Kyle Mahoney both have five goals and one assist on the year – good for six points each.

With Williams, Mahoney and Cullinan running the offense side, and the defense being equally formidable, the midfield also earned a lot of praise from Cannella. Ian Correia, Steve Dunn and Trevor Dougherty were picked by Cannella to work the midfield for the Hawks.

"[They are] players that are young that are trying to find their way to play a very difficult schedule," said Cannella. "They'll be fired up for us and obviously coming off of a loss, we're going to have to be ready."

Additionally, this contest will be the first time that SJU and UMass clash in CAA play, as the Hawks joined the conference this season, a year after the Minutemen's own move to the conference.

In their final year of Metro Atlantic Athletic Conference play, the Hawks showed similar signs of struggle, going 3-12 in 2010 with the three wins coming in conference play.

Herb Scribner can be reached at hscribne@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Sophomore K.R. Jurgelevich makes a move against a PSU defender in a loss this year. UMass faces another CAA foe in SJU Saturday.

JAKE HAMILTON/COLLEGIAN

Kyle Smith cradles the ball against an opponent this year. The Minutemen face five-straight CAA teams to close out the 2011 season.

5-straight conference matches begin on Sat.

See STRETCH on page 8

for the Minutemen is arguably the toughest and most significant stretch of their regular season schedule.

After playing three of its first four games this year at Garber Field, UMass needs to play six of its final nine contests on the road, where it has a 2-2 record so far.

"It's a difficult part of the year especially when you lose," said Cannella. "When you win, everybody's okay, but when you lose a couple of games and now you've got to go back on the road, it's a long trip."

The upcoming matchup with Saint Joseph's on Saturday will mark the first of five-straight conference games. In their only meeting with a CAA opponent this season, the Minutemen fell to the Nittany Lions.

Cannella understands that now, more so than any other part of the season, is a critical time for his team and would be an opportune period to get back on track.

"This is your opportunity, this is your access, that's why you get involved with leagues and league championships if that may be," said Cannella. "That's why you do it, to get access to the NCAA's and obviously it's going to be very important. This is a pretty important time for every league and every team in our league."

JUMP TO THE CAA

UMass' matchup with SJU on Saturday will be the first ever men's lacrosse history. That's because the Hawks are new to the CAA after making a jump from the Metro Atlantic Athletic Association this year.

So far, Saint Joseph's has had trouble making a seamless transition, losing both of its CAA games and holding an 0-7 overall record. The Hawks, however, didn't fare much better last season, going 3-15 and not earning a victory until April 10 in their 11th game of the year.

Nevertheless, Cannella, who knows about transition of changing conference after the Minutemen joined the CAA in 2010, realizes that the Hawks are in an adjustment period.

"I think it's a much tougher conference for them," said Cannella. "Their non-league schedule was fairly difficult. So not only is their non-schedule tough, but their in-league [schedule] is a lot different than the MAAC."

Jay Asser can be reached at jasser@student.umass.edu.

UM hopes to make in three in a row

BY STEPHEN HEWITT
COLLEGIAN STAFF

The home-opening jitters are all but a memory for the Massachusetts softball team, as it will try to build off of its latest momentum when it welcomes Saint Louis to Amherst on Sunday for a doubleheader.

The Minutewomen (11-14, 3-3 A-10) will return to conference play against the Billikens (19-14, 4-2 A-10) after notching a pair of victories against Dartmouth on Wednesday, wins of 1-0 and 6-2 respectively, that included junior pitcher Sara Plourde's first no-hitter of the season in Game 1.

The momentum has a lot to do with the re-energized play of Plourde. The Minutewomen's ace was impressive following a pair of shaky performances against Temple and Saint Joseph's last weekend in which she gave up seven and four runs, respectively.

UMass head coach Elaine Sortino made some mechanical adjustments with her pitcher in practice earlier this week, and the results thus far have been very satisfying, as Plourde threw the no-hitter before relieving freshman Caroline Raymond in Game 2 on Wednesday with two shutout innings and four strikeouts, earning her first save of the year.

UMass will now turn its attention to SLU, who lost four of its last six games heading into its matchups with Rhode Island Friday and Saturday before traveling to Amherst for Sunday's tilts.

The Minutewomen will look to avenge their lone blemish in conference play last season, in which SLU managed to tie UMass, 3-3, in a game shortened due to rain conditions.

In their first matchup in the series in 2010, which was played at SLU, Plourde threw a one-hit shutout, striking out 14 Billikens in a 1-0 victory in a true pitcher's duel. Junior Hannah Huebbe was the starting pitcher for SLU in the game, as she went the distance, allowing one run on six hits in the loss.

In the second game of the series, Plourde took the mound again, pitching eight innings, striking out 11 and allowing three runs on three hits before rain shortened the affair. Junior Kelcie Matesa started for the Billikens and also pitched a complete game, retiring the first 13 UMass batters of the game before giving up three runs on three hits to earn the tie.

Huebbe and Matesa return this year, and will likely get the nods similar to last year on Sunday.

So far in 2011, Huebbe boasts an 8-4 record along with a 2.88 ERA, which is good for seventh in the conference, while Matesa holds a 7-4 record, a 3.06 ERA and a team-leading 86 strikeouts in 80 innings of work.

For the Minutewomen offense to get to both pitchers on Sunday, it will have to rely on the momentum of Wednesday's effort, in which they were able to muster six runs on 12 hits in what was an otherwise uncommon offensive splurge for the team this year.

Guiding the Maroon and White at the plate will be senior Audrey Boutin, who leads the team with a .321 batting average to go along with her two home runs and 10 RBIs this season. Boutin is 9-for-13 in her last four games, including a 4-for-4 effort in Game 2 on Wednesday against the Big Green.

In addition to Boutin, freshman Lindsey Webster has provided a much-needed lift to the UMass lineup.

Since presumably taking over Katie Bettencourt's place in the lineup – she is out for the season with a lacerated liver – Webster has made the most out of her opportunities at the plate, batting .289 on the season to go along with three home runs and 10 RBIs, which includes a three-run home run that she hit on Wednesday.

The doubleheader will get started at 12 p.m. on Sunday afternoon from the UMass Softball Complex.

THE MASSACHUSETTS DAILY COLLEGIAN

SPORTSFRIDAY

FRIDAY, APRIL 1, 2011 SPORTS@DAILYCOLLEGIAN.COM

UMass wins first Atlantic 10 game of the season Thursday

UMass	12
Temple	9

By Jackson Alexander
Collegian Staff

The No. 13 Massachusetts women's lacrosse team opened up its Atlantic 10 conference play with a 12-9 win over Temple on Thursday afternoon.

The Minutewomen received a game-high five goals and one assist from freshman Katie Ferris.

Despite missing the first two games of the season, Ferris leads her team in goals scored with 26, and her 3.25 goals per game average ranks first in the A-10.

"When we get inside and get good angled shots [Katie] can put them away," said UMass head coach Angela McMahon. "She has the great ability to finish when she's in good position."

The Minutewomen jumped out to an early 5-2 edge just 12 minutes and 20 seconds into the game. However, Temple picked up their play on both ends, shutting out the Minutewomen for the rest of the half, while tacking on a pair of goals before the end of the half. UMass held just a 5-4 lead heading into break, as McMahon was not pleased with her team's performance to close out the first half.

"We just didn't do a good job of doing the little things and working hard off ball on the draw controls like we should have," said McMahon.

Ferris had two of her goals in the half, while Dayna Defliese, Riley Perry and Haley Smith each added a goal.

At this point, UMass goalie Katie Florence (four saves) was replaced in net by attacker Nina Sarcona. This switch was planned in advance as Florence's back injury, suffered in last weekend's game versus Northwestern, flared up.

"The fact that we're playing two games this weekend, we just wanted to give (Katie) a little rest," said McMahon.

The Minutewomen came out of the second half with a vengeance, ripping off five unanswered goals and extending their lead to six.

Ferris again led the attack, providing a goal and a impressive assist to fellow freshman Tanner Guarino. Senior Jackie Lyons came to life during the stretch as well, tossing in both of her goals on the afternoon.

It was evident that McMahon had delivered a halftime speech that ignited a much-needed spark in the Maroon and White's attack.

"She told us to get it together and go out there and play the way we usually do," said Ferris.

With the game slipping away from the Owls, Kelsey Zenuk finally stopped the bleeding with her first goal of the game at the 22:44 mark in the second half. The teams then traded goals before Ferris capped off her performance by scoring her fifth goal of the game. Down 12-6, Temple coach Bonnie Rosen called a timeout and attempted to regroup her team.

With just under 10 minutes remaining and the game seemingly out of reach, the Owls made a run at the lead cutting the deficit to just three with two minutes and 46 seconds remaining on goals from Jackie Mercer, Stephany Parcell and Missy Schweitzer. But it was too little too late as UMass controlled the ball and let the clock run out, making the final score, 12-9.

Temple stayed competitive with their slow, deliberate style of play, as they maximized time on their possessions.

The most alarming statistic of the night was UMass' 22 fouls to Temple's 4, a product of the time of possession discrepancy held by the Owls.

"I was happy with the win, but I wasn't happy with the way we played, we're a lot stronger than that," said Sarcona, who made two stops in net and also added an assist on offense.

Lyons was the only other Minutewomen with more than a goal, as she registered two goals and an assist.

Charlotte Swavola was Temple's best source of offense, scoring two goals and handing out two assists. Parcell recorded a hat trick and Schweitzer added a pair of goals.

Now the Minutewomen will hit the road to face La Salle, their second A-10 opponent of the season, on Sunday at 11 a.m.

The game will be a rematch of last years semi-final game in the A-10 tournament, a game in which UMass won, 9-7.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Junior attackman Art Kell makes a move against an opponent this year. The Minutemen take on SJU on Saturday.

Minutemen look to halt skid on Saturday vs. Saint Joseph's

By Herb Scribner
Collegian Staff

The No. 17 Massachusetts men's lacrosse team could catch a break from its tough schedule, as it takes on a winless Saint Joseph's team on Saturday afternoon, in UMass' second Colonial Athletic Association game of the season.

The Minutemen (5-3, 0-1 CAA) enter the home of the Hawks (0-7, 0-2 CAA) having lost three of their last four contests, which were all closely-contested battles that crumbled for the Maroon and White at the end.

Despite SJU's winless start of the season, UMass coach Greg Cannella doesn't look at the team any differently than any other opponent.

"This time you only have a couple of days [to practice]," said Cannella. "You don't have that much time, so I don't think it matters who you play. It's the opportunity to get back out there as a team and try and prove yourself."

Heading into the SJU game, Cannella and the rest of the Minutemen are taking note of the slow style the Hawks have displayed so far this season. Along with playing at a slower pace, SJU has also hustled on the defensive end by allowing no more than 10 goals in four contests this season.

"They're an athletic team – an aggressive team," said Cannella. "They play a certain style, a slow-down style, so we have to be aware of that for sure. Most of their experience is on the defensive side, it's a very young team."

See MLAX on page 6

JEFF BERNSTEIN/COLLEGIAN

Junior attackman Art Kell makes a move against an opponent this year. The Minutemen take on SJU on Saturday.

Cannella & Co. face toughest part of season, SJU joins CAA

By Jay Asser
Collegian Staff

If there was ever a difficult time to face struggles this season, the Massachusetts men's lacrosse team is in the midst of it. The No. 17 Minutemen have lost their last two contests and are in the middle of a schedule in which they have a three-game road trip and get into the meat of conference play.

The reason for UMass' struggles lately has been the inconsistency of the offense, which has scored in double-digits once in the past five games.

"Honestly I think it's just the ability to go out there and play and not think about it too much," said UMass coach Greg Cannella. "I think for a lot of guys it's weighed heavy in the back of their heads, when they have the opportunity to score they're not just going out there and reacting … The only thing we're struggling with is putting the ball in the back of the net."

Despite outshooting Penn State, 38-27, in a March 19 meeting, the Minutemen suffered an 8-7 loss, including going scoreless in the second quarter. Nevertheless, UMass ranks second in the Colonial Athletic Association with 10.00 goals per game, behind Drexel's average of 11.11.

Cannella also expressed that the recent offensive problems have added extra pressure to the defense, which he considers to be playing well and keeping the team in contention during games.

APATHY&DYING

FRIDAY, APRIL 1, 2011 DICKNOSE@MORNINGWOOD.COM

Ledger has yet to have his last laugh on screen

By Jack Offer
Morning Wood Staff Pornher

Looks like the joke's on us.

Heath Ledger ("The Dark Knight"), who was pronounced dead on Jan. 22, 2008, was found alive yesterday at a Denny's in Edmund, Okla.

Just under seven months following his alleged death, "The Dark Knight" was released to record-breaking crowds. Ledger was "posthumously" honored for his role as the Joker in the film, winning the Academy Award for Best Supporting Actor.

On March 31, four members of the Westboro Baptist Church spotted Ledger at the popular breakfast spot. Their names have not yet been released. Ledger, who was eating a Grand Slam according to police reports, insisted they were mistaken, and that he was not, in fact, the guy from "A Knight's Tale." When one member remembered that he was also in "Brokeback Mountain," all hell broke loose.

The men proceeded to shout insults at him for his inaccurate portrayal of agricultural techniques in the film. When one of the Church-goers threw a hot waffle at Ledger, he slowly stood up and laughed.

Denny's regular and witness Bobby-John Thompson explained that Ledger began bawling out the name, "Kevin." Laughing still, he presented the hostess with his middle finger and walked out the front door.

Ledger jumped into a 1991 Volkswagen Jetta, which had plates that were traced back to actor Daniel Stern ("Home Alone," "Home Alone 2"). Stern, who was reported missing from the Grand Lakes Mental Health Hospital in Mangum, Okla. in September 2008, was found and arrested.

After only a few minutes of questioning, Stern explained to the police that he received $500 million from director Christopher Nolan to stage Ledger's death, to hold him captive until January 22, 2011, and to make him insane. When the three years were over, Stern said that he refused to release the barely-competent Ledger to Nolan. Rather than follow Nolan's specific instructions, Stern admitted that he used the opportunity to test an experiment that he insisted was his own idea.

Stern strapped Ledger to a chair, and using a device to keep Ledger's eyes open, Stern played his entire filmography on a continuous loop for the entire three-year period. He fed Ledger through feeding tubes, and would not explain the method in which Ledger went to the bathroom.

When Nolan saw the first trailer of "Iron Man," Stern said he drastically overestimated how successful the Jon Favreau action flick would be. Nolan, feeling pressured to do something to draw attention to his own film, then approached Stern.

According to Stern, Nolan wrote a very intricate plan to stage Ledger's death. Ledger was led to believe that Mary-Kate and Ashley Olsen were waiting for him at an apartment on Broome Street in New York. When he walked in, Stern, who was hiding in the bathroom, forced Ledger onto the bed and injected him with a potent sedative. The drug made Ledger's pulse nearly undetectable, and when paramedics arrived on the scene, they pronounced him dead. The ambulance, driven by Dennis Stern, the brother of Daniel, disappeared with the body. Embarrassed by the incident, Holy Oaks Hospital gave the family an urn full of ashes that since have been tested and proven to be those of various rodents.

Stern transported the limp, yet living, body of Ledger all the way to Edmund, Okla., where he handed him over to his brother.

Stern said that Nolan and Ledger had a signed agreement that Ledger, a known method actor, would go to any extreme to play the Joker perfectly. This should cause a lot of issues for Ledger if he decides to press charges, which actually seems rather unlikely.

A psychiatrist who evaluated Ledger after Stern had been arrested said that he was suffering from Stockholm syndrome. He was repeatedly ranting about how Jack Palance got all the critical attention for his work on "City Slickers," even though Daniel Stern was the real star.

According to a nurse, Ledger shouted, "He wasn't even on the poster!"

He was able to mumble some information to the nurses and psychiatrists about his escape from Stern's lair. Because his eyes were not adapted to natural light, he didn't recall anything he saw, but vividly described the smell. Ledger repeated, "Bacon, waffles, Grand Slam," many times before collapsing into a puddle of his own filth.

Lifelong friend Kareem Abdul-Jabbar explained to The Morning Wood that there were two things that Ledger loved: "methadone and Denny's."

"He sure loves his Denny's. And his methadone," said the NBA's career points leader.

The third film in Nolan's Batman adaptations, "The Dark Knight Rises," is set to be released on July 20, 2012. In an interview last summer while promoting "Inception," Nolan was asked if he would recast the Joker for his final film.

"For me, Heath was the definitive Joker. It wouldn't feel appropriate to readdress that character," he said.

Conspiracy theorists read deeply into his particular wording and concluded unanimously that this must mean Ledger will again play the Joker in the final film.

While Nolan couldn't be reached for comment, Stern confirmed that the stunt was intended to prepare Ledger for a cameo in "The Dark Knight Rises."

Jack Offer can be reached in the bathroom with a box of tissues, or by watching "It" on acid.

Ledger, who was thought to be dead, was recently spotted at a Denny's in Edmund, Okla. by members of the Westboro Baptist Church. Ledger had been held captive for three years.

2011 Summer movie preview

By Babelsweat Baldwin & Fred Dichmeheighn
Morning Wood Staff

The weather is finally warm, and that can mean only three things: ducklings at the campus pond, the return of booty shorts and a fresh new lineup of summertime blockbusters. Because it can be difficult to decide which two-hour brain cell buster to spend your hard-earned money on, The Morning Wood is here to lay out your options for this year's movie season.

"Superman: On the Origin of Hatred"

Charles Darwin (Paul Giamatti) is the dark overlord of Hell, and he is growing angry that Superman is keeping Lois Lane (Cameron Diaz) from his clutches. Darwin's forces shouldn't allow Lane to live, but Superman keeps intervening. To correct this injustice and ensure that natural selection takes its reaper's toll, Darwin mounts his dark forces for a total war on Superman (Patrick Warburton). Will the fittest survive?

"Pulp Fiction II: The Wandering"

Jules (played once again by Samuel L. Jackson) has quit the mob life and has decided to "walk the Earth." Old habits die hard, however, and he soon falls back into his old ways. Jules gets involved with a black-market virginity ring, and is forced to bring the hammer down once again. On the run, he befriends a hard-nosed reporter (played by Kathy Bates) in a Tanzanian tiki bar, and a bizarre Tarantino romance is born. SPOILER ALERT: The pair eventually gives birth to a boy named Mowgli, but accidentally leaves him with a pack of wolves while on a methadone binge.

Owen Wilson in "Oafie's Choice"

Owen Wilson plays Oafie, an accident victim whose nose was terribly malformed. Oafie must face a battle with his identity; will he hold true to his values as a holistic surfer dude, or will he give in to the pressures of his wealthy family and finally get that vulture-like nose fixed? Oafie is joined by his unhelpful best friend Hank (Vince Vaughn) and plastic surgeon-turned love interest Dr. Jenna (Catherine Zeta Jones).

"Charlie Brown: All Grown Up"

Charlie Brown, (Louie Anderson), now 45, is all grown up. He has finally gone from being a mildly existential downer of a little boy to a crushingly depressed, unbearably existentialist middle aged man. The only person that will listen to him is his unfathomably sexy friend, Lucy (played by Robin Williams). Can Brown ever get over his own psychological issues, quit that job at Walgreens and finally make something of himself?

"Pitt and Portman Talk About Sex for an Hour"

If you thought "The Sound of Music" was a tease, wait until you see the latest film by Wes Anderson. Brad Pitt and Natalie Portman talk about what their privates look like without exposing anything – for one hour on horseback, while on a journey across Irish fields to find the true meaning of sexuality.

"Magnus Almighty"

Liam Neeson plays Magnus, a blue-collar man working a dead-end job at a government weapons factory. One day, after questioning his place in the world, he is approached by Morgan Freeman (played by Morgan Freeman) who offers him the powers of Yahweh, the God of the Old Testament. While previous recipients of Freeman's largess have used their powers for mild personal gain, Magnus proceeds to cleanse the planet of non-believers by scouring the earth with pillars of brimstone Freeman must battle his creation and is forced to call upon old-friend Lucifer, (Jeremy Irons) for aid. Can they join forces and end the zany madness?

"Duke Nukem: Home of the Brave"

The year: 2017. The United States is under siege by the greatest threat humanity has ever faced: Mechanazis. All of our forces have fallen before the terrible might of the titanium totalitarians, and President Schwarzenegger is forced to call in freedom's last hope: Duke Nukem. With a hefty supply of ammunition and a few Cuban cigars, Nukem (Gerard Butler) sets out on a warpath. He must blast his way from Atlantic to Pacific to put an end to the steely socialists, and put a size-15 boot up Robo-hitler's ass. Hell yeah, Amer'ca!

Balschweat Baldwin and Fredrick Dichmeheighn can be reached in the alley next to Antonio's from 2-3 a.m. on Tuesdays.

Sheen actually an illusion of self

By Rumplewein Sinclaire
Morning Wood Staff

Early this morning, by way of a marathon "tweeting" session that took place between the hours of 4:17 a.m. and 5:31 a.m., actor Charlie Sheen made some revelatory and disturbing remarks on the subject of his recent return to the limelight. Sheen had been propelled to infamy by a series of disparaging comments he made about the executive producer of "Two and a Half Men," culminating in a widely-viewed, seemingly drug-addled interview on "Good Morning America."

But with the information released on Twitter this morning, Sheen's seeming fall from grace has been cast in a new, distressing light. At 4:17 a.m. Pacific Time, he posted: "Fools."

Moments later, he added: "How easily you have been deceived."

Quickly following these posts, Sheen's community of Twitter followers erupted in confusion. One user, snowdog98, posted at 4:22 a.m.: "@charliesheen w8 yo is the warlock 4 real nite now! U lost me charly!!"

Thousands of similar posts came flooding in over the next several minutes, including a number of replies from celebrity Twitter accounts. At 4:29 a.m., William Shatner's account posted the following: "@charliesheen Sheen! What is the meaning of this!? RESPOND."

Apparently anticipating this post, Sheen responded almost immediately (after mockingly re-tweeting Shatner): "@williamshatner Ha ha ha, I have been studying your race for some time, Shatner. Highly amusing. But the time has come for the nature of my phantasm to be laid bare. All will be revealed shortly. Haha. So very amusing you humans have been."

What followed was a long series of posts by the actor's Twitter account in which he giddily confessed to being an incorporeal time traveler with powers beyond the conception of our shallow insect minds. At 4:45 a.m., he posted:

"My 'interview' with your beloved 'Good Morning America' was nothing more than the first act of a magnificent play. A play that I put on with my mind. I have taken control of your 'World Wide Web' and used it as my stage."

Sheen also indicated that much of what we had previously known about his career and family history was equally illusory:

"Martin Sheen? An illusion. Who could father a being such as myself? I perceive and manipulate time. Emilio Estevez? Illusion. In Earth year 1989, you flocked to your cinemas to behold 'Major League' starring Charlie Sheen. Another illusion!"

No spokesperson for Charlie Sheen could be reached for comment, as his press team and tour headquarters had seemingly dissolved away from our terrestrial plane of existence. Sheen later confirmed that he was preparing to leave our "curious little planet."

In his last post, at 5:31 a.m., he cryptically explained that he had finally finished his business on Earth:

"I am the quantum mirror of ten thousand faces! I have utterly absorbed through the endlessly pathetic adulations of your species the delicious abstraction you call Fame. The harvest is complete! I now make the final preparations."

Sheen apparently logged off at this point, discontinuing his posting stream. According to eyewitnesses on the ground near his party compound outside Las Vegas, he then began a hideous and breathtaking transformation into his true form. Accounts greatly differ as to the precise appearance of the resulting entity, as most witnesses were driven to the edge of insanity by sight of it. One bystander, a local writer named H.M. Lundquist, attempted to describe the monstrosity: "...an enormous polychromatic sun with shifting projections. Contained in its center was a field of impossible geometric figures. And the sound! Some kind of a tumbling, cackling prayer. The sound of it! The sound!"

Lundquist, too overwhelmed with emotion to finish relaying his experience, proceeded to lay one hand across his eyes and the other over his heart, crouching and trembling at the feet of the interviewer.

Further investigation of Sheen's abandoned motel compound revealed no trace of the celebrity's infamous decadence.

"There definitely used to be a lot of crack in there, and it was definitely real crack," said an anonymous former Sheen disciple. "I think he took all the crack with him."

Local hipster opens up art gallery in SW

By Mike Tyson
Morning Wood Staff

The Hampden Dining Hall Gallery was abuzz yesterday as a "groundbreaking" new collection was released by some hipster dickhead. The hipster in question is a sophomore at the university of Massachusetts who currently holds a BDIC double major in Organic Preservology and Artistic Counter-Culture-Something-or-Other.

The collection is "a cross-medium exploration of the meaning of urban culture in the valley." While no one has a clue what that's supposed to mean, the gallery seems to be filled with poorly thought out displays across a series of inexpertly used mediums.

"Paintings" adorn the walls, most of them using French fry condiments on a black velvet background.

"It represents the oppression suffered by the underprivileged peoples of Compungena," said the hipster dickhead. "It's a pretty obscure country. You've probably never heard of it."

Other mediums used include pastels on ceramic tile, of which there is a series of 10 works. They seem to be loosely centered around Navajo mythology, with images of coyotes, deserts and oblong humanoid figures. When asked about his inspiration for this particular line, the hipster asshole cited "this one time my buddy Cedric got a hold of some peyote."

Also included in the collection is a series of sculptures, which all seem to be oblong shapes roughly chopped out of tree trunks.

"I used the native Algonquian method of axe chopping," said the self-important bastard as he took a drag on his hand-rolled cigarette. "It really brings out the natural essence of the local organic wood." When questioned about the artistic meaning of his work, he simply mumbled something about "native peoples" and shuffled off.

The artist cited inspirations for his work, which include Craig Blacklock, Chris Faust, and Julie Wood. While even he seemed to be hard-pressed to list any works by the aforementioned painters, he justified this by saying "You probably wouldn't understand anyway."

The reaction from the crowd was largely positive. Ill-shaven students in plaid jackets and obscure band t-shirts milled around the gallery for hours, staring at the various works, nodding and saying, "yeah, man."

"It really speaks to me," said one skinny chick who was found wandering aimlessly. "I liked his stuff way more before he went public, though. He's a little mainstream for my tastes." Several other underfed-looking people in Salvation Army clothing agreed with their fellow art lover, claiming that they admired the artist "before he got big."

The gallery collection will be available for viewing at Hampden through the end of the month. The artist could not be reached for comment on how the opening went because he had on an enormous pair of headphones.

Mike Tyson can be reached in the VIP Lounge, but only if you guys do funds.

Club hockey gaining varsity status

Minutemen roster completely cut, Crowley hopes to rebound

By Barry Melrose
THE MOST INTERESTING MAN IN THE WORLD

According to a statement released by UMass Athletic Director John Calipari yesterday afternoon, the Massachusetts varsity hockey team will be completely replaced with the Minutemen club hockey team, effective immediately.

"Unfortunately, the Mass Attack can no longer generate a fan base, or wins for that matter," Calipari said in a statement early yesterday afternoon. He also went on to admit that the "clockey" team had bribed him in hair gel. The new team will be coached by former UMass standout basketball player Derek Kellogg, who will replace Don "Toot" Cahoon, the coach for the past 37 seasons. All 30 players will be replaced by the entire club hockey team from the 2010-11 season. After the varsity team got beat by everybody and their mother this year, failing to make the NCAA tournament since the first time they ever did when they had that goalie that was nasty, Calipari felt the program needed to go in another direction.

This is good news for seniors and KENO roommates Matthew Coughlin, Daniel Arnao and Nicholas Crowley, who will have another extra year of eligibility after stellar careers with the JV squad.

Unfortunately, center Ryan Leary, a former varsity hockey player and club hockey player, will not return for his eighth year of collegiate puck due to eligibility issues.

"I'm really excited about making the jump from clockey to varsity hockey at UMass," said Arnao, a captain on the club hockey squad and former first round draft pick of the Montreal Canadiens.

Arnao has been thinking about a career in modeling or acting after graduating, but has decided to stick around for one last season of hockey dreams. Last month, Jeff Bridges contacted the communications major about playing a miniature version of "The Dude" in the upcoming sequel, "The Big Lebowski 2."

Coughlin, another captain for the clockey team in his senior year, is excited about his chance at improving his draft stock.

"I am really fortunate that this opportunity arose and cannot wait to represent UMass in the Hockey East…Go Bruins!"

Junior William Foard, an avid socialite and star defensemen for the clockey team in two seasons, sees the jump to varsity status as a great opportunity to not only play hockey at the Division 1 level, but to also impress the ladies.

"My main goal is to meet as many women as possible, so if that means I get to play hockey at the highest collegiate level, I see that as a bonus."

Six-foot-four defensemen Nick Crowley, a starter for three seasons for the club hockey team, will look to return from two broken ankles he suffered while training with the United States figure skating team. Crowley's ankles snapped when he attempted a triple-axel and was dropped by Brian Boitano. Crowley has met his share of skeptics after a leg-lengthening procedure in the offseason delayed his 2010 debut.

"I cannot wait to get back on the ice and show people what I can do at the varsity level," said Crowley.

The new-look Minutemen host the Swedish U-13 boys in an exhibition at the Mullins Practice Rink at 3 p.m. today.

JEANNIE PANTOLOPE

Tim Tebow is crying because the Minutemen cannot come out and play. WAHHHHHHHHHHH!

UM won't come play

By Eli Rosenwaike
MORNING WOOD STAFF

Amidst rumors of a jump to the Football Bowl Subdivision, the Massachusetts football team has become the subject of scrutiny of other Colonial Athletic Association teams, who got really jealous that the Minutemen won't be around to play anymore.

UMass has been rumored to be talking to a lot of cool kids in FBS that have their own cars and get to stay up past 10 p.m. This comes after years of the Minutemen attempting to sit down with such cool programs at lunch and trying to catch up with the wealthy kid down the street, Boston College.

However, reports that some older kids from the Mid-Atlantic Conference came over to see if UMass' house was pretty cool have gotten other CAA programs kind of jealous.

"I know they went to play with Michigan this year, but we were hoping UMass would still come back and play," said Maine cornerback Rex Jones. "I hear that it's really fun over there and that over 100,000 people showed up to play. We can't do that, but we still have a lot of fun in Maine doing… something."

The news has been especially hard for UMass childhood rival New Hampshire, who is also the school's next door neighbor. The two schools, whose parents reportedly met at the supermarket one day and arranged a play date, have been almost inseparable ever since. Notable play dates between the two schools include playoff matches only a few years ago that brought out riot police, who claimed that the schools were having "way too much fun, and really shouldn't be up this late anyway" and threatened to call UMass' dad, then-Chancellor John V. Lombardi.

In the face of rumors of a move to the MAC's table at lunch time, UMass coach Kevin Morris said that the CAA is really, really fun and that the Minutemen love their friends.

"I know that when we play with any team in the CAA, it's going to be a lot of fun," said Morris. "Each of these teams we face brings a different thing to the table, so we're always calling different teams' moms to see if they can play. If we're lucky, we can go over if it's not too close to supper."

Even though UMass is "super serious" when it says it wants to play with the CAA teams, other teams have started to pick on the Minutemen, hoping to crush their self-esteem to the point that they won't think they're cool enough to go hang out with the cooler Bowl Subdivision kids.

The ridicule started when UMass had a lot of fun hanging out with Michigan this year, almost beating the college football juggernaut in a football game at its own house. A couple of other teams, namely UNH and Delaware, picked on UMass when they went out to play.

Delaware, whose turn it was to go over UMass' house this year, beat up gave the home team "a really bad owwie" when the Blue Hens toppled the Minutemen. The Blue Hens so didn't say sorry.

"Well, maybe UMass should hang out with us more. Otherwise, it could get a noogie or even a knuckle sandwich," said Delaware linebacker DeSean Meriweather. "UMass should just hang out here. We have a lot of fun doing stuff. Why are they so mean?"

UNH, meanwhile, ruined the two teams' first trip to Gillette Stadium to play after all the effort their parents went through with Mr. Kraft to let them over to his house. UNH continued to throw the ball, even though UMass kept saying "Quit it! We agreed no deep bombs! Stop it! Mom!!"

The affair was no laughing matter for the UMass coaching staff.

"You better start running the ball, or I swear I'll turn this football stadium around and take it back to Amherst," Morris yelled to the Wildcats at halftime.

Other teams, like UMass' neighbor, Rhode Island, and nerdy friend from another town, William & Mary, said that they want UMass to stay, especially since Northeastern and Hofstra's parents both said they couldn't come out and play anymore after last season.

"I don't understand why everyone's so mad. I just wanna go over UMass' house and throw the ball around for a bit," said Rams quarterback Trevor O'Donnell. "My mom said that UMass is just going through a phase, and that I can go over to play next week. I'm happy about that."

Neither Morris or UMass Athletic Director John McCutcheon would confirm if UMass would, in fact, be out to play.

"We're always ready to play," said Morris. "We've been watching tape on new Tag strategies and looking for new locations for Hide & Seek. But we just don't know when, or in what capacity we'll be playing next."

Eli Rosenwaike may be reached under the artificial turf of Garber Field.

CIA informants among roster

By Sephen Glass and Jukt Micronics
MORNING WOOD STAFF

The Massachusetts men's soccer team has been working for the United States Central Intelligence Agency (CIA) over the past four years, according to recent reports.

On Friday night, papers were sent to the Morning Wood from an unknown source indicating that UMass coach Sam Koch, assistant coach Walker Boyd, midfielders Ben Arikian, Stuart Amick and goalkeeper Chris Piekos are contracted members of the CIA, and have been investigating terrorism plots in the Western Mass. area and abroad. These reports were confirmed on Monday morning.

The entire undercover operation by the CIA began back in the 2007-2008 season – the same season that the Minutemen rose to the top and made its way to the NCAA Men's College Cup. The team played well that year because U.S. operatives implanted Amick, Arikian and Piekos into the team, who apparently would wear guns along their waistline and flash them to opponents if they dared to score. Guns and espionage equipment were found in those players' bags following the season, but John Sinnett, director of the team's media relations, effectively kept that under wraps.

"Yeah, sure we had guns," said Sinnett. "How else do you think we made it that far? We didn't care about winning, just the mission. But we're glad they can't get prosecuted now because of that that ex post facto thing."

One of the missions that the team executed included heading to the Final Four to match up against Ohio State. Arikian and Amick were completing black ops missions on one of the Buckeye players the night before against a player whom will remain nameless.

While Piekos, Arikian and Amick were brought in during the College Cup season, Koch entered the frame over 20 years ago. His entrance was the first step in CIA operatives within the UMass soccer team. The media was often left confused by Koch's snarky, boring comments, which were actually part of the U.S.'s strategy to keep things quiet.

Koch did decide, however, to speak about the recent reports.

"Much like our goals' positioning, those reports were found in the wrong places," said Koch. "We could never finish our chances on our target last season; we have to finish on those opportunities."

During a search for an unnamed target, Koch and the rest of the soccer team missed their opportunity to eliminate the enemy.

"It was windy," said Koch following the "game." "That's why we couldn't finish."

Boyd, who served in the Israeli military, specializes in goalkeeper training, bringing him closer to Piekos. This allowed the two to plan out their secret missions, which largely included overseas scouting of insurgents.

According to the reports, the U.S. invested over $73 million dollars in recruiting for the Minutemen for the College Cup season.

With Arikian, Amick and Piekos all graduating, Koch and Boyd are already in the mix of signing some new agents to the team. Forward Hellah Sidibe, who joined the team last year, specializes in diplomatic relations. Tyler Cleverdon, who received a considerable amount of playing time for the Minutemen this past fall, is rumored to replace Amick and Arikian in black ops operations.

Amick and Arikian will be shipped back to headquarters, where they are to be evaluated for their poor performances this season, primarily due to their lack of solid intel collection.

"Me and Stu never really cared about the team," said Arikian. "Sure it was fun making the College Cup that year, but we never caught the man we were looking for, and were punished pretty bad back at HQ."

"We didn't get the job done, that is all," added Amick.

Piekos will continue to work overseas. Early rumors within the intelligence community suggest that he will take up a position as an undercover chef, and search for a pair of young, red-headed twins that have been connected to terrorist organizations.

Glass and Micronics can be reached at tbray@morningwood.com

Faculty Senate to debate ban on tobacco products Thurs.

By Sam Butterfield
Collegian Staff

Life for smokers in high-tax Massachusetts could become a bit more complicated Thursday if the University of Massachusetts Faculty Senate ratifies a proposal to ban tobacco use on campus at its Thursday meeting.

The Senate will vote on "A Tobacco-Free UMass Amherst" at its Thursday meeting, which will be held at 4 p.m. in Herter Hall room 227. The proposal has already been approved by the campus Health Council and by the Campus Leadership Council.

The proposed ban draws on a precedent set by what a UMass release says is some 400 colleges and universities which have already nixed on-campus tobacco use. UMass Worcester, the University-system's medical campus, already bans tobacco use. The proposal would be encompassing, as it would ban tobacco use in any form across campus, even in motor vehicles while on campus. It would also ban smoking in vehicles or property owned by the University. The ban would apply to everyone in the campus community, even contractors and those passing through campus, according to the release.

The Student Government Association is also expected to take up debate on the measure and – were it to gain Faculty Senate approval – Chancellor Robert Holub would likely appoint a Tobacco-free Campus Committee. The committee would be composed of students, faculty, staff and administrators and would oversee the implementation of the ban, which would take full effect July 1, 2013. The plan, Holub explained in the release, would also include programs and measures helping students to quit using tobacco.

The proposal, which is viewable at the Faculty Senate's website and at www.umass.edu/loop, states that "tobacco use compromises the health and well-being of the entire University community," and that "as a public institution of higher education, UMass Amherst has an obligation to promote a healthy, and hence tobacco-free, environment."

The ban would apply to all forms of tobacco products, whether they are smoked, chewed or snorted, and would also ban so called e-cigarettes. Enforcement of the ban would rest with campus employees' supervisors and ultimately would lie with University Human Resources, while for students it would fall to the Vice Chancellor for Student Affairs.

The Health Council would oversee and revise the ban as necessary.

The Tobacco-free Campus Committee would be charged not only with overseeing the implementation of the ban, but would also hold meetings drawing feedback from the campus community, produce materials aimed at promoting the ban, providing smoking-cessation resources, be consulted for making exceptions to the ban, such as for during artistic performances or scientific research projects, determine what steps may help expedite removing tobacco from campus, including creating specific smoking areas, and will be given the authority to fully oversee the implementation process, including generating a budget for the project.

The Faculty Senate's meeting Thursday is open to the public.

Sam Butterfield can be reached at shutterfield@dailycollegian.com.

Cigarette butts like these could soon become history at UMass if the Faculty Senate approves a plan to ban on-campus tobacco use.

Professors and local activists will hold a teach-in Tuesday to address recent labor, higher education and social justice issues.

Profs., activists will hold Tues. teach-in

A group of senior faculty members and area education activists will be holding a teach-in Tuesday in the Student Union Ballroom as part of a national effort to generate support for increased higher education funding.

Members of the Massachusetts Society of Professors and others will touch on issues – such as media coverage of higher education, race and equality, current legislation on immigration, taxes and economic hierarchies, health care, student fees and recent union debates.

The list of planned attendees include Sonia Alvarez of Latin American Politics and Studies, Dan Clawson, a sociology professor, communications professor Sut Jhally, Max Page in architecture and design and Ekwueme Michael Thelwell of Afro-American Studies. Three representatives from the economics department – professors Gerald Friedman and David Kotz and Ph.D. student Helen Scharber – will be on hand for the event. Others in attendance will be Jo Comerford, director of the Northampton-based policy think tank the National Priorities Project (NPP), Dale Melcher, the labor extension coordinator, and former Student Government Association president Malcolm Chu.

The event will take place Tuesday from 11:45 a.m. to 4 p.m., with local events exclusively running until 2 p.m. When the local speakers are through, organizers will link to a live feed of the national teach-in going on in New York City and being led by labor and poverty activist and City University of New York professor Francis Fox Piven and philosopher, civil rights activist and Princeton University professor Cornel West.

Other speakers at the national teach-in – which has been titled "Fight Back USA" – will include economist and Columbia University professor Jeffrey Sachs, Heather McGhee, Washington, D.C. director of the social policy and economic equality think tank Demos, and Richard Trumka, president of the American Federation of Labor and Congress of Industrial Organizations (AFL-CIO), the largest coalition of labor groups in America.

Teach-ins will be held across the

Brown prof. Miller asks why evolution counts in UM visit

By Michael Roberts
Collegian Correspondent

Kenneth Miller, a professor of biology at Brown University and a prominent science author, gave a lecture titled "The Evolution Wars: Why Do They Matter? Why Do They Continue?" to a crowded room in UMass' Campus Center on Thursday. Although Miller's lecture touched on numerous aspects of the evolution debate, his central message was that evolution and faith can coexist harmoniously and that the two are not mutually exclusive. He also said that to continue to take sides would only hamper science education in the United States.

"Science is compatible with faith, especially a kind of faith that accepts scientific reason as a divine gift," said Miller, author of "Finding Darwin's God: A Scientist's Search For Common Ground Between God and Evolution."

"I think that the best religious traditions do exactly that," he said.

Miller used the 19th century Austrian scientist Gregor Mendel as an example of why he feels the two are not irreconcilable. Mendel was devoutly religious, but was also a brilliant scientist and is now considered a father of modern genetics, Miller said.

Furthermore, Miller thinks the intricacies and perfection of evolution are more flattering to a higher power than intentional design.

"I think it's remarkable to think that you and I are bound into the fabric of life that pervades everywhere on this incredibly beautiful planet on which we happen to live," he said.

Using former Pennsylvania senator Rick Santorum as an example, Miller said he feels those who do not believe in evolution sometimes believe the theory implies humans are "mistakes of nature" and devoid of moral compass. Miller thinks these attitudes are unfounded.

"What I've tried very hard to do is to take those concerns that people have about the theory of evolution as being degrading or demeaning or dehumanizing and try to say this isn't true," he said. "Evolutionary processes are creative…they're driven by natural selection, which is as nonrandom a force as you can get."

Miller does not believe intelligent design is a credible scientific theory. Rather, he holds that it is nothing more than a rather silly religiously-tinged doctrine. During the leeture, he discussed what he believed to be "weapons" of the intelligent design movement: "intentional distortion" of facts used to support the theory of evolution and "fear of the implications of evolution for people of faith." Maneuvers like these, Miller believes, are creating a movement against science.

"I really am concerned about an anti-science tide in the United States," he said. "There are certain people, certain political groups, who seem to feel that science is inherently left-wing. This is why the evolution wars matter – it's Exhibit A in the portfolio of the anti-science movement in the United States."

Because he feels science and politics are becoming increasingly intertwined, Miller said he finds himself talking about politics with his friends from the scientific community more than ever before.

"We feel that the political process has become, in some respects, so anti-scientific that we literally have to defend ourselves," he said.

Miller said he does not believe mounting support for the intelligent design theory – which holds that the world could only have been created by an intelligent being – accounts exclusively for what he sees as America's slippage in science education or for

UM's Mosgrove wins natl. 3-point contest

By Michael Wood
Collegian Staff

Massachusetts women's basketball player Cerie Mosgrove took her record-breaking stroke to the 2011 State Farm Women's 3-Point Shooting Contest in Houston, Tex. on Thursday night and won the 3-point title.

Mosgrove defeated seven other players from schools spanning the country and netted 19 baskets in the final round to secure the championship title, which was nationally broadcasted on ESPN2. She defeated Kelsey Bolte of Iowa State in the finals, 19-11.

COURTESY UMASSATHLETICS

UMass guard Cerie Mosgrove won the State Farm Women's 3-Point Shooting Contest Thursday in Houston.

"I'm just completely ecstatic to have made as many as I did, considering the caliber of players I was up against," said Mosgrove in a UMass Athletics interview. "I'm really honored that I was able to represent UMass on a national level."

After claiming the women's title, Mosgrove went on to face the men's 3-point shooting contest winner, Andrew Goudelock (College of Charleston), and fell one basket short of tying his mark.

"I had no idea how I was going to do, since my legs were shaking from nerves and excitement, but [I] fought through it," Mosgrove added in an interview with ESPN2. "Obviously he's a phenomenal shooter and hit a few more [in the finals] I just couldn't finish in the end."

Mosgrove was invited to compete in the Final Four festivities after leading the NCAA in 3-point percentage in 2010-11 and ending the season 78-of-157 from 3-point range.

She also set school records for 3-pointers and 3-point percentage during her time at UMass and sits in third-place all-time for each of those categories.

This season, Mosgrove led the Minutewomen in points with 408 and rebounds with 195. She also ended the season second on the team in points-per-game (14.4) and rebounds-per-game (6.5). She was one of three seniors on the squad along with Megan Zullo and Stephanie Lawrence.

Prof. talks evolution in Thursday lecture

MILLER from page 1

what he identifies as a rising anti-science sentiment in the country. He also pointed a finger at the declining quality of education.

"You don't have to look very far to discover that American students are behind in math and science," said Miller. "We're really, really not doing a very good job of teaching or learning science, and it would be naïve to suspect that this resistance to science has nothing to do with poor science education in this country."

This lack of focus on science education, according to Miller, comes in part from the scientific community's dry reputation and lack of representation in mainstream culture. Miller believes the scientific community needs to take more vocal political action and improve its communication with the rest of society by making science more digestible for the average citizen.

"There almost is a culture within the scientific community that looks down on people who are good at popularizing science," he said during a short question-and-answer session after the lecture.

During his lecture, Miller outlined several 20th century court cases surrounding evolution in learning environments. The rulings have given him hope for the future. Most of the court cases including Kitzmiller v. Dover Area School District, in which Miller was a participant – have ruled in favor of science.

"Don't lose faith in democracy," he said. "The American people, given a choice, are going to pick science every time."

In addition to writing "Finding Darwin's God," Miller is perhaps best known for his appearances on the satiric pundit show The Colbert Report and the high school science textbook he co-authored with Joe Levin, "Biology."

The lecture was presented and organized by UMass' Interdisciplinary Seminar in the Humanities and Fine Arts (ISHA).

Interior launches site pushing outdoor jobs

AMERICASGREATOUTDOORS.GOV

President Obama and the Department of the Interior are encouraging youngsters to get out and hit the trails, and have drafted a website showcasing opportunities to do so.

OUTDOORS from page 1

Obama's recent America's Great Outdoors Initiative.

The initiative aims to "develop a 21st century conservation and recreation agenda," according to its website, americasgreatoutdoors.gov. The effort is non-partisan in nature and uses as its doctrine "that the protection of our natural heritage is a non-partisan objective shared by all Americans."

President Obama announced the commencement of the initiative last April 16, stating that "we are losing touch with too many of the places and proud traditions that have helped to make America special," and that "families are spending less time together enjoying their natural surroundings."

The mission of the initiative is to "reconnect Americans, especially children, to America's rivers and waterways, landscapes of national significance, ranches, farms and forests, great parks, and coasts and beaches by exploring a variety of efforts, including: promoting community-based recreation and conservation, including local parks, greenways, beaches, and waterways; advancing job and volunteer opportunities related to conservation and outdoor recreation; and supporting existing programs and projects that educate and engage Americans in our history, culture, and natural bounty."

In addition, the initiative aims to "build upon state, local, private and tribal priorities for the conservation of land, water, wildlife, historic and cultural resources," and to "use science-based management practices to restore and protect our lands and waters for future generations."

In his remarks announcing the inception of the new youth opportunities site, Salazar said the page will serve as a job hub for young people hoping to get involved in outdoors programs.

"This website is designed to help young people get out, get involved, and get a job when it comes to the great outdoors," he said. "Young people are the next generation of conservationists and we must empower them to take a leadership role in shaping their future."

As part of the America's Great Outdoors Initiative, the Interior Department has already created a Youth in the Great Outdoors office, hiring more than 21,000 young people in 2010 alone, according to the White House release. That marked a 45 percent increase from 2009.

The YouthGO site provides links to an array of internships, seasonal and permanent job opportunities within the Department of the Interior, with the release listing a few such openings as working concessions to national parks to building trails on publicly-held land.

According to the release, the site was driven by the National Conservation Training Center of the Fish and Wildlife Service. The site will also be a home for non-profits and government partners in various initiatives to highlight outdoors-related programs and efforts they are organizing. Young people will also be able to use the site for networking purposes, as it features a section for sharing outdoors-inspired stories and experiences.

Top chefs converge on Amherst for cook-off

Tuesday might be a good day to bring an appetite to Berkshire Dining Commons. The Visiting College Chef Series hosted by University of Massachusetts Dining Services is welcoming Ivy Award-winning chefs from across the country to campus Tuesday to cook up favorites from their campuses and display some regional cuisine.

Ten chefs, all representing campuses which have won Ivy Awards, recognitions dished out by the journal Restaurants & Institutions for top college cuisine, will be visiting the Valley Tuesday at Berkshire. The chefs are traveling to Amherst from far corners of the country, with cooks coming from as far as Oregon State University and the University of Georgia, in addition to northeastern chefs making their way from Villanova University in Pennsylvania and Boston College. The chef pairings will prepare three main entrees, two sides and a dessert.

The chefs will be cooking up some regional specialties, like peanut soup from Georgia and lamb tagine from Villanova, while Boston's chefs will whip up some salmon and ponzu, and Oregon State's delegates will prepare chocolate hazelnut mousse trifle. UM students will then select their favorite item from each school.

In a Friday release, Executive Director of Auxiliary Services Ken Toong touted the event as an opportunity for students to sample some award-winning repast, noting the prominence of the Ivy Awards.

"The Ivy Award remains one of the most prestigious awards in the foodservice industry," said Toong.

The awards are determined by a group of past award-winners, with nominees elected by Restaurants & Institutions' subscribers, who are primarily foodservice professionals.

"It is the first time we have invited four past Ivy Award-winning university chefs at one time to join us for this special event," said Toong in the release. "I think it is a great way to show why the dining program at each school was declared award winner."

The cook-off will be free to students on meal plans, and costs $10 for staff and $12.50 for members of the public.

MARGIE SOSNIK/UM

Chefs from a variety of schools vied to take home the Ultimate Chef Showdown prize in 2009. Representatives of four schools will visit Berkshire Dining Commons Tuesday for a similar event.

Campus to participate in national teach-in

TEACH-IN from page 1

country Tuesday, according to a release from MSP member Ferd Wulken. In the release, organizers of the event say it will seek to teach, with each speaker preparing one-page handouts detailing current trends and figures on sociopolitical and higher education issues. In addition, free lunch will be served until supplies run out for those attending.

The release also states that the teach-in is being sponsored by the departments of Afro-American Studies, Anthropology, Communication, CPAA, Economics, English, History, Philosophy, Political Science, Sociology, STPEC and Women, Gender and Sexuality Studies. The teach-in is also being sponsored by the Graduate Employee Organization (GEO).

ANETTE DE CUBA

Activist Francis Fox Piven will speak at New York's teach-in.

At the national level, the teach-in is being supported by the AFL-CIO, the workers' rights and union rights group American Rights at Work, the community development organization Center for Community Change, the City University of New York (CUNY), Demos, New York's Judson Memorial Church, the custodians' rights group Justice for Janitors, CUNY's workers' rights group the Professional Staff Congress, the Student Labor Action Project (SLAP), the Service Employees International Union (SEIU), the anti-war and violence group United for Peace and Justice, United Students Against Sweatshops (USAS) and the U.S. Student Association (USSA).

According to the national teach-in's website, www.fightbackteachin.org, the event will rally students and activists at 185 schools from Alaska to Florida to Massachusetts. New England schools participating include Yale University, Southern Connecticut State University, the University of Connecticut, West Hartford, the University of Maine, the University of Southern Maine, Massachusetts Institute of Technology, North Shore Community College, Smith College, Harvard University, Emmanuel College, Westfield State University, Salem State University, Wheelock College, Northeastern University, Williams College, Brown University, the University of Rhode Island and the University of Vermont.

Prof. Cornel West will speak as part of the national teach-in.

The next day, the higher education activist group Public Higher Education Network of Massachusetts (PHENOM) will sponsor a call-in to state and federal legislators urging them to better fund public higher education and encouraging officials not to make a college education more difficult to obtain financially. That event will occur from 10 a.m. to 2 p.m. in the Cape Cod Lounge, according to the release.

-Collegian News Staff

APD issue sex offender notice

The Amherst Police Department announced last week that a level three sex offender has moved to Amherst. In a March 29 release, APD Lieutenant Ronald Young announced that 31-year-old Robert A. Martinez, who has been found to be "a high risk to reoffend," is living on Amherst's streets.

Martinez is listed as 5-feet-3, weighing approximately 225 pounds, with black hair and brown eyes. He has five convictions for sex crimes to his name spanning 14 years. In 1995, he was convicted of indecent assault and battery on a person over 14, while that same year he was found guilty of rape and abuse of a child. He was also guilty of indecent assault and battery on a person under 14 in 1995. His next conviction came in 1999, when Martinez was found guilty again of indecent assault and battery on a person over 14. In 2005 he was convicted of the same crime.

EDITORIAL OPINION

MONDAY, APRIL 4, 2011

"Of course it's trivial, but then most things are." - John Malkovich

EDITORIAL@DAILYCOLLEGIAN.COM

Serving what purpose?

The idea behind the University of Massachusetts Community Service Learning Program (CSL) is simple: students get college credit for volunteering in local communities. But how effective are these programs? What does volunteering mean when student volunteer programs are as widespread and insubstantial as a Katy Perry song?

Rachel Dougherty

At face value, it appears that students today are more socially conscious than our predecessors. According to a volunteer growth report issued by the Corporation for National and Community Service, the number of teenagers between the ages of 16 and 19 who volunteer in the U.S. increased from 13.4 percent in 1989 to 28.4 percent in 2005. Students of our generation are as likely to spend their spring break tearing down houses in New Orleans as they are downing kegs in Cancun. Service Learning classes are cropping up as part of the curriculum at UMass and at other colleges across the country. But as more and more students jump on the volunteering bandwagon, the question must be asked: how much of an impact does service learning really have? Is our generation really more socially conscious, or are we just fooling ourselves?

UMass' Commonwealth Honors College seems to think it's the former. ComCol's Community Engagement Program (CEP) offers a wide range of service learning opportunities, such as IMPACT!, the Citizen Scholars Program, and individual service learning classes and capstones. These classes seem like a great way to get students engaged in service work and connect supposedly privileged UMass students to underprivileged local communities.

The problem is they don't always work very well.

In fall 2008, I enrolled in a Dean's Book Service Learning class through Commonwealth Honors College. The class offered students an opportunity to volunteer at various nonprofits in Holyoke and discuss their service experiences in a classroom setting. The problem was that, like most of the individual CSL classes at UMass, the Dean's Book class only required one to two hours of service a week from students, which leaves students feeling ineffective and nonprofit organizations frustrated. Many students in the class complained that most of their "service" was spent just standing around, and that they felt they were more of a nuisance than a help to the organizations.

CSL sounds like a great idea, but like a lot of great ideas – communism, spray-on hair, "Star Wars: The Phantom Menace" – it works better in theory than

CSL sounds like a great idea, but like a lot of great ideas – communism, spray-on hair, "Star Wars: The Phantom Menace" – it works better in theory than in practice.

According to Amy Calandrella, farm programs coordinator for the Holyoke nonprofit group Nuestras Raices, the relationship between student volunteers and local nonprofits "is really complicated."

"The organizations can get dependent on student volunteers and don't look for other resources in their own communities," said Calandrella. "Student volunteers can also become a burden on the organization because students don't have the skills and experiences they need to truly make a difference."

But, like Calandrella said, the relationship is complicated. Calandrella first became involved with Nuestras Raices through the UMass Citizen Scholar Program in 2006. She continued to volunteer with the organization during her undergraduate career and worked with them after graduation with funding from an Americorp VISTA, a program where volunteers work for a year on an anti-povery initiative. A year later, she was hired full time as Nuestras Raices' farm programs coordinator.

It is possible to make a difference through volunteer service learning, but it often requires going beyond the parameters of the University's CSL courses. Community Service Learning programs have two major flaws that prevent them from being effective. One, students do not have the necessary skills to be of use to the organization, and two, they do not volunteer for long enough periods of time to have a real impact on the organization or community.

This is particularly true of short-term service opportunities like Alternative Spring Break. ASB is a form of volunteering in which students spend a week traveling and doing community service projects in distant parts of the country.

"It's very difficult to make a tangible impact in a week," said UMass senior Zachary Fischer. Fischer recently returned from an Alternative Spring Break trip to Birmingham, Ala., as a part of the Civic Interfaith Alliance. His group spent the week working in homeless relief centers and learning about urban agriculture. Fischer believes service projects such as alternative spring breaks should be seen as "an activator, not an ending."

"I know that I personally signed up on my first trip because I wanted to see New Orleans," said Fischer. "The experience there, however, prompted me to get more involved, and now I've led two trips and taught two classes."

Students may not be able to make a huge impact in a week or even a semester, but that doesn't mean their efforts are meaningless. The point of Community Service Learning is education, and what education can inspire.

Calandrella said the best thing a student can do before coming into a service project is to research the organization.

"Having realistic expectations helps," she said. "The more informed the student is, the more enriching the experience."

Fischer echoed Calandrella's sentiment and also emphasized the "learning" part of service learning, that education is that the primary purpose of CSL.

"The real impact of service learning is what both sides take away from it," he said. "Students get a week to apply academic discussion to real practice and see how difficult it is to enact any sort of social change. In its best instances, they are inspired to dedicate themselves to a cause and start from the ground up."

Rachel Dougherty is a Collegian columnist. She can be reached at rdougher@student.umass.edu.

Mullins Center needs alcohol

There is certainly logic to banning alcohol from the University's largest athletic center and music venue. Excessive drinking encourages risky behaviors and is generally hazardous to one's health.

Yaroslav Mikhaylov

If students can buy drinks at a Mullins Center event, they are likely to be drunker than if they can't. Heavily intoxicated students tend to be disruptive to events, making the venue less attractive for people who are not fans of collegiate-scale drinking. And since most of the University's community and therefore the potential audience for Mullins Center events is under the age of 21, sales of alcohol in the Mullins Center could make it easier for underage students to secure alcohol.

However, the lack of alcohol at the Mullins Center actually works in the opposite direction: it encourages students to engage in more risky and disruptive behaviors, because alcohol can't be bought at events. People who wish to experience hockey games or musical performances under the influence of alcohol will simply drink before they arrive at the event or will attempt to smuggle in refreshments. It also makes it easier, not harder, for underage students to get drunk.

The fact is, certain events just tend to pair well with alcohol. It's no secret that hosting concerts in bars and pubs is a time-honored tradition, and hockey games and beer have a stronger bond than peanut butter and jelly. Barring people attending such events from purchasing alcohol will simply force them to get more creative.

One option – which at this point in the year even the greenest freshman knows about – is "pre-gaming." Pre-gaming involves rapid and heavy drinking before attending an event. Because it is done fairly quickly, the mind-altering effects of alcohol are going strong about the time the pre-gamers arrive at the event. And yes, it is just about as dangerous as it sounds; since one doesn't feel the effects of alcohol until after one stops drinking, it is hard to gauge how drunk one will be at the event. This makes obtaining a stomach pumping drunk dangerously easier than it sounds.

It's no secret that hosting concerts in bars and pubs is a time-honored tradition, and hockey games and beer have a stronger bond than peanut butter and jelly.

Point in case: Friday's DAYGLOW paint party.

As I stood in line to get into the Mullins center, I saw at least a half-dozen students being pulled out of the line by police because they were simply too drunk to stand up without help. Doubtlessly, many more of the partygoers were just as intoxicated but succeeded in maintaining a semblance of balance.

As the campus policy requires people to pre-game if they wish to imbibe, it makes it easier for underage students to obtain alcohol. Where do those under 21 obtain alcohol? From people over 21, of course! And because the Mullins Center does not sell alcohol; those over 21 will pre-game just as hard as their underage counterparts. However, if of-age students could just buy drinks at the event, they would drink less, or even not at all before the event. If the 21-year-olds are drinking more at events and bars, they are going to the liquor store less often and thus have fewer opportunities to provide alcohol to minors. Because these older students are necessary for the underage students to get the alcohol to pre-game with, they set the tone for the before-event drinking. It's hard to feel comfortable taking shot after shot while the person who supplied that alcohol is calmly sipping a beer.

The people with the alcohol set the tone for the drinking, and if the Mullins Center is the entity controlling the flow of alcohol, it can exert some control over how intoxicated its patrons are. The Graduate Lounge at the Campus Center serves only beer and wine, and I can say that I have personally never seen anyone belligerently drunk or smuggling in nips or 'water' bottles filled with variously colored fluids there. On the other hand, anyone who wishes to witness the aforementioned need only stop by a UMass home hockey game.

The Mullins Center policy against selling alcohol on premises not only fails to reduce the amount of drinking that goes on within it, but it also encourages more risky and dangerous behaviors. So, Mullins, how about installing a bar there over the summer?

Yaroslav Mikhaylov is a Collegian columnist. He can be reached at ymikhayl@student.umass.edu.

Easy money at your expense

Looking for a job for after graduation or for the summer? Be careful of bogus advertisements for scams that will cost you dearly. Many of these job offers sound like quick money and boast their ability to fit into our busy schedules. And who wouldn't want to make a lot of money working at home like some of these offers promise? Well these "too good to be true" offers will, more often than not, leave you jobless at a heavy cost.

Kimberly Wilson

Most tempting, especially to our generation, is the "make money with Twitter" scam. This offer comes addressed to your inbox with an enticing subject line and promises the ability to earn up to $250-$873 per day using Twitter. The ad will tell you that you can participate in the seven-day trial and that all you need is the training CD for the low cost of $1.95. However, what they don't tell you is that if you do not cancel within seven days of the CD being ordered – possibly before it's even received - you will be charged an additional $47-$99.99 per month even after the trial period ends. As a cherry on top, their software often sneaks in malware that could harm your computer.

There are many con artists out there who post ads for employment opportunities and require an upfront fee that is promised to be refunded in full once you start working. These ads may not be as easy to spot as you may think. Many times, the fake ads are posted in the same classified section as the legitimate ads, making them seem valid. In fact, I almost fell for such a scam.

The email informed me that all I had to do was complete some online job surveys to be eligible for a fat $900 a week. The catch? When you email the company back to inquire about the ad, they tell you that you have to pay an upfront fee of $75 in order to be "hired." Of course, I was assured that I would make that $75 back in no time.

The good news is that I was smart enough not to spend the $75, but the bad news is they took my email address and put it on some sort of list to sell to other companies involved in similar scams. Now my inbox is flooded with purported "job offers." After the fact, I Google-searched one of the companies, only to find out that it is indeed a fraud.

Even worse is if the advertisement boasts about being "totally legit" or "scam free."

Now, there are a few red flags to watch out for when job hunting. If it states in a job posting ad that you will be required to pay for job certifications, materials and other services, proceed with caution.

According to the Federal Trade Commission (FTC), flashy and aggressive job ads are usually scams; legitimate jobs don't usually need to beg for applicants. If the ad doesn't provide details about the location of the employer that should be flag number two. Even worse is if the advertisement boasts about being "totally legit" or "scam free."

Another warning sign is unsolicited email with a link to the "company website." Clicking on this link could take you to an imposter website that could install malware on your computer. Such parasitic programs are used to "phish" and pull bank account information, addresses, social security numbers and other confidential information off of your computer. Once the scammers have that information, stealing your identity is a cinch.

If any of this sound familiar, I urge you to take the time to do a little research on the company. The Better Business Bureau (bbb.org) has a great database for companies, complete with reviews, complaints, and ratings. Monster.com has a section of their website dedicated to helping educate job hunters about possible scams. The FTC also has an educational video with tips to help avoid job scams on their website.

Many job posting websites post warnings about possible scams. Craigslist.org has a page with "Scam Alert" posted in red letters informing the reader of possible scams on the following page. Many of us don't pay much attention to these alerts, but they actually offer good advice about how to weed out the bogus from the legitimate.

If you have complaints about a company, you can file a complaint with the FTC by contacting the Consumer Response Center by phone at 1-877-FTC-HELP (382-4357), or online at www.ftc.gov by clicking on "Complaint Form". You can also call the Consumer Protection Divisions of the District Attorney's offices; Franklin County (413-774-3186), Hampshire County (413-586-9225) for informal mediation between you and the company. The University also offers assistance through Student Legal Services at (413-545-1995) or email at slso@stuaf.umass.edu.

"Prepare for the fight scene!" - Robin Hood, Robin Hood: Men in Tights

ARTS@DAILYCOLLEGIAN.COM

'Jane Eyre' a stunning adaptation

By Ian Opolski
Collegian Correspondent

In his adaptation of Charlotte Brontë's classic Gothic romance, director Cary Fukunaga opens "Jane Eyre" with force, showing the titular character as an adult wandering miserably across the harsh English countryside. Fans of Brontë's novel will notice immediately that this "in medias res" opening is a sharp divergence from its source material, which follows a linear path of Eyre's life from her childhood onward. Devotees need not fear, however. Besides the alteration in the story's timeline, this latest adaptation of "Jane Eyre" is a superb rendition of the literary classic and stays appropriately faithful to its origins.

In both the novel and the film, Eyre is a proud, plain-faced orphan who, after a difficult childhood, rises to become a governess at Thornfield Hall, the household of Lord Rochester (Michael Fassbender). After a turbulent romance, Jane overcomes the boundaries of social class and wins the heart of her unyielding employer. Before they can wed, however, a horrible secret concerning Rochester is unearthed, changing everything. Jane flees to the home of the stern clergyman St. John Rivers (Jamie Bell), but her tormented heart must decide whether to return to her stormy lover or begin a new life abroad.

Mia Wasikowska runs away with this film as the tale's protagonist. In a performance that would likely make Brontë proud, Wasikowska expertly handles her material with quiet dignity and firm conviction. She is entirely believable as Jane is forced to navigate the unfamiliar waters of romance and interaction with the upper class. Fukunaga thankfully resisted the typical Hollywood urge of glamorizing an unattractive character; while Wasikowska can hardly be called homely, her pale figure, drowned in drab clothes and messy hair, is just as plain as Brontë describes the character.

Fassbender's Rochester is slightly more charming and handsome than his literary counterpart, but he does manage to capture most of the character's brooding unpredictability.

The rapport between Eyre and Rochester – particularly in the early stages of their relationship – makes for some of the film's best scenes. This romance is an atypical one. But from their first witty conversations, one can clearly see Rochester's recognition of a worthy verbal sparring partner in Jane, a sentiment which blossoms into a strange, but compelling, love affair.

Dame Judi Dench complements the two leads as the scandalized housekeeper Mrs. Fairfax. With her disapproving commentary and significant glances, Dench brings unexpected moments of comedy to the otherwise dark film.

The shift in the story's timeline lends a greater degree of early sympathy on the St. John Rivers character than is present in the novel. As a result his later sternness seems more comical in the film than it should. Regardless, Bell performs well enough in a role that is likely intended to be unappealing.

The cinematography of the film is another fantastic component. The interior and exterior shots of the film's setting are visually striking and function well in establishing the film's gloomy mood; sunny days are as rare as happy ones in "Jane Eyre." Long takes of the stony English countryside create a sense of the governess' isolation, while Thornfield Hall, dimly lit by candles, is an appropriately moody and sometimes fearful place.

The costumes in the film are excellent and work well in the development of both the characters and social commentary. Jane's drab outfits complement Wasikowska's physical appearance and contrast dramatically with the gaudy gowns of the wealthy women with whom she interacts. This attention to atmospheric and historic detail couples with the performances to create a truly great film.

There are, of course, necessary omissions from Brontë's novel in the screenplay adapted by Moira Buffini. One of the most notable missing scenes is the bizarre incident in which Rochester masquerades as a gypsy fortune teller in order to determine Jane's true feelings for him. The absence of this scene and others like it is actually a positive quality for the film. While these portions of the novel contribute to the uniquely weird quality that "Jane Eyre" possesses, they likely would have translated awkwardly to the screen. Buffini captures the mood of the original story without compromising the novel's stranger sequences in the process.

Audience members – familiar with the story or not – will likely find something to praise in Fukunaga's "Jane Eyre." With generally fantastic performances and evocative settings, this latest adaptation vividly brings to life one of the strangest and most timeless love stories of English literature.

Ian Opolski can be reached at iopolski@student.umass.edu.

Mia Wasikowska stars as Jane Eyre in director Cary Fukunaga's adaptation of Charlotte Brontë's classic Gothic romance. Michael Fassbender and Jamie Bell co-star as Wasikowska's love interests.

'Hop' a sweet surprise

FACEBOOK

James Marsden leaps over obstacles in "Hop," the new family film about the son of the Easter Bunny coming to America to pursue his dream of becoming a professional drummer.

By Margaret Clayton
Collegian Staff

The writers of "Despicable Me" are back with another film for families this spring: the combination live-action/animation flick "Hop."

"Hop" gives audiences a peek behind the proverbial curtain to explore the secrets of Easter, answering mystifying questions such as, "What is the function of the stone heads on Easter Island?" and "why do we have an Easter Bunny and not an Easter Chick, when the painted and candy-filled goodies are eggs and bunnies are mammals?"

The film "Hop" takes place under the stone statues of Easter Island in a "Willy Wonka"-like factory of Easter. Marshmallow chicks are made up of a ratio of "marsh" and "mallow" cream and bunnies oversee their chick workers as they ride the factory floor on Segways.

This fantastic world encounters real-life difficulties as the film tackles the issue of children's dreams conflicting with their parents' expectations. The story follows E.B., the son of the Easter Bunny, as he runs away from the underground family business to the bright lights of Hollywood to pursue his dream of being a professional drummer.

Although eager to reach his dream, E.B. (Russell Brand) is not prepared to leave his sheltered life and live on his own, just like another character he encounters in America, Fred O'Hare (James Marsden). These two struggling 20-year-olds cross paths one night in Beverly Hills and become stuck together, for better or worse. Through a series of events, E.B. and Fred help each other to realize their own potential and go through a bunny boot camp to prepare for the big day.

The film culminates as the two utilize their new found strength and save Easter from the clutches of Carlos, an evil chicken bent on taking over Easter and transforming it into a healthy, logical holiday in which the egg-layers give out the egg-filled baskets.

In this Easter-centric world, everything is egg or candy-based. Before the movie begins, the globe in the Universal logo is transformed into the shape of an egg, matching the globe in E.B.'s room. Similarly, the end credits have eggs, chocolate bunnies, gummy carrots and bunnies, lollipop trees and marshmallow chicks as accompanying artwork for the headings. The yellow minions from "Despicable Me" make an appearance wearing bunny ears and cotton tails attached to their overalls as they finish painting the Illumination Entertainment logo. Truly, once the feature presentation kicks off, audiences are trapped in an egg-shaped world. And while this might sound awful, there is an eclectic soundtrack to keep viewers singing along and laughing for an hour-and-a-half.

The lyrics of Good Charlotte's "The Anthem" resonate with the conflicted lives of E.B. and Fred O'Hare as they try to assert their independence and determine their own future. Poison's melancholic "Every Rose Has Its Thorn" and Taio Cruz's "Dynamite" are also featured on the film's soundtrack, as the audience is led through the musical world of E.B.

"Hop" features an ensemble cast comprised of live action performances and voice-acted animations. Marsden, Gary Cole and Elizabeth Perkins lead as the O'Hares, humans who welcome E.B. into their home, while Brand, Hank Azaria and Hugh Laurie lend their voices to the illustrated animals. Of course, the cast also encounters the quintessential personalities one would expect to meet on any trip to Tinseltown: David Hasselhoff, Chelsea Handler and Hugh Hefner.

Rated PG for some mild humor, "Hop" takes the beloved Easter bunny icon and breathes in some magic and family politics. For a mindless laugh and hopping musical accompaniment, see Brand ("Get Him to the Greek") as a horrible houseguest once again, and Marsden ("Enchanted") as a dashing male lead looking for a new life goal. But don't leave before the end of the credits - there is a surprise waiting in store!

'Code' alters reality

By Malea Ritz
Collegian Staff

Jake Gyllenhaal races against time in his newest film, "Source Code." As a courageous soldier named Captain Colter Stevens, Gyllenhaal is on a mission to save the city of Chicago from a series of bombings. Through a program called the Source Code, Stevens is able to enter an alternate reality that allows him to go back in time to a train bombing in the place of a deceased passenger. He is given only eight minutes to find the bomb, disable the detonator and stop the bomber. Will he be able to save the passengers – and himself – before time runs out?

Through clever editing, director Duncan Jones immediately immerses the audience in the middle of the action. The audience's confusion at what is occurring on screen mimics the confusion felt by Stevens within the film, allowing the audience to bond with the protagonist. This technique also engages viewers as it forces them to focus on the plot and attempt to put together the puzzle pieces themselves.

With the assistance of great graphics, Jones creates a frighteningly realistic world that captivates viewers. Jones plays on this technique by slowing down time during an explosion to show the individual reactions of the passengers. The striking emotional reactions of the passengers arouse a profound feeling of connection between viewers and the characters on screen.

In one of the closing scenes, Jones employs a freeze frame that effectively initiates heart-wrenching emotions in the viewer. The delay heightens the anticipation within the audience, as the scene could end either way. While he does not leave the ending open to interpretation, it may come as a surprise.

Jake Gyllenhaal shines as he switches between the role of the train passenger and soldier. His facial expressions effortlessly convey his emotions as he delves into the two characters; every emotion is felt by the audience.

As Stevens' objective slowly changes throughout the film, the relationship between Stevens and Christina Warren (Michelle Monaghan), a passenger on the train, becomes increasingly more crucial to the plot. The chemistry between Gyllenhaal and Monaghan grounds this relationship, and the tension is palpable. As Stevens desperately tries to convince Warren that remaining on the train is not a good idea despite a lack of rational reasoning, the audience is drawn even more into the tale and the action as it unfolds.

According to the Internet Movie Database (IMDB), the film has some inconsistency. The bombing which Stevens is attempting to stop is planned to engulf two passing trains; however, in order to achieve this, the bomber would need to be looking at both of the trains. Yet, when the identity of the bomber is revealed, viewers can conclude this is not logically possible – the bomber departs from the train before the bombing and is not able to see both trains to plan the explosion in time. Despite the logical inconsistency, the bombing still goes off as planned. Although such an error should detract from the credibility of the director and the movie, the film remains interesting enough that this problem can be overlooked.

Prior to its release, "Source Code" was marketed as a traditional thriller with a rather subdued love story. However, the film shatters these expectations with unexpected twists and thought-provoking themes that throw this action flick beyond the formulaic tales within its genre.

The film contains an underlying criticism of the American military, giving the film some controversial undertones. This is mainly due to the role of the military within the film, as it engages in some activities that are ethically questionable in nature.

"Source Code" is a great action thriller the audience will want to see again and again; it also may take a few views to be able to put all of the clues together. The film's carpe diem theme, emphasized by its main line, "make every second count," begs the audience to waste no time in seeing the movie and appreciating every moment of the experience.

Malea Ritz can be reached at mritz@student.umass.edu.

Jake Gyllenhaal and Michelle Monaghan make every moment count in their new film, "Source Code," in which Gyllenhaal plays a soldier who travels through time to stop a tragic train bombing from occurring.

UMass hosts Huskies before taking on BU

SOFTBALL from page 8

was much closer, as the two teams went back-and-forth before sophomore Teea Rogers ended it in the seventh inning with a walk-off single to left field to score senior Audrey Boutin. Rogers made up for a throwing error she made in the third inning, which led to three unearned runs and a 3-2 Billikens lead.

"That was her pitch," said UMass head coach Elaine Sortino of Rogers' walk-off hit. "She had been taking it the whole game and she just turned on it and so it went."

"It was a good [moment]," added Rogers. "It felt nice to be the one to hit the team in the end. I had a bobble in the middle of the game that cost us some runs, so it was nice to get it all back."

Following Rogers' error, Raymond kept UMass in it on the mound despite a lack of command. Over 5.1 innings, Raymond walked five and hit three before handing the ball to Plourde, who shut SLU down over the remainder of the game, setting the stage for Rogers' heroics.

Sortino was relieved to know that Plourde was waiting in the wings to quell any Billiken rally. After striking out the first batter in the sixth inning, Raymond gave up a single, which prompted Sortino to send in Plourde for relief. Plourde then struck out the next batter before inducing a pop up to junior shortstop Jordan Storro to end the inning. After UMass failed to score in the bottom half, Plourde retired the side in the top of the seventh, striking out two. With the effort, Plourde ran her consecutive hitless innings streak to 17.2, breaking the school record set in 1983.

"Sara knew that … she would be ready in the later innings and she was," said Sortino. "There's nobody you want more with the ball in her hand than her."

"We can feel that every day we're getting better," said Rogers. "It's nice to get our first sweep of the conference season, and it's only going to go up from here."

The Minutewomen have won four straight and six of their last seven. They will host Connecticut on April 5 before traveling to Boston the following day for a game against Boston University. Both games are scheduled for 4 p.m.

Steve Levine can be reached at slevine@student.umass.edu.

Sophomore Cyndil Matthew runs out of the batter's box in a victory over the Billikens on Sunday. The outfielder stole a base in a win and now leads the Minutewomen with nine on the season.

Fredette, Gedman aid in 'W'

BASEBALL from page 8

After UMass went down in order to begin the game, Fordham came out and took an early lead. Ryan David singled and advanced to second base on a groundball out and eventually scored on a two-out double by Chris Walker.

UMass would answer in the top of the second after Matt Gedman and Peter Copa reached base with a walk and single, respectively. After a wild pitch advanced both runners into scoring position, junior Tom Conley knocked in Gedman with a sacrifice fly to make the score 1-1.

UMass tacked on three more runs in the top of the fourth to take a 4-1 lead. After a couple of Fordham miscues put Rob McLam and Eric Fredette into scoring position, Gedman tripled to right center field, plating both base runners. Gedman would round out the inning's scoring after Conley knocked him in with his second sacrifice fly of the game.

Neither side would add to their run totals until the bottom of the seventh, when the Rams struck for three runs of their own. With one out in the inning, Tim Swatek doubled and Nick Martinez walked. After Fordham's David fouled out for the second out of the inning, Ryan Lee would triple to score both Swatek and Martinez. After Misho was replaced by Leif Sorenson, Lee would score on a wild pitch to tie the score at four.

The Minutemen wasted no time and took the lead right back. With two outs in the next frame, Fredette reached on an error and advanced to third on a single by Gedman. Fredette then scored on a wild pitch by Jonathan Reich.

UMass could not hold on, though, as Fordham plated two runs in the bottom of the ninth inning while down to their final out. Martinez scored from second on a double by Lee, who then scored the winning run on a single by Chris Walker.

The Minutemen could not hang their heads for long, though, because Albany got off to a quick start in the second game of the doubleheader. Brian Bullard put the Great Danes on top 2-0 with a home run to right field in the top of the first.

Stone said that while UMass got off to a slow start both mentally and offensively, the Minutemen regained their energy and were able to take advantage of several Albany miscues.

"[You] can't feel sorry for yourself," said Stone. "[Eventually we] put a little pressure on them," Stone said.

The fifth inning saw the Minutemen score four runs on just one base hit. Copa, Conley and Nick Sanford all reached base after being hit by pitches. With the bases loaded, freshman Kyle Adie walked, plating Copa, before Conley then scored on a wild pitch. Sophomore Rich Graef knocked in both Sanford and Adie with a single to center field, with the inning ending after Graef was caught stealing second base. UMass then held a 4-2 lead, as the game would end with the same score.

Getting the win for the Minutemen was junior Joe Popielarczyk, who went six innings, allowing two runs on five hits while striking out five and walking two. Senior Charlie Benson and Sorenson would combine to pitch the last three innings of relief, allowing just four hits over that span.

The Minutemen will now set their sights on Connecticut. They will travel to Storrs to take on the Huskies on Tuesday and head back to Amherst for their home opener on Wednesday.

Eric Mansfield can be reached at ecmansfi@student.umass.edu.

Plourde gets two victories on the day, records 19 strikeouts

PLOURDE from page 8

laboring for most of the day with control problems, Raymond allowed a one-out infield single in front of the Saint Louis No. 3 hitter. That's when Sortino made the call.

"Caroline gave us five good innings," said Sortino. "But Sara knew that if the game stayed close, and it was, then she was ready in the later innings."

Plourde immediately ended any sort of threat, striking out the first batter she faced and getting the following hitter to pop out to short. Her 1-2-3 seventh inning was the first time all game that the first three batters of the inning went down in order.

The Minutewomen sealed the victory in the bottom half of the inning to hand Plourde her second win of the day.

"As a defensive player, you always have confidence when she's in the circle," said Teea Rogers, who smacked the game-winning single. "We have Caroline Raymond, who's a very powerful pitcher and always gets the job done, but if something happens, we have that weapon in the back and we know we're going to be comfortable no matter what."

Regardless of the situation, Plourde's mentality does not change. Whether she is starting or relieving, she's going to be ready.

"It doesn't really matter to me at all," said Plourde. "Caroline went out there and threw a great game, and if [Sortino] needed me, I was there."

Plourde is now 11-10 on the season, sporting a 1.51 earned run average. Her 143.1 total innings pitched are more than double the 70 hits she's surrendered.

Pete Vasquez can be reached at pvasquez@student.umass.edu.

Senior Matt Gedman (8) celebrates with second baseman Eric Fredette(4) in a game last season. Gedman had a triple in the loss to the Rams, while Fredette scored on a wild pitch later in the contest.

THE BRYANT
GRADUATE PROGRAMS

The Bryant University Graduate School of Business prepares students for success in their chosen professions. As a graduate, you will join an impressive alumni community that includes industry leaders across the country and around the world.

THE BRYANT MBA ONE-YEAR PROGRAM
Full-time, day program for all majors
- No professional experience necessary
- Distinguish yourself in a competitive job market
- Gain hands-on experience with the Business Practicum

THE BRYANT MBA TWO-YEAR PROGRAM
Part-time, evening program for professionals from any field
- Develop high-level business skills for long-term career success
- Enter and progress through the program with a supportive team
- Build your network while enhancing your resume

THE BRYANT MASTER OF PROFESSIONAL ACCOUNTANCY (MPAC)
Full-time, day program for accounting majors
- Meets the 150 hour requirement for CPA licensure
- Complete in Summer/Fall, Summer/Summer, Fall/Spring or Spring/Summer
- Tax concentration available with Summer/Fall or Summer/Summer plan

THE BRYANT MASTER OF SCIENCE IN TAXATION (MST)
Part-time, evening program for tax professionals
- Build an expertise in all areas of taxation
- Network with tax executives and industry professionals
- Flexible scheduling options

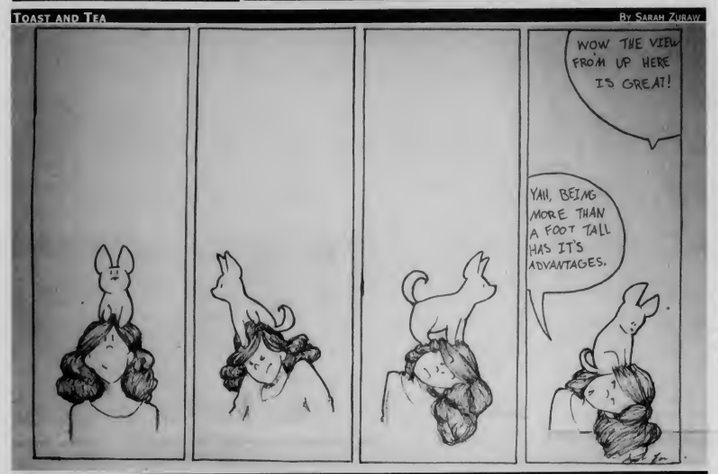
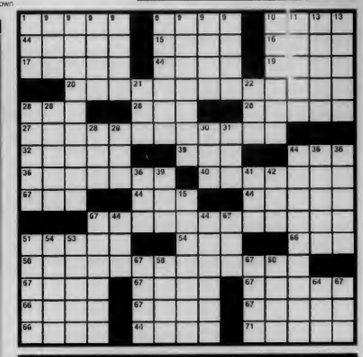
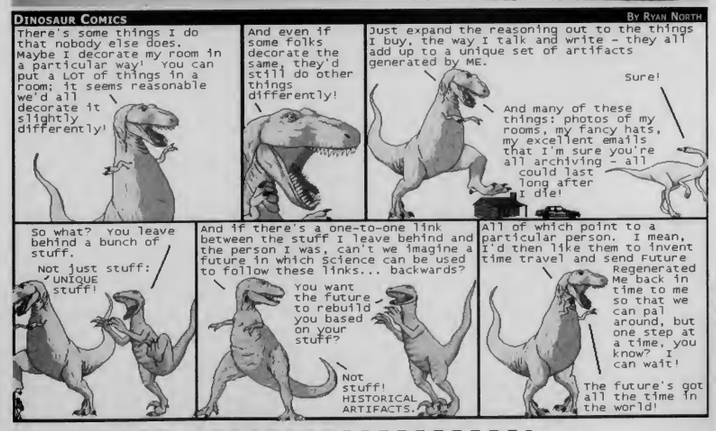
TOAST AND TEA By Sarah Zuraw





DINOSAUR COMICS By Ryan North



There's some things I do that nobody else does. Maybe I decorate my room in a particular way! You can put a LOT of things in a room; it seems reasonable we'd all decorate it slightly differently!
And even if some folks decorate the same, they'd still do other things differently!
Just expand the reasoning out to the things I buy, the way I talk and write - they all add up to a unique set of artifacts generated by ME.
Sure!
And many of these things: photos of my rooms, my fancy hats, my excellent emails that I'm sure you're all archiving - all could last long after I die!
So what? You leave behind a bunch of stuff.
Not just stuff: UNIQUE stuff!
And if there's a one-to-one link between the stuff I leave behind and the person I was, can't we imagine a future in which science can be used to follow these links... backwards?
You want the future to rebuild you based on your stuff?
Not stuff! HISTORICAL ARTIFACTS.
All of which point to a particular person. I mean, I'd then like them to invent time travel and send future Regenerated Me back in time to me so that we can pal around, but one step at a time, you know? I can wait!
The future's got all the time in the world!

XKCD By Randall Munroe

UMass, Plourde punish Billikens

Pitcher throws 8th no-hitter, Rogers drives in winning run

By Steve Levine
Collegian Staff

UMass	4
SLU	0
UMass	4
SLU	3

The Massachusetts softball team appears to have a full head of steam as it rolls through its conference schedule.

The Minutewomen (13-14, 5-3 Atlantic 10) swept Sunday's doubleheader at the UMass Softball Complex against Saint Louis (21-16, 6-4 A-10), 4-0 and 4-3, respectively. Junior pitcher Sara Plourde recorded her second-consecutive no-hitter in game one, striking out 16 in the complete game effort. Freshman pitcher Caroline Raymond got the nod in game two, throwing 5.1 innings while giving up three runs (none earned) on four hits, five walks and four strikeouts.

The UMass offense backed Plourde's dominant first game effort with four runs, three of which came during a fifth inning rally sparked by redshirt junior Stephanie Mayne's solo home run to center field. Sophomore Cyndil Matthew followed with a hit-by-pitch and promptly stole second for her team-leading ninth steal in nine attempts. Junior Kyllie Magill then drove in Matthew with a single to left center. Freshman Lindsey Webster followed with a single before stealing second. Magill then stole home to cap the rally, putting the Minutewomen up, 3-0.

The three-run cushion was more than enough for Plourde, who cruised to the victory with the eighth no-hitter of her career. Plourde and her teammates hoped to add to the momentum, and immediately shifted their attention to game two.

"If you have a good game one, then you go to game two and you're like, 'Okay, I know I can do it [again],'" said Plourde.

The second half of the doubleheader

MICHAEL WOODY/COLLEGIAN

Sara Plourde delivers a pitch against the Billikens on Sunday. Plourde threw her second no-hitter in five days and earned two wins.

After brief injury, junior back impressing for Minutewomen

By Pete Vasquez
Collegian Staff

After junior Sara Plourde collected her eighth career no-hitter, she followed it up just two hours later with 1.2 additional hitless innings of relief as the Massachusetts softball team swept Saint Louis in Sunday afternoon's doubleheader in Amherst.

Plourde collected her second no-hitter in five days and her second in a row, racking up 19 strikeouts and two wins on Sunday, as she continues to work her way back to full strength from injury.

"She keeps getting better," said UMass coach Elaine Sortino. "Obviously it's no secret that she was hurt. We've had to start her very gingerly, and she's been roughed up a little bit. But we figured some things out this week that have really started to click in for her and she's getting stronger as the season's going on."

"It's just really good to see her back like that," Sortino added. "She looks tough."

Seven of Plourde's first eight outs in game one were strikeouts, as she recorded at least two punch-outs in every inning. Each Billiken batter took turns trying to poke her pitches to the opposite field, as Plourde overwhelmed them with her speed.

Plourde has now gone 17.2 innings in a row across a span of four different games without surrendering a hit.

"We can tell [she is recovering from her injury] by her pitches, by the ball placement, by the way people are swinging and missing and fouling balls off," said Sortino. "She's really stepping back into her game. It's good that we're building instead of deteriorating."

The Minutewomen (13-14, 5-3 Atlantic 10) rode their ace to a second doubleheader sweep this week. The first one came Wednesday against Dartmouth, when Plourde went seven hitless innings in game one, followed by two more hitless frames in the second game. Her two-inning effort in the second game earned Plourde her first save of the season.

Sunday's game called for Plourde to relieve freshman Caroline Raymond in the sixth inning of a 3-3 ballgame. After

Collegian Staff

UMass	16
Hawks	9

Following a pair of grueling losses, the No. 16 Massachusetts men's lacrosse team got back on track with a 16-9 rout of Saint Joseph's in Philadelphia, Pa. on Saturday.

Junior Art Kell and sophomore Will Manny each netted four goals for the Minutemen (6-3, 1-1 Colonial Athletic Association). The duo came out firing in the first quarter, combining for the first five goals of the contest to help create an insurmountable early lead.

"I just needed to start fast," said Manny in a UMassAthletics.com interview. "We were able to hit the net today and we were lucky moving the ball. I had a lot of assisted goals."

UMass coach Greg Cannella was pleased with his team's offensive effort after a two-game stretch that saw the team struggling to put goals away.

"We need our attack, and every team needs their attack to score in games, and it's great to see those guys do that," Cannella said. "Again, it's got to be consistent if we're going to be a very good team."

Ryan Hantverk and Anthony Biscardi each had a pair of goals and an assist on the afternoon, while four other Minutemen added goals.

The Minutemen overmatched the Hawks in the opening frame, scoring on five of their seven shots in the period and winning six of seven faceoffs.

The Maroon and White snapped its two-game skid with losses coming to Penn State and Harvard on March 19 and March 29, respectively.

"We said we needed to get back on track," said Manny. "We had a rough couple of weeks and we lost a couple one-goal games, lost by two to Harvard, and we needed to come out strong [and] play 60 minutes of UMass lacrosse, and we did that."

Saturday marked UMass' greatest offensive production of the season (16 goals) as the Minutemen's previous best was 14 at Hartford and Providence. UMass employed great ball movement, racking up 10 assists as Kell and sophomore Kyle Smith led the way with a pair apiece.

"It's good for those guys," said Cannella. "Hopefully they can continue to do that. We've been an assist team all year long percentage-wise in our goals scored. I just hope we can continue to do that…"

After Saint Joseph's opened the second half with a Kyle Williams goal, the Minutemen strung together their second 5-0 run to put the game out of reach, at 13-4.

UMass found success on their man-up situations, capitalizing with five goals on seven opportunities. The Maroon and White also outshot the Hawks, 35-31, and won the groundball game, 34 to 27.

Overshadowed by the offense's play was the UMass defense, which yielded just single digits on the scoreboard for the seventh time of the season. The unit was perfect clearing the ball, going 18-of-18.

Tim McCormack was solid in goal on the day with 10 saves and just seven goals before being pulled late in the fourth period in favor of freshman Reed Goodhue.

Greg Rushing was back on the field after missing the last three games with mononucleosis. The junior won six of nine faceoffs, secured six groundballs and scored a goal in his return.

Junior Anthony Toresco and freshman Joe Calvello, who helped fill the void in Rushing's absence, won 10 of 15 and four of five faceoffs respectively.

Despite its dominance, UMass committed 17 turnovers while only causing 11.

"We got real sloppy at times during the game, which we're [going to] have to find a resolution [for] that," said Cannella.

UMass stays on the road with a tilt with Towson on Saturday to continue CAA play.

Stephen Sellner can be reached at ssellner@student.umass.edu.

Senior captain Ryan Hantverk attempts to get by a Army defender in a game this season. Hantverk had a pair of goals in a 16–9 victory over the Hawks on Saturday.

McMahon & Co. get lopsided win on the road over La Salle

By Dan Gigliotti
Collegian Staff

UMass	17
Explorers	4

The No. 13 Massachusetts women's lacrosse team won its second-straight Atlantic 10 contest with a 17-4 win over La Salle on Sunday.

The Minutewomen (9-2, 2-0 A-10) reeled off 14 unanswered goals and shutout the Explorers (4-7, 0-2 A-10) in the second half to remain perfect on the road (6-0).

"It was one of the best halves we've played all season, I think," said UMass coach Angela McMahon. "The huge thing, for us, is just ball possession. We're winning the draws, we're getting a lot of caused turnovers and then we're converting on our shooting."

Freshman Katie Ferris tallied four goals and two assists to lead nine different UMass scorers. It was Ferris' seventh hat trick in nine games played this season and the fifth time she recorded five or more points.

"We have a lot of different weapons," said McMahon. "Today, [Katie Ferris] did a great job of seeing the net, getting really good angled shots in front of the cage and putting them away."

Ferris and junior Jessie O'Donnell (three goals, one assist) combined to spark a 10-0 second half for UMass.

O'Donnell misfired on two shots in the first half before scoring or assisting on three of the first four goals to start the final frame. After senior Haley Smith scored her second goal of the afternoon to put the Minutewomen up, 8-4, O'Donnell scored back-to-back goals to push the lead to 10-4.

"[Jesse O'Donnell] has been playing great for us all season… it's just I think today was a big day for her to start converting on her opportunities, which she did," said McMahon.

Then, O'Donnell set up Ferris for a goal to give UMass an 11-4 lead with a little over 25 minutes to play in the game. The two scored back-to-back goals and Ferris added another assist on a goal by Sam Rush to swell the lead to 16-4 with 11:36 to play.

The Minutewomen outshot La Salle, 35-13, on the afternoon and 15-3 in the second half. Junior Katie Florence made three saves in over 57 minutes in goal.

A Smith goal with 18:12 left in the first half put UMass up, 3-1, but La Salle then scored the next three goals to take the lead.

Junior Allison Herman's goal off a Lauren McDermott assist at the 15:15 mark proved to be the final of the game for the Explorers.

The Minutewomen scored four straight goals to end the half, beginning with a tally by senior Jackie Lyons (two goals, one assist) at 14:09 and ending with junior Nina Sarcona's second goal of the day off a Ferris assist with 1:31 remaining before halftime.

"[La Salle] was very intense and came ready to play those first two minutes," said McMahon. "We were just a little bit sluggish, so hopefully it's not a habit for us, because it's not something we can always get away with in the end, especially in tight games."

"It's something we're going to put focus on: having strong starts [and] hopefully establishing a lead early," she added.

Dan Gigliotti can be reached at dgiglio@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

A member of the Minutemen looks to make contact against an opponent in a game last season. UMass fell to Fordham 6–5 but defeated Albany by a score of 4–2 to split the weekend series.

JEFF BERNSTEIN/COLLEGIAN

Senior Jackie Lyons scores a goal in a victory over Temple last week at McGuirk Stadium. Lyons had a pair of goals and added an assist in a 17–4 win over the Explorers on Sunday.

UM splits weekend slate with loss to Rams, win vs. Albany

By Eric Mansfield
Collegian Staff

UMass	5
Rams	6
UMass	4
Albany	2

The Massachusetts baseball team traveled to Fordham's Houlihan Park this weekend, splitting a pair of highly-contested games to hosts Fordham and Albany.

Fordham (16-9) walked off with a victory in the first half of the doubleheader, defeating UMass (8-11), 6-5, while UMass came right back to defeat Albany (5-14), 4-2.

Glen Misho started on the hill in the first game, pitching 6.2 innings, allowing four runs on nine hits while walking one and striking out two.

Spring Concert selections explained

Artists' asking prices, economy responsible for 2011 lineup

By Dan Gigliotti
Collegian Staff

For the past two-and-a-half years, the University Programming Council (UPC) at the University of Massachusetts has toiled over the idea of charging students for the Spring Concert, held annually at the Mullins Center.

The Spring Concert, an event hosted by the UPC, typically features some of the most popular contemporary musical acts in a live concert at the Mullins Center.

For every year since the event began, a UMass student identification card has been payment enough to acquire a ticket to the Spring Concert, until this year. For the first time in the history of the concert series, students are being required to pay for their Spring Concert ticket, at the behest of the UPC, but not before much deliberation.

"Ten dollars, to me, is so worth paying for any type of concert, when you can see artists that are on the radio," said UPC President Brianne Niego. "We did really struggle back and forth with it, because we do pride ourselves on throwing free events."

With performers B.o.B., Pretty Lights and 3OH!3!, the lineup for April 17's Spring Concert does not include some of the legendary names like Jay-Z, Phish or Bob Dylan the campus has become accustomed to. However, a still-bruised economy and the rising asking prices of premium musical artists have reached a breaking point, forcing the UPC to examine its priorities.

"One of the problems is that we are a very spoiled campus," said Lloyd Henley, associate director of the Center for Student Development and faculty advisor to the UPC. "We are used to such top-caliber artists, and so one of the things I said to UPC and the SGA is, 'Something's got to break.'"

Funding for the Spring Concert is based on the Student Activities Trust Fund (SATF), an allocation of the student activities fee paid each semester by every undergraduate UMass student, according to the SGA's SATF explanation page on its website.

Any student enrolled in at least one credit hour in the fall 2010 or spring 2011 semesters paid $47 per semester towards student activities, which include guest speakers, sporting events, concerts and other University-run events, according to the Bursar's Office Tuition and Fees page.

Last April 11, the Student Government Association (SGA) Senate Ways and Means Committee issued its recommendation for a budget allocation for FY2011 following months of detailed analysis and review.

This process involves taking the money accrued from student activities fees and distributing it among the 298 Registered Student Organizations (RSOs) and other campus programs, including the Spring Concert, also according to the SGA's site.

The SATF allocations were then approved by the Center for Student Development (CSD), with this year's budget showing an increased allocation of just over 14 percent to the Spring Concert Fund from last year.

The UPC, the most-funded RSO on campus, is allotted a $203,000 budget for this year's Spring Concert (up from $190,000 in 2010) to cover the entire cost of the event, yet it's still having difficulties curbing the rising costs of holding the event, according to Niego and Henley.

In deciding how to address the rising price of putting on a top-notch concert while staying within budget constraints, SGA Senator and Secretary of University Policy and External Affairs Dave Robertson believes it could be as easy as increasing the activities fees.

"What I think needs to happen is there needs to be an increase in the [Student] Activities Trust Fund," said Robertson. "Right now, it's $94 a [year] and that's why most of the clubs are free and most of the events are free But, in terms of national

SAM BITTERMAN/COLLEGIAN

Profs. discuss quake in Japan at Thurs. panel

By Brian Canova
Collegian Staff

A panel of University of Massachusetts professors gathered last Thursday night in the Morrill Science building for a panel discussion on the recent earthquake and tsunami event which ravaged Japan and parts of the Pacific on March 11.

Included in the "Scientific Forum on 2011 Japanese Earthquake and Tsunami" were seven professors, among them geologists, civil and environmental engineers and specialists on Japanese culture and literature.

"In the United States, we have never experienced a tragedy on this level," said Assistant Professor of Sedimentology and Coastal Processes Jonathan Woodruff.

The greatest death toll from a natural disaster in the United States was between 10,000 and 12,000 after the Galveston Hurricane struck southeastern Texas in 1900. The number of confirmed deaths as a result of Hurricane Katrina in 2005 along the Gulf Coast totaled 1,464. Woodruff compared the predicted death toll of 10,000 in Japan with the 280,000 deaths incurred after the 2004 Indian Ocean earthquake and tsunami, which originated just off the coast of Sumatra and hit Indonesia, Sri Lanka, India, and Thailand the hardest.

Early on the morning of March 11, an 8.9 magnitude earthquake struck Japan's eastern coast, rupturing just north of the city of Honshu at a triple-junction of the Japan Trench, Ryukyu Trench, and Izu-Ogasawara Trench, and left the ground in that area shaking for six minutes, explained Associate Professor of Geomechanics Michele Cooke.

The shaking was at its heaviest in the first two minutes, Cooke said, adding that this is "a much longer time than it may sound when looking for shelter."

The earthquake generated a maximum upward acceleration of 2.7g, or 2.7 times the force of gravity in the opposite direction, launching objects into the air, said Cooke. The initial earthquake was followed by a second quake with a magnitude of 7.9, a "sizable aftershock," she said.

The earthquakes resulted in a permanent geological deformation, shifting Japan an average of 2.4 meters (and in some places as much as 4.4 meters) to the east and permanently downward, as well, with a maximum subsistence of roughly 0.7 meters, said Woodruff.

As a consequence of the ongoing shocks, provisional sea walls built to withstand a tsunami event were rendered unsuccessful before the tsunami ever reached Japan.

"[The sea walls] did serve a purpose, even if it looked like they failed," said Woodruff, who explained that with the presence of the walls, water floods coastal areas at a much slower rate than if such waves were allowed to freely crash onto the shore.

After the earthquake, a portion of the ocean the size of northern Japan moved upwards four meters, while the landmass of this area of Japan itself dropped as much as a meter, said Woodruff. The amount of water displaced by this event was equal to the entire northern part of Japan.

"Japan has experienced a lot of tsunamis in the past, so it's not like it wasn't prepared. This tsunami was just a lot bigger than anything before," said Woodruff.

Woodruff explained that the earthquake generated extremely long waves, measuring approximately 300 kilometers. Even at depths of five kilometers, waves of this length interact with the seabed wherever they are as shallow-water waves. The waves, he said, were pushed across the Pacific Ocean at speeds of 200 meters per second, or 450 miles per hour, "about the speed of a jet airliner, to put it into perspective," said Woodruff.

The waves traveled towards Japan and slowed to speeds of 20 to 30 miles per hour just before hitting the Japanese coast about 20 to 30 minutes after the quake. As the waves neared the coast, their speed slowed in the shallower water, while the period between their crashing remained the same. The wavelength shortened, but in order to conserve energy, the waves heightened as well, rising substantially as they approached the shoreline, explained Woodruff.

Sergio Breña, an associate professor of Civil and

Women of Color relate their stories in 'Body Politics 2011'

The Women of Color Leadership Network at the University of Massachusetts will perform an original theater production examining the juncture and formation of social identities, racism, sexism and other social issues this Thursday and Friday.

The group will put on its award-winning "Body Politics 2011" show April 7 and 8 at 6:30 p.m. in Bowker Auditorium.

According to a Monday release from the UMass Office of News and Media Relations, the network, a part of the campus' Everywoman's Center, will address a variety of social, personal and cultural issues in the serious - but sometimes comical - performance.

Among the societal forces the group will deal with are "the intersectionality of social identities, cultural appropriation, discrimination and racism, manifestations of internalized oppression, sexuality, violence" and "feelings around body image, hair texture, skin color and self esteem," according to the release.

The network will deal with these issues in an academically legitimate manner, but will also provide room for some "wisdom and humor," the release states.

Feeling positive and proud will also be among the show's motifs.

"Sisterhood, pride, courage and resistance are woven throughout the tapestry of this production," the release states.

The performers will be 12 women of color who came together in the fall semester to relate their own personal narratives "through storytelling, creative writing and improvisation and dance." Their work ultimately led to "Body Politics 2011."

MASS ETV

12 members of the Women of Color Leadership Network will put on "Body Politics 2011" this week.

"Body Politics" has been facilitated by Social Justice Education Program doctoral candidate Andrea Dre Dominique, with local theater artist Celia Hilson serving as artistic director.

Both nights of the performance are free and open to the public.

UM marks Public Health Week with events

T.S. Eliot wrote that April is the cruelest month. Well, administrators and health officials at the University of Massachusetts would at least like April's drizzly showers to serve as a wake-up call to get out and get fit, as the campus marks National Public Health Week with a series of events intended to get students thinking about making healthy choices.

National Public Health Week began Monday and will run through Sunday. Here at UMass, events marking the week begin today, with the School of Public Health and Health Sciences (SPHHS) hosting its annual Research Day from 3 to 5 p.m. in the Amherst Room of the Campus Center. At that event, students from SPHHS will display health-related posters to be judged for content and presentation. Also on Tuesday will be the twenty-third annual Virginia A. Beal Lecture and Dinner in the Cape Cod Room of the Student Union. The gathering runs from 4:30 to 9 p.m., with this year's theme titled "Reducing Hypertension: Are Americans Ready to Shake the Salt Habit?" Registration and a fee are required to attend the Beal dinner.

On Tuesday night, UM will also tackle sexual and reproductive health issues, with a screening of "PROTECTION: A film about men and condoms in the time of HIV and AIDS" at 7 p.m. in Hasbrouck Hall, room 134. The film, shot in South Africa, Kenya and Sierra Leone, seeks to serve as an impetus for young men to speak about the significance of protecting themselves, and their partners. The film's producer, Jill Lewis, a professor of Literature and Gender Studies at Hampshire College, will host a question-and-answer session following the screening.

On Wednesday, a certified sex therapist and the former clinical director of the Human Sexuality Institute of Washington, D.C. will visit campus to discuss striking a healthy sexual balance. At 7:30 p.m. in 106 Isenberg, Joyce Joseph will deliver a lecture with a follow-up discussion titled "Sex: Getting It Right."

Over the weekend, the campus will put its walking shoes on to support a healthy drive to stomp out aphasia. On Saturday, Amherst will host the Second Annual Walk and Roll for Aphasia, taking participants 2.6 miles and beginning at 10 a.m. at the Amherst Town Common. The walk is organized by communication disorders graduate students and is sponsored by the UMPD.

Even after National Public Health Week is over, the campus will not turn its attention from healthiness issues. Next Monday there will be a CPR training and certification event at 122 Draper Hall, being sponsored by the Public Health Club. That session will run from 7 to 9 p.m. and costs $10 per participant. Finally, on Tuesday, April 19, several campus organizations will put on a health fair from 4 to 7 p.m. in the Student Union Ballroom.

Top choices were Kid Cudi, MGMT; B.o.B., Pretty Lights, 3OH!3 to play

SPRING CONCERT from page 1

ranking, that's like the 45th-lowest activities fee," said the one-time SGA presidential candidate.

Robertson believes an increase of $6 per year would raise enough money to make every concert and activity on campus free, but perhaps not without controversy.

"If you raise the SATF six dollars, you get $120,000 more right off the bat, so it would have been a free concert," he said. "But, also, some people complain, 'I don't really want to go to the concert. I don't want to pay $6.' They don't realize that six dollars goes to a lot more than just the concert," said Robertson.

This past year, fees did not increase and, according to Josh Davidson, chairman of the SGA's Ways and Mean Committee, they should stay the same until the budget process is modified.

"I really feel that we can spend the money a whole lot better," he said. "The way that we allocate money to groups can be much more effective. I would like to see those things happen before we raise the fees."

The majority of the Spring Concert's budget, separate from the more than $75,000 allocated to the UPC which goes to the dozen or so other events it puts on aside from the Spring Concert, goes to paying for the artists, Niego explained.

In 2010, Spring Concert tickets were sold out entirely to students, which was encouraging for the UPC, but also acted as a monetary ceiling, as Ludacris and the three other acts were paid a combined total of $130,000, leaving little room to spare for the other expenses.

In addition to the costs of the artists, the Spring Concert's budget must account for a host of other expenses, including the agent fees, marketing and advertising, private and public security, and most of all use of the Mullins Center, which is owned by UMass but independently managed.

Above all, the selection of artists and their steep costs still acted as the biggest impediment to a free concert this year.

"The biggest issue we ran into this year was definitely the rising prices [of the artists]," said Niego. "It got to the point where [it was] like, was the price of the person worth the amount of votes, and then going over budget when they weren't the top choices?"

The UPC issued one poll and one survey last year, administered via Campus Pulse, allowing students the opportunity to give suggestions for potential Spring Concert performers.

Colorado electronica DJ Pretty Lights was among this year's three primary acts for the Spring Concert.

The first was a poll issued in June asking students to submit three suggestions for musical artists of their own choosing, said UPC Treasurer Wing Lau. Approximately 3,000 votes were collected, and the UPC researched each artist and their potential for creating an exciting Spring Concert.

"Anyone who was over a certain price, we had to immediately take out," said Niego. "We also researched their history; if they are reliable at shows, [would] they just cancel for no reason, are they going to put on a good performance, or are they going to charge us an astronomical amount of money and play for 10 minutes because no one wants a show like that," said Niego.

Then, a second survey was issued last October, consolidating the top vote-garnering artists into three categories, based primarily on each one's price range.

Lau said 6,065 students participated in the final survey, and the final results were submitted on Nov. 17. The UPC and the CSD then evaluated the results to determine which artists it would pursue after assessing their affordability and availability.

"We looked at the votes and we basically went down the list in order," said Niego. "So, we started with the top vote, we checked their pricing again, we went to our agents and put in a bid. We had to sit around and wait for the artists to get back.

"What we ran into this year is that a lot of people either were not touring this spring…or they were touring overseas already and couldn't break off of it. So, we did have to go, somewhat down the list in certain aspects, but we were still able to get a lot of the top votes this year, which I know there's a lot of argument about," she continued.

With the help of Henley, the UPC then contacts its most coveted musical acts and puts a bid, or a formal request, that binds University to the artist, Niego explained.

During the time it takes for the artist to respond to the University's request, other artists are busy booking conflicting shows, which makes the process a painstaking one.

Rapper B.o.B., who played last year's Welcome Back Concert, is now charging 10 times more for appearances than he was a year ago.

"While we put in that bid, we cannot bid on other artists, just because we cannot pull it out. Say we have an artist like Kid Cudi and then we have a backup, we cannot go to the backup until the first one says no."

UPC executives then scratched names off of the final survey list one-by-one until the first column of artists was nearly eliminated, Niego and Lau said.

Kid Cudi cancelled his tour, KeSha was booked and MGMT was not touring, they said. Instead of continuing to the bottom of column one of the survey's top vote-getters, UPC executives opted to start their search again from the top of column two, considering the most popular artists in this grouping received more overall votes than the least popular in column one.

Deadmau5 topped column two in the voting process and Niego and the UPC executive board had to decide whether or not to put a bid in, while other bids were still being processed.

"We came together and asked, since he is so expensive, do we want to continue to pursue him, but also had bids in for Kid Cudi, so if they both accepted, they would be way over budget," she said.

In the month it took for Kid Cudi to respond to the UPC's bid, Deadmau5's asking price went up $25,000, and a similar circumstance occurred with B.o.B., she said.

Since he performed at last year's Welcome Back Concert in the Fine Arts Center on the UMass campus for $5,000, the artist has upped his asking price tenfold to $50,000 to play at this year's Spring Concert.

The $10 ticket price charged to students is more than most expected to pay, especially for those unfamiliar with the budget process. According to Henley, it was an inevitable consequence of the high demand for tickets and a lack of funds needed to compete with the competitive market.

"In the past, we used to get the outside world that used to come in and pay full price and that used to help cover. But now, students are now coming to the concert and we're selling out [on] just students, and so we're not having any income coming in," he said. "So it's a great thing that we're selling out for students, but there's no other money coming in to try to help pay those bills, and that's what's getting us."

Profs. discuss quake's impact on Japanese life

JAPAN from page 1

Environmental Engineering, whose presentation focused on how Japanese structural engineering affected Japanese buildings' readiness for a quake of this magnitude, raised an unlikely question in his presentation, "The 2011 Tohoku Earthquake: A Structural Engineering Success Story(?)"

"To date, there are no major failures that could be attributed directly to the earthquake," said Breña. "Most of the damage I have seen has been from the tsunami."

By the time the seismic waves from the earthquake reached Japan's capital, Tokyo, they were already much smaller in magnitude than at the quake's epicenter, Breña said.

"When we think about earthquakes, we think of collapse[s] and heavy things falling on top of you, which is why they teach you to get under a table, which will not cushion you from a total collapse, but will protect you from something like a falling light fixture," Breña said.

Breña illustrated the preparedness of Japanese cities to withstand an earthquake of this magnitude by showing footage from a specialized facility where structures are built and tested atop a large surface that simulates the ground-shaking of an earthquake. Engineers then analyze these tests to determine what structural reinforcements are needed to support buildings of a particular height and material, he explained.

Associate Professor of Civil and Environmental Engineering Dr. Carlton Ho said that apart from provisions designed to protect against structural collapse, the planners behind the infrastructure of Japan's nuclear power reactors "most likely didn't take into account the risk of the entire system or all means of power going out," Sono said.

Ho explained that improved network analysis needs to be performed to avoid so-called cascading-effect disasters of this sort can have on infrastructural networks in place.

"Every time you have a big earthquake, you have big lessons learned," said Ho, who referenced the 1906 San Francisco earthquake that destroyed water mains and gas lines and left fires burning with no means of putting them out.

Large sections of northern Japan were destroyed in the March 11 quake and tsunami, like this section of the city of Kamaishi.

"Now there is water on supply to put out fires if the water mains break," he said.

Reiko Sono, a senior lecturer in Asian Languages and Literature, explained in her presentation what she identifies as a cultural divide between Japanese and Western society, and its implications on the civilian response to the devastation. Sono said people in the area hit hardest by the tsunami are especially known for their patience and collective perseverance, attributing to this the practical nonexistence of looting.

"The mentality is a little different," she said of the region. "One of the good things about living in New England is you don't have to worry about [tsunamis]. People are prepared for tsunamis in coastal areas, but as Jon [Woodruff] said, it was much more than anyone expected, so all the drills and all they did to prepare for the tsunamis didn't work," Sono said.

She explained that Japan, which has a long history with tsunami events, has had parts of its culture sculpted by such disasters. For instance, Sono said the tsunami which hit Japan in 1896, which had particularly devastating financial implications for wealthy Japanese, actually came to symbolize economic rebirth for some lower class Japanese.

"When the earthquake happened in the 19th century, people saw it rather as an opportunity to rebuild," said Sono.

Sono said the now famous "catfish prints," valuable Japanese art depicting brightly colored catfish, were illegally produced and distributed throughout the country, alluding to a traditional folk belief that huge catfish under the surface of the ground caused earthquakes.

In the artwork "you see the catfish helping people to rebuild the world," Sono said.

The lesson to be learned from the Tofuku Tsunami, Ho said he believes, is "the whole idea that you need to look at the network, as opposed to just the individual structure."

Moving forward from the disaster, Breña said "emergency backup systems in critical facilities have to remain operational after an earthquake" and "tsunami resistant construction needs to be developed or improved."

"The lesson to be learned is that you can't be too prepared," said Sono.

Canvassing for votes and enjoyable memories

Dan Stratford

As a political science major, campaigning, elections and writing about campaigning and elections typically consumes most of my time. It can be said that they lie at the dead center of my metaphorical universe, along with my family and my passion for both bagpipe music and long, meandering bus rides. So what better way to spend a weekend than to canvass for the much-contested Sixth Worcester District represented by state Rep. Geraldo Alicea?

On April 2, my compatriots in the University Democrats and I, including our president, Emily Jacobs, went to Southbridge to canvass for Alicea. In the process, however, we engaged in not only canvassing and other quintessentially political tasks, but also a degree of personal bonding that would be unfathomable in any other quest.

There is nothing I enjoy more on a given Saturday than getting to campus at 10:30 a.m. after a night of wild, rancorous reading and contemplation about the minutia of politics. Specifically, there is nothing more enjoyable than getting to campus and consuming myriad organic pastries from the French Meadows cafe on the campus center concourse while preparing for a vigorous and fun-filled day of canvassing.

After eating my breakfast, Jacobs drove us to Southbridge, which involved many a joke and hearty laugh, but especially a multitude of puns. If there is one thing that we Democrats pride ourselves on, it is our prodigious propensity for wordplay, which was in full swing on the ride to Southbridge. In fact, it would not take a particularly great leap of faith to assert that our never-ending stream of puns and jokes was akin to Bob Dylan's so-called "Never-Ending Tour," with comic interludes at every stop yet with no stop being the last.

As we ventured further into what can only be described as the more bucolic areas of central Massachusetts, one striking economic feature stoked our collective curiosity: the sheer preponderance of antique shops and venues for antique "shows." In all seriousness, once we reached the sleepy town of Brimfield, there had to be one of these places every two or three blocks. To us, it was the most peculiar thing, but it is actually intriguing to conceive of a town economy underpinned almost entirely by the sale of antique wares and trinkets. In an ironic twist to the adventures of that day, it could be said that the road to the tentative promise of the future – in the form of Alicea – runs through the rustic thicket of the past. Perhaps this overriding fact is proof, as Edmund Burke once asserted, of history being "the pact between the dead, the living, and the yet unborn."

Perhaps this overriding fact is proof, as Edmund Burke once asserted, of history being "the pact between the dead, the living, and the yet unborn."

In addition to the large number of antique dealerships, we passed by restaurants with names and menus that could only be done justice by a personal sampling. These fine eating establishments included the illustrious Jenny Chan's, to whom we owed the pleasure of our dinner much later during the day, the Apple Barn Cafe and Girly's Grill. These culinary idiosyncrasies could only occur in an area as pleasantly idiosyncratic as central Massachusetts.

Once we arrived in Southbridge, we began to get organized for the great endeavor of canvassing. One of the great intellectual gems of this special election is that Alicea's original race against his Republican challenger Peter Durant resulted in a literal tie between the two candidates, with individual ballots even being contested in court. In more ways than one, the race is beginning to resemble a mini-Florida from the 2000 presidential election, minus the hanging chad hearings.

It was in the middle of this electoral tumult that we found ourselves that day, walking streets that were unfamiliar to us yet replete with potential votes for Alicea. At a first glance, despite the aforementioned lack of familiarity, many of the houses could have come right out of Amherst, being large structures with multiple residents housed inside of them akin to off-campus student housing. This is not to mock the integrity of such dwellings – most were actually quite lovely. This, aside from the electoral politics involved, was one of the chief sources of our beloved group's intense bonding experience: The realization that, in the aggregate, and sometimes literally, we all have to find some way to live with each other.

Either way, that day's canvassing was nothing, if not tremendously successful. My fellow University of Massachusetts Democrats and I even went out for a second round of door-knocking – at the insistence of yours truly, of course. This only reiterates the fact that politics in a republic is an intrinsically communal enterprise, requiring the participation of the populace at large to be truly considered legitimate. If anything, traversing the Massachusetts countryside with my fellow college Democrats only strengthened this sense of civic obligation. Our travels in Southbridge were proof-positive that politics in a republic originates locally. However, it was the shared experience with my fellow Democrats that made it personal.

The necessity of student action

Dean Curran

This generation of college students has an extraordinary degree of anxiety about the future. On Feb. 6, The Daily Collegian reported that a recent study found that freshman have the highest levels of stress in 25 years. According to the article, "Linda Deangelo, the assistant director for research at the Higher Education Research Institute and one of the [report's authors]," says that an unstable job market and expensive loans is contributing to the problem. "Students want more than ever for their college experience to mean something," she told the Collegian. And this problem plagues more than first year students. There is a fundamental uncertainty in attending university in modern America. The promise of success that once accompanied a college degree does not apply to us anymore. Meanwhile, the cost of attaining that degree has risen to unprecedented levels, and is likely to continue rising. We can no longer count on things to "fall into place" after we graduate. We must be active in the pursuit of our futures.

If we are to be successful, we must have more to show for our college experience than a piece of paper. This past Wednesday, 17 University of Massachusetts students demonstrated their eagerness to take responsibility for their success. They brought their ideas and talents to the first meeting of Student Action, a new organization committed to galvanizing UMass students to be active participants in democracy.

I am the co-founder and co-chief executive of Student Action, and our work is driven by the sense of urgency most of us have about doing what it takes to succeed. We are networkers for civic engagement, which will expand our opportunities. Social capital clearly enables the individual, and some experts even credit it with helping to sustain democracy. According to the late political scientist Samuel P. Huntington, a rich associational life provides "the basis for the limitation of state power, hence for the control of the state by society, and hence for democratic political institutions as the most effective means of exercising that control."

If we mobilize to assume characteristics of democracy: responsiveness, participation, competition and responsibility - we will be more effective students, job seekers and citizens. Student Action has no official party affiliation or ideology other than democracy, truth seeking and respect. Through discourse, action, workshops and networking (DAWN), our members are striving to improve student life while establishing a framework for post-graduation success.

Free and civil discourse is vitally important to the success of any group, and the survival of democracy itself. Discussion leads to effective planning and teambuilding, as well as an appreciation for opposing viewpoints. But it is just as important to speak with purpose. Henry David Thoreau once wrote: "How can a man be satisfied to entertain and opinion merely, and enjoy it? Is there any enjoyment in it, if his opinion is that he is aggrieved?"

I worked with some political groups on campus when I was a freshman, but I grew frustrated when their action amounted to little more than lively discussion. And when these well-intended organizations did attempt to create change, they often hit a wall. I saw several bright and valuable members lose interest because they felt shut out or that their direction was somehow being limited. This is not to say that UMass has lots of great student groups, but Christian Waterman and I formed Student Action so that students could make their experience their own. It is also important to take on issues that are feasible. It is certainly positive to voice your opposition to the Iraq war, for example, but if your struggle for peace solely consists of "raising awareness," it is unlikely that you will ever accomplish anything of substance.

Student Action is working to improve student and community life in ways that are doable. Through our "Concrete Canvasses" campaign, we seek to invigorate UMass buildings with student mural art. This program would provide students with valuable internship experience while creating an inspirational backdrop to our campus community.

Free and civil discourse is vitally important to the success of any group, and the survival of democracy itself.

I described the benefits of such a program last semester in a column for The Collegian, and since then, Student Action members have taken the initiative to further its development. Our "Let Us In" campaign aims to make campus buildings more handicap assessable. We are working to create an internet survey to locate problem areas across campus, and ally ourselves with disability services in our efforts. We are also planning a number of community service projects, including anti-hunger initiatives and a clothing drive for Haiti.

Through our workshops, students will be empowered with the skills they need to be highly effective people. Upcoming instruction includes cooking basics, finance, investing and community organizing tactics. Student Action will also continue to network to gain valuable alliances, knowledge and opportunities - both for the benefit of the group and its members. Some of us are attending the National Conference for Media Reform in Boston this weekend to associate with key policymakers, journalists, media-makers and activists. We will continue to network to promote resources both on and off campus.

Wan wastes potential with 'Insidious'

Rose Byrne (pictured) stars in "Insidious," the latest horror film from director James Wan of "Saw" fame. The film also features Barbera Hershey and Patrick Wilson, and is now playing in theaters everywhere. (MCT)

By Ian Opolski
Collegian Staff

The Lambert family has moved into a new home, hoping for a fresh start and new opportunities. But when son Dalton has an accident and falls into an unresponsive, coma-like state, his doctors are dumbfounded and his parents are devastated.

Soon, however, increasingly terrifying sights and sounds plague the entire house, and the Lamberts begin to question whether supernatural forces might have caused Dalton's condition. They call in a team of psychic experts to see if they can discern the real source of the family's nightmares, save their son's soul and banish the evil haunting their family.

Considering that "Insidious" recreates one of the most overused storylines in the horror genre, "Poltergeist," the film manages to be surprisingly effective in building an unsettling atmosphere. The first half of the film is a nice blend of family drama and supernatural scares. It's a slow build of momentum, and the fact that the scary moments are so spaced out somehow makes them more agonizingly unnerving.

Director James Wan cleverly upends our expectations. Moments in which we'd expect a jump scare often deliver nothing, while at other times horror comes at us without any musical cue. In a film that frequently feels like a patchwork of the classic horror movies of the past in its plot and execution, this unpredictability is probably the strongest and most original aspect of "Insidious."

None of the ways in which the film heightens tension are new, but they are all used effectively. In a refreshing turn from the standards set by his "Saw" franchise, Wan uses minimal gore in "Insidious." With the exception of a single bloody handprint, this film never resorts to that type of visceral scare, turning instead to other methods of frightening the audience.

Music, of course, is creepily employed. Particularly noteworthy is the use of Tiny Tim's "Tiptoe Through the Tulips," which loses all its comic value and instead becomes genuinely horrifying. The film's alternating gray and fluorescent lighting gives all the actors' faces a washed-out feel, which contributes even further to the sense of exhausting horror.

For the majority of the film, the monsters are obscured by veils, curtains and fogged windows. The filmmakers know that the viewer's imagination can create images far scarier than any visual effect, and for a time that strategy pays off. The uncertainty of what you're seeing combined with the uncertainty of when you're going to see it allows the early stages of "Insidious" to rival even the best of classic horror films, including those from which it borrows many of its elements.

Unfortunately, the frightening tension built up in the first half of the movie is not maintained toward the end. The scares in "Insidious" are most effective when they occur in brief, uncertain flashes. When the film lingers too long on the horror and unveils the actual demons, they lose all their punch.

The film's modest budget, estimated at $1 million, painfully shows in its special effects. The demons, ghosts and zombies that populate the end of the movie are, for the most part, comically unconvincing. A plot twist tries to recover what is lost, but does not succeed. The ending of "Insidious" is a letdown.

Regardless, the performances in the film are solid. Patrick Wilson ("Watchmen," "Hard Candy") and Rose Byrne ("28 Weeks Later") are convincing as Josh and Renai Lambert. They skillfully toe the line between family drama and horror without ever becoming unrealistically hysterical. In a rolle that could have easily become ridiculous, Lin Shaye is equally grounded as Elise, the psychic investigator. Leigh Whannell and Angus Sampson, who play Elise's partners, are comical, though their undesired comedic relief plays a significant part in destroying the film's atmosphere.

Barbara Hershey, fresh off her role as a creepy mother in "Black Swan," switches things up to play a creepy grandmother here. Her part is perhaps the most confusing element of "Insidious," as the film jarringly throws the character into the plot and leaves her extremely undeveloped. Hershey's inclusion may have simply been a nod to her horror pedigree from 1982's "The Entity," but her part is, unfortunately, negligible.

"Insidious" will keep you tense if not terrified for a portion of its run, but, like many horror films, it cannot sustain the tension throughout. Leave halfway through and you might be satisfied; stay until the end and you'll inevitably be disappointed.

Toubab Krewe combines rock with W. African 'jeli' tradition

By Brian Canova
Collegian Staff

When Toubab Krewe took the stage Friday night, it seemed for a moment they might not be all that into it. Between the droopy-eyed djembe percussionist in the back right and the rather stiff bassist in the front left, uncertainty loomed over what this Malian-trained crew was prepared to bring to the crowded Iron Horse Music Hall.

However, once the band began to play and the crowd began to loosen up, Toubab Krewe loosened up, too, unleashing southern rock-infused jams, bright harp solos from the 12- and 21-string West African harps, and even a lengthy djembe jam which immediately garnered the full support of the crowd, clapping and dancing along.

It's not often that music of this genre makes its way to Northampton. The Krewe blends traditional West African music that the band learned on countless trips to Guinea, Mali and the Ivory Coast, with southern rock riffs absorbed from the majority of its members' North Carolina upbringing.

In fact, it's not all the time that this style of music makes its way anywhere. To put it simply, the music of Toubab Krewe is very unique and original. Their name is derived from the West African word "toubab," which is used in reference to white people of European decent and the New Orleans spelling of "crew." The band manages to bridge the gap between familiar rock and jam performances, still managewhile at the same time to fitting the expectations elicited from the label of "traditional West African music."

Toubab came on stage just before 11 p.m. and played for almost two hours, building emotion and energy the entire time. Despite the fact that the dance floor was ripe with the smell of sweat, the band radiated positive vibrations unto the crowd and seemed to inspire a communal atmosphere that strengthened their performance.

In West African culture, "jeli" or "griot" are a prestigious caste of professional musicians and orators. These storytelling musicians are entrusted with the important task of recounting genealogical information and family events, as well as celebrating the morally praiseworthy actions and behavior of their ancestors and patrons and mediating disputes.

In Malian culture, few non-jeli take music as a profession. To the jeli, music is less an expression of oneself and more the communication of an important, timeless message or lesson. Each member of Toubab Krewe, and the music of the six-year-old, five-piece band, embodied these virtues and qualities on Friday night.

After a few particularly memorable jams that got the whole crowd jumping, unfamiliar concertgoers gave each other fist-bumps, exchanged stories of past concerts and festivals, and future ones they intend to explore. People introduced themselves to each other and made witty small talk in front of the stage as the music got quiet, then jumped right back into it as the band picked up, everyone basking in the heightened atmosphere that had overtook the bar.

The five members of Toubab Krewe, Teal Brown (drums), Drew Heller (electric guitar), Justin Perkins (kora, kamelengoni, electric guitar), David Pransky (bass guitar) and Luke Quaranta (percussion), met after Brown met Quaranta at college. Then, Pransky, whose sister danced for the Toubab predecessor "Common Ground," joined the band.

Following the encore Toubab Krewe promoted their festival to the Iron Horse crowd, "The Manifestivus" takes place July 22 and 23 in Cabot, Vt.

Brian Canova can be reached at bcanova@student.umass.edu.

Last Friday, the Iron Horse Music Hall hosted Toubab Krewe, an unconventional band that blends modern rock with traditional West African stylings to create a sound that's all their own.

Wrapping up hunger

That's a Wrap, the latest restaurant to settle in Amherst Center, offers a variety of sandwiches, including paninis, flat bread sandwiches and wraps, as well as a breakfast menu.

By Anthony Santiago
Collegian Correspondent

With so many different places to dine in Amherst Center that offer a variety of flavors, it can be hard to choose a restaurant with something for everyone. Atmosphere, style and affordability are unavoidable factors when deciding.

That's a Wrap is a new type of sandwich shop that has been brought into Western Massachusetts. They first began in Pittsfield and have expanded to Dalton, Williamstown, and now Amherst. They have future plans of expanding into New York and even someday being as competitive and successful as the Subway franchise.

That's a Wrap offers a small, cozy environment to enjoy quality food with friends or family. When you enter the restaurant, the first thing you notice is the décor. Their rustic yet simple look is achieved through the exposed brick wall, small wooden tables and chairs, bar with stools, and open kitchen. The atmosphere is relaxed, making the restaurant a very warm and comforting place to dine.

The restaurant also provides a coffee shop-like atmosphere, making it a great place to get some work done. The music can be heard, but is not overpowering or annoying when you're trying to talk or do work. The dim lighting and neutral colors add to the coziness of the restaurant and, overall, the place presents itself as very versatile for many moods, occasions, and people.

Above the counter where you place your order, you will see the chalkboard menus, which can be overwhelming at first glance. Don't worry, though; if you need help one of the employees will gladly explain items on the menu for you. Offering a wide variety of food choices that expands from just wraps to paninis, flat breads, salads, smoothies, soups, coffee and even a selection of breakfast items.

Any order of a flat bread, wrap or panini, comes with your choice of a bag of chips, potato salad, macaroni salad, couscous or fruit. The prices are very reasonable, with wraps costing between $6.95 to $7.75 and nothing else on the menu ranging out of a college student's budget.

After placing your order, you can sit at either the long, cushioned bench, the stools or at a regular table. What makes That's a Wrap different from most restaurants of its kind is that you don't have to stand and wait for your food or pick it up yourself. After you've found a fitting table, your order is delivered to you. The portion sizes of the food are very good and the quality is top-notch. The sandwiches are tasteful, full of flavor and just look absolutely delicious. The sandwich components are portioned just right so that there isn't an overwhelming amount of any given item and nothing falls out of the sandwich. The sides are also very good.

The restaurant itself, as well as the restrooms, are clean and sanitary. The staff is very friendly and open to talking to customers and providing assistance. They also offer catering and a delivery service, so if you just can't come to them they'd be more than happy to come to you.

Located in the Center of Amherst on North Pleasant Street next to Moti, That's a Wrap is in the perfect location for business. It provides quick, great tasting food to start or to finish your day. The next time you're in town and have that urge to try something new, or if you simply want a sandwich, That's a Wrap is a great contender.

Anthony Santiago can be reached at aosantia@student.umass.edu.

UM's Nelson, Niland, Griffin, Havens take part in Pro Day

PRO DAY from page 8

JEFF BERNSTEIN/COLLEGIAN

Wide reciever Anthony Nelson was one of five UMass seniors to take part in the annual Pro Day event for NFL scout at McGuirk Stadium.

Nelson, Kyle Havens and Greg Niland each worked out for NFL scouts at McGuirk Stadium during the annual Pro Day event.

Each player participated in specific drills, including the 40-yard dash, intended to test their skills at their particular position.

The weather conditions were not ideal for the NFL-hopefuls, but it didn't deter them from putting out their best performances.

"It was definitely cold, that's for sure," said Nelson in an interview with UMass Athletics. "Overall, it wasn't a bad day. We had a good amount of scouts here... For me, from an individual standpoint, I think I did pretty good, especially in the position work."

"I came out here, tried to have fun with the guys, see the football team again, so it wasn't that nerve-racking," said Griffin.

New def. coordinator

The departure of Keith Dudzinski from the Minutemen coaching staff made way for the announcement of Frank Forcucci as the new defensive coordinator on March 18.

Forcucci served on the UMass staff for five years, most recently acting as the team's outside linebackers coach from 2001-03. Last season, he was the linebackers coach at Central Connecticut.

After seven seasons with the Minutemen, Dudzinski is now the inside linebackers coach at Maryland after being hired on Feb. 16. Dudzinski reunites with Terrapins head coach Don Brown, whom he worked under in 2004-08 when Brown was the UMass head coach.

"We are very excited about Frank Forcucci returning to UMass in the role of defensive coordinator," said Minutemen head coach Kevin Morris, according to UMass Media Relations. "I have gotten to know Frank over the years and am impressed with his knowledge, organization and philosophy of defense."

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

Increased offense helps defense too

OFFENSE from page 8

bunt. Meeks was eventually brought home by Stephanie Mayne's RBI single.

The 1-0 victory was a rare score that the Minutewomen believe is not a reflection of modern softball scores.

"Games are scored 6-2, not just 1-0 or 2-0 anymore," said Webster. "So it's not just a pitcher's game like it used to be. I really think it's a lot about hitting and our team's finally doing a much better job at that and I'm excited to see us progress."

However, one particular inning in Game 1 on Sunday against Saint Louis epitomized how diverse the Minutewomen have become on offense as they topped the Billikens, 4-0.

After Mayne began the fifth inning with a solo home run to center field, sophomore Cyndil Matthew, the team's pesky ninth hitter, was hit by a pitch. Following a steal of second base, Matthew was brought home on a base hit by Kyllie Magill, who advanced to second on the throw.

Webster singled to put runners on the corners with no one out. The heads-up base running continued as Webster attempted a steal of second base. Magill alertly sprinted home following the throw. When the second baseman retrieved the throw, she immediately threw home, which allowed Webster to take third.

The manufactured run by Webster and Magill proved to be very important, as UMass did not get another hit in the inning.

Sara Plourde, in the process of what would become her eighth career no-hitter, was able to loosen up after holding a 3-0 advantage.

As Sortino knows, a productive offense can help relax the other facets of a team.

"It means a lot," said Sortino. "It takes the pressure off the pitcher, pressure off the defense. When you know you can score multiple runs, it's a very important thing. If you don't have run capability, that makes everyone just a little bit tighter. It makes them tighter in their at-bats. It keeps feeding off itself and that's not a good thing."

Patience at the plate has also been a key element to the Minutewomen and their recent success.

The first two runs of Game 2 against the Billikens came courtesy of leadoff walks in the first and second inning, respectively.

With a versatile offense coming to the plate each game, Sortino and the Minutewomen can breathe easier as more wins are sure to be in store.

Pete Vasquez can be reached at pvasquez@student.umass.edu.

MARIA CMINSKI/COLLEGIAN

Since scoring two or more runs in just two of its first 11 games this year, UMass has averaged nearly four runs in the last seven games.

UMass hosts, heads on road

SOFTBALL from page 8

more Kiki Saveriano, will look to bounce back after her poor outing in which she gave up nine runs (six earned) over 6.1 innings. The Huskies led 5-4 after five innings, but surrendered a nine-run seventh to the Scarlet Knights, which put the game out of reach.

Despite her performance, Saveriano will likely make her team-leading 19th start against the Minutewomen. Saveriano holds a 7-10 record along with a 3.19 ERA and 90 strikeouts in 98.2 innings.

Plourde, who currently holds a UMass record with 17.2 consecutive hitless innings, will likely start against the Huskies, which boasts four players with over a .300 average. Senior Julianne Towers is leading the team in all major hitting categories, including average (.386), runs batted in (26), home runs (seven) and runs (23).

Following the UConn game, the Minutewomen will get on a bus to Boston to face the Terriers (18-10). It is unclear which pitcher BU will choose to make the start, but they have three very solid options in sophomore Erin Schuppert, Holli Floetker and Whitney Tuthill. All three pitchers sport an ERA under 2.00 and at least a .500 winning percentage.

Highlighting the Terriers offense is senior outfielder April Setterlund, who leads her team in the triple crown categories (.382 average, six home runs, 26 RBIs). As a team, BU has a .273 average.

Following this week's games, the Minutewomen will return home for a doubleheader against conference rival St. Bonaventure (6-11, 3-5 A 10) April 10 at the UMass Softball Complex.

Temple's Marris throws back-to-back complete games vs. GW

By Amy Chaunt
Collegian Correspondent

A-10 Softball

Senior right-hander Kristen Marris threw two complete games in a doubleheader sweep of George Washington University on Sunday for the Temple University softball team.

GW started on the right track, scoring a run off of Marris in the bottom of the first inning. However, the lead was short-lived when Meaghan Marley and Devynne Nelons scored two runs in the top of the second.

The bases were loaded when Marris stepped up to bat, hitting a two-run single up the middle, securing a 2-1 lead for the Owls.

Both Marris and GW pitcher Kara Clauss held the offenses scoreless the rest of the way as Temple held on for the victory.

In the second game, Marris was a key player once again, starting off the top of the first with a triple. Sarah Prezioso brought Marris home on a sacrifice fly to center field, giving the Owls an early 1-0 lead.

Sophomore Julie Orlandi hit her first career home run in the bottom of the third, knotting the score for the Colonials.

Temple broke the tie in the top of the sixth when Ali Robinson hit a solo home run, increasing her total to a team-high six for the season.

The Owls added insurance when Marris scored the final run of the contest to give Temple the 3-1 win.

The Owls are now 16-18 overall and 7-3 in the Atlantic 10, while the Colonials are 11-13-1 overall and 3-5 in conference play.

Billikens shut out Rams

Saint Louis swept Rhode Island 7-0 in the home-opener this past weekend at the URI Softball Complex.

The assault started early for the Billikens as they drove in a run in the top of the first and three in the second.

Rhode Island didn't have many opportunities to score, with only five hits the entire game, two coming in the last inning.

In the last inning, the Billikens scored three runs on three hits to ensure a 7-0 victory.

In the second game, the Billikens continued the barrage, scoring seven runs in the fourth inning. Of the 12 batters who got up to the plate, five recorded at least one run batted in. The Billikens swept the two-game doubleheader, outscoring Rhode Island 14-0 over the weekend.

Recognized for excellence

Junior Saint Joseph's player Bernadette Moran was awarded the title of Atlantic 10 Conference Softball Player of the Week. Massachusetts' Sara Plourde, meanwhile, was named the Pitcher of the Week, and Lindsey Webster was named Rookie of the Week.

Moran played in four games this week, recording a hit in each game to lead the Hawks to a 3-1 mark in the A-10.

Plourde was impossible to hit, as she struck out a school record 39 batters with 17.2 consecutive hitless innings in four games for the Minutewomen. She earned a 3-0 record with one save over that span.

Webster, a freshman right fielder, helped UMass win all four games this past week with a three-run homer over Dartmouth and two successful recorded sacrifice bunts. She also hit .500 with a 1.000 slugging percentage and knocked in five runs.

Amy Chaunt can we reached at achaunt@student.umass.edu.

COLLEGIAN FILE PHOTO/TEMPLE MEDIA RELATIONS

Right-hander Kristen Marris tossed two complete games to help Temple sweep a double header against George Washington. The senior also hit a two-run single to help her own cause in a 2-1 victory.

MICHELE MCDONALD/COLLEGIAN

Ace Sara Plourde makes a pitch in a game earlier this season. The junior has thrown consecutive no-hitters, increasing her record to 11-10 this year with a 1.51 earned run average and 244 strikeouts.

Minutewomen look to keep hot streak going

UM faces UConn, BU on consecutive nights

By Steve Levine
Collegian Staff

After scuffling for over a month to start the season, the University of Massachusetts softball team has looked a lot like a Atlantic 10 Championship team again over the past two weeks. The Minutewomen will go for their fifth and sixth wins against non-conference opponents this week, when they host Connecticut on Tuesday and travel to face Boston University on Wednesday.

UMass (13-14, 5-3 A-10) lost 10 of 12 to start the season, often struggling to find consistent offense. However, UMass has averaged nearly four runs a game its last seven contests (6-1). UMass coach Elaine Sortino has seen her young players mature at the plate, citing a better approach and more patience.

Still, the Minutewomen are characterized by their starting pitching. Junior ace Sara Plourde has thrown two consecutive no-hitters while her understudies, freshmen Caroline Raymond and Lindsey Webster, have pitched well at the backend of the rotation. Plourde carries an 11-10 record with a 1.51 earned run average to go along with 244 strikeouts in 143.1 innings. Raymond has seen the bulk of No. 2 duties, going 2-1 with a 2.88 ERA through 24.1 innings. Collectively as of March 31, the UMass staff is second in the conference with a 2.22 ERA behind Fordham's 2.15. Defensively, the Minutewomen rank fourth in the conference with a .958 fielding percentage.

As the offense, pitching and defense are all coming together, it's clear that UMass' confidence is rising as it heads into the heart of the season. The Minutewomen will look to fine-tune their offense this week, starting with Tuesday's contest against the University of Connecticut Huskies (13-15), who are coming off a 13-7 loss against Rutgers on April 3. UConn's ace, sopho-

See SOFTBALL on page 6

Offense coming of age after abysmal start to begin season

By Pete Vasquez
Collegian Staff

Earlier in the season, Massachusetts softball coach Elaine Sortino was looking for anybody and everybody to contribute offensively. Now, however, each player in the lineup is contributing in her own way as the Minutewomen have recently grown into a versatile group of batters.

Not too long ago, UMass was searching for answers. In the midst of an 11-game stretch that produced just one win, the Minutewomen scored over two runs just twice.

"We haven't had the easiest of times," said Sortino in a March 30 interview. "We've been struggling. We have to hit one through nine. We've been out of sorts. Quite frankly, I really felt like it's not technically our swings as much as the choices."

Sortino recalled a weekend at Charlotte from March 18-20 when she stood from the third base coaches' box as her team let good pitches go by and swung at multiple bad pitches.

The Minutewomen scored three total runs in the weekend's two games.

However, since UMass started its first home campaign of the season, the offense has been there just enough to help out the pitching staff.

A four-game win streak over Dartmouth and Saint Louis saw the Minutewomen score 15 total runs.

While four of those runs came via the home run, the majority has been created as a result of small ball principles, smart base running, and timely, collective hitting.

The lone run scored in UMass' Game 1 win over Dartmouth on Wednesday came after Tiffany Meeks earned a full-count walk. The next batter, freshman Lindsey Webster, promptly sacrificed her over to second with a

UMass announces '11 schedule, will play BC

By Dan Gigliotti
Collegian Staff

The Massachusetts football team held its annual Pro Day at McGuirk Stadium on March 25, announcing its 2011 schedule.

The schedule is highlighted by the second-annual Colonial Clash at Gillette Stadium against New Hampshire on Oct. 22 and a BCS battle against Boston College on Sept. 24.

UMass will open its season on Thursday, Sept. 1 at Holy Cross on the road. Following a bye week, the Minutemen open their home schedule with a conference game against Rhode Island on Sept. 17.

Central Connecticut rounds out the non-conference schedule for UMass as it will host the Blue Devils on Oct. 8 for Band Day. Nov. 5 marks the annual Homecoming game, this year played against Villanova. The Wildcats, who lost in the semifinal round of the Football Championship Subdivision postseason tournament in 2010, will meet the Minutemen after a year off.

Old Dominion, also omitted from last season's schedule, welcomes UMass on Oct. 1. The Minutemen also travel to Delaware (Oct. 15), Richmond (Oct. 29) and Maine (Nov. 12) for Colonial Athletic Association road contests.

The final regular season game will be played on Nov. 19 against James Madison.

Kentucky overthrows No. 5 Florida 9-2 on Sunday

By Trevor Bray
Collegian Correspondent

The University of Kentucky softball team set the tone immediately against No. 5 University of Florida on Sunday afternoon, drilling in eight runs in the first inning en route to a 9-2 victory.

Meagan Aull started the onslaught for the No. 23-ranked Wildcats by hiting a leadoff home run in the top of the first inning. Lauren Combess executed a suicide-squeeze with the bases loaded, bringing Megan Yocke home. Samantha DeMartino then grounded back to Gators pitcher Hannah Rogers. Florida, however attempted to go for a double play, but an error at first resulted in another run for the Wildcats.

With the score at 3-0, Annie Rowlands drove in Combess on a grounder and Emily Jolly hammered a two-run double into centerfield. Aull made a second appearance at the plate in the inning, delivering another home run to bring a snowman on the scoreboard for Kentucky.

A double from Jolly led to a Florida error on a sacrifice bunt from Yocke to increase the Wildcats' lead to 9-0 in the fourth.

Florida got on the board in the fifth on senior Ava Pacuiba's line drive to left field. Pacuibi drove in two runs to make the deficit 9-2 for the Gators. Florida, however, was unable to edge any closer the rest of the game.

While Kentucky will take a breather from the SEC, Florida will face Arkansas this upcoming weekend in a conference matchup.

Tide crashes on SC

In a pitcher's battle, senior Kelsi Dunne came out on top by throwing her eighth career no-hitter, leading No. 1 University of Alabama to 1-0 victory over the University of South Carolina.

Dunne (18-1) walked two and stuck out 10 while in her second no-hitter of the season. On Feb. 12, Dunne struck out 11 and walked three against Jacksonville State, which has accounted for three of the senior's no-hitters.

Gamecock pitchers Audrey Broyles and Julie Sarratt put up a fight by only allowing five hits against the Crimson. South Carolina's defense forced nine Alabama players to remain on base throughout the game. Broyles let up one run in the first after Whitney Larsen's RBI single brought Kayla Braud home. Braud originally gained a leadoff walk, stealing second and advancing to third after Jennifer Fenton's sacrifice bunt.

Alabama will next face Louisiana State at Baton Rouge for a three-game series, commencing on Friday.

Top 25 Softball

Bulldogs sweep Skyhawks

Jack Turner Stadium was jam-packed this past Sunday, with over 1,000 fans in attendance to watch the University of Georgia sweep the University of Tennessee Martin with a 6-0 win.

The Skyhawks were no match for the No. 2-ranked Bulldogs. Center fielder Megan Latimer was the only Tennessee-Martin player to get a hit off of Georgia pitcher Morgan Montemayor. The freshman (16-2) pitched six innings, walking two and striking out seven. Senior Katie Murphy came in for relief in the seventh and held the Skyhawks scoreless.

In the first, Georgia seniors Megan Wiggins and Brianna Hesson reached bases due to a walk and a fielder's choice, respectively. Ashley Razey then hit a two-run single to make the score 2-0. Razey was a crucial component to the Bulldogs on Sunday, finishing 3-for-3 with four RBIs. The junior catcher drove a double to center in the third, scoring Hesson. By the fifth inning, Georgia led 5-0 and Razey snagged her forth RBI and second double of the game with a line drive to center.

Georgia's victory marked its 37th straight win at home. The Bulldogs will look to continue that streak when they face the No. 10 Tennessee in a doubleheader at home on Wednesday.

Trevor Bray can be reached at tbray@student.umass.edu.

UMass community hosts large scale teach-in

By Michelle Williams
Collegian Staff

Hundreds of members of the University of Massachusetts community packed the Student Union Ballroom Tuesday afternoon to demonstrate support for public sector workers, unions and alternative solutions to funding higher education without increasing financial burdens upon students.

The UMass event showed its solidarity with a national event and call-to-action titled, "Fightback USA: A National Teach-in on Austerity, Debt & Corporate Greed."

"The teach-in seeks to help young people across America understand how the recent actions undertaken by the brave citizens of Wisconsin are the key to turning the tide away from increasing inequality and misery, and toward the development of a sustainable and healthy American society in the 21st century," said Christine Kelly, an organizer of the national event. "The teach-in seeks to infuse the fight back in the states with the energy and commitment of American youth whose future hangs in the balance."

While the national event was held in New York City, organizers called for campuses across the country to hold local events. According to the event's website, over 266 campuses were set to participate.

UMass community members organized a local teach-in to participate, and the event was sponsored by over a dozen academic departments at UMass, as well as local unions and student groups.

Interested students and supporters filled the ballroom's seats, leaving many attendees with seats on the floor and standing-room only positions as they listened to professors, students and community organizers discuss issues such as taxes and economic hierarchies, single-payer health care, student fees and media coverage of higher education.

In a short speech titled, "WTF: Where's the Funding?" Melissa Urban, an organizer on the state-level for the Center for Education Policy and Advocacy, discussed the issue of rising student debt.

"America now has more student loan debt than credit card debt. In June 2010, America had $829.785 billion in student loan debt ... At the same time, the Federal Reserve cites credit card debt at $826.5 billion," she said. "Since this time, student loan debt has bee growing. In a bad job economy where students are having difficulty finding employment when they graduate, that's like taking out a mortgage only without getting a house."

Dan Clawson, a professor in the sociology department of UMass and a former president of the Massachusetts Society of Professors union, discussed the reasons why student debt has reached such alarming levels.

Clawson compared the cost of higher education 30 years ago to the cost of education at the University today.

"If the cost of a public university had gone up at the same rate as general inflation, it would cost you $2,400 to attend the University," he said. "In fact, the tuition for one year for an in-state student is $11,732. That is more than four times as much."

The rising cost of tuition means it is inevitable for more students to take on debt when going to college, according to Clawson. "In the 1970s and 1980s a student could work 10 hours-a-week at a minimum wage job and earn enough to pay for their tuition and fees. Today, you'd have to work more than 29 hours a week, and work more if you still wanted to eat, have a place to sleep or be able to afford clothes," said Clawson.

The sociology professor said that the cost of an education has risen at such an alarming rate due to a decrease in federal and state funding, in the form of direct funding to universities and in the form of grants to students. Due to the shift of who pays for education, Clawson said education is no longer entirely public. "Effectively, the university is being privatized, it is no longer a fully public university," Clawson said.

He ended his speech by saying, "we need free public education. We can't afford it now, so let's tax the rich."

Immediately following Clawson's speech, members of the audience began the chant "Tax the rich! Tax the rich!"

Near the end of the local event, Student Trustee Mike Fox stepped onto the stage to discuss fee increases to be voted on soon by the UMass Board of Trustees. Initially, Fox told the crowd that he still wasn't sure if he would vote in favor or against fee increases for university students.

The crowd responded in anger and several members of the audience shouted, "Vote no!" Hearing the crowd's response Fox said, "I was elected to represent the people, and you are the people who are passionate and and clearly want no, so I will vote no."

Montola lectures on LARPing

By Tim Jones
Collegian Staff

Imagine the types of games children play, mostly with their imagination, such as pretending the floor is lava or that a stick off the ground transforms into a broadsword and they're now a knight in shining armor. Now pretend adults are participating in playing "pretend." It's not an identity crisis – it's Live Action Role Playing, or LARP, for short, and it's a rapidly expanding phenomenon, especially in Nordic culture.

Guest lecturer Marcus Montola, who according to a release from the Scandanavian Impulses lecture series, is the "leading scholar of role-playing and pervasive games in the emergent field of game studies" and a researcher at the University of Tampere, Finland, discussed the roots, uprising and impact of Nordic LARP on Monday, April 4, in his lectured titled, "Nordic LARP, Grassroot Expression, Playful Art."

As part of the final installment of the Scandinavian Impulses series at the University of Massachusetts, Montola delved into the culture of LARPing and the reasons behind the activity.

LARPing is a type of immersive game, with different rules depending on the style of game played. While some games may focus on fighting in a fantasy story, others may focus on a more realistic setting in which players actively engage in acting out the role of being another person. Almost all LARP games feature a storyline of some sort, and the games nearly always rely on people interacting with others to fully develop the plotlines.

Opening up with a scene in Oklahoma during the Cuban Missile Crisis, Montola told the audience to picture themselves there, enjoying a normal day. That is, until the alarm go off, where they must evacuate to the nearest bomb shelter and remain inside for 12 hours. Only, the cardboard boxes that are supposed to be filled with tin cans are filled with speakers to enhance audio of the bombing. Of course, the bombing isn't actually happening; it's all a scenario that people willingly chose to be in.

Montola said this style of extreme immersion is typical of Nordic LARPs.

"Someone thought it would be cool, exciting or terrifying to experience this," said Montola.

He explained the primary differences with LARP in America compared to Nordic ones, stating that Nordic LARPs are generally more immersive and tend to deviate from the style of over-the-top fighting campaigns that

See LARP on page 2

JACK CROW/THE KS

Live Action Role Playing has become a cult activity and fascination in recent years, with individuals activitely engaging in following storylines of varying degrees of intensity.

New Amherst lib. trustee appointed

By William Perkins
Collegian Staff

Members of Amherst's Select Board and the town's Jones Library Board of Trustees Monday night appointed a longtime town resident and college professor to a vacated library trustee post.

Austin Sarat, the William Nelson Cromwell Professor of Jurisprudence and Political Science at Amherst College, received eight-of-nine votes cast by Select Board and trustee members at a joint meeting between the two boards. Sarat was one-of-three residents who vied for the position – the other two were Carl Erikson, a library volunteer with a background in non-profit financial management, and Richard Fein, the director of placement at the Isenberg School of Management at the University of Massachusetts.

The position became open after Kathleen Wang resigned from the library's board of trustees in January. Wang left the post after the ballot deadline for the annual town election, so the Select Board and trustees, by law, were charged with electing someone to the post.

Each of the three candidates at the onset of Monday night's meeting gave the members of the Select Board and board of trustees short pitches as to why they felt they would be best suited for the position.

Fein, who noted that he is retiring from UMass this June, said he felt that serving on the board of trustees would be a way that he could give back to the community. He also said that he feels the Jones Library is a gem in Amherst.

"The Jones Library is one of the treasures of our community," Fein said, adding that he feels that the edifice is a point of pride in the community.

Erikson, who voluntarily reshelves books at the library, said he likes tackling financial issues, and added that he feels the library instills knowledge in members of the community.

"The library's important to me because it creates a sense of knowledge and understanding," said Erikson.

And Sarat, who has lived in Amherst since 1974, said that he wanted to serve on the board of trustees because of his love for books, library and the public. He noted that the library should also be thought of as a community center.

After each of the candidates gave their opening statements, they were questioned by Select

Teach-in draws in concerned crowds

TEACH-IN from page 1

The teach-in at UMass was one of four teach-ins chosen by the national group to be featured on the event website, www.fightbackteachin.org.

Ben Taylor, a student at UMass and the local event's the master of ceremonies, said, in an interview prior to the event, he feels that there needs to be a national fight against student debt, and he feels this event could be the start of one.

"It's the first time in my adult life that I've heard of something like a national teach-in on budget cuts, on austerity, on the attack on the working class," he said. "It feels like a historic moment, something that absolutely needed to happen."

Taylor said he felt strongly about the issue of student debt as graduation approaches and he will have to begin to payback his loans.

"I'm expecting to graduate with $40-50 thousand worth of student loan debt. It's a horror show, student debt is the new national debt crisis."

An average graduate of UMass faces $21,614 of student loan debt upon graduation, according to a 2008 study by the U.S. Department of Education. The average amount of debt for a college graduate is $20,200 nationally, according to the Department of Education.

On Wednesday, April 6, Public Higher Education Network of Massachusetts (PHENOM), a group that advocates at a state-wide level for public higher education, is sponsoring an event to call federal and state legislators to ask them to better fund public higher education institutions. Callers will be asking state legislators to support House Bill 2553 "An Act to Invest in Our Communities," that, according to a press release from PHENOM, "would progressively raise $1.2 billion by restoring the income tax rate to 5.95 percent, greatly increasing personal exemptions, and increasing the capital gains tax rate to 8.95 percent."

The call-in will be held in the Cape Cod Lounge from 10 a.m. to 2 p.m.

Michelle Williams can be reached at mnwillia@student.umass.edu.

UM lecture explores distinctive LARPing styles

LARP from page 1

many LARPs in America are associated with.

He said Angalo LARPs are generally more focused on a fantasy campaign with boffer combat and having fun. A boffer is a fake weapon usually made from tape, a durable type of foam and other supplies.

This was compared to Nordic LARPs, where he said that the style of game that was played was founded further in psychological roots, reinventing one self and as a form of expression. Nordic LARPs, he said, can be a very community-driven experience, though not always an ideal one.

He argued that people are willing to put themselves through mundane and straining games for various reasons, including that fictional experiences produce real emotions, and that having fun isn't the only worthwhile experience.

He also said that there was not always a defined goal, whereas many Angalo games include objectives, Nordic games are lacking in objective and rely on the players to establish what their personal goals are as they play.

He did admit at the end of the lecture in response to a question that he was not fully educated in Angalo LARPs, however.

"I'm sure I didn't do justice to American LARPs in this presentation, but it's just much harder to find documentation of it."

He went into the 360 degree ideal, which he considers ultimate physical immersion, or playing a role extensively to the point of actually being that person, in a "what you see is what you get" element.

In addition, he mentioned a type of persuasive LARP, where some players play in the world, regardless of where they actually are, and that this can have ethical and legal issues.

In addition, he noted how LARPing is definitely a cult culture.

"LARP is not a spectator sport. It looks really silly when you're looking from outside," he said.

The impact of LARPing, he continued, has led to several franchises and endorsements, some in an attempt to make the game more mainstream.

According to Montola, companies like Nokia have sponsored LARPs, and several Nordic LARPs have a business-like style.

Several Nordic LARPs also have a political background, and may tend to include themes such as "leftist, green, liberal, feminist and anti-war," he said.

Montola, who has a masters degree in social science, is the author of "Beyond Role and Play," "Playground Worlds," "Nordic Larp," and he co-authored the book "Pervasive Games: Theory and Design."

The lecture was part of the University's Scandinavian Impulses series, and was held in the Isenberg School of Management.

Tim Jones can be reached at timothyj@student.umass.edu.

DANIELLE_BLUE/FLICKR

While North American LARPing is known for its somewhat over-the-top style, Nordic LARPing is known to be more immersive for players.

Town manager reports on EMS calls made after Dayglow events

SELECT BOARD from page 1

Board and trustee members on a variety of matters that pertain to the library. Some questions involved how the candidates would go about increasing donations to the library, how they feel representatives from the library should approach the public and what they feel about the physical standing of the library.

Additionally, the candidates also gave closing statements before the members of the two boards took a vote on who to appoint.

All five Select Board members and three out of the four current board of trustees members voted to appoint Sarat to the post, as newly-elected trustee Michael Wolff voted to appoint Erikson to the position.

Sarat will serve as a library trustee until the town elections of 2012.

Elsewhere Monday night, Town Manager John Musante reported to Select Board members that roughly 64 emergency medical services were placed from Friday night to Sunday morning – the majority of which were related to drug and alcohol issues, pertaining to the Dayglow events this past weekend at the Mullins Center. The town, Musante said, relied on mutual aid services from Sunderland, Belchertown and Northampton to respond to all of its calls.

Additionally, Musante said that he spoke to UMass officials about the matter, and noted that they said they will look into the issue further.

In other business, Select Board members Monday night also unanimously approved a resolution that will call on state representatives to support legislation that would institute a progressive tax aimed at increasing funding for public entities.

The resolution, known as "An Act to Invest in Our Communities," calls for increasing the state income tax from 5.3 percent to 5.95 percent.

However, the bill also calls for increasing tax exemptions for those defined as middle-class individuals, which the authors of the legislation perceive will offset the tax increase.

Additionally, the resolution aims to increase the tax rate for those perceived to be wealthy investors.

The Select Board approved of the measure after Max Page, the vice president of the Public Higher Education Network of Massachusetts, urged them to support it.

William Perkins can be reached at wperkins@student.umass.edu.

Obama's gross foreign policy

Dmitriy Shapiro

Distracted as we are by the unprecedented domino-like toppling of a multitude of the Middle East's oppressive regimes and dictatorships and President Barack Obama's waffling on issues arising from our George W. Bush era interventions (should we try terrorists at home or not?), we've left our small Communist neighbor, the Republic of Cuba, under much less scrutiny than usual.

Raul and Fidel Castro have rightfully seen this as a window of opportunity to deal a blow to the United States – much like their "Axis of Evil" mentors Iran under Mahmoud Ahmadinejad and North Korea under Kim Jong Il – by capturing an American civilian contractor and throwing him in jail without any guarantee of imprisonment length or trial date.

Maybe this is the first time you're hearing of this – don't be ashamed if you are, this story has not grabbed the public's attention quite like the American nationals that were captured in other, more loudmouthed nations. Maybe that this captive, 61-year-old contractor Alan Gross, is neither young nor related to a celebrity. Gross, captured in December 2009 – apparently a good year for capturing Americans – has been wasting away in a high-security Cuban jail ever since, with little media or international scrutiny. Only recently, miniscule pressure from the U.S. forced the Cuban government to finally try and sentence Gross – 15 months after his detention.

As Krauthammer and others point out, the current administration is displaying a very flawed moral logic.

The verdict delivered by the Cuban court on March 12 sentenced Gross to 15 years in jail for attempting to implement a "'subversive' program paid for by the United States that aimed to bring down Cuba's communist government."

Allegedly, Gross, a contractor for a U.S. Agency for International Development backed networking firm Development Alternatives, Inc, based in Bethesda, Md., whose mission statement is "to make a lasting difference in the world by helping developing nations become more prosperous, fairer and more just, cleaner, safer, healthier, more stable, more efficient, and better governed."

It is not hard to see why working for this firm could arouse suspicion in anti-democratic nations throughout the world, but what actual threat could the Cuban government have received from Gross' work to warrant such a prolonged internment and a 15-year sentence – pretty much a life sentence for a man of his age and health. Gross, a Jewish-American, was working to enable a small Cuban Jewish community access to the internet in order to communicate with other communities within Cuba as well as around the world. His work included the distribution of laptops, satellite phones and other hard/software to this tiny, peaceful and aging community – hardly a subversive revolutionary force.

Having recently awakened to the call of humanitarianism, the Obama administration has recently granted Gross' case a small portion of their attention and sent bumbling foreign affairs flunkey, Hamas-apologist and diplomatic third-stringer ex-President Jimmy Carter to meet with Raul and Fidel Castro to secure Gross's release. After publicly embarrassing and subverting U.S. foreign relations on the Cuban media circuit – appearing on television and radio shows to blast the U.S.'s Cuban embargo and calling for the U.S. to release five Cuban spies that are being held for delivering information to our Middle Eastern enemies – Carter hobnobbed with the Castros like the old friend he is. According to an AFP report, Cuban dissident blogger Yoani Sanchez wrote, "Because he has the experience that managed the release (in 2010) of an American in North Korea, maybe he can do the same here, but the Cuban government is harder."

Really? "Harder" than North Korea? Jimmy Carter did successfully free English teacher Aijalon Gomes, a Boston native, after Gomes had crossed over the North Korean border. Yet for what the U.S. deemed a priority – the release of journalists Laura Ling and Euna Lee that same year, the administration sent the significantly more prestigious former President Bill Clinton.

Not surprisingly, Carter left Cuba on March 30 without securing Gross's release, stating that he wasn't expecting that outcome.

Cuban President Raul Castro and his venerated brother Fidel have made a mockery of American foreign policy. They, along with the world's other dictators, are seeing the Obama administration's foreign policy as a joke – as was predicted by Republicans before and after the president's election. The liberties taken by the nations that President Bush called the "Axis of Evil," had not disappeared as expected by Obama's supporters, but only increased, a trend demonstrated by the rise in the kidnappings of American nationals by non-terrorist states for diplomatic leverage. Meanwhile, our actions in Libya, highlight that finally, humanitarian considerations are now factoring in this administration's logic, although quite arguably, the wrong kind of logic.

But Gross's crime of providing internet access to a small and marginalized segment of Cuban society – him claiming that he had not realized the hardware he was given was paid for by USAID – invokes another, larger problem.

Many have pointed to how powerful the effects of free communication via the internet empowers the population of a repressed state by observing revolts in Iran, Tunisia, Egypt, Libya and others. The story of the previous decade is of government infringement of such freedoms.

No doubt that the restrictions put on media, search engines and general internet use empower repressive regimes to control information to maintain their power. This is not surprising – leaders have always tried to restrict the freedom of information. What's more appalling is that the post-President Bush U.S. has not challenged any of these present incursions when such power is being used by nations to avoid the fate of their fallen comrades. In a recent opinion column, Washington Post columnist and Fox News contributor Charles Krauthammer slammed Secretary of State Hillary Clinton for a statement describing Syrian President Bashar al-Assad, sounding more like Hugo Chavez than an American dignitary. "Many of the members of Congress of both parties who have gone to Syria in recent months have said they believe he's a reformer."

If suppression of free media, restrictions on internet use and violent crackdowns on protesters are Clinton's idea of reform, then either the Democrats have allied with the Arab Socialist Ba'ath party or the Obama administration thinks Bashar's actions could teach them to handle their Tea Party opponents. As Krauthammer and others point out, the current administration is displaying a very flawed moral logic.

While President Obama basks in the limelight of the false coalition he built against Qaddafi on shaky moral and constitutional grounds, Gross remains imprisoned and in poor health, wondering whether he will ever see his family again, especially his 88-year-old mother and 26-year-old daughter who are both suffering from cancer. The lack of outrage and sympathy being shown by the administration is vile and contemptible. Alan Gross, his family and supporters can only hope that the media will awake to better expose his case so that the American public can once again strong-arm Obama into action as it did in the previous election.

The importance of unions

Jaron Lewin-Berlin

American workers' rights are being restricted in several states and this trend is in danger of spreading across the country. In Wisconsin, a law banning collective bargaining for all public employee unions except firefighters and police has passed in the state legislature. Although a Wisconsin judge has deemed the new law as having been passed without due notice, it is only one of several bills that are in development in states across America.

In Ohio, a new bill denies unions the right to bargain over health care, sick time or pension benefits. Although this law does not restrict unions from all forms of bargaining, like Wisconsin's, it affects about twice as many workers, including police and firemen. Bills restricting the rights of workers unions to bargain are also in development in other states. In Indiana, a right-to-work bill, which prohibits anyone from being forced to join a union or pay union dues as a condition of employment is under consideration. Union members are protesting this bill, saying it will kill their unions' abilities to bargain and deplete their benefits. In Tennessee, a bill has been proposed that would eliminate teachers unions' collective bargaining rights. In Massachusetts, a bill that would eliminate bargaining rights for all issues except salary has also been proposed.

If you are opposed to the idea of organized unions, take a second to think about what unions have done for the workers in our country.

In the last two months, tens of thousands have gathered in Wisconsin as well as hundreds of people in other states to protest Wisconsin's anti-union bill. As I write this, people across the state of Ohio are gathering signatures in an attempt to obtain a referendum against the new law. It is obvious that this matter is incredibly important to any Americans who believe in the importance of workers' rights. After all, it is due to the work of unions that American workers have the rights they are entitled to today.

Unions affect society in general. You may believe the passing of these new bills won't affect you unless you are a fireman or teacher, but the way that these unions are doing their jobs affects all sorts of things we take for granted. If you are opposed to the idea of organized unions, take a second to think about what unions have done for the workers in our country.

Imagine America without any unions. It would be an America without a 40-hour-work-week, an America without a minimum wage, an America without appropriate safety standards, women worker's rights or weekends off.

It was due to organized strikes by labor unions in America that the eight-hour-work-day was established. The National Labor Union requested Congress for an eight-hour-work-day in 1866.

Although this request was initially denied, wit was due to further work by the union that awareness of the issue was brought to the public.

This lead to organized strikes, often in turn leading to shortened workdays and eventually leading to enough political pressure to influence Congress to pass the National Industry Recovery Act, which established minimum wages, maximum hours and the right for unions to have collective bargaining.

Unions have been intrinsically influential in supporting America's working class since they were introduced. It is the unions that protect the rights of the workers involved. Big businesses aren't concerned with the rights of individual workers, they are concerned about their profits. If unions lose the ability to bargain for the rights of workers, they might as well lose their existence entirely. These new laws will have the effect of depleting many of the rights the working class people of America have struggled to obtain.

In a sense, it is understandable that government officials in these states believe that something needs to be done. There are budget deficits that do need to be dealt with, and in some cases the unions may be asking for more money from the state than is necessary. However, the way that these state governments are going about dealing with these situations is atrocious. Instead of renegotiating with the unions about how much money they need, officials are opting to pass laws to ban unions from negotiating at all.

Instead of attempting to shut down workers unions to decrease budget deficits, the state governments should be working with the unions to achieve an agreement which benefits the budget without damaging worker's rights. Democracy is the backbone of our society, and destroying the rights of workers unions to bargain democratically with the government is damaging to democracy in general. So if you do believe that more money is being paid to workers unions than is necessary, support a decrease in appropriated funds; don't support a bill that will annihilate American workers freedom to be allowed to negotiate for their rights.

'Color' me flustered

Amanda Joinson

For years now, social networking websites have been criticized for their lack of privacy and with backlash, comes acceptance.

Facebook tells people too much information, which you volunteer, but that is a whole other topic.

Twitter is constantly updating followers about what you are doing and where you are doing it. Both networks became a little creepier when they enabled GPS coordinates from which you are posting and tweeting. But even with that said, people have embraced the GPS location sharing. A site such as Foursquare is solely based on the location and incredibly successful.

So, there is obviously a love-hate relationship with social networking. There is obviously a twisted concept of privacy in our culture. Both issues are based on the responsibility of the parties involved. Some people don't care what they share; others care too much.

Privacy is practically thrown out the window with this application, and again, like I said, some people could not care less about what other people know about them. This application would be for people in this category but even then, things can get creepy and weird.

As most college students do, living in the dorms or in apartments would quite possibly allow you to spy on the people down the hall or next door without ever speaking to them. I totally understand people who live on Facebook and constantly creep around from profile to profile, but at least there is some sort of regulation and protection.

Color is fundamentally encouraging voyeurism. There are no rules. You don't know who is looking at you. Isn't this how murder mysteries start?

This application would be for people in this category but even then, things can get creepy and weird.

With that said, the new mobile photo application, Color, for those with nifty iPhone and Android phones, is pushing the limits of social networking and privacy a little further.

The idea of Color is based on people in public places with Smartphones. The GPS, along with a bunch of cool things you didn't know were possible, such as using the camera to determine lighting and the microphone to pick up noise, the device "connects" you with people around you. Connection is used in the loosest form possible here; you are not actually following them, friending them or any of that real relationship kind of stuff. The connection is purely digital. When you step out of the 100-foot radius of them, your connection is over. While within the radius though, your connection is possibly one of the most personal, as Color shares the photographs stored on the phone.

Public is the default for Color.

Think about the kid sitting next to you looking at your photos on their phone right now. It is scary to think what you could see.

Think about showing the pictures on your personal password-protected phone with your parents – it could end very badly.

On top of that, because you are not actually friends with these people, there is no way to regulate who sees what. Friend lists cannot be created to make sure some pictures are available to everyone and some only to a limited group, like the photo privacy settings currently in use on Facebook.

Maybe I'm exaggerating, but downloading the application would be essentially like constantly looking through the peephole in the wall at your neighbor. But then think how twisted things just got when your neighbor actively notices the peephole is there and does nothing about it.

First off, why would anyone be comfortable with that? Secondly, this could create a whole new culture of everything Sut Jhally has ever taught in his online classes about the so-called "gaze." (If you haven't taken Sut Jhally's class, look into it.)

Back to the peepshow analogy again: People now know others are watching them. Everyone engaged in this application would be putting on a show.

Color would be adding to this show culture that somewhat exists on Facebook, where people that want all the best pictures to convince others that they do cool awesome things and look pretty all the time.

Has anyone thought about the consequences of this application? Your identity can be stolen by putting too much information up on your Facebook page. You can die from sharing your location and personal photos with random strangers around you. This is not hard, people.

Amanda Joinson is a Collegian columnist. She can be reached at ajoinson@student.umass.edu.

"A screaming comes across the sky." - Gravity's Rainbow

ARTS@DAILYCOLLEGIAN.COM

3DS: Worth your money or not?

By Joe Kling
Collegian Correspondent

The Nintendo 3DS is the newest member of Nintendo's seemingly endless line of portables, and their first truly new hardware since 2004. While the four models of the Nintendo DS (DS, DS Lite, DSi and DSi XL) were simply improvements on their predecessors, the 3DS has taken the first step into the next generation of portables.

The graphics have improved since the DS, while the top screen is larger and a circle pad has been added. However, the most notable addition to the system is its namesake and main selling point: glasses-free-3D. With that in mind, the decision to upgrade comes down to whether the 3DS is worth the $250 upgrade, or if it's going to go the way of Nintendo's last console that promised 3D, the ill-fated Virtual Boy?

First, let's address the obvious questions about the 3D itself. Does it work? Yes. Is it just a gimmick? Of course it is. Does it hurt your eyes? Not really, but it can be distracting.

The 3D effect actually works by sending out two pictures through the system, one to each eye, which can be annoying when the picture becomes unfocused from the slightest horizontal tilt. The effect can be adjusted with a slider on the side of the top screen casing (the effect is only present on the top screen) and can be turned all the way down to produce a 'normal' 2D resolution. I found the 3D to be at a comfortable level right around the middle of the slider, which still gives a nice 3D effect but doesn't exactly jump out at you, which can certainly be a distraction when playing a fast paced game like "Street Fighter IV: 3D." That being said, the 3D seems to actually enhance graphics. "Street Fighter" in particular looks fuzzy with the 3D turned off, but almost looks like a diorama when turned on. It is by no means a necessity to buy any games, but they sure do look good. Beauty comes at a cost though, as the 3DS only has a battery life of about 3 hours with the 3D and brightness at the highest settings, and about 5 hours with everything on the lowest settings.

It seems Nintendo valued appearance over performance, as there are already two battery improvements you can buy, but both bulk the system enough that it may be awkward to carry in your pocket. The Nyko Power Pak+ is a replacement battery that will just about double the battery life at the cost of $20, lasting about five-and-a-half hours with the settings at max, and nine hours at minimum settings. The Newbie PowerPlay somewhat doubles as a case for the system (no battery installation required), and for $40 will give you nine-to-15 hours on max settings, and 15-24 hours on minimum settings. It should be noted, however, that neither are compatible with the pre-packaged charging dock that allows convenient wire-free charging for the 3DS , though you can buy one for the Power Pak + for $10.

The best way to "wow" your friends with 3D doesn't even require anything other than what's included in the box. The system comes bundled with six "augmented reality" cards. You can place one of these cards down on the table, and watch as a box pops out of the card, and unfolds into a dragon on your countertop. As long as you keep the card in your 3DS's camera view you can walk around the dragon, and find his weak points to defeat him before he slashes at your screen. If you prefer, you can use the other cards to take pictures of Mario, Samus, Link, Kirby or Pikmin, which you can move around to be sitting on your laptop, running up your walls or shooting your TV.

The system also comes preloaded with a game called "Face Raiders," which has you actually moving the 3DS around your body to shoot little robots with your face on them thanks to an internal gyroscope. Also included is a cheap 3D music visualizer and mixer titled, "3D Sound." both features are neat, but lose their charm quickly.

One interesting feature is the Streetpass mode, which will automatically exchange Mii characters (whom you can make on the system just like the Wii) with anyone you happen to walk by who also has a 3DS, and may cause bonuses in other games as well. "Street Fighter" has a Streetpass RPG with mini figurines that you can collect in the game.

Easily the most disappointing part of the 3DS is the launch title of actual 3DS games, easily the weakest of any Nintendo console in recent memory. While "Super Street Fighter IV 3D Edition" will finally provide fighting fans with a great game on the go, the title was already released on Xbox 360 and Playstation 3 last April. "SSFIV" was one of only two launch titles averaging over 75 on Metacritic, along with "Tom Clancy's

See 3DS on page 6

MCT

Despite a somewhat weak set of launch titles, one of the main incentives for picking up a 3DS lies with the large amount of 3D reissues that will be coming out this summer, including "Paper Mario."

'The Way Back' works as showcase for Weir

MCT

Peter Weir, who developed his reputation with the creative Australian films "The Last Wave" and "The Year of Living Dangerously," breaks new cinematic ground with his new film "The Way Back."

By Ian Opolski
Collegian Staff

Based on Slavomir Rawicz's memoir "The Long Walk," "The Way Back" details the story of a group of men imprisoned in a Soviet gulag. Led by the Polish Janusz (Jim Sturgess) and the American Mr. Smith (Ed Harris), they escape from the prison into the heart of the Siberian winter, beginning a 4000-mile trek on foot which takes them through Russia, Mongolia, Tibet and India in search of freedom.

The film's cinematography is handled so beautifully that it is reason enough to travel to the theater. Particularly appealing are the landscape shots. From the snow-covered forests of Siberia to the endless Gobi desert, director Peter Weir captures at once the fierce beauty and the relentless danger of the land across which the group travels. The disparity between nature's beauty and its brutality provokes the question of whether the prisoners' escape was worth the struggle. Indeed, Weir's strong suit as a filmmaker seems to be capturing unimaginable hardship; he does not hold back from presenting the physical and mental toll of imprisonment and endless travel. In one particularly haunting scene, a group of prisoners is ordered to crouch on the ground in the middle of a snowstorm. When ordered to stand up again, only half can do so; the rest are dead, killed by the freezing cold. After a time, the frequency of these long, harrowing sequences begins to weigh down the film, but the vital feeling of immense struggle is never lost.

Another of the film's well-developed motifs is the base levels to which men are reduced in times of struggle, both in a positive and negative sense. In one scene, the starving men chase a pack of wolves away from a kill and gorge on the bloody carcass themselves. The men have reverted to a primal, savage state, as stripped of civilization's touch as the uninhabited terrain. In a contrasting scene, Irena, a Polish runaway played by Saoirise Ronan, silently bathes the frostbitten feet of Mr. Smith while tears course down his cheeks. It is wordless moments like this one which are the most humane and most moving in the film.

"The Way Back" is not without its faults, however. With the exception of Sturgess, Harris and Colin Farrell (who plays a Russian criminal), it is difficult to discern the characteristics of any of the other party members. As all the prisoners are shaved bald when they are imprisoned, it is even a challenge to separate the men physically until well into the film. Ronan stands out, though only because she is the group's lone female. While the young actress continues a string

See THE WAY BACK on page 6

Building a case for Kate Bush

By Mark Schiffer
Collegian Staff

It's a chancy thing, to traverse the world of female singer-songwriters. In addition to the risk of infringing on one's masculinity, there is always the occasional schlock factor. For every Joni Mitchell there will be a Carly Simon, for every Rickie Lee Jones there will be a Norah Jones. Undoubtedly, one of the greatest musicians to be grouped into this category would have to Kate Bush.

Today, she is known for, well, very little in fact – at least in the public sphere. Although she released a fairly large body of work in her heyday, and in fact managed to receive a good amount of radio play at one point, today probably the most recognition she has received has been "This Woman's Work" playing over the ending of this past season's finale to "It's Always Sunny in Philadelphia." This beautiful song was released on her 1989 album, "The Sensual World." Although a solid work, this album is far from the best introduction for new listeners to Kate Bush. The production is somewhat dated in a way that obscures some of the less-solid songs.

Despite that fact, songs from this album and her follow-up "The Red Shoes," are going to be revamped on her upcoming release "Director's Cut." Fans would be well-advised to keep their eye out for this album. A reworked version of "Deeper Understanding" has already been released, and it contains a warm, organic feel, which, although not absent in the original, really has to be heard.

Probably the best starting point would be 1985's "Hounds of Love." Indie-rock fans may remember Brit rock band The Futureheads' cover of the title track from several years ago. As a piece in itself, it works just fine. However, when placed side-by-side with Kate Bush's seminal original, it is hard to dispute which is the superior song. Kate Bush's classic single swoops and swerves with passion and joy, at a level rarely reached in world of pop music.

This album works as a perfect introduction for new listeners, because it equally covers both sides of this singer's persona – both her quirky and experimental one, and her swooningly romantic one. The "Ninth Wave" arc of songs on the album's back half tells a dark and unsettling story of Paganism, space and dreams while acting as incredible songs in themselves. The first half of this album contains what may be the single greatest string of pop songs she released in her career: "Running Up That Hill (A Deal with God)," the title track, "The Big Sky," and "Cloudbusting"

See KATE on page 6

MTS PICTURE.COM

Kate Bush, who last released new material in 2005 with her fantastic album "Aerial," will soon be reworking tracks from her earlier albums "The Sensual World" and "The Red Shoes."

3DS adds an extra dimension to gaming

One of the launch titles to come out with the 3DS is a new Madden game. Although nothing special, it should satisfy fans of the series so far.

3DS from page 5

Ghost Recon: Shadow Wars," a turn-based strategy game much more like "Fire Emblem" than a Tom Clancy game. Other notable titles include: "Rayman 3D," a near-direct port of "Rayman 2: The Great Escape;" "Nintendogs + Cats," which is all the fun of owning a puppy or kitten minus actually having a pet, "Lego Star Wars 3: The Clone Wars," which somehow comes without any co-op; a watered down Madden title devoid of any statistics; and "Pilotwings Resort," yet another Mii game seemingly designed to show off technology rather than actually be fun. Thankfully, the 3DS is backwards-compatible with DS games, so you can just continue your "Pokemon Black/White" journey instead.

There is a light at the end of the tunnel though and it is likely the reason why the 3DS had the highest first-day sales of any Nintendo handheld system. The 3DS is due to have a number of big-name releases this summer, including "Dead or Alive Dimensions," "Paper Mario," "Star Fox 3D," and most notably "The Legend of Zelda: Ocarina of Time 3D."

In about a month, the browser and e-shop (for downloadable titles including classic Game Boy games) will be made available and come summertime Netflix will be available as well. Because of these late additions, I wouldn't recommend getting a 3DS until this summer, but it will surely be a hot commodity once the system receives its full set of functioning and top of the line games.

Joe Kling can be reached at jkling@student.uamss.edu.

'The Way Back' has slightly questionable history, but works

THE WAY BACK from page 5

of diverse, challenging roles, her affected Polish accent occasionally slips away from her here. Harris' performance is the best of the entire cast's, though again, he might only be noticeable because he's easily identifiable as the character with an American accent. Otherwise, little of the acting stands out as particularly good or bad.

The issue of language is handled somewhat sloppily. It would be understandable if the entire film were spoken in either accented English or subtitled Russian, but "The Way Back" waffles between both. The movie's first scene features Sturgess speaking either Polish or Russian with Soviet guards. While imprisoned, the inmates usually speak Russian among themselves, but sometimes inexplicably revert to English. Once they escape, they all speak in English together, even though only one man has English as his native tongue. An interview from a Jim Sturgess fan page, JimSturgessOnline.com, reveals that English was actually the common language for this group of escapees, as the majority of them were of various Eastern European origins. But the issue is not sufficiently addressed in the film itself and the linguistic inconsistency is noticeable.

There is also the questionable label of this film as "based on a true story." According to a BBC report issued in 2006, there is conflicting evidence as to whether Rawicz's account actually happened to him, or whether it happened at all. Even watching the film without additional information, it seems somewhat far-fetched to believe that a man could survive such a long journey through such unceasingly brutal conditions. This consideration does nothing to detract from the movie's visual beauty, but it does sap its magic as an inspirational tale of survival.

"The Way Back" is worth a view for its stunning cinematography, as well as the ideas it suggests about the limits of man's capability. True or not, the film is an aesthetic feast which has, at times, a great evocative power.

Ian Opolski can be reached at topolski@student.umass.edu.

Kate Bush: Queen of art pop

One of the better starting points for new listeners of Kate Bush would have to be her 1985 album "Hounds of Love."

KATE from page 5

all are perfectly arranged and engaging pop songs with career-defining videos.

From here, there are several directions one can take. One can pursue the singer's pop side, if one chooses. For this, listeners would be recommended to head towards the singer's classic debut "The Kick Inside," which she released at the age of 19. This album contains her classic single "Wuthering Heights," which in addition to obviously being heavily informed by the Emily Brontë novel contains a terrific guitar solo from Pink Floyd guitarist David Gilmour and one of the best pop choruses of Kate Bush's career.

For those who prefer to explore her darker material, the best next step would probably have to be 1983's "The Dreaming." This curious album explores rather curious themes of domesticity, colonization and theft. The music itself is informed by world-beat sounds, show tunes and torch songs.

Although there certainly are still elements of pop music, a combination of her voice (which she stretches on this album to both high and low extremes, which she never really reached before or after) and the curious instrumentation (which, once again, is informed by curiously disparate genres) allows for "The Dreaming" to be the most forward-reaching album of Bush's career. Admittedly, it isn't an album that will be to everyone's taste. But for those who find something to enjoy, here, there will be many musical joys to be had.

Webster wins ROTW, UMass faces BU today

UMass coach Elaine Sortino gives advice to a Minutewoman. Sortino's wise words were held off in yesterday's rainout.

SOFTBALL from page 10

second game.

If the latest home stand for the Minutewomen is any indication, Plourde should be pitching at the level she did in that first game as she steps on the rubber this afternoon.

Over the latest four-game stretch, Plourde has picked up three wins and her first save in two starts and two relief appearances, and recorded 39 strikeouts in 17.2 hitless innings of work. For her impressive week's efforts, she was named the National Softball Player of the Week by the National Fastpitch Coaches Association.

As dominant as Plourde has been of late, however, she won't be at it alone as the Minutewomen offense will have to put some runs on the board to give their ace some support.

The Terriers will pose as a threat for the Minutewomen, as they are highlighted by top players Erin Schuppert, Holli Floetker and Whitney Tuthill, who highlight a pitching staff, each boasting an ERA under 2.00.

As dominant as the BU pitching staff appears to be throughout the course of the season thus far, UMass might be playing them at just the right time, as the Terriers have just hit a bit of a rough patch in their schedule, having just lost two out of three in a series against Maine this past weekend, including losing both contests in a doubleheader on Sunday, 8-2 and 6-1, respectively.

Looking to take advantage on the attack for the Minutewomen will be freshman Lindsey Webster, who was recently named the Atlantic 10 Rookie of the Week. During the homestand, she went 5-for-10, including two doubles and a home run.

Continuing the offensive support for Plourde will be in the form of junior Kyllie Magill, who posts a .301 batting average and a team-leading 15 RBIs as the team's leadoff hitter. Much like Plourde, Magill should be familiar with the Terriers, as she went 3-for-3 and hit a two-run home run in the first regular season meeting with them last season before going hitless in the following two meetings.

The first pitch is scheduled for 4 p.m. at the BU Softball Field. After Wednesday, UMass will dive right back into conference action on Sunday, hosting St. Bonaventure in a doubleheader.

Stephen Hewitt can be reached at shewitt@student.umass.edu.

Freshmen Lindsey Webster and Tiffany Meeks celebrate after a play in the Minutewomen's recent victory over Saint Louis.

New regulated bats not an issue for baseball

BASEBALL from page 10

times, some of them just don't amount in your favor. It doesn't mean that you need to constantly adjust, you just need to keep doing the things that make you successful and everything will take care of itself."

Fredette, a senior who transferred to UMass from Vermont before the beginning of last season, is currently hitting .261 with six RBIs and two extra-base hits in 69 at bats. Despite the lack of run production, Fredette has still walked more times than struck out with a six-to-eight ratio, which he credits to his coach, as well as his own personal calmness in the box.

"Coach hasn't asked me to do anything different when I'm hitting, compared to the past," said Fredette. "I'm still going to have the same approach and mindset every time I step in, and it'll all come around, but I'll do what I need to help the team win, because that's all that matters."

Multner has shown more signs of ups and downs this spring, going from a .200 average after the first nine games, to over a .300 average towards the end of last month, to currently a .261 average with two home runs and 10 RBIs. Multner's discipline at the plate has been evident, maintaining a strikeout-to-walk rate of 16-to-11.

The lack of production in the box in the first half of the season for these two players has been undoubtedly disappointing. However, since both players have shown that they are much more capable than hitting at their current level, the trend isn't expected to continue at its current pace for much longer.

Roughly halfway through last season's campaign, Multner was batting .218 with two homeruns and a total of four extra-base hits. After April 24, Multer, a junior at the time, finished the second half batting .312 (15-for-48) with six homeruns and 12 of his season-total 18 RBIs.

In 2009, after hitting .250 through the first 18 games of the season, Multner turned up the dial, hitting nine homeruns the rest of the way, while driving in 24 of his season-total 30 RBIs and finished the year with a .306 average.

The same elevated performance can be said for Fredette, who last season posted a .384 average, while driving in 31 runs.

Fredette expressed his disappointment in his hitting thus far into the season.

"It obviously hasn't gone the way I expected it to go so far [this season], but I know that it will come around," said Fredette.

When it comes to his timing and difficulty to adjust to different pitchers game after game, Fredette said his woes could be a result from, "a little bit of all of that, but that's just the way the game goes sometimes."

Fredette doesn't attribute the lack of adjustment to the new Batted Ball Co-efficient of Restitution-regulated (BBCOR) bats that have been introduced this season, although he did express that there's, "certainly a different feel to it than before."

"Before, with the older aluminum bats, the sweet spot was larger, which meant you could have a more solid connection," said Fredette. "With these bats, you can feel like you got a hold of ball, but the result may be a deep fly out. However, we're a small-ball team that plays the fundamentals, and that's been our way to succeed, not hitting the ball out all the time."

Multner and Fredette hope that their bats heat up as April continues when they take on Connecticut on Wednesday.

Scott Cournoyer can be reached at scournoy@student.umass.edu.

Senior Eric Fredette joins his fellow Minutemen in a game last season. Fredette scored two runs in UMass' last loss against Fordham.

Minutewomen sweep Colgate

By Ben Lambert
Collegian Staff

The Massachusetts women's rowing team was not to be denied this past Saturday afternoon. Although the weather was poor and the competition fierce, the Minutewomen easily took control and swept all three races against Colgate to earn a dominant victory.

"Despite the rough conditions, I thought both boats raced pretty well," said UMass coach Jim Dietz. "Normally, the Connecticut River is flat and very conducive to rowing. On Saturday, the wind was blowing big time and there were white caps, so it was very rough water."

The Lightweight Varsity Eight was largely a competition between the two entered Minutewomen boats. The first sped across the finish line in five minutes, seven seconds, with the second nipping at their heels in 5:08. The third party in the race, the Colgate boat, had issues almost directly out of the gate that put them a few seconds back. The boat had hit a boat-stopping crab, a dip in the waves that slammed them to a halt just 600 meters from the starting line. After regaining their composure and momentum, the Raiders came across in 5:18.

"We changed the lineup [of the Varsity Eight boat], kind of changed the rhythm of the boat, and it just got a lot more aggressive effect out of it," said Dietz. "We moved up [Kaitlyn MacKenzie] to the stroke seat from the second boat, and we moved [Michaela Streitfield] into the seventh seat."

There was no major interference from the elements in the Varsity Four competition, but it was still controlled by the Minutewomen. The Varsity Four squad won the race in 5:40. The win continued the squad's recent run of success as last weekend they won the Yankee Cup against Rhode Island.

The secondary Four boat came across the finish line just a few seconds after in 5:43, while Colgate's boat brought up the rear in 5:49.

The Minutewomen completed the sweep in the Novice Eight race. As the Colgate counterparts clocked in at 5:18, UMass' Novice Eight boat was just over one second faster, finishing in 5:15.5.

Entering the race, the Minutewomen were ranked eighth in the country in the USRowing Lightweight Varsity Eight rankings. Last year, the boat earned the ninth spot in each of the final three polls of the season.

This was the only home competition of the season for the Minutewomen.

Next up, the Minutewomen are on to Camden, N.J., where they will compete in the Knecht Cup against 50 schools from across the country including Wisconsin, who are currently ranked third in the Lightweight Varsity Eight and Bucknell, who is currently ranked sixth. The preliminary heats will take place on April 9, with the championship heats taking place the following day.

After that, the Minutewomen will travel to Pennsauken, N.J. for the Atlantic 10 Championships. Last time around, they came in second out of nine teams.

Minutewomen slowed down by rain

By Stephen Hewitt
Collegian Staff

April showers will hopefully bring a continued display of power for the Massachusetts softball team.

On the heels of a four-game winning streak to open play at home, the Minutewomen (13-14, 5-3 Atlantic 10) were slowed down on Monday and Tuesday as rainstorms swept through Amherst and postponed their home date with Connecticut.

Instead, the Maroon and White will go for five-in-a-row when they travel to Boston Wednesday to take on Boston University.

Although the Terriers (18-10, 4-2 America East) are a part of a different conference than UMass, the Minutewomen should be very familiar with their in-state counterparts, as they played three games against them in 2010, posting a 2-1 record.

However, the lone game that UMass surrendered to BU may have been the one that stung the most throughout the 2010 campaign, as it came in the NCAA Amherst Regional, a 10-4 Terriers victory that cut an optimistic Minutewomen season short.

In that game, ace pitcher Sara Plourde didn't come close to her record-breaking form that she displayed throughout the season that included a nation-leading 556 strikeouts and 40 wins. In just one inning of work, she gave up four quick runs before UMass coach Elaine Sortino pulled the plug and replaced her with senior pitcher Bailey Sanders, who went on to surrender six more runs in five innings of relief.

It was revealed later that Plourde suffered from a stress fracture in her hip that limited her abilities in the postseason. However, after an offseason of being on crutches and going through rehabilitation, Plourde is back and will look to avenge the loss from last season.

On their trip, the Minutewomen will hope to duplicate the success they had against BU in the regular season a year ago, in which they shutout the Terriers at home, 3-0, before traveling to Boston less than a week later to defeat them again, 7-5.

In those contests, Plourde picked up both wins and pitched two complete games, which included a two-hit, 15-strikeout performance in the first matchup before giving up five runs and striking out nine in the

See SOFTBALL on page 7

JEFF BERNSTEIN/COLLEGIAN

Senior Audrey Boutin and junior Kyllie Magill converse over a play during UMass' doubleheader against Saint Louis. The two victories against the Billikens were a part of a four-game winning streak for the Minutewomen.

MICHAEL WOOD/COLLEGIAN

Sara Plourde releases a pitch against Saint Louis in the doubleheader on April 3. Plourde was awarded National Fastpitch Coaches Association Division I National Player of the Week.

Heavy rain washes out game for UM, Plourde earns award

By Michael Wood
Collegian Staff

Two days of heavy rain washed out the Massachusetts softball team's scheduled game against Connecticut on Tuesday and the game has not been rescheduled yet, according to UMass Athletics.

The week was supposed to kick-off yesterday with a single matchup against UConn, but after significant and steady rainfall pelted western Massachusetts for the last two days, the field conditions were deemed to be unplayable and the game was cancelled.

The Minutewomen will travel to Boston on Wednesday for a 4 p.m. contest against Boston University then return to the UMass Softball Complex on Sunday for a doubleheader against St. Bonaventure.

The Maroon and White are coming off two impressive victories on Sunday which saw junior ace Sara Plourde notch two wins and throw 8.2 no-hit innings across the two games. Plourde struck out 16 batters and allowed three walks in the first game. After entering in the sixth inning of the second game in relief of freshman Caroline Raymond, she struck out three of the five batters she faced and earned the save.

Plourde's performance last week garnered her national attention as she was named the National Fastpitch Coaches Association Division I National Player of the Week.

Since March 28, Plourde has thrown 17.2 consecutive no-hit innings and not allowed a single run. She went 3-0 last week with one save while striking out 39 batters and issuing seven walks. Opponents are hitting .143 against her this season, which equates to approximately 70 hits in 490 at-bats. She has also yet to allow a run at home this season.

Her streak of hitless innings also broke the UMass record for that category which was set in 1983.

Plourde is the catalyst of UMass's team, and thus far she is 11-10 with a 1.51 ERA and 244 strikeouts, the latter of which leads the Atlantic 10.

Michael Wood can be reached at mcwood@student.umass.edu.

Games moved due to weather

By David Martin
Collegian Staff

Though the rain is certainly not ideal for making plays on the diamond, the Massachusetts baseball team looks to do more than just weather the storm as it prepares to take on Connecticut at J.O. Christian Field on Wednesday afternoon.

The Minutemen (8-11, 2-1 Atlantic 10) were originally supposed to take on the Huskies (14-10-1) in a home-and-home split over Tuesday and Wednesday afternoons. However, as a result of Tuesday's unfavorable weather, the game in Storrs, Conn. will be moved to this Wed. afternoon, while the game played at Earl Lorden Field will take place later this month on Monday, April 14.

With weather conditions aside, UMass coach Mike Stone is confident that his team will perform to its capabilities after the first pitch.

"The rain does not affect us here, and I really do not consider it an issue," said Stone. "We just want to approach every game like it is the most important game, and if we focus on that, we can really win a ballgame."

It is that kind of attitude that has propelled the Maroon and White to earn a 7-3 record in their past 10 games, a mark that certainly gives them strength against a UConn team that has a little bit of its own momentum to work with.

The Huskies are coming fresh off the heels of a weekend series sweep of St. John's last weekend. The sweep has solidified the notion that UConn will be a serious contender throughout the season, as the Huskies now rank No. 29 in College Baseball Newspaper's top-30 poll.

However, despite their success, Stone feels that nothing the competition can say brings need for panic on the field of play.

"They will definitely be one of the better teams we have played [so far], but we are not going to be intimidated," said Stone. "The shape of this game is really going to be determined by how the pitchers perform. They certainly have a good staff, but so do we, and I know that every one of our starters give us a very good chance to win right from the start [of the game].

"But, it is one of those things where it is a midweek game, and a lot of times you are not sure what you will see from the other team," continued Stone. "They could be resting their big starters in anticipation for the weekend series, or they could put out the best they got for you to face. You just do not know how it will go until game time."

Stone isn't concerned about a lack of effort or production from the Minutemen in the field or at the plate.

Senior Matt Gedman has been leading the way so far this year for the Minutemen in most offensive categories. Gedman leads the team in batting average (.466), slugging percentage (.671), on base percentage (.494), hits (34), RBIs (16) and total bases (49) in 17 total games this season, all of which he has started.
